CITIES AND TOWNS.

CHAPTER I.

NEWTON.

BY REV. S. F. SMITH.

THE history of Newton is rooted in the history of Boston, the metropolis of New England. The settlement of Boston was commenced September 17, 1630, by the removal thither of Mr. William Blaxton, whose name is perpetuated in Blackstone Street, at the north part of the city, and Blackstone Square, on Washington Street, at the south end. Mr. Blaxton was attracted to Boston by the existence of a spring of pure water, such as he failed to find in Charlestown, his former residence. Boston was at first but a diminutive place in territory. In the northern part it was but three streets wide from east to west, the three streets being Fox Street, Middle Street and Back Street; the first being now North Street, the second the north part of Hanover Street, and the third the south part of Salem Street. The northern portion of Boston, originally "the court end," was separated from the southern by a creek called Mill Creek, reaching from water to water, and occupying the space of the present Blackstone Street. The southern portion of Boston was joined to the continent by "the neck," so-called, being the upper part of Washington Street, towards Roxbury. The neck was so narrow that farmers bringing their produce to market in Boston in the morning, used to hasten back at evening in the periods of high tides, lest the rise of the water should cut off their return. Long Wharf, at the foot of State Street, commenced at India Street. Large vessels were moored close to Liberty Square. Harrison Avenue was washed by the tide. The Public Garden and most of Charles Street, and Tremont Street, south of Pleasant Street, was under water.

The territory of Boston was small, but the inhabitants of the little peninsula thought it necessary to have a fortified place to flee to in case of invasion by the neighboring tribes of savage Indians. Other towns, already commenced—Charlestown, Watertown, Roxbury and Dorchester—shared in this spirit of wise precaution, and felt equally the need of a sure place of defence. At first they fixed upon the neck, between Boston and Roxbury, which was, on some

accounts, a strategic point, shutting off the possibility of assault by Indians of the continent. But this plan was abandoned on account of the lack in that vicinity of springs of running water. It was finally decided to build the place of defence on the north side of Charles River, laying the foundations of a new town near where Harvard College now stands. Here they began to build in the spring of 1631. They laid out a town in squares, with streets intersecting each other at right angles, and surrounded the place with a stockade, and excavated a fosse inclosing more than a thousand acres; and, as a historian of 1683 remarks, "with one general fence, which was about one and a half miles in length. It is one of the neatest and best compacted towns in New England, having many fair structures, with many handsome contrived streets. The inhabitants, most of them, are very rich. Half a mile westward of the town is a great pond (Fresh Pond), which is divided between Newtowne and Watertown on the south side of Charles River."

In 1632 the General Court levied a rate of £60 upon the several plantations towards building the palisade around Newton. The tax levied was thus distributed: Watertown, £8; Newton, £3; Charlton, £7; Medford, £3; Saugus and Marblehead Harbor, £6; Salem, £4 10s.; Boston, £8; Roxbury, £7; Dorchester, £7; Wessagusset, £5; Winethomet, £1 30s. The fence passed near the northwest corner of Gore Hall, in the college yard, eastwardly to the line between Cambridge and Somerville, and southwardly from Gore Hall to a point near the junction of Holyoke Place with Mount Auburn Street. This £60 levy for building the stockade was probably the first State tax. Watertown objected to the assessment as unjust, and a committee of two from each town was appointed to advise with the Court about raising public moneys, "so as what they agree upon shall bind all." "This," says Mr. Winthrop, "led to the Representative body having the full powers of all the freemen, except that of elections."

Boston, as was natural, came to be regarded as the old town, and this new and fortified place beyond the river acquired the title of the new town, or Newtown. When Harvard University was founded, in 1638, the General Court ordained "that Newtowne should thenceforward be called Cambridge," in compliment to the place where so many of the civil and ecclesiastical

tical fathers of the town had received their education. The large territory on the south side of Charles River, beyond the stockade and Cambridge, and comprising most of what is now Brighton and Newton, was at first called the "south side of Charles River," and sometimes "Nonantum," the Indian name. After religious services came to be held regularly on the south side of the river, about 1654, the outlying territory was called "Cambridge Village," or, "New Cambridge," until 1679. The General Court decreed that after December, 1691, it should be called "Newtown." The change of the name from "Newtown" to "Newton" seems to have come about spontaneously without any formal authorization. The change is first noticed in the records of town-meetings by Judge Fuller in 1766 and ever afterwards. The question of spelling the name of the town was never put to vote; but it is deemed that Judge Fuller was fully justified in assuming such a responsibility.

Before leaving London the company forming the first plantations in New England received the following instructions: "If any of the salvages pretend right of inheritance to all or any part of the lands granted in our patent, wee pray you endeavor to purchase their tittle, that wee may avoyde the least scruple of intrusion." Accordingly, at the session of the General Court, March 13, 1638-39, Mr. Gibbons was desired to agree with the Indians for the land within the bounds of Watertown, Cambridge and Boston. "The deed of conveyance is missing, but there is sufficient evidence," says Mr. Paige, "that the purchase was made of the Squaw-sachem, and that the price was duly paid. The General Court ordered, May 20, 1640, 'that the £13 8s. 6d. layd out by Capt. Gibbons shall be paid him, viz., £13 8s. 6d. by Watertown, and £10 by Cambridge, and also Cambridge is to give Squaw-sachem a conte every winter while she liveth.' This sale or conveyance to Cambridge is recognized in a deed executed Jan. 13, 1639, by the Squaw-sachem of Misticke and her husband, Web-cowits, whereby they conveyed to Jonathan Gibbons 'the reversion of all that parcel of land which lies against the ponds of Misticke aforesaid, together with the said ponds, all which we reserved from Charles-town and Cambridge, late called Newtowne, and all hereditaments and appurtenances thereunto belonging, after the death of me, the said Squaw-sachem.'"

This Squaw-sachem is supposed to have died in about the year 1662. Twenty years previous to her death she, with four other Indian rulers, put herself under the government and jurisdiction of the Massachusetts, to be governed and protected by them, and promised to be true and faithful to the said government. The inhabitants of Cambridge lived on terms of amity with the Indians.

The early history of Newton is involved with the history of Cambridge. Indeed, Newton was required to pay taxes for the support of the church in Cambridge till 1661. In 1656 the inhabitants of Cam-

bridge Village organized a distinct congregation for public worship, and petitioned the General Court to be released from paying rates for the support of the ministry of the church in Cambridge. The committee reported adversely to the petition, and the petitioners had leave to withdraw. Dr. Holmes, however, says that in 1656, when the inhabitants of the village had become so numerous as to form a distinct congregation for public worship, "an abatement was made of one-half of their proportion of the ministry's allowance during the time they were provided with an able minister according to law." In 1661 they renewed their petition, and the Court granted them "freedom from all church rates for the support of the ministry in Cambridge, and for all lands and estates which were more than four miles from Cambridge Meeting-house, the measure to be in the usual paths that may be ordinarily passed."

The petitioners were not satisfied with this line, and in 1662 petitioned the Court for a new one. A committee was appointed in October, 1662, to give the petitioners and their opponents a hearing. This new committee settled the bound, as far as ministerial taxes were concerned, and "ran the line which is substantially the line which now divides Newton from Brighton."

In 1672 the inhabitants of Cambridge Village presented to the Court another petition, praying to be set off from Cambridge and made an independent town.

The following year the Court granted the petitioners the right to elect annually one constable and three selectmen dwelling among themselves, "but requiring them to continue to be a part of Cambridge so far as related to the paying of certain taxes." The action of the committee did not satisfy the petitioners, and they declined to accept it or to act under it. In 1677 another attempt was made to determine a satisfactory dividing line, through a committee of referees, two to be chosen by Cambridge, two by Cambridge Village and the fifth by the four others jointly. The line proposed by these referees did not differ materially from the line run in 1662.

Again, in 1678, fifty-two out of sixty-five of the freemen of Cambridge Village petitioned the General Court to be set off from the town of Cambridge and to be made a town by itself. Cambridge, by its selectmen, presented a remonstrance. The Court, however, so far granted the petition as to order "that the freeholders should meet on the 27th August, 1679, and elect selectmen and other town officers to manage the municipal affairs of the village." This was an important concession on the part of the Court, though it did not fully meet the desires of the petitioners; and nearly ten years more passed away before they fully obtained the object of their requests.

Until August 27, 1679, all the town-meetings were held in Cambridge, and all town officers were elected there. After this date town-meetings were held in Cambridge Village (Newton) by the freemen of the

village only, and they transacted their town business free from all dictation or interference of Cambridge. On that day they took into their own hands the management of the prudential affairs of the village as completely as any other town, and conducted them according to the will of the majority of the freeholders until Newton became a city. For town purposes they were independent, but for a number of years they were still taxed with Cambridge for State and county purposes, to wit, the repairs of the Great Bridge between Cambridge and Brighton. Nor were they permitted to send a deputy to the General Court till 1688, when the separation was fully consummated, and Newton became a free and independent corporation. Dea. John Jackson, the first settler of Cambridge Village, and nine others were dead when the town of Newton became wholly independent.

After an extended and careful investigation by different historians, "there seems," says Mr. Paige, in his "History of Cambridge," "no reasonable doubt that the village was released from ecclesiastical dependence on Cambridge and obligation to share in the expenses of religious worship in 1661; became a precinct in 1673; received the name of Newton in December, 1691; and was declared to be a distinct village and place of itself, or, in other words, was incorporated as a separate and distinct town by the order passed January 11, 1687-88, old style, or January 11, 1688, according to the present style of reckoning.

"While by her separation from Cambridge, Newton lost in territory, she found, in due time, more than she lost. By the limitation of her boundaries she cut herself off from 'Master Corlet's faire grammar schoole,' though she retained as much right in the University as belonged to any and every town in the Commonwealth. She was deprived of the prestige of the great men whose dignity and learning brought fame to the Colony; but she has since been the mother of governors and statesmen, of ministers and missionaries, of patriots and saints. And in the progress of years she added to her reputation as the scene of that great enterprise, the translation of the Bible into the language of her aborigines, and the first Protestant missionary efforts on this Continent. Subsequently she had the first normal school for young ladies (continued from Lexington); several of the earlier and the best academies and private schools, and finally the theological institution, whose professors have been and are known and respected in all lands, and whose alumni have carried the gifts of learning and the gospel to every part of the earth. She left the rustic church near the College, by the inconvenience of attending which she was so sorely tried; but she has attained to more than thirty churches within her own borders."

The first appearance of the name of the town in the form of Newton appears in the following town-meeting record:

"Newton, May 18, 1694. The Selectmen then did meet, and leavy a

rate upon the town of twelve pound six shilling. Eight pound is to pay the debety for his service at the General Court in 1693, and the other fore pound six shilling is to pay for Killing of wolves and other necessary charges of the Town."

This record is signed by Edward Jackson, town clerk.

The organization of the First Church in July, 1664, and the ordination of Mr. John Eliot, Jr., as pastor, had in the meantime consummated the ecclesiastical, though not the civil separation of Cambridge Village (Newton) from Cambridge. The first meeting-house in Cambridge Village was erected in 1660.

Six years after Charlestown was settled, the whole State of Massachusetts consisted of only twelve or thirteen towns, of which Newton paid the largest tax. In the records of a court held at Newtown, September 3, 1634, is this item: "It is further ordered that the sum of £600 shall be levied out of the several plantations for publique uses, the one-half to be paid forthwith, the other half before the setting of the next Court, viz., Dorchester, 80; Roxbury, 70; Newtowne, 80; Watertown, 60; Saugus, 50; Boston, 80; Ipswich, 50; Salem, 45; Charlestown, 45; Medford, 26; Wessagasset (Weymouth), 10; Barecove (Hingham), 4."

It is evident from this record that Newton possessed at that time as much wealth as any plantation, and, excepting Dorchester and Boston, more than any other in the Colony. In 1636 Newton had so prospered that she stood in wealth at the head of all the towns, and numbered eighty-three householders. This year the rates levied upon the several towns stood as follows: Newton, £26 5s.; Dorchester, £26 5s.; Boston, £25 10s.; Watertown, £19 10s.; Roxbury, £19 5s.; Salem, £16; Charlestown, £15; Ipswich, £14; Saugus, £11; Medford, £9 15s.; Newbury, £7 10s.; Hingham, £6; Weymouth, £4.

The question of the boundaries of the new towns in the wilderness was not readily nor easily settled. It was necessary that agriculture, in its various branches, should be an important factor in the occupations of the early settlers. Hence they felt the need of much land for cultivation, and for their flocks and herds. At the outset, after the extinction of the Indian titles, generous grants were made by the General Court to towns and individuals. The people of the various towns, however, began, at an early period, to demand more land. The farmers specially craved meadow land, free from wood, and suitable for mowing fields without the labor of clearing, of which they could avail themselves at once for the support of their stock. A committee was appointed in 1636 to investigate the Shawshine country, now including the town of Andover, and to report whether it was suitable for a plantation; and 1641 this order was passed: "Shawshine is granted to Cambridge, provided they make it a village, to have ten families there settled within three years; otherwise, the Court to dispose of it."

The report of the committee to examine the grant

was rendered in 1642, and being unfavorable, the Court enlarged their grant, and gave the petitioners further time to effect a settlement. This new grant read as follows: "All the land lying upon the Shawshine River, and between that and Concord River, and between that and the Merrimack River, not formerly granted by this Court, are granted to Cambridge, so as they erect a village there within five years, and so as it shall not extend to prejudice Charlestown village or the village of Cochitawist, nor farms formerly granted to the now Governor of 1200 acres, and to Thomas Dudley, Esq., 1000 acres, and 3000 acres to Mrs. Winthrop; and Mr. Flint and Mr. Stephen Winthrop are to set out their head line toward Concord."

No settlement having been made within the period designated, this grant was modified by the following order, passed by the General Court: "Shawshine is granted to Cambridge without any condition of making a village there; and the land between them and Concord is granted all, all save what is formerly granted to the military company, provided the church present continue at Cambridge."

"The limits of this grant of Shawshine, as of most of the grants of that period, are very indefinite, and it is not possible to define with precision what is included. But it is generally admitted that the Shawshine grant extended to the Merrimack River. We know it included all the town of Billerica, the greater portion of Bedford, and all that portion of Lexington north of the eight-mile line. Billerica was incorporated in 1655 into a town by the consent of Cambridge. It was at that time a large territory, bounded on Cambridge Farms (Lexington), Chelmsford, Woburn and Concord." And thus Newton, from being territorially the smallest township in the Colony, became, at least for a season, the largest.

The small portion of Watertown, on the south side of Charles River, according to the settlement in 1635, included about seventy-five acres. The settlement of 1675 increased the extent to about eighty-eight acres—enough to protect their fishing privilege—and afterwards called "the Wear (weir) lands." "In the year 1679, when the town lines were established between Cambridge and New Cambridge, or Cambridge Village, it was expressly stipulated that this Watertown reservation on the south side of Charles River—200 by 60 rods—should be maintained and held by Watertown for the protection of her fish-weirs. They did not wish to enter into co-operation with this new Colony in the carrying on of the fish business, and were very strenuous to have their rights protected. Indeed, they became dissatisfied and grasping, and in 1705 called for a commission to readjust the line for the better protection of their fishing interests. John Spring, Edward Jackson and Ebenezer Stone, on the part of Newton, with Jonas Bond and Joseph Sherman, of Watertown, composed that committee. They agreed upon a settlement which shortened the easterly

line a few rods, and lengthened the southerly and westerly lines a few rods each from the original grant. Since this time there have been further re-adjustments of these boundaries, and it is evident in each of these that Watertown has lost nothing. The total acreage now held to Watertown, on the Newton side of the river, is nearly 150 acres, or a gain, above what was originally intended for her fish protection, of nearly seventy-five acres."

We have this record under date of March 3, 1636: "It is agreed that Newton bounds shall run eight miles into the country from their meeting-house, and Watertown 8, Roxbury 8, Charlestown 8."

"In the year 1798, as appears from an article by Dr. Homer, in the 'Massachusetts Historical Collections' for that year, the extent of Newton from north to south, measuring from Watertown line to Dedham line, was six miles and thirty-six rods, the measure being made along the county road, from east to west, measuring from the bridge at Newton Lower Falls to Cambridge, which at that date included Brighton or Little Cambridge, four miles, three-quarters & fifty-one rods. The whole town, including the several ponds, was, at that time, by careful estimate, reckoned to embrace 12,940 acres. At the same time Charles River, with its various windings, washed the edges of the town for about sixteen miles.

"In 1838, 1800 acres of the extreme southerly part of Newton were set off to Roxbury. In 1847 about 640 acres at the extreme northwesterly part were set off to Waltham. After the construction of Chestnut Hill Reservoir by the city of Boston, a slight change was made in the eastern boundary of Newton by an exchange of land, so that these beautiful sheets of water might be entirely within the limits of Boston, and under its jurisdiction. Brighton having been annexed to Boston, the two cities—Newton and Boston—for a considerable distance near this point, border on each other."

The first settlers in Newton did not come in a body, but family after family. Of those who came into the town between 1639 and 1664, the date of the organization of the first church—twenty in number—the ages of the majority were between twenty-one and thirty-five. Only five had reached the age of forty; two only were more than fifty. Notwithstanding the hardships of frontier life to which they were subjected, fourteen out of thirty, whose date of death is recorded, died more than eighty years of age, only eight under seventy, and only two under fifty.

One of the earliest settlers—Samuel Holly—was in Cambridge in 1636, and owned a house and eighteen acres of land adjoining John Jackson in 1639. He sold six acres of this estate to Edward Jackson in 1643 for five pounds, and died the same year. The following are the names of the first twenty male settlers of Newton, extending to 1664, which was the date of the organization of the first church, and the ordination of John Eliot as the first pastor:

Date of Settlement.	Age at Settlement.	Names.	Where from.	Date of Death.	Age.	Inventory.
1639	39	Dea. John Jackson . . .	London .	1674-3	77	£1250 0 0
1640	30	Dea. Samuel Hyde . . .	London .	1689 79	79	
1643	42	Edward Jackson . . .	London .	1681 79	2177	19 0
1644	33	John Fuller . . .	England .	1698 87	534	5 0
1647	21	Jonathan Hyde . . .	London .	1711 85		
1647	21	Richard Park . . .	Cambridge	1665		972 0 0
1649	29	Capt. Thomas Prentice .	England .	1710 89		
1650	35	John Parker . . .	Wingham	1686 71	412	2 0
1650		Thomas Hammond . . .	"	1675		1139 16 2
1650		Vincent Druce . . .	"	1678		271 19 0
1650	25	John Ward . . .	Sudbury .	1708 80	88	16 10
1650	21	James Prentice . . .	England .	1710 81	286	11 0
1650		Thomas Prentice (2d) .	"			
1654		Thomas Wiswall . . .	Dorchester	1683		340 0 0
1658	40	John Kenrick . . .	Boston .	1686 82		
1661	23	Isaac Williams . . .	Roxbury .	1718 99	85	6 9
1662	34	Abraham Williams . .	Watertown	1712 84		
1664	28	James Trowbridge . .	Dorchester	1717 81	240	0 7
1664	34	John Spring . . .	Watertown	1717 85		
1664	28	John Eliot, Jr. . . .	Roxbury .	1668 33	457	2 5

At the time of Mr. Eliot's ordination (1664), there were twelve young men in Newton of the second generation, nearly all unmarried.

From the year 1664 to 1700 history presents a list of fifty additional names of settlers within the limits of Newton :

Date of Settlement.	Age at Settlement.	Names.	Where from.	Date of Death.	Age.
1666		Gregory Cook . . .	"	1691	
1667		Humphrey Osland . . .	"	1720	
1667		Daniel Bacon . . .	Bridgewater	1691	
1669	45	Thomas Greenwood . .	"	1695	50
1672	26	Samuel Truesdale . . .	Boston .	1695	49
1673		Joseph Bartlett . . .	Cambridge	1702

The descendants of some of these are still living. Deacon Jackson had a numerous progeny,—five sons and ten daughters, and about fifty grandchildren. The name has been familiar in Church and State from the beginning until now. Deacon Samuel Hyde and Jonathan Hyde still live in name in the history of horticulture and in the beautiful Common of Newton Centre. The Fullers were equally renowned for religious and civil influence. The Wards have held a place of honor in every generation. The name of Williams is perpetuated in the whole world through their labors of love and through Williams College, at Williamstown, Mass., which had its origin in the bequest of one of them, and which is itself the mother of all the missionary organizations in the United States; for there the seed was planted which has brought forth fruit in many lands. John Eliot, Jr., died young, but through his work he seems to be living still. The Kenricks have ever held a distinguished place. Hobart and Stone and Parker have left their names embalmed in their history. Woodward and Clark were worthy of their posterity, who flourished more than 200 years after them, the sons worthy of such sires. John Staples, the schoolmaster, taught well the boys of his period. His broad acres, still distinctly marked, and his comely caligraphy in the town records,—for he was town clerk twenty-one years,—and the church of which he was long a deacon, are his enduring monuments. And not these alone. The plantation was founded in faith and prayer, by sturdy sons of the soil and independent thinkers,—men not to be turned aside from the right, and cherishing from the beginning the spirit and the principles which entitled them, as soon as the Colonial government was abolished, to all the privileges and prerogatives of freemen.

A considerable accession of settlers came to the original plantation of Cambridge as early as August, 1632. The Baintree Company, so-called, numbering forty-seven, headed by the Rev. Mr. Hooker, began a settlement at Mount Wollaston, but were compelled by the Court, for what reason is not stated, to remove to Newton. Dr. Holmes says: "It is highly probable that this company came from Baintree, in Essex County, in England, and from its vicinity. Chelmsford, where Mr. Hooker was settled, is but eleven miles from Baintree, and Mr. Hooker was so esteemed as a preacher, that not only his own people, but others from all parts of the County of Essex, flocked to hear him." "The same year" (1632), says Mr. Prince, "they built the first house of worship at Newtowne (Cambridge) with a bell upon it;" which indicates that the early settlers were not summoned to worship by beat of drum, like Mr. Eliot's Indian congregation later. No record shows when a bell was first used on the first church in New Cambridge (Newton). Mr. Hooker's company arrived in Boston, September 4, 1633. Mr. Hooker was installed pastor and Mr. Stone teacher of the church October 11th, following, with fasting and prayer.

Two of this company, Simon Bradstreet and John Haynes, attained to the office of Colonial Governors of Massachusetts. Mr. Bradstreet owned the estate now held by ex-Governor Claflin. Mr. Haynes received the earliest and largest grant of land in Newton, in 1634; was chosen Governor in 1635; removed to Connecticut with Hooker's company in 1636, and was Governor of Connecticut in 1639. He died in 1654, and this tract of land passed to his heirs.

The addition of the Braintree company to the population made the settlers feel that their territory was insufficient for their needs, and in May, 1634, they petitioned the General Court, either for enlargement or the privilege of removal. Messengers were sent by Mr. Hooker to explore Ipswich, and the Merrimack and Connecticut Rivers, and lands adjacent. The explorers of the Connecticut Valley brought a favorable report, which led to a petition to the Court, in September, 1634, for leave to move thither. The question was a very exciting one, and was debated by the Court many days. On taking the vote, it appeared that the Assistants were opposed to the removal and the Deputies were in favor of it. "Upon this grew a great difference between the Governor and Assistants, and the Deputies. So when they could proceed no further, the whole Court agreed to keep a day of humiliation in all the congregations. Mr. Cotton, by desire of the Court, preached a sermon that had great influence in settling the question."

After various and unsuccessful efforts to come to an agreement, finally, the donations of land, which had been made provisionally, reverted to their original owners, and Mr. Hooker and his company obtained from the Court leave to remove wherever they pleased, only "on condition that they should continue under the jurisdiction of Massachusetts." They took their departure the following year, and settled in what is now Hartford, Conn. Therefore Connecticut and its capital city must be ever regarded as the daughter of Newton. Mr. Trumbull thus describes their journey:

"About the beginning of June Mr. Hooker, Mr. Stone and about one hundred men, women and children took their departure from Cambridge and traveled more than a hundred miles through a hideous and trackless wilderness to Hartford. They had no guide but their compass, and made their way over mountains, through swamps, thickets and rivers with great difficulty. They had no cover but the heavens, nor any lodgings but those that simple nature afforded them. They drove with them 100 head of cattle, and by the way subsisted on the milk of their cows. Mrs. Hooker was borne through the wilderness on a litter. The people carried their packs, arms and some utensils. They were nearly a fortnight on their journey. This adventure was the more remarkable as many of the company were persons of high standing, who had lived in England in

honor, affluence and delicacy, and were entire strangers to fatigue and danger."

Among the most interesting relics of antiquity are the records of early times. The quaint forms in which their doings were expressed, the acts of legislation made necessary by the emergencies of a new country, and the minute affairs carefully written down by those conscientious people, the announcement of which in our own times would hardly be deemed worth the breath which told them or the ink which recorded them, form an integral part of history. They reproduce the men and the times in vivid pictures. They are valuable and instructive, as showing the elements and beginnings of the civilization, the culture, the security and the elegance which we now enjoy. The records of the Colony, of Cambridge, of New Cambridge, and of Newton after its separation from Cambridge, and the Registry of Deeds of Middlesex County all give copious specimens, on which the historian delights to linger.

The following have reference to various matters pertaining to the interests of the town, taken, under the respective dates, from the records of Cambridge before the separation of Newton:

"At the Court held in Newtowne, Sept. 3, 1634, it was ordered that no person shall take tobacco publicly under the penalty of eleven shillings, nor privately, in his own house, or in the house of another, before strangers; and that two or more shall not take it anywhere under the aforesaid penalty for each offence."

"At a Court held at Newton on the 2nd day of the 9th month, 1637, it was ordered that no person shall be allowed to sell cakes and buns except at funerals and weddings."

1647, April 12. "The Town bargained with Waban, the Indian chief (Eliot's first convert to Christianity), who lived in a large wigwam on Nonantum Hill, to keep six score head of dry cattle on the south side of Charles river, and he is to have the full sum of £8, to be paid as follows: viz., 30s. to James Cutler, and the rest in Indian corn, at 3s., after Michaeltide next. He is to take care of them from the 21st day of this present month, and to keep them until three weeks after Michaelmas; and if any be lost or ill, he is to send word unto the town; and if any be lost through his carelessness, he is to pay, according to the value of the beast, for his defect."

It is said that Waban became an excellent penman, though this record was signed by his mark. Two deeds at least are in existence in which he wrote his name, Waban, with Thomas—the name given him by the English—above it.

1648. Joseph Cooke, Mr. Edward Jackson and Edward Goffe were chosen commissioners, or referees, to end small causes, under forty shillings,—and for many years succeeding.

1649. "It is ordained by the townsmen that all

persons provide that their dogs may do no harm in cornfields or gardens by scraping up the fish, under penalty of three pence for every dog that shall be taken damage feasant, with all other just damages."

A large body of lands at Shawshine (now Billerica) was granted by the General Court to the proprietors of Cambridge, in 1652. Seven Newton men shared in this distribution. Edwin Jackson obtained 400 acres, which he gave, by will, to Harvard University; Thomas Prentice, 150 acres; Samuel Hyde, 80; John Jackson, 50; Jonathan Hyde, 20; John Parker, 20; Vincent Druce, 15. In 1662 267 acres of the common lands in Cambridge Village were divided among ninety proprietors. In 1664 a further distribution was made of remaining lands in Cambridge Village, and 2675½ acres were divided by lot among 133 proprietors. In this distribution Edward Jackson received 30 acres; John Jackson 20, and Thomas Prentice, 9.

In 1668, Elder Wiswall, Edward Jackson and John Jackson were appointed to catechise the children at the new church at the village. This was four years after the settlement of Mr. Eliot as pastor, and the year of his death. In 1660 it was ordered that none shall be freemen (voters) but such as are in full communion with the church of Christ. In 1674 it was ordered "that Cambridge Village should be a distinct military company of themselves, and so to be exercised according to law," and James Trowbridge was appointed lieutenant.

The doctrine of religious toleration was one of slow growth among these sturdy Puritans. The following records stand in striking contrast with the Christian charity and harmony of modern times:

"1678. Forasmuch as it hath too often happened that through differences of opinion in several towns, and on other pretences, there have been attempts by some persons to erect new meeting-houses,—although on pretence of the public worship of God on the Lord's day—yet thereby laying foundations, if not for schism, and seduction to errors and heresies,—for perpetuating divisions and weakening such places where they dwell, in comfortable support of the ministry orderly settled among them,—for prevention thereof, it is ordered that no person whatever, without the consent of the freemen of the town where they live, first orderly had and obtained at a public meeting assembled for that end, etc., and every person or persons transgressing this law, every such house or houses where such persons shall so meet more than three times, with the land whereon such houses stand, and all private ways leading thereto, shall be forfeited to the use of the country, or demolished, as the Court shall order."

"1680. A society of Baptists were censured by the Governor in open Court, and prohibited meeting as a society in the public place they have built, or any other public house, except such as have been allowed by lawful authority." In political matters, however,

intellectual advancement led very early to greater freedom. In 1689 the deputy elected to the General Court from New Cambridge, John Ward, was "instructed to advocate an enlargement of freemen,—that all freeholders that are of an honest conversation and competent estate may have their vote in all civil elections." This John Ward served as deputy, or representative, fifty-four days, and was paid one shilling and six pence per day. He was elected eight years in succession by his fellow-citizens, and, as the first of a long series, did efficient service.

The first person who died in Newton after it was incorporated was Nathaniel Hammond, son of Thomas Hammond, Sr., May 29, 1691, aged forty-eight. The first couple married were Josiah Bush and Hannah ———, December 25, 1691, Christmas day. They were married by James Trowbridge, the first town clerk, and had three children. The first meeting-house stood in the centre of the old cemetery on the east side of Centre Street; it was built in 1660. The second was erected on the opposite side of the street, nearly on the site of the house of the late Gardner Colby. The vote to build it was passed in 1696; the work was begun in the spring of 1697, and finished early in 1698. The site was given to the town by John Spring. In 1717 the first meeting-house was still standing, though for what purpose it was or had been used is unknown. Mr. Ripley says, in his "History of Waltham," that a committee appointed by that town was authorized to purchase the second meeting-house of Newton for a sum not exceeding £80, and that it was so purchased, and taken down and removed to Waltham in October, 1731, and there it remained till 1776. The house in Newton being finished, a vote was passed "that the Building Committee should seat the meeting-house, and that age and gifts (towards the building) should be the rule the Committee should go by." This absurd custom of "seating the meeting-house," or "dignifying the pews," created much ill feeling. It was finally abolished in March, 1800. Before the erection of the first meeting-house, it is conjectured, in the absence of records, that meetings were held in a hall in the house of Edward Jackson. Mr. Jackson's house was near the dividing line between Newton and Brighton, and the meetings were probably held here four or five years.

In 1699 it was voted to build a school-house before the last of November, sixteen feet by fourteen, and the next year "John Staples was hired to keep the town-school at five shillings per day."

The citizens were not forgetful of the claims of charity. In March, 1711, it was voted "that once in the year, upon the Thanksgiving Day that falls in the year, there shall be a contribution for the poor, and that it shall be put into the town treasury, and to be ordered to the poor by the Selectmen, as they see need." The deacons were formally set apart to their office. A price was set on the heads of wolves, black birds, jays and gray-headed woodpeckers. Provision

was made in 1733 for a work-house, or almshouse, and the school-house was set apart, in the recess of the school, as a place of labor for idle and disorderly persons. Sheep and swine, under proper restrictions, were permitted to run at large, the latter being "carefully yoked and ringed." Deer were protected in the town by law; and a commission was appointed with reference to the free passage of fish up and down Charles River. By vote of the town in 1796 the deacons were allowed to "have liberty to sit out of the deacons' seats in the meeting-house, if they choose." As late as 1707 the selectmen were appointed "Assessores, to asses the contrey rates." In 1796 the town voted to have a stove to warm the meeting-house. This was one hundred and thirty-six years after the building of the first meeting-house; and during all that period, the strong and the weak, the old and young had gone to the house of God in company, and sat shivering in winter during the two services of the Sabbath day, forenoon and afternoon, knowing only the comfort of an hour's heat in their "noon houses," in the recess of worship, when the women might also refill their little foot-stoves for the second session.

In 1647 the selectmen of Cambridge, including, at that time, New Cambridge, made a careful estimate of the estates in the town at that date, from which it appears that there were in the whole town 135 ratable persons; 90 houses; 208 cows, valued at £9 each; 131 oxen, valued at £6 each; 229 young cattle; 20 horses, valued at £7 each; 37 sheep, at £1 10s.; 62 swine, at £1; 58 goats, at 8s.

The vote of the town of Newton in 1699 to build a school-house is the first record looking to the education of the children of Newton,—sixty-eight years after the first settlement in Cambridge, or Newtowne; sixty years after the first record of the sale of land in Newton by Samuel Holly to John Jackson, and twenty years after the first town-meeting, when the first selectmen and town officers of Newton were chosen; eleven years after Newton became an independent town. Cambridge, however, had a "a fair grammar school under Master Corlet," in which New Cambridge had a right until its separation was consummated. As the early settlers were well-to-do, very likely they availed themselves of this right for their elder children. And, as they were generally intelligent people, the younger were undoubtedly taught the elements of learning at home.

The act of the town passed in 1717 to prevent the destruction of deer, implied that at this date deer still roamed in the forests of Newton. The late Rev. James Freeman Clarke said that among his recollections of the house of Gen. William Hull, his maternal grandfather (now ex-Gov. Claflin's), was a pair of deer's horns suspended in the hall, belonging to a victim which was shot by the general from his front-door.

The "noon houses," above referred to, where the

people could eat their frugal lunch and warm their freezing limbs on the Sabbath between the services, were three or four in number. One of them was erected very near the church; a second stood on land which is now at the junction of Centre and Lyman Streets, under a great oak tree which formerly stood there. A chimney was built in the middle of the floor, resting on four pillars, so that the largest possible number could sit around the common hearth. The First Baptist Society, one year earlier than their neighbors, in January, 1795, passed a vote "to procure a stove to warm the meeting-house." But it was not till November, 1805, eleven years later, that the Federal Street Church in Boston, Rev. Dr. Channing's, by their committee, "voted that a stove be permitted to be placed in the Federal Street Church without expense to the society, to be erected under the direction of the church committee,—its use to be discontinued at any time when the committee shall direct." Thus Newton showed itself in this provision for the comfort of the worshippers in the house of God eleven years in advance of one of the wealthiest churches in Boston.

The first actual settler in Newton was John Jackson. He "bought of Miles Ives, of Watertown, a dwelling-house and eighteen acres of land, very near the present dividing line between Newton and Brighton, 24 rods on Charles river, and extending southerly 120 rods. The same year Samuel Holly owned a like lot and dwelling-house adjoining Jackson's estate, and Randolph Bush owned a like lot and house adjoining Samuel Holly's estate, and William Redson or Redsyn owned four acres and a dwelling-house adjoining Bush's estate, and William Clements owned six acres and a dwelling-house, adjoining John Jackson's west, and Thomas Mayhew owned a dwelling-house next the spot where Gen. Michael Jackson's house stood. These six dwelling-houses were in the Village in 1639, and perhaps earlier. Samuel Holly died in 1643, and left no descendants in the town. We cannot tell who occupied the houses of Mayhew, Clements, Bush and Redson; they were transient dwellers, and were soon gone. Edward Jackson bought all these houses and the lands appurtenant before 1648, and all except Mayhew's were in what is now Brighton." Twenty-two landholders established their residence in New Cambridge between 1639, the date of the coming of John Jackson, and 1664, the date of the formation of the First Church. Some historians add two or three others, as William Healy, Gregory Cook and a third family bearing the name of Prentice. John Jackson, the first on the list, and one of the first deacons of the church, brought with him from England a good estate, and gave an acre of ground for the first church and cemetery. This acre now constitutes the old part of the cemetery on the east side of Centre Street. He was prominent in the efforts for the incorporation of Newton as an independent town, but died eighteen years before it was

accomplished. A son of his, Edward Jackson, was killed by the Indians at Medfield, when they attacked and burned that town, February 21, 1676. The cellar of his house is still visible at the northeastern part of the town on the Smallwood estate, and the pear trees still standing there are supposed to have been planted by him.

THE FIRST SETTLERS OF NEWTON.—Samuel Holly is supposed to have been in New Cambridge in 1636. In 1643, the year of his death, he sold six acres of his land to Edward Jackson for £5.

Samuel Hyde, the second settler, came from London in 1639, and settled here in 1640. He and his brother Jonathan bought of Thomas Danforth forty acres of land in 1647, and 200 of the executors of Nathaniel Sparhawk, which they held in common until 1662, when it was divided. He was a deacon of the church. His descendants to the seventh generation have continued to own and occupy a part of the same land. He died in 1685, and his wife the same year.

Edward Jackson, brother of John Jackson, was born in London about 1602. His youngest son by his first marriage, Sebas Jackson, according to tradition, was born on the passage to this country. He took the freeman's oath in 1645, and purchased a farm of 500 acres in Cambridge Village of Governor Bradstreet for £140. Bradstreet bought the same farm in 1638 of Thomas Mayhew for six cows. This farm extended westward from what is now the line between Newton and Brighton, and included what is now Newtonville. The house of Michael Jackson, built near the centre of this farm, was probably the first house erected in Newton; it was built before 1638. Edward Jackson's house was built with a spacious hall, where probably the first religious meetings were held. He was representative to the General Court seventeen years in succession, and was constantly present at Rev. John Eliot's meetings with the Indians. In his will he left 400 acres to Harvard University. He divided his land among his children in his life-time. From the inventory of his estate it appears that he owned two slaves, valued at £5 each. Probably he was the first slaveholder in Newton. He had nineteen children, and more than sixty grandchildren. Forty-four of his descendants were in the army of the Revolution.

Joseph Fuller, who settled in New Cambridge in 1644, bought 750 acres next west of Edward Jackson for £160. His farm was bounded north and west by Charles River, south by Thomas Park. By subsequent purchases he increased his lands to 1000 acres, intersected by Cheesecake Brook. He had eight children, and twenty-two of his descendants were in the Revolutionary Army. Edward Jackson and John Fuller had a larger number of descendants than any other of the early settlers.

Jonathan Hyde, brother of Deacon Samuel Hyde, came into New Cambridge in 1647, and bought, in common with Samuel, 240 acres, which they held to-

gether fourteen years. In 1656 he bought eighty acres, which was one-eighth of the tract recovered by Cambridge from Dedham in a lawsuit; and settling upon it, he increased it by later purchases to several hundred acres. He seemed to have had a taste for buying and selling land. His house stood on Centre Street, not far from the residence of Honorable Alden Speare. His home lot ran 160 rods on Centre Street and 100 rods deep, and included the site of the present Congregational and Baptist Churches in Newton Centre. Wiswall's Pond was its southern boundary. He was twice married, and had twenty-three children. Some years before his death he divided 400 acres of his land, with several dwelling-houses standing thereon, among twelve of his children, and in 1705 gave half an acre to the town for a school-house, at the junction of Homer and Grafton Streets. This was six years after the vote of 1699 to build a school-house. The Common in Newton Centre, or a large part of it, is supposed to have been his gift; there is no record of the gift. He deeded to his children, "for a cartway forever," the land which is now the highway known as Grafton Street.

Richard Park owned land in New Cambridge in 1636, and in Lexington, three Cambridge farms in 1642. His house probably stood within a few feet of the site of the present Eliot Church, and was pulled down in 1800. His farm was bounded west by the Fuller farm, north by Charles River, east and south by Edward Jackson, and contained about 600 acres. He bequeathed his land to his only son, Thomas. This son built a corn-mill on the river, where the Bemis factory was afterwards erected (now called Nonantum). His inventory showed that the property standing in his name at the date of his death amounted to £872. The Cambridge Church owned a farm and other property in Billerica, and in 1648 ordained that "every person that from time to time hereafter removed from the church, did thereby resign their interest in the remaining part of the church property." During the contest for the separation of Cambridge Village from Cambridge in 1661, Richard Park petitioned the Court that, in case of a division, he be permitted to retain his connection with the Cambridge Church. Possibly this vote might have influenced him to present such a petition.

Captain Thomas Prentice, born in England in 1621, was in New Cambridge in 1649; for the record shows that in November of that year he became the father of twins, Thomas and Elizabeth. He was a man of military tastes, and chosen lieutenant of cavalry in 1656 and captain in 1662. In 1663 he bought of Elder Frost eighty-five acres of land, in the east part of Newton, adjoining land of John Ward, and occupied the place as his homestead fifty years, conveying it by deed of gift in 1765 to his grandson, Captain Thomas Prentice. His house stood on the site of the old Harbach house, at the corner of Waverly Avenue and Ward Street. He was very prom-

inent in the Indian wars, and distinguished for his bravery. He was hardy and athletic, and continued to ride on horseback till the end. His death was caused by a fall from his horse at the age of eighty-nine. He was Representative to the General Court three years, 1672-74. He had eight children, two of whom died in childhood.

John Ward married a daughter of Edward Jackson. His father came from England after the birth of John, and settled in Sudbury. He was the first representative of Cambridge Village in the General Court, and continued to be a representative for eight years. He was also selectman nine years, from 1679. His house stood on the site of the residence of the late Ephraim Ward, near the Newton reservoir, and was at first constructed for a garrison-house in 1661, and used as such during King Philip's War. It was demolished in 1821, having stood 170 years—the home of seven generations. He had eight sons and five daughters, and died in 1708, aged eighty-two.

Thomas Hammond sold his land in Hingham, where he had been one of the earliest settlers, in 1652, and his house in 1656. In 1650, in connection with Vincent Druce, he bought land in Cambridge Village, and in 1658 600 acres more, partly in Cambridge Village and partly in Brookline, embracing what is now Chestnut Hill. They held this land in common until 1664. When a division was made the pond fell within Hammond's part, and hence bears his name.

John Parker was also one of the earliest settlers of Hingham. He bought land adjoining John Ward and Vincent Druce in 1650. He had five sons and five daughters. After his death his property passed into the hands of Hon. Ebenezer Stone, and afterwards became the John Kingsbury estate. The Parkers of Newton are from two progenitors,—John Parker, of Hingham, and Samuel Parker, of Dedham. Nathaniel Parker, a son of the latter, was born in Dedham in 1670. The third meeting-house in Newton Centre was built on land purchased of him and conveyed to the selectmen of Newton, measuring one and a half acres and twenty rods, and valued at £15. The sale occurred in August, 1716. On this spot of land the First Congregational Church has stood ever since.

Vincent Druce came from Hingham, where his name is found in 1636. The highway from Cambridge to Brookline was laid out through the land of Druce and Hammond. The old Crafts house on the Denny place was built by Druce in the end of the seventeenth or beginning of the eighteenth century, and must be now nearly two hundred years old. John Druce, the third of that name, graduated at Harvard University in 1738, and became a physician in Wrentham. The first John Druce was a member of Captain Prentice's troop of horse. He was mortally wounded in a fight with the Indians at Swanzeny in 1675, and brought home and died in his own house. He was probably the first victim from Cambridge Village who fell in the Indian wars.

James Prentice, Sr., and Thomas Prentice, Jr., bought of Thomas Danforth four hundred acres in March, 1650, in Cambridge Village, and in 1657 one hundred acres more. A part of this purchase is now included in the old cemetery on Centre Street, from which it extended southerly beyond the estate of the late Marshall Rice. The house was taken down in 1800. It stood a few rods southeast of the Joshua Loring house, on the east side of Centre Street.

Thomas Prentice (2d) married Rebecca, daughter of Edward Jackson, Sr. This Edward Jackson gave him, by will, 100 acres of land called Bald Pate Meadow, near Bald Pate Hill, and to his daughter several other parcels of land. Prentice lived to a great age, and conveyed land to his two sons and two grandsons. It is recorded that in 1753 "he held one end of a chain to lay out a highway over Weedy Hill in New Cambridge."

Elder Thomas Wiswall came to this country from England about 1637, and was prominent among the first settlers of Dorchester. He removed to Cambridge Village in 1654, and was ordained "ruling elder" of the church at the same time with the ordination of Rev. John Eliot, Jr., as pastor. His homestead of 300 acres included the pond at Newton Centre, called after him, "Wiswall's Pond," afterwards "Baptist Pond" and "Crystal Lake." His house for many years continued in the Wiswall family. Later, it was occupied by Deacon Luther Paul and his heirs, and removed in 1889 to the west side of Paul Street. He had seven children and more than thirty grandchildren. His son Noah was killed in 1690 in an engagement with French and Indians at Wheeler's Pond, afterwards Lee, N. H. He had also a son Ichabod, who was minister in Duxbury.

John Kenrick in 1658 bought 250 acres in the southerly part of Cambridge Village. Kenrick's Bridge over Charles River is near his house, and perpetuates his name. In his will he left to his pastor, Rev. Nehemiah Hobart, four acres of meadow land or ten pounds, at the option of his son John, who was his executor.

Captain Isaac Williams was the son of Robert Williams, who came from Norwich, England. He was born in Roxbury in 1688 and twice married. He owned 500 acres adjoining John Fuller. Thomas Park, John Fuller and Isaac Williams were the first, and probably for a season the only, settlers in West Newton. He was a weaver by trade, selectman three years, and representative to the General Court six years. His house was about thirty rods northeast of the West Parish meeting-house. He died in 1707, and, being a military man, was honored with a military funeral. He had twelve children and more than fifty grandchildren. The youngest son, Ephraim, was father of Colonel Ephraim Williams, Jr., the founder of Williams College. William, a son of Isaac, graduated at Harvard University in 1683, being one of a class of only three members. Through the thought-

fulness and enterprise of Colonel Ephraim, Jr., the First Church in Newton became the mother of all the foreign missionary efforts of the Christian church of all denominations in the United States. For the first foreign missionary organization in this country originated in the zeal and piety of a few students in Williams College in the year 1808.

Gregory Cook was a constable in Cambridge Village in 1667. He removed afterwards to Mendon and Watertown. In 1668 he bought sixteen acres of Samuel Hyde, bounded on what is now Centre Street, and south on Samuel Hyde. In 1665 he bought the mansion house and six acres, the house being near the Watertown line. In 1672 Jeremiah Dummer, of Boston, conveyed to him 112 acres, with house and barn, lying partly in Cambridge and partly in Watertown, and reaching to Charles River. The house, having stood about 150 years, was pulled down in 1823. He was twice married, the second time three months after the decease of his first wife. He was a shoemaker by trade.

Abraham Williams bought twelve acres, with a house, near Mr. Cook, in 1654. After living in Newton eight years he removed to Marlborough, in 1688. He was colonel of militia, and representative to the General Court. He kept a public-house in Marlborough many years, and died 1712, aged eighty-four.

Deacon James Trowbridge, son of Thomas, was born in Dorchester in 1636. His father was a merchant in the Barbadoes trade, and came from Taunton, England, where his father founded a generous charity for poor widows, which still is in existence. Thomas, the father, went home to England in 1644, leaving his three sons in charge of Thomas Jeffries, who also came from the same vicinity in England. In 1637 or 1638 Jeffries removed to New Haven, and afterwards to England, leaving all his estates and goods in charge of Henry Gibbons, his steward. The sons of Thomas obtained possession of their father's property by a suit at law. The wife of James was one of the constituent members of the First Church in Newton. James also became deacon after the death of John Jackson. He was selectman of Cambridge Village nine years, and one of the first board elected. He bought of Governor Danforth eighty-five acres, with a dwelling-house, bounded by the highways west and south. He was clerk of the writs, lieutenant, and two years representative to the General Court.

Lieutenant John Spring was born in England in 1630, and brought to this country in 1634 by his parents, who settled in Watertown. The son John removed to Cambridge Village about the time of the ordination of Rev. John Eliot, Jr., in 1664. His house stood on the west side of Centre Street, opposite the cemetery. He built the first grist-mill in Newton, on Smelt Brook, afterwards Bulloughs' Mill, on Mill Street, near the centre of the town. It is supposed that he gave the land for the second meet-

ing-house, near his own house. On its removal to Waltham, and the adoption of the present site by the First Church, the town re-conveyed the land to his son John. He died in 1717, aged eighty-seven. He had ten children, of whom the first nine were daughters. He was selectman eight years, and representative three years, and served in various other offices, one of which was sweeper of the meeting-house.

Daniel Bacon removed with his family to Cambridge Village from Bridgewater about 1699, and bought land in Newton and Watertown, portions of which were afterwards conveyed to General William Hull, Oakes Angier and others. The Nonantum House at Newton stands on one of these estates. From Oakes Angier this part of the town was at one period called Angier's Corner.

Captain John Sherman was an early settler of Newton, coming from Watertown. His grandson, William, a shoemaker, was the father of Roger Sherman, one of the signers of the Declaration of Independence, who was born here, and was also, like his father, a shoemaker. The family residence, where Roger Sherman was born, was on Waverly Avenue, near the estate formerly of Dr. James Freeman, and later of Francis Skinner, Esq.

Rev. John Eliot, Jr., worthy to close these sketches of the early settlers of Cambridge Village, was the son of Rev. John Eliot, the Apostle to the Indians of Nonantum, and ordained first pastor of the First Church in Newton, July 20, 1664. He was born in Roxbury, where his father was pastor, in 1636, graduated at Harvard University in 1656, and began to preach in 1658, in his twenty-second year. He acquired proficiency in the Indian language, and aided his father in his missionary work until his ordination, and afterwards preached once in two weeks to the Indians of Stoughton, and occasionally to the Indians in Natick, whither the Nonantum Indians subsequently removed, and where the first Indian Church was organized; for the converts were never gathered into church estate in Newton. He died at the early age of thirty-three, four years and three months after his ordination. He is said to have been "an accomplished person, of a ruddy complexion, comely proportions, cheerful countenance, and quick apprehension, a good classical scholar, and having considerable scientific knowledge for one of his age and period." He lived on the west side of Centre Street, about sixty rods north of the old cemetery. The estate was sold, after the death of his son John, to Henry Gibbs, and by Gibbs to Rev. John Cotton, Eliot's successor as pastor, and by heirs of John Cotton to Charles Pelham, in 1765.

"The number of freemen within the limits of Cambridge Village in 1688—the date of its complete separation from Cambridge—was about sixty-five. In forty years—from 1699 to 1679—forty-two freemen became permanent settlers, some from England, others from the neighboring towns. During the same period

thirty of their sons had reached their majority, making in all seventy-two. But five had died and two had removed, leaving the sum total sixty-five. There were six dwelling-houses in Cambridge Village in 1639, all being situated near the present dividing line between Newton and Brighton (Boston), and all on farms adjoining one another.

The early inhabitants of Newton, as of New England generally, had little idea of the future growth of the sapling which they had planted. A committee appointed to lay out a road westward from Boston, having fulfilled their task, reported to the body which appointed them, that they had laid out a road twelve miles, as far as Weston, and in their opinion that was as far westward as a road would ever be needed.

THE INDIANS.—The relations of the settlers of Newton and the Indian population among them, or on their borders, were never otherwise than friendly. Besides the original bargain with the Squaw-sachem, the labors of Mr. Eliot for their religious improvement had a happy influence in winning their goodwill. Nevertheless the brave men of Newton sympathized with the persecuted colonists in other towns, and readily took up arms in their defence. In King Philip's War, which broke out in 1675, Captain Thomas Prentice was a distinguished figure. On the 26th of June in that year he marched for Mount Hope, with Captain Henchman, of Boston, and a company which included twenty men from Cambridge Village and twenty-one from Dedham. In the first engagement with the foe, William Hammond, of Newton, was killed, and a few days later John Druce was fatally wounded. In December following, with five companies of infantry and his troop of horse, he marched to Narragansett, and performed remarkable exploits in destroying or scattering the enemy and protecting the white settlers. In April, 1676, he rushed to the aid of the colonists and of the troops at Sudbury, whom the Indians had overpowered, reaching the town in his headlong haste with only six of his company, and after a brave conflict the Indians were put to flight. Four men of Cambridge Village—Hanchett, Woods, Hides and Bush,—also served in the war against Philip; so also did Edward Jackson. When the Indians in 1690 committed depredations upon the white settlements in New Hampshire and Maine, Newton soldiers volunteered at once for their defence. Captain Noah Wiswall, Gershom Flag and Edward Walker defended Portland. Two sons of Henry Seger were among the military forces at Groton, of whom one was killed and the other taken prisoner. A son of Nathaniel Healey also perished, and on petition of his father to be remunerated for the gun which was lost by the young hero, the General Court ordered that twenty shillings should be paid him out of the public treasury for the lost gun. John Gibson was slain by the Indians at Portland in 1711. Ephraim Davenport, another of Newton's citizens, was stationed some time at Bethel, Maine, to protect

the inhabitants, and afterwards received a pension. Benjamin Clark, son of Norman Clark, was taken prisoner with Nathaniel Seger. Ebenezer Bartlett, of Newton, had six sons, all of whom went to the defence of Bethel. In the war with the French and Indians, in 1755, several citizens of Newton took part, prominent among whom were Samuel Jenks, Lieutenant Timothy Jackson, whose wife carried on the farm while her husband was gone to the war; Colonel Ephraim Jackson and Colonel Ephraim Williams, the founder of Williams College, who was shot through the head in a battle with the French and Indians near Lake George, in September, 1755.

ELIOT AND THE NONANTUM INDIANS.—One of the most interesting portions of the history of Newton is that which relates to the labors of Rev. John Eliot, in behalf of the Nonantum Indians. The interest arises from the fact that this was the first Protestant missionary undertaking on the continent of America; the first converts from heathenism in modern times were among the aborigines of Newton, and the first translation of the Bible into a heathen language was here consummated. And thus the town of Newton, by a double right, has gained the honor of being the mother of all the Protestant missionary efforts from America in modern times—first, through the labors of Mr. Eliot, and secondly through the founding, by one of her sons, of Williams College. The Indians of Newton congregated on the slope of Nonantum Hill, where the ground descends to the village of Newton and the limits of Brighton. Here Waban, their chief, had his house, and here Eliot preached his first sermon to the Indians, October 28, 1646, near the spot where a monument has been begun to his memory. Mr. Eliot was born at Naseby, England, in 1604, and died in Roxbury, where his remains rest, in the cemetery at the corner of Eustis and Washington Streets, May 20, 1690. When he began his labors for the Indians he was forty-two years of age, his age, by a singular coincidence, being the same as the age of Waban. The companions of Mr. Eliot at this first service for the Indians were Major Gookin, Rev. John Wilson, of Boston, Elder Heath, of Roxbury, and Rev. Thomas Shepard, of Cambridge. The Indians, by intercourse with the white people, had gained some ideas of their religion, and were anxious to know more. The service was opened by prayer in English. Mr. Eliot's text was Ezek. 37: 9—"Prophesy unto the wind," &c. The Indian word for *wind* was *Waban*, which, doubtless, prompted Mr. Eliot to choose this text; and it must have been most impressive to the Indian chief to find that his own name was thus distinctly recognized in Holy Writ, and a Divine message thus sent, as it were, personally to him. The discourse lasted an hour and a quarter, and the whole service three hours.

After the sermon the Indians affirmed that they had understood all, and, when liberty was given them to ask questions, they proposed these six: 1. How

they could learn to know Jesus Christ? 2. Did God understand Indian prayers? 3. Were the English ever so ignorant as the Indians at that time? 4. What is the image of God, which it is forbidden in the second commandment to worship? 5. If all the world had once been drowned, how was it now so full of people? 6. If a father be bad and the child good, will God be offended with the child for the father's sake? Being asked at the close if they were weary, an Indian replied, "No," and "they wished to hear more." A few apples were given to the children, some tobacco to the men, and another meeting appointed a fortnight later. At the second meeting more Indians were present, and deep interest manifested.

The next day one of the Indians visited Mr. Eliot, at his house in Roxbury, and reported how all night at Waban's the Indians could not sleep, partly from trouble of mind and partly from wonder at all the things they had heard.

A work of grace, similar to modern revivals of religion, followed the services. Many of the English people came together from neighboring towns to witness the marvelous effects of the Gospel. Many Indians from Concord and other towns removed to Nonantum, that they might be more fully instructed in the truths of religion. Soon after the third meeting three men and four children begged Mr. Eliot to establish Christian schools among their people. No suitable arrangement could be made, and they were sent back to their native forests. But it is an interesting fact that the first call for a mission school came from the heathen themselves.

An effort was made at Nonantum to bind the people together under a civil government. Many English customs were adopted by the Indians. Their clothing became more seemly, and they gave themselves more to the cultivation of the soil as their dependence for the means of subsistence. There were doubtless many true converts among them, but never an Indian church in Newton. It was after their removal to Natick that a church was first formed, and the institutions of religion and a civilized life first took root.

The success of missionary effort among the Indians created a strong sensation in England. The British Parliament passed an act, July 27, 1649, ordering a collection to be taken up in all the churches of England for the advancement of the work. The Society for the Promotion of Christian Knowledge was formed in 1698, and the Society for the Propagation of the Gospel among the Indians and Others in North America in 1701, and the Scottish Society for the Propagation of Christian Knowledge in 1709—all of which grew out of Mr. Eliot's efforts in behalf of the Indians. "Most of the Indians," says Mr. Shepard, "set up family prayer and grace before meat, and seemed in earnest in their devotions."

The new Indian town in Natick, to which they removed, was commenced in 1651, with a day of fast-

ing and prayer, and the preparations for forming the church by another day of prayer and confession, October 13, 1652. Under the superintendence of Mr. Eliot the Indians built a foot-bridge in Natick, across Charles River, securing to them communication with other Indians as far south as Pegan Hill, in Dover, near which many traces of dwellings remain, and many traces of their civilization have survived in the rose-bushes and fruits growing around their homes. A fire-proof building, for a free library, now stands in South Natick, on the site of this central point of Indian civilization and church life. A single headstone remains here, the memorial of the Indian pastor, Daniel Takawambait, who died September 17, 1716. In 1670 there were two teachers and between 40 and 50 communicants. In 1763 there were only 37 Indians; in 1797 not more than 20; and in 1843 but a single individual known to be living in whose veins flowed Indian blood.

In 1687 Cotton Mather wrote, "There are six regular churches of baptized Indians in New England and 18 assemblies of catechumens, professing the name of Christ. Of the Indians there are twenty-four preachers of the word. There are also four English preachers who preach the gospel in the Indian tongue." In the year 1671 Mr. Eliot recognized missionary stations in places now known as Natick, Stoughton, Grafton (between Natick and Grafton), Marlboro', Littleton, Tewksbury and Pawtucket Falls, near Lowell. Several of them had regular worship and a native preacher. At Natick the meetings were assembled by beat of drum.

Mr. Eliot's evangelistic efforts bore fruit on the other side of the globe. Dr. Leusden wrote to Cotton Mather that the example of New England had awakened the Dutch to attempt the evangelization of the heathen in Ceylon and their other Indian possessions, and that multitudes there had been converted to Christianity. This is another star in Newton's crown.

The most remarkable service performed by Mr. Eliot for the Indians was the translation of the whole Bible into their tongue. To prepare himself for this work, as well as for preaching to the people, he took into his family an Indian who could speak both languages. Mr. Eliot's early training fitted him specially for the work. He was proficient in linguistic studies, as well as in Hebrew and Greek. He is said to have written out the entire translation with one pen. The New Testament was printed at Cambridge in 1661, and the whole Bible, with the Psalms in metre, in 1663. It was the first Bible printed in America. A thousand dollars in gold has been refused, of late, for a copy. An Indian who had been taught the art of printing was employed in the work. A second edition was printed in 1685. There were 2000 copies of each edition.

During Philip's War the Indian converts manifested unshaken fidelity to the English, and often served as guides and otherwise. The English, how-

ever, were so sensitive, and so suspicious of every red man, that the General Court, on the breaking out of the war, ordered them to be removed, 200 in number, to Deer Island, in Boston harbor.

It is not difficult to trace the way in which the territory of Newton was distributed among its early inhabitants. A map drawn in 1700 marks the boundaries of the first settlers. Charles River at first bounded three sides of Newton, except the small portion denominated the "Watertown weirs," and determined mainly the location of its several villages. Wherever the falls or the river indicated a water-power, and the possibility of a profitable manufactory, there a village sprang into existence. Such was the origin of Newton, long called Angier's Corner and Newton Corner, being at the northeast corner of the town, and adjacent to the Watertown fisheries, Newton Upper and Lower Falls, and Bemis' Factories, since called North Newton and Nonantum. In later times, the stations of the Boston and Albany Railroad, and the New York and New England, now all included in the Newton Circuit Railroad, determined the villages of Newtonville, West Newton, Auburn-dale and Riverside, and Chestnut Hill, Newton Centre, Highlands, and the younger stations, Waban, Eliot and Woodland. The cession of a small territory to Waltham sacrificed a part of this water limit. The first settlers of Newton were in the northeast corner of the town, John and Edward Jackson, Holly, Bush and Radson, reached to the river. William Clement name next to Edward Jackson, and the latter owned all the remainder to Centre Street. Crossing Centre Street, westwardly, came Gregory Cook; next him the large estate of 600 acres of Richard Park; then John Fuller, extending west, to the river. South of Fuller was Capt. Isaac Williams. South of Gregory Cook, on the west side of Centre Street, was the great farm of Thomas Mayhew, of 500 acres, sold to Gov. Bradstreet in 1638, and by the latter, in 1646, to Edward Jackson, including much of Newtonville. Returning to Centre Street, on the east side were some smaller estates, and south of them Deacon Samuel Hyde, on both sides of the street, still bearing his name. South of this, on the west side, Rev. John Eliot, Jr., afterwards Rev. John Cotton, John Spring, and then the large holdings of Jonathan Hyde, reaching to the Baptist Pond. South of Samuel Hyde, on the east side of Centre Street, were Col. Ward, Robert Prentice and Henry Gibbs (the Rice estate), and a little farther south, Wiswall, John Clark and the great estate of Governor Haynes. East of Gibbs was Joseph Bartlett, and east of Bartlett, Thomas Hammond, including Hammond's Pond and reaching nearly to the limit of Newton in that direction. John Parker and Ebenezer Stone were west and southwest of Thomas Hammond. Thomas Prentice was on Waverly Avenue, and south of him the Wards and Clark. The larger farms soon began to be divided among many proprietors. John and Elijah Kenrick

settled near the river at the south part of the town, and John Kenrick on Waverly Avenue. As the northeast corner of Newton was the first to be settled, the southeast, in later times, seems nearly the last. Vincent Druce was there at first, whose name was spelled six different ways. Could Erosamon Drew, whose saw-mill hummed there on a little brook, be a kinsman of Druce, under this kindred name? This large tract of land, lying, till lately, in a nearly wild state, was in early times in the hands of Tories, who, it is said, hid in the thick woods some of King George's cannon, intending to use them, when circumstances should favor, in behalf of the Royal cause. The Tories, however, were forced to flee to the British Provinces, and their property was confiscated and sold, and divided among many proprietors. Erosamon Drew's house was called "the Huckleberry Tavern," because the tenant then occupying it was remarkably successful in making a kind of wine from the huckleberries of the neighboring pastures, which the scattered residents of the neighboring portions of Newton and Brookline were fond of quaffing when they visited the locality on election days and other festive occasions.

In West Newton beyond the meeting-house was Miller, Bartlett, the Segers and John Barbour, who set out the great elm-tree by "the Tavern House," and, in the progress of years and in the transitional period from the old to the new, was Seth Davis, who first taught geography and astronomy in his private academy, and was blamed for it, and who set out most of the trees on the older public streets of West Newton; the Greenoughs, Stones and Fullers, and Samuel Hastings, with his tan-yard near the meeting-house. In what is now Auburndale, the estate of John Pigeon, the sturdy patriot whose donation of two field-pieces to the town sounded the alarm of the Revolutionary War; Thomas Greenwood, Alexander Shepard, Daniel Jackson and William Robinson; on the road to the Lower Falls, the Murdock and Dix estates; still farther south, John Staples, the first school-master, also deacon and town clerk, who gave to the town "seventeen acres of woodland for the support of the ministerial fire from year to year annually;" the Collins families. At the Lower Falls we find the names of Jonathan Willard, the iron-worker, Wales, Curtis, Crehore, Hagar and Rice, the latter extensive paper manufacturers,—one of them, Thomas, selectman eighteen years, representative three years, twice elected to the Senate and two years member of the Executive Council, at whose mill the paper was manufactured for the *Boston Daily Transcript* forty years, and who, in the days of the War of the Rebellion, was to Newton what John A. Andrew, the war Governor, was to Massachusetts; and his younger brother, Alexander K., mayor of Boston in 1856-57, and Governor of Massachusetts in 1875-76, and member of Congress eight years. Still farther south and southeast were the estates of Cap-

tains Clark, Hyde and Woodward, in whose house, still standing, family worship has been maintained for nine generations; at the Upper Falls, Cheney, Gibbs, Bixby, Elliott and Pettee, a man of infinite ingenuity and perseverance, whose machine-shops and factories built up the village, and who, more than any other, secured the building of the first railroad from Needham, through Newton Centre to Boston; on the southern extension of Centre Street, Mitchell's tavern, the Winchesters; at Oak Hill, the Richards, Stones, Wiswalls, Deacon King, Hall, Richards, Wilson, Rand, Kingsbury and Goody Mary Davis, the widow, who died aged 116 years, and cultivated her garden with her own hands in her old age, and whose portrait hangs on the walls of the Massachusetts Historical Society in Boston.

HISTORICAL ITEMS.—In the early periods of New England history the parish and the town were co-extensive. The laws of Massachusetts did not recognize the church as distinguished from the parish; hence parish business was town business and ecclesiastical legislation was only town legislation. The town called and settled the minister, and provided for his support. The town also paid the funeral expenses of the pastors when they were dead. When Mr. Meriam, the fourth pastor, died, in August, 1780, the town appointed a committee to make provision for the funeral. Colonel Benjamin Hammond lent £195 towards these expenses, "which included £60 to Deacon Bowles, for making a coffin," and £31 paid to Joshua Murdoch "for half barrel of beer and half a cord of wood for the funeral." The town also regulated the exercises of worship. About 1770 a petition was offered for a committee "to consider respecting the introduction of the version of the Psalms by Tate and Brady, with the Hymns annexed." The report was favorable, and adopted. About the same time it was voted in town-meeting "that trees be set out to shade the meeting-house, if any persons will be so generously-minded as to do it."

The first five ministers of the town were called and settled under this system. The first church was properly a colony of the First Church in Cambridge. The records of the church were burned with the house of Mr. Meriam, the fourth pastor, March 18, 1770. King Philip's War broke out soon after the settlement of the second pastor, Mr. Hobart. Had the Nonantum Indians remained unchristianized and uncivilized, and joined with the other Indian tribes to exterminate the English settlers, humanly speaking the latter would have been forced to leave the country. But, remaining faithful to their friends, they saved the situation, and New England was preserved from destruction, almost in its inception, through the influence of Christian missions to the heathen.

In 1779 six new pews were built in the First Parish meeting-house, slips or long benches being removed to make room for them. These pews were leased at auction annually at the March meeting, "the rent to be

paid in Indian corn, not less than half a peck to be accepted as a bid, and delivered to the Treasurer." The first year twenty-two bushels were received, and at the next annual meeting "sold in lots to suit purchasers." After eight years the custom was discontinued, and pew rents were ever afterwards paid in money.

Near the ancient meeting-house were erected the stocks, for the punishment of those who misbehaved at church or in town-meeting. We do not know precisely where they stood, or at what date they were erected. But in the Town Records of 1773 it is stated that "a committee was chosen to examine the church stocks." The office of constable of Newton, we may infer, was not eagerly sought after. One part of his duty was to collect the annual taxes. In 1728 Mr. Joseph Jackson was elected constable, but declined the office, and "did immediately pay his fine, as the law requires." The amount was £5. The pay of the Representative to the General Court in 1729 was £45 6s. A new pound for the confinement of stray cattle was built of stone near the site of the Unitarian Church, Newton Centre in 1755, where it remained about 110 years. Cypress Street, on which it stood, was hence called Pound Lane until a recent period. In 1755 it was voted to provide a cotton velvet pall for use at funerals, and in 1763 to "let the velvet pall to other towns," when not in use in Newton, "the persons hiring it to pay half a dollar every time it is hired." In 1799 it was voted to buy two hearses for the use of the town, when the money could be spared out of the treasury. Also in 1760, "that persons working out their highway taxes on the road should be paid three pence per hour, and each team that is able to carry a ton weight, the same sum."

NEWTON UPPER FALLS.—The beginning of Newton Upper Falls was a saw-mill erected by John Clark about 1688, on Charles River, where the water falls twenty feet perpendicularly, and then descends about thirty-five feet in half a mile. There was an eel-weir above the falls which John Clark bought of the Indians, together with all the water power, for £3 lawful money. The river was called by the Indians Quinobeguin, and the Indian who signed the deed of conveyance of the water privilege was William Nehoiden or Nabaton. The eel-weir was a dam built by the Indians near the upper bridge, and the yard of the present cotton-mill. Its foundation stones can still be seen in the bed of the river. General Elliott erected snuff-mills at that point later, on the Newton shore. In 1720 this busy spot included a saw-mill, fulling-mill, grist-mill and eel-weir, and Noah Parker became the sole owner. The property afterwards fell to Thomas Parker, and was sold later on to Simon Elliott, a tobacconist from Boston, a man of much enterprise. In the first decade of the nineteenth century he was the owner of one of the only three "family carriages" in Newton.

The first dwelling-house in the village of the

Upper Falls was erected about 1800 and still stands. Some of the timber used in building the cotton factory on the Needham side was taken from a prize at sea, during the War of 1812, and carried into Boston and sold at auction. About 1829 a hotel was built at the Falls, and kept as a house of entertainment twenty years. It became afterwards a private dwelling. A stage-coach for Boston, until near 1850, left Newton Upper Falls every morning at 9 o'clock, going through Newton Centre and Brighton, and left Boston on its return at 3 P.M.; fare, fifty cents. It was through the energy of a Mr. Whiting, of Dover, Massachusetts, who for ten years courted fortune in the gold-mines of Mexico, that cotton manufacturing was first introduced into Tepic, a city near the western coast of that republic. The cotton machinery was built by Mr. Pettie at the Upper Falls, and sent to Mexico in 1837, in charge of workmen employed for three years to go thither and set up the machinery and instruct the native workmen, till they could manage the business themselves. Other factories followed, and were established with satisfactory results in Durango, Tunai, Colima, Santiago, Curaçoa, Mazatlan and other places.

The Worcester Turnpike (Boylston Street) was chartered March 7, 1806, and the road constructed through Newton in 1808. Of the 600 shares of stock, valued at \$250 each, sixteen were held by citizens of Newton. The road paid but few dividends, and finally the stockholders lost their entire capital. In 1833 the county commissioners laid out the portion in Newton as a public highway, and in 1841 the proprietors surrendered their charter.

The village of Newton Upper Falls lies outside of the Newton Circuit Railroad, on the line of the Woonsocket Branch of the New York and New England Railroad. It has the appearance of an old village, built more for utility than beauty, although the natural scenery is not equaled by that of any part of Newton. The river Charles here cuts its way between the hills, and in some places, as in the rear of the Baptist meeting-house, the landscape has striking charms. The first owner, Nahaton, a sagamore of the Punkapoag tribe, sold a part of it to John Mangus for a gun. It was bought of him by the English colonists. In 1700 the rest of it was sold to Robert Cooke, of Dorchester, for £12.

The large "stone barn," so-called, on Oak St., a conspicuous feature of the Upper Falls, was built by Mr. Otis Pettie, Sr., in the period of the silk excitement in Eastern Massachusetts, when Mr. John Kenrick, nurseryman, living on Waverly Street, had for sale many thousands of *Morus Mottocandis* trees, deeming that the raising of silk-worms and the manufacture of silk was likely to become an important industry of Newton. It was generally conjectured among the villagers that the "stone barn" was designed for a nursery of silk worms and a depot for the manufacture of silk. But Mr. Pettie would never reveal to

any one his purpose in rearing the structure. It stood unused for years, and then part of it was utilized for a common stable. It is a singular fact that, after more than half a century, the silk manufacture is actually established at last as a feature of the industry of Newton Upper Falls. The weather-beaten brick mills, once a cotton factory, employ 130 operatives, engaged in spinning silks, silk yarns, filosselles, embroidery-silk and other goods of like character, the raw material in the original packages being brought from France, Italy, China and Japan.

In 1639 certain parties in Dedham dug a canal designed to divert the waters of Charles River into East Brook, a tributary of the Neponset, and actually secured to themselves one-third of the water of the Charles. In 1777 a petition to the Governor and Council, and another in 1807, by General Elliott, invoking the aid of the town of Newton in behalf of its own citizens, saved the remainder of the water to its rightful proprietors. The settlement caused much litigation.

It is said that salmon, shad and alewives used to find their way, before dams were built, as far as this point.

At the northeast corner of Boylston and Chestnut Streets, Upper Falls, is a large, wooden house, which, from 1808 to 1850, bore the name of the "Manufacturers' Hotel," a place of considerable business, where merchants from Boston and the manufacturers of the village held frequent sessions to discuss their mutual interests.

THE LOWER FALLS ON CHARLES RIVER are two miles below the Upper Falls. In 1703 John Leverett, of Boston, conveyed to John Hubbard, also of Boston, four acres of land at the Lower Falls, bounded on one side by a forty-acre lot, then belonging to Harvard University. This land has since been the site of all the mills on the Newton side of the river. In 1705 John Hubbard conveyed to his son, Nathaniel, one-half of this lot, with half the iron works thereon, and half the dam, flume, stream and running-gear belonging to the forge. Jonathan Willard erected here, in 1704, iron works, forge and trip-hammer, which was the beginning of business at the Lower Falls. In 1722 Mr. Willard became sole owner of the entire plant, and was the principal man of the iron works and of the village for nearly half a century. He was the first Baptist Church in Boston; and for many years he and his daughter were the only professors of that faith. Many kinds of business requiring water-power have been carried on here, as iron works, saw, grist, snuff, leather and paper-mills, calico-printing, machine-shops, etc. But for the last half-century the manufacture of paper has been the leading industry. Eight or ten paper-mills, in constant operation, have supplied the traders and newspaper presses of Boston and other cities and towns. The names of ex-Gov-

ernor Rice and Hon. Thomas Rice, an influential and patriotic citizen, are prominent in this manufacture. The first paper-mill was erected by Mr. John Ware, son of Professor Ware, Sr., of Harvard College, in 1790, and father of Mrs. Ebenezer Starr, whose husband was the physician of the Lower Falls. The business was afterward enlarged under the management of the Curises, Crehore's and Rices. The work was at first done by hand; but after the invention of the Fourdrinier press, in England, the capacity of manufacture was greatly enhanced. The first machine of this kind in use in the United States was placed in a mill at the Lower Falls.

In 1800 there were only thirteen houses in the village. The only post-office in Newton, previous to 1820, was at the Lower Falls. A stage-coach ran from the Lower Falls to Boston three times a week. The old Cataract Engine Company, at the Lower Falls, is the oldest fire organization in Newton. Their first tub was of wood, afterwards replaced by copper. Stringent rules were adopted to prevent the members from using spirituous liquors to an immoderate extent. The members paid an admission fee of \$5.00. The organization lasted from 1813 to 1846.

Paper-making has been carried on here for much more than a century. The Crehore Mill, still in operation, as well as others, has proved a benefit to the whole country. Silk and hosiery manufactories and machine-shops have also been among the industries of the village. Mr. Isaac Hagar, of the Lower Falls, was a member of the School Committee thirty years.

WEST NEWTON.—Early in the present century West Newton became a kind of centre of several lines of stage-coaches; at one period as many as thirty made it a regular stopping-place daily. The private academy of Master Seth Davis, and his public spirit, enterprise and taste, probably did more than anything else in the first quarter of this century to bring the village into prominence. The fixing of a station of the Boston and Albany Railroad here was among the important elements of its prosperity in modern times. The Normal School removed hither from Lexington, and the presence of those rare educators, Rev. Cyrus Pierce and Mr. Eben Stearns, the head masters of it, and the influence of Horace Mann, the first secretary of the Massachusetts Board of Education, who lived in his estate on Chestnut Street while he held that office, and the academy of the Alens afterwards, and the educating influences of the town-meetings held there, at one period, alternating with sessions at Newton Centre, completed the circle of elements which gave the village fame and distinction. As early as 1661 Thomas Parker, John Fuller and Isaac Williams were probably the only settlers in this part of Newton. The house of Isaac Williams stood about thirty rods northeast of the site of the present meeting-house. The old Shepard house was near by, and, not far away, Peter Durell. The names of Fuller, Park, Craft, Jackson and Captain Isaac

and Col. Ephraim Williams were among the most prominent. The Robinson farm, of 200 acres, covered what is now Auburndale, reaching to the river. Here also was the Bourne house, Nathaniel Whittemore's tavern, in 1724, and John Pigeon, that sterling patriot of the Revolution. Capt. Isaac Williams was the ancestor of all of that name whom Newton delights to honor, who shone in the pulpit and the field, as scholars, statesmen and soldiers. Here also lived, till 1739, Col. Ephraim Williams, whose will, establishing Williams College, has perpetuated his name and fame. Two or three roads were laid out through the Williams land, which are still among the most important highways of the town. Dr. Samuel Wheat, the village physician, in and after 1733, bought fifty-five acres of this farm. In 1767, a hundred and three years after the formation of the First Church in Newton, Jonathan Williams and others petitioned the town that money might be granted from the town treasury to support preaching in the meeting-house in the west part of the town in winter. The petition was not granted; but in 1778, eleven years later, by order of the General Court, in October, a line was drawn establishing and defining the West Parish. This implies that the people had already quietly built a church for their accommodation, in faith that their reasonable request would at some future time be granted. The action of the Court gave the inhabitants liberty to elect to which parish they would belong. For the erection of this new parish was not without opposition. The parish covered a wide territory, and numbered not more than thirty-five or forty families, and from fifty to sixty dwellings. The first church built here, of very modest dimensions, and afterwards enlarged, was, after a time, removed, and became first the Town Hall, and when Newton grew into a city, was again variously enlarged and improved, and is now the City Hall. The three elm-trees in front of what was the Greenough estate were planted by fond parishioners. John Barbour kept the hotel and set out the great elm before it. The salary of Parson Greenough, the first minister in West Newton, was £80 and fifteen cords of wood annually. All the ministers of his day on public occasions wore powdered wigs. Rev. Mr. Greenough held on to the last to small clothes, knee-buckles and shoe-buckles, and to the cocked hat, until the boys followed him when he walked in the streets of Boston.

As the settlement of Newton (Newton Corner) was the beginning of Cambridge Village (Newton), its growth in population and wealth has wonderfully extended. The earliest station of the Boston and Albany Railroad at this point, and until 1845-50, was a small room partitioned off from the westerly end of a harness-maker's shop. The village naturally extended southerly towards Newton Centre, where the meeting-house has stood since 1721, and onwards toward Newton Highlands and Oak Hill, and later in

every other direction. Farlow Park was the generous gift of a citizen, Mr. J. P. Farlow, given on condition that the ground should be graded and adorned by the city authorities. The first important streets in Cambridge Village were made in this part of Newton, — the road from Brighton westward (Washington Street) and the Dedham Road (Centre Street). Nonantum Hill, overlooking the village, was the home of Waban, and here, among the wigwams, near the Eliot monument, the apostle to the Indians first preached to them the Gospel. Farther south, on Waverly Avenue, was the home of Mr. John Kenrick, Jr., the first to embark in the nursery business in the vicinity of Boston, and the Hydes, in the same business on Centre Street, both descendants of the first settlers. Mr. Kenrick was a man of substance, the first president of the first Anti-Slavery Society in the United States, and a liberal contributor to its funds; also, an efficient helper of the temperance reformation, and a friend of the poor and unfortunate in his native town. He left a fund, still existing, to be loaned to enterprising young mechanics just starting in business. In his vicinity lived Dr. James Freeman, grandfather of Dr. James Freeman Clarke. He was once pastor of King's Chapel, Boston, and under his lead that ancient church passed from the Episcopal faith to the Unitarian. Indian Lane (Sargent Street) was probably a path often trodden by the aborigines, and hence its name. Cotton Street, on the south side of the first cemetery, was one of the great streets of the town, accommodating all who came from "the east part," either to church on the Sabbath or to Lieut. John Spring's mill, on Mill Street.

NEWTONVILLE was chiefly known, in early times, as the Fuller farm, the residence of Judge Fuller (whose house occupied the same site now owned by ex-Governor Claflin), and afterwards of his son-in-law, Gen. William Hull. This land was part of the farm purchased in 1638 of Thomas Mayhew, by Governor Simon Bradstreet. Newtonville in 1842 was only a flag-station of the Boston and Albany Railroad. A storehouse for the Miller Bullough's grain stood near the track on Walnut Street, and an occasional traveler, wishing the cars to stop for him, was obliged to raise the flag. The establishment of the mixed high school here, and, later, the high school for the whole town, have given it importance.

NEWTON HIGHLANDS was chiefly known as the site of Mitchell's Tavern, kept in later times by Nancy Thornton, at the corner of Centre and Boylston Streets, and Bacon's Tavern, afterwards the estate of Dea. Asa Cook, wheelwright and undertaker, at the junction of Boylston and Elliott Streets. These two hotels caught the patronage of an extensive travel before the days of railroading, and were also the scene of convivial gatherings. A stone shop, for the blacksmith's craft, at the corner of Woodward Street, completed the conveniences of village life.

The railroad depot, of pink granite, was built by the Boston and Albany Railroad Corporation in 1886. The station has been fated to wear various names. The first was Oak Hill, though there was never a more level plain, and the heights of Oak Hill were far to the southeast; then it became Newton Dale and finally Newton Highlands; but the high land is a considerable distance away, to the southeast, southwest and west. In this vicinity reside the twin brothers Cobb, Darius and Cyrus, artists; they were born in Malden, where their father, Rev. Sylvanus Cobb, was settled as a Universalist minister, and first saw the light of this world in the same house and the same chamber with the celebrated missionary to Burmah, the Rev. Adoniram Judson.

AUBURNDALE anciently was best known as the home of the fervent patriot of the Revolution, John Pigeon. His house afterwards became, for several years, the Newton Almshouse. In 1800, within the present limits of Auburndale, extending to the Weston Bridge, there were only seven houses. The old Whittemore tavern stood near the bridge, at Woodland Avenue, and was known as a house of entertainment in 1724. The starting of the village is due to a casual conversation in Newton Centre between Rev. Messrs. Gilbert, of West Newton, and Rev. Chas. du Marisque Pigeon, a scion of the John Pigeon household, in reference to Hull's Crossing, as the possible site of a future village, and a good place for the profitable investment of funds. Lasell Seminary has been one of the chief elements of its prosperity. The Rev. Mr. Pigeon and Rev. Messrs. Woodbridge and Partridge, his neighbors, in this so-called "Saints' Rest," after protracted consultation, agreed, in memory of the line,

"Sweet Auburn, loveliest village of the plain,"

on the name Auburndale, which it has ever since enjoyed.

The three new stations on the Newton Circuit Railroad, lying between Newton Highlands and Riverside, are just becoming the nucleus of new villages in Newton.

ELIOT, near Elliott Street, and near the old toll-house, still standing, on the former Worcester Turnpike, seems, from its spelling, to be designed as a memorial of Rev. John Eliot, the apostle to the Indians. Very near it is the house of the renowned General Cheney, and the home of the Ellis family, the birthplace of two distinguished Unitarian clergymen of Boston, Rev. Messrs. George E. and Rufus Ellis. The plain north of Eliot is said by geologists to have once been an extensive lake, whose dark ooze is turned up twenty or thirty feet below the surface. Singular hollows exist, of funnel shape, at various points, at the bottom of which large trees are growing.

CHESTNUT HILL, now a lovely and cultivated swell of land, adorned with tasteful dwellings and evergreen shrubbery, was for many years a dry and breezy expanse of pasture. On Beacon Street, on the northern

side of the hill, still stands the old Hammond house, built in 1730, an ancient unpainted structure with its rear facing the street, and the roof descending almost to the ground. The ancient Kingsbury house was the home of John Parker, who came from Hingham in 1650. Its huge chimney and broad, uncemled barns near the house, and mighty overhanging elm, proclaim its age. In 1700 part of the estate passed into the hands of Hon. Ebenezer Stone. The Dr. Slade house, corner of Beacon and Hammond Streets, was honored by the reception of Dom Pedro, Emperor of Brazil, when he visited the United States in 1876. The house of Judge Lowell was built by one of the Hammonds in 1773, and remained in the family over eighty years. It came to the Lowells after 1850. Hammond's Pond covers about twenty acres. Thomas, after whom it was named, was one of the three richest colonists of Newton, the other two being John and Edward Jackson. Another settler in this vicinity was Vincent Druce, who built the house on the Denny place, about 1695. Before the war of King Philip Thomas Greenwood, the weaver and town clerk, lived in this vicinity. Up to 1850 all Chestnut Hill, except the forests and pasture lands, was occupied as market gardens by Messrs. Kingsbury, Woodward and the Stones.

Up to that time the streets were grassy lanes, bordered by weeds and brush. In about 1850 an artificial channel was dug from Hammond's Pond, by which the overflow was to be conducted into Smelt Brook, thus increasing the power of the mill on Mill Street, formerly Lieutenant John Spring's. The grounds near the railroad station were laid out by Frederick Law Olmstead, and the station itself is a gem of architecture by the late H. H. Richardson, of Brookline. The more recent inhabitants have been sometimes called "the Essex Colony," because its chief families originated in Essex County, Mass.; the Saltonstalls and Lees being from Salem, and the Lowells from Newbury.

WABAN is said to have been a favorite hunting-ground of Waban, the chief of the Nonantum Indians, where he encamped spring and fall with parties of his people, to hunt and fish along the banks of the Quinobequin (Charles River). He was Eliot's first convert, and it is fitting that these two villages, side by side, should be a memorial of their relations, as Gospel teacher and catechumen. The region now constituting Waban was the farm of John Staples, the first schoolmaster of Newton. The farm has passed through several hands since his time, as Moses Craft, 1729; Joseph Craft, 1753; William Wiswall, 1788; David Kinmouth, merchant of Boston, and William C. Strong, whose extensive nurseries are everywhere celebrated. Moffatt Hill, on this estate, was so called after the name of a resident on it for a brief period. When the new streets of Waban were built to its summit, the name was changed to Beacon Hill, because for several years the beacon of the

United States Coast Survey and of the State Survey of Massachusetts was its most striking feature.

WOODLAND STATION is chiefly interesting, thus far, as the seat of the Woodland Park Hotel and the Newton Cottage Hospital. Near the former is the site of the old Stimson place, so called, well known by residents of a hundred or more years ago. It owes its importance to the station built here on the Newton Circuit Railroad. Being continuous with Auburndale, of which it is really only a suburb, the pleasant scenery and palatial homes of that village are justly claimed as belonging to both villages alike.

RIVERSIDE.—This station, the seat of Miss Smith's Home and Day School, is the point between Woodland and Auburndale, where the Charles River, just below the tracks of the railroad, furnishes a delightful naval station. Here the Boston and Albany Railroad sends off a branch from the main road to the Lower Falls, and on the opposite side the circuit road comes in from Newton Centre. The club-house of the Newton Boat Club, and the romantic boat-builders' shop on the river below, are the main features. The club was organized in 1875, having now about 200 members. The boating-ground is about five miles long, from Waltham to the rapids, near County Rock. An annual gala day festival is held in the autumn, when sometimes four hundred boats are in line.

THE NORTH VILLAGE, or NONANTUM, was on both sides of Charles River, and for many years known as Bemis' Factory. All the land on the Newton side of the river, from near the Watertown line to the north end of Fox Island, for a century or more from the first settlement belonged to Richard Park and John Fuller and their heirs. This tract now belongs, by cession of Newton, to Waltham. John Fuller had seven sons. With some or all of them he went out once upon a time to explore the surrounding wilderness. At noon-day, hungry and weary, they sat down to refresh themselves on the banks of a brook with cheese and cake; and the stream hence acquired the name of Cheesecake Brook. Previous to 1764 David Bemis bought sixty-four acres of land on the Watertown side, embracing all the land now covered by the village on that side of the river. In 1778, in connection with Dr. Enos Sumner, who owned the land on the Newton side, he built the original dam across the river. A paper-mill was erected in 1779, and the Bemises, father and son, carried on this business, alone or in association with others, till 1821, when the water-power was sold to Seth Bemis. Captain Luke Bemis is regarded as the first successful paper manufacturer in Massachusetts. He had to overcome great difficulties, and to import many of his workmen and most of his machinery from Europe. But so important was the manufacture to the interests of the country, that when his works were destroyed by fire, the Legislature of Massachusetts voted a special grant to enable him to rebuild his mill.

While David Bemis and his son Luke were manu-

facturing paper on the Newton side of the river, the former built a grist-mill and snuff-mill on the Watertown side, which was inherited by his sons Luke and Seth. The latter carried on successfully the manufacture of chocolate, dye-woods and medicinal roots till 1803, and then turned his attention to cotton machinery. The profits derived from his cotton-warp were said to be almost fabulous. With the aid of foreign weavers, in 1808 or 1809, Mr. Bemis began the manufacture of sheeting, shirting, bed-ticking, satin and cotton-duck, Mr. Bemis being the first manufacturer of the latter article in the United States. In 1812 Mr. Bemis built a gas-house in connection with his works. This is said to have been the first attempt in the United States to manufacture coal-gas. Thus carburetted hydrogen for illuminating purposes gleamed out over the water of Charles River from the windows of the Bemis factory and irradiated the intervals of Newton two years before it was in use in England.

For the first eighteen or twenty years the employees in this busy village were summoned to their work by the blast of a horn. This led to the ludicrous name of "Tin Horn," long afterwards applied to the village. From the original purchase in 1753 this property was in the Bemis family a full century and a quarter on the Watertown side, and nearly a century on the Newton side. A bridge, which was private property, was built across the river by the Bemises between 1790 and 1796. For ten or twelve yards it was without railing. In 1807 the Watertown end was carried away by a freshet, and only a foot-bridge took its place for two or three years. A new bridge was built for teams, but in 1818 the same end was again carried away. The road leading across the bridge was laid out as a public highway in 1816, and in later times received the name of California Street.

CEMETERIES.—The first cemetery in Newton was that on the east side of Centre Street, opposite the estate of the late Gardner Colby. An acre of land was given by Deacon John Jackson "for a meeting-house and for a burying-place." The first church was in the centre of the cemetery. The place was afterwards enlarged by another acre, given by his son, Abraham Jackson; but no deed of this acre being recorded, and a later heir setting up a claim to it, the town, in 1765, relinquished the piece on the southwest corner, bounded on Cotton and Centre Streets, and voted "to settle the bounds and fence the burying-place, measuring one acre and three-quarters and twenty rods." An addition on the east side was purchased in 1834, making the whole area nearly three acres. The twenty-acre lot east of the cemetery was anciently called Chestnut Hill. The first tenant of the cemetery was the wife of John Eliot, Jr., the young pastor. She was the daughter of Thomas Willett, the first mayor of New York City, and died April 13, 1665. It is a singular coincidence that the wife of the apostle Eliot, father of this John, is said to have been

the first tenant of the Eustis Street Cemetery in Roxbury, where the Indian apostle also is buried. The second is supposed to have been the young pastor himself. On a mound not far from the entrance of the cemetery, the two later pastors, Homer and Grafton, who labored together side by side, the one a pastor more than half a century and the other not much less, sleep under fitting monuments. Near the grave of General William Hull is a spreading willow, raised from a slip of a willow which grew on the resting-place of Napoleon on the island of St. Helena. From the time when the ceremony of Decoration day began to be kept, Mr. Seth Davis, of West Newton, then a nonagenarian, took pains, annually and alone, to travel two miles from his home to lay his tribute on the grave of General Hull. He was a friend of the general, and thought he had been treated unjustly. In 1828 the town erected a monument to the memory of John Eliot, Jr., with a suitable inscription. The descendants of the families of the first settlers erected a conspicuous but modest monument in the centre of this ancient cemetery in the year 1852, designed to perpetuate the memory of their early ancestors. It is a plain obelisk or pillar, having recorded on it the names of the first twenty settlers of Newton, with the dates of their settlement and death, and ages at the time of their death. The inscriptions on the other three sides of the monument are as follows: Thomas Wiswall, ordained Ruling Elder July 20, 1664. His son, Enoch, of Dorchester, died November 28, 1706, aged seventy-three. Rev. Ichabod, minister of Duxbury thirty years, agent of Plymouth Colony in England, 1690. Died July 23, 1700, aged sixty-three. Captain Noah, of Newton, an officer in the expedition against Canada, killed in battle with the French and Indians, July 6, 1690, aged fifty, leaving a son Thomas. Ebenezer, of Newton, died June 21, 1691, aged forty-five.

Rev. John Eliot, Jr., first pastor of the First Church, ordained July 20, 1664. His widow married Edmund Quincy, of Braintree, and died in 1700. His only daughter married John Bowles, Esq., of Roxbury, and died May 23, 1687. His only son, John, settled in Windsor, Connecticut, where he died in 1733, leaving a son John, a student in Yale College.

Deacon John Jackson gave one acre of land for this burial-place and First Church, which was erected upon this spot in 1660. Abraham Jackson, son of Deacon John, gave one acre, which two acres form the old part of this cemetery. Edward Jackson gave twenty acres for the parsonage in 1660, and thirty-one acres for the ministerial wood-lot in 1681. His widow, Elizabeth, died September, 1809, aged ninety-two.

On a green mound, not far from the entrance, stand two white monuments, similar in form, dedicated to the Rev. Dr. Homer and Rev. Mr. Grafton, pastors for about half a century each over the neighboring Congregational and Baptist Churches. They lived

and labored side by side, in harmony, as faithful shepherds, and in death they are not divided. These monuments were erected by subscriptions of \$1.00 each, through the energy of Mr. Thomas Edmunds. A multitude were glad in this way to honor their beloved pastors.

Colonel Nathan Fuller gave to the West Parish for a cemetery an acre and a half of land, in September, 1781, about the time of the settlement of the first pastor, Rev. William Greenough. It lies about sixty rods north of the meeting-house. The first tenant of the cemetery was a young woman seventeen years of age, who died of the small-pox. The first man buried here is John Barbour, who kept the tavern near the meeting-house, and set out the great elm in front of it on Washington Street in 1767. His widow married Samuel Jenks, father of Rev. Dr. William Jenks, of Boston.

The South Burial-ground, near the corner of Centre and Needham Streets, was laid out in 1802. A committee of the inhabitants of the south part of the town bought three-quarters of an acre of land of Captain David Richardson for a cemetery. Part of the ground was laid out in equal family lots for the original subscribers. About 1833 Mr. Amasa Winchester gave to the town three-quarters of an acre adjoining, and the town purchased the cemetery of the proprietors. This shaded nook was used for many years for the convenience of families living in and near Oak Hill and the Upper Falls. The residents of the Upper Falls had no other burying-place.

St. Mary's Parish, Lower Falls, was incorporated by the General Court in 1813, and about the same date two acres of land were presented to the corporation for the church and cemetery by Mr. Samuel Brown, of Boston. One of the most interesting of the memorials of the silent sleepers in this cemetery is that of Zibeon Hooker, a drummer in the Revolutionary War, who died aged eighty. His bass-drum was perforated by a British bullet in the battle of Bunker Hill.

The older cemeteries being small and crowded, and the spirit of the times demanding an improvement in the matter of the burial of the dead, the beautiful cemetery on Walnut Street, near the centre of Newton, was commenced in 1855. At first, thirty acres of land were purchased, admirably adapted to such a use, and later, thirty-five acres additional, extending from Beacon Street nearly to Homer Street. Dr. Henry Bigelow was the first president of the Board of Trustees. Mr. Henry Ross was appointed superintendent in 1861. The cemetery was dedicated by public exercises June 10, 1857: prayer by Rev. D. L. Furber; address by Prof. F. D. Huntington, of Harvard College. The gateway was completed in 1871. The Soldiers' Monument, near the entrance, was dedicated by prayer and eloquent addresses July 23, 1864. The oration was by Rev. Prof. H. B. Hackett, of the Newton Theological Institution. It was one of the first

memorials, if not the first, erected in honor of the patriots who fell in the Civil War. Hon. J. Wiley Edmonds headed the subscriptions for the monument by a pledge of \$1000. Nearly \$1200 were raised by pledges of one dollar each by the citizens of Newton; more than 1100 children of the public schools gave one dime each. The monument and surroundings cost \$5220.50; the land constituting the soldiers' lot was given by the city. The entablature records the names of 59 Newton men who sacrificed their lives for their country. The chapel, built at an expense of \$20,000, was a gift of the city by J. S. Farlow, Esq. One of the lots in this cemetery, called "the Missionary Lot," belongs to the American Baptist Missionary Union, where veteran missionaries, returning to this vicinity and dying at home, may be buried, unless their friends direct otherwise. The first to be laid here was Rev. Benj. C. Thomas, 1869, for twenty years a missionary in Burmah; the second, Mrs. Ashmore, missionary in China.

THE REVOLUTION.—Newton has been distinguished from the beginning by its patriotic and military spirit. The Common at Newton Centre was given to the town for a training-field forever, nearly two-thirds by Jonathan Hyde and one-third by Elder Wiswall. No deed of the gift remains, but it is known to have been in possession of the town since 1711. In 1799 a powder-house was built on it, on the east side, near where Lyman Street begins, and stood about fifty years. A second training-field, measuring 136 rods, and bounded on all sides by townways, was laid out at Newtonville in 1735, by Capt. Joseph Fuller, and given "to the military foot company forever." But after the Revolutionary War was ended, and the government established, this field was discontinued and returned to the legal heirs. A large number of Newton's citizens bore military titles. In a register extending to the year 1800 there are two generals, nine colonels, three majors, forty-one captains, twenty-one lieutenants and eight ensigns. In the events preceding and accompanying the Revolution, "the inhabitants of Newton, almost to a man," says Mr. Jackson, "made the most heroic and vigorous efforts to sustain the common cause of the country, from the first hour to the last." Oct. 21, 1765, ten days before the Stamp Act was to go into operation, the town recorded its first patriotic and revolutionary action in the form of instructions to Capt. Abraham Fuller, their representative to the General Court. The instructions closed with these heroic words: "Voted that the foregoing instructions be the instructions to the Representative of this town, and that he is now enjoined firmly to adhere to the same; also, that the same be recorded in the Town Book, that posterity may see and know the great concern the people of this day had for their invaluable rights and privileges and liberties."

The General Court passed a series of resolutions Oct. 29th, affirming their conviction of the injustice of an attempt to enforce the right of taxation on the col-

onists, without granting them at the same time the right of representation. In consequence of the unjust and oppressive act passed by the Parliament of Great Britain, great riots took place in Boston. Governor Hutchinson's house was sacked, and much property destroyed. The people of Newton, in town-meeting assembled, affirmed their abhorrence of this lawless destruction of property, and instructed their representative to use his influence to have the losses made up out of the public treasury or otherwise, "as shall seem most just and convenient." But the spirit of opposition was not quelled. More than two hundred merchants of New York held a meeting in which they "resolved to import no goods from England until the Stamp Act be repealed; to immediately countermand all orders sent for spring goods, and to sell no goods from England on commission." The next year the Stamp Act was repealed, and the gratitude of the people found utterance in the erection of a leaden statue of George III. on horseback on Bowling Green, New York City. A few years afterwards, in a revulsion of feeling on account of the tax on tea, this same statue, the horse and his rider, was torn from the pedestal and run into thousands of bullets by the wife and daughters of Oliver Wolcott, Governor of Connecticut. These bullets did good service to the American patriots, subsequently, in the invasion of Connecticut by the British soldiery,—a mine of ammunition easily accessible and made ready to their hand.

In 1767 it was unanimously voted by the townsmen "strictly to adhere to the late regulation respecting funerals, and not to use any gloves but what are manufactured here, nor procure any new garments upon such occasions but what shall be absolutely necessary." Also, "that this town will take all prudent and legal measures to encourage the produce and manufactures of this province, and to lessen the use of superfluities, and particularly the following enumerated articles imported from abroad, viz.: loaf sugar, cordage, anchors, coaches, chaises, and carriages of all sorts, horse furniture, men's and women's hats, men's and women's apparel ready made, household furniture, gloves, men's and women's shoes, sole leather, sheathing, duck, nails, gold and silver and thread lace of all sorts, gold and silver buttons, wrought plate of all sorts, diamonds, stone and paste ware, snuff, mustard, clocks and watches, silversmiths' and jewellers' ware, broadcloths that cost above ten shillings per yard, muffs, furs, tippets and all sorts of millinery ware, starch, women's and children's stays, fire-engines, china ware, silk and cotton velvets, gauze, pewterers' hollow-ware, linseed oil, glue, lawns, cambric, silk of all kinds for garments, malt liquors and cheese."

"This action of the citizens was provoked by the Navigation Act, so called, of the British Parliament, which restricted home industry in the Colonies, and tended to destroy their commerce. In consequence

of the passage of this act, they were not allowed to trade with any foreign country, nor export to England their own merchandise, except on British vessels. Iron abounded in the Colonies, but not an article could be manufactured by the people; all must be imported. Wool abounded, but no cloth could be manufactured except for private use; and not a pound of the raw material could be sold from town to town; but all must be sent to England, to be ultimately returned as manufactured cloths, burdened with heavy duties. Beavers were plenty all along the streams; but no hatter was permitted to have more than two apprentices, and not a hat could be sold from one Colony to another. These are specimens of that vast network of restrictions upon trade and commerce in which Great Britain encircled the thirteen Colonies.

"This was not alone. The Parliament added humiliation to extortion. Naval officers' acting under the law were insolent towards Colonial vessels. They compelled them to lower their flags in token of homage, fired on them on the slightest provocation, and impressed their seamen whenever they chose.

"The Mutiny Act, as it was called, required the inhabitants of the Colonies to furnish quarters, and, to some extent, supplies, for all the soldiers that might be sent over from England to oppress them."

September 22, 1768, a representative meeting was held in Faneuil Hall, Boston, forming a convention, to consult and advise such measures as the peace and safety of the subjects in the Province may require. Abraham Fuller was chosen unanimously as a member of this convention. The report of their committee was accepted at an adjourned meeting of the convention, and "ordained to be printed in pamphlet form, and distributed agreeably to the original vote."

"Jan. 4, 1772, Edward Durant, Charles Pelham, Esq., Alexander Shepard, William Phillips and Noah Hyde were chosen a Committee to consider and report what it may be proper for the town to do, relating to the present unhappy situation the country is reduced to by some late attacks made on our constitutional rights and privileges."

In a brave and earnest report the committee presented five resolves, expressing the sense of the citizens, which were unanimously adopted. These resolutions affirmed that no good man can be silent at such an alarming period, when such arbitrary measures are taken as tend to the oppression of a free people; that the Colonists had been and were disposed to be loyal to the mother country, so far as may be consistent with their rights and privileges as Colonists; that no civil officer could safely be dependent on the Crown for support, or on grants made by the Crown; that all taxation without representation, for the purpose of raising a revenue, is unconstitutional and oppressive; that the extension of the power of a Court of Admiralty, and the introduction of a military force into the Colony in a time of profound

peace, and other measures of his Majesty's ministers are a grievance of which we justly complain, and must continue to do so, till they are redressed. These resolves were committed to the representative, Abraham Fuller, with instructions enforcing them, and closing thus :

"We therefore think it proper to instruct you, our representative in General Assembly, that you unite in such measures as shall place the judges of the Superior Court of Judicature of this Province upon a constitutional basis, and make, when that is done, suitable provision for their support, adequate to their merit and station.

"We further instruct you that you use your utmost endeavors that all our rights be restored and established as heretofore, and that a decent, though manly remonstrance be sent to the King, assuring his Majesty that universal discontent prevails in America, and nothing will restore harmony and insure the attachment of the people to the Crown, but a full restoration of all their liberties."

The selectmen of Boston having sent to the selectmen of Newton a circular in reference to the state of public affairs, soliciting advice and co-operation, a most patriotic answer was returned, applauding the course taken by the town of Boston, and recommending as follows :

"We do recommend it to the Town, that they order the foregoing resolves and instructions to the representative, and letter to the town of Boston, to be recorded in the Town Book of Records belonging to the Town, that posterity may see and know the great concern the people of this day had for their invaluable rights, privileges and liberties."

At a town-meeting held December 20, 1773, a "Committee of Five was appointed to draft such measures as they shall think best for the town to come into at this emergency, and report at the next meeting." Also, "a Committee of Fifteen to confer with the inhabitants of the town as to the expediency of buying, selling or using any of the Indian teas."

At an adjourned meeting held January 6, 1774, the committee of five reported the following resolves :

"We do with firmness of mind, on mature deliberation, establish the following resolves, viz. :

"1. That an Act passed in the last sessions of Parliament, empowering the Honorable East India Company to export tea to America, subject to a duty upon its arrival in America, is a fresh attack upon our rights, craftily planned by a few of our inveterate enemies in the ministry, in order to establish a tax on us plainly contrary to the constitution of England itself, and glaringly repugnant to our charter ; which we deem a grievance greatly aggravated by the cruel partiality therein shown against millions of his Majesty's loyal and good subjects in America, in favor of a few, very few, opulent subjects in Britain. This we cannot brook, and do therefore solemnly bear testimony against it.

"2. That in justice to ourselves, our fellow-citizens and our posterity, we cannot, nor will, voluntarily and tamely submit to this or any tax laid on us for the express purpose of raising a revenue, when imposed without our consent given by ourselves or our Representatives.

"3. That as part of the Colonies laboring under oppression, we are determined to join the rest in all and every lawful and just method of obtaining redress, or preventing the oppression, even to the risk of our lives and fortunes.

"4. That all and every person or persons, who have been, are, or shall be advising or assisting in the aforesaid, or any such acts, or are active or aiding in the execution of them, are, so far, at least, inimical to this country, and thereby incur our just resentment ; in which light we shall view all merchants, traders and others, who shall henceforth, presume to import or sell any India tea, until the duty we so justly complain of be taken off.

"5. That we, each and every one of us, will not, directly or indirectly, by ourselves or any for or under us, purchase or use, or suffer to be used in our respective families any India tea, while such tea is subject to a duty payable upon its arrival in America ; and recommend that a

copy hereof be transmitted to the Committee of Correspondence in Boston.

"6. That a Committee of Correspondence be appointed, to confer and correspond with the Committees of any or all our sister towns in the Province, as occasion may require."

The committee appointed in accordance with this resolution were Edward Durant, William Clark, Captain Jonas Stone, Joshua Hammond and Captain John Woodward.

The famous tea party in Boston Harbor took place but a few days before the meeting took place which reported these resolutions, and undoubtedly contributed to the unanimity and enthusiasm of the action of the town. On the 16th December, 1773, a company of men disguised as Indians, boarded three British vessels at Liverpool Wharf, Boston, commanded by Captains Hall, Bruce and Coffin, broke open with their hatchets 342 chests of tea, and in less than four hours mingled the whole with the waters of Massachusetts Bay. Newton was represented on that occasion by two or more of its citizens. One, in particular, who drove a load of wood to market, stayed very late on that day, and was not very willing the next morning to explain the cause of his detention. But as tea was found in his shoes, it is easy to understand what he had been doing. This was Samuel Hammond, son of Ephraim, then a young man twenty-five years of age, and ripe for such an expedition.

A vote was passed by the town enjoining upon the committee of fifteen "to lay before the inhabitants of this town a paper or papers, that each of said inhabitants may have opportunity to signify it under their hands, that they will not buy, sell or use any of the India teas, until the duties are taken off ; and such as will not sign, to return their names to the town at the adjournment." It does not appear that any one refused to sign.

The Reconstruction Acts of 1774 were the crowning acts of British oppression. The effect of these acts was to cut off almost every vestige of freedom which remained, and to substitute for civil, martial law ; to prohibit town-meetings, excepting twice a year, at which the people could do nothing but elect their town officers. Five thousand regulars were quartered in Boston ; the Common was occupied by troops and the Neck fortified. Troops were sent to Salem to disperse a meeting of citizens. The time for action had come. John Pigeon and Edward Durant were appointed delegates to join the Provincial Congress at Concord or wherever the Congress should meet. The selectmen were requested, by vote of Newton, to use their best discretion to provide firearms for the poor who were unable to provide for themselves. Two field-pieces were given to the town by John Pigeon, and accepted with thanks. January 2, 1775, a committee was charged with the duty of obtaining subscriptions to mount them. It was also voted to raise men to exercise them. A committee, consisting of Captains Fuller and Wiswall and Major Hammond,

was chosen to enlist thirty-two minute men, and to add as many as they think necessary for officers, to meet once a week during the winter season half a day for exercise; also, "that each man of the Company of Minute-men be paid one shilling for half a day exercising, and eight shillings a day for the eight officers, over and above the one shilling each; the Minutemen to train once a week, at the discretion of the commanding officer."

April 19, 1775, the day of Lexington and Concord, there were three companies of infantry in Newton—the West Company, commanded by Captain Amariah Fuller, the East Company, commanded by Captain Jeremiah Wiswall, and a company of minute-men, raised in 1775, commanded by Captain Phineas Cook—all of which were in the battles of that day, and marched twenty-eight miles. The rolls of each company were returned to the secretary's office, and sworn to by their commander as follows: West Company, 105; East Company, 76; minute-men, 37—total, 218. Besides these, many Newton men not attached to either of these companies were in the action. In the West Company were thirty-seven volunteers, called the alarm list,—men who had passed the age for military duty. Among the members of the alarm list in the West Company, Captain Joshua Fuller was seventy-six years old, and Deacon Joseph Ward, sixty-nine. Only one, Captain Edward Jackson, was under fifty. In the East Company Noah Wiswall was seventy-six; Ebenezer Parker, seventy-three. Wiswall's son Jeremiah, was captain of the company, and two other sons and some of his sons-in-law were in the same company. The old veteran could not be induced to remain at home, because, as he said, "he wanted to see what the boys were doing;" and, when he was shot through the hand by a bullet, he coolly bound up the wounded member with his handkerchief, and brought home the gun of a British soldier who fell in the battle. Both the East and West Companies were in the battle of Lexington.

The Bravery of Michael Jackson.—He was the son of Michael Jackson, and about forty years of age, and had been lieutenant in the French War. At the opening of the Revolution he was a private in the volunteer company of minute-men. At the early dawn of April 19, 1775, a signal announced that the British troops were on their march to Lexington and Concord. The signal was a volley from one of John Pigeon's field guns, kept at the gun-house at Newton Centre, near the church. So "the shot heard round the world," according to Emerson, was fired from the lips of a Newton cannon and at Newton Centre. The company of minute-men were early on their parade-ground; but none of the commissioned officers were present. The orderly sergeant had formed the company and a motion was made to choose a captain for the day. Michael Jackson was nominated, and chosen by uplifted hands. He immediately stepped from the ranks to the head of the company, and, without a

word of thanks for the honor, or the slightest formality, he ordered the company,—“Shoulder arms! Platoon to the right, wheel! Quick time! Forward march!” These few words of command were uttered and the company were on the march to join the regiment at Watertown meeting-house. On their arrival there the commissioned officers of the regiment were found holding a council in the school-house, and he was invited to take part in their deliberations. He listened to their discussions, but soon obtained the floor, and affirmed that there was a time for all things; but that the time for talking had passed, and the time for fighting had come. “Not now the wag of the tongue, but the pull of the trigger.” This *pro tempore* captain accused the officers of wasting time through fear of meeting the enemy. He told them, if they meant to oppose the march of the British troops, to leave the school-house forthwith, and take up their march for Lexington. He intended that his company should take the shortest route to get a shot at the British. And, suiting the action to the word, he left the council, and took up his march. The blunt speech broke up the council so that there was no concert of action, and each company was left to act as they chose. Some followed Captain Jackson; some lingered where they were, and some dispersed. Jackson's company came in contact with Lord Percy's reserve near Concord village, and were dispersed after exchanging one or two shots. But they soon rallied, and formed again in a wood near by, and were joined by a part of the Watertown company. They hung upon the flank and rear of the retreating enemy with much effect until they reached Lechmere Point (East Cambridge), at nightfall, and the British regulars took boats for Boston. After they had rowed beyond the reach of musket-shot, this company received the thanks of General Warren, upon the field, for their bravery. Soon afterwards, Captain Jackson received a major's commission in the Continental Army, then quartered at Cambridge, and was subsequently promoted to the command of the Eighth Regiment in the Massachusetts Line, than which no regiment was more distinguished for bravery and good conduct during the war. William Hull was a major in this regiment. The sword of Michael Jackson did service at Bunker Hill and in other conflicts of the Revolution. One of his relatives presented it to the Newton Public Library, where it is now preserved.

On the same historic day Col. Joseph Ward, of Newton, who was master of one of the public schools in Boston, learning that the British troops were in motion, left at once for Newton, mounted a horse, and, gun in hand, rode to Concord “to encourage the troops, and get a shot at the British.” He also greatly distinguished himself at Bunker Hill, where he served as aid-de-camp to Gen. Artemas Ward, and held that office until Gen. Ward resigned in December, 1776. He rode over Charlestown Neck through a cross-fire of the British floating batteries to execute

an order from Gen. Ward, at which time a broadside was fired at him by a British man-of-war. He continued to hold important positions in the army, and was honored by receiving the thanks of Gen. Washington in a letter written to him near the close of the war, as follows :

"You have my thanks for your constant attention to the business of your department, the manner of its execution, and your ready and faithful compliance with all my orders; and, I cannot help adding on this occasion, for the zeal you have discovered at all times and under all circumstances to promote the good of the service in general, and the great objects of our cause.

"GEORGE WASHINGTON."

Col. Thomas Gardner, who lived at what is now Allston, had Newton men in his regiment. On the 16th of June, 1775, he received orders to be on Cambridge Common with his regiment at daylight of the 17th. He was there, and ordered to Bunker Hill, where he was mortally wounded, and his regiment suffered severely. A man known later as "Daddy Thwing," who lived near the Mitchell Tavern at Newton Highlands, was a private soldier in that battle, and in his extreme age loved to repeat the incidents of the fight, in which he was proud to have been a partaker. We have spoken elsewhere of Zibeen Hooker, the drummer, whose drum was pierced by a bullet at Bunker Hill. Major Daniel Jackson, of Newton, was also in the battles of Bunker Hill, Concord and Dorchester Heights. He is said to have pointed the cannon which destroyed four British vessels in the North River, for which service he was promoted to the rank of lieutenant. Two new companies were raised in Newton not long after the battle of Bunker Hill. Seventy-four of these men joined the army at Cambridge March 4, 1776, to serve eight months.

In the terrible struggle of the years which followed, it is estimated that full 430, out of Newton's population of not over 1400, served in the Continental army, in the militia, and in the duty of guarding the captured army of General Burgoyne; 275 enlisted in the Continental army for a longer or shorter period. In August, 1775, Captain Jos. Fuller, of Newton, raised a company of ninety-six men and marched to Bennington and Lake George, to oppose Burgoyne. The same year sixty-four men enlisted for three years. In 1778 Captain Edward Fuller raised a company of sixty-eight men. In 1780 fifty-four men marched to reinforce the Continental army. Mr. Jackson says, "The number of men who served more or less in the Continental army and in the militia during the war was about one-third of the entire population." Had the war continued longer than it did, it seems impossible that Newton should have furnished more men.

With an eye to the supply of gunpowder, March 4, 1776, the citizens of Newton, in town-meeting, appointed Alexander Shepard, Jr., Capt. Ephraim Jackson and John Pigeon a committee to use their influence to promote the manufacture of saltpetre. July 10, 1775, the whole number of the troops in Cam-

bridge was 8076; John Pigeon, of West Newton (Auburndale), was commissary-general. The East Company, of Newton (forty-seven men), and the West Company (fifty-eight men), with a few others, on the 4th of March, 1776, marched, at the request of General Washington, to take possession of Dorchester Heights, but as the British evacuated Boston March 17th, their service was of short duration. Many of the citizens who, through enterprise and frugality, had accumulated a small property, freely loaned it to the town towards the expenses of the war. The names of thirty-one citizens are on record in this honorable list. Persons suspected of a lack of loyalty to the cause of freedom were carefully examined and two such persons were escorted out of the town.

On the 10th of May, 1776, the General Court passed the following resolution :

"Resolved, as the opinion of this House, that the inhabitants of each town in the Colony ought, in full meeting, warned for that purpose, to advise the person or persons who shall be chosen to represent them in the next General Court, that if the Honorable Congress should, for the safety of these Colonies, declare them independent of the Kingdom of Great Britain, they, the said inhabitants will solemnly engage with their lives and fortunes to support them in the measure."

The town-meeting of Newton was held on the 17th of June, 1776, that great anniversary, and the first of the battle of Bunker Hill. Capt. John Woodward was moderator. The second article of the warrant summoning the meeting was as follows :

"That in case the Honorable Continental Congress should, for the safety of the American Colonies, declare them independent of the Kingdom of Great Britain, whether the inhabitants of this town will solemnly engage with their lives and fortunes to support them in the measure."

After debate the question was put and the vote passed unanimously in the affirmative.

Newton was then only a little country town of about 1400 inhabitants. But, as Mr. Jackson says, "Newton men formed a part of every army and expedition, fought in almost every battle and skirmish throughout the contest. Scarcely a man in the town, old or young, able or unable, but volunteered, enlisted or was drafted, and served in the ranks of the army from the hardest fought battles down to the more quiet duty of guarding Burgoyne's surrendered army, partly by aged men.

The Declaration of Independence, adopted by the Continental Congress in Philadelphia, July 4, 1776, was received at once, and the Massachusetts Council took immediate measures to give publicity to the document, by ordering that a copy be sent to every minister of each parish in every denomination within this State; and that they severally be required to read the same to their respective congregations as soon as divine service is ended in the afternoon, on the first Lord's day after they shall have received it; and after such publication thereof, to deliver the said Declaration to the clerks of their several towns or districts, who are hereby required to record the same in their respective town or district books, there to remain as a perpetual memorial thereof.

In obedience to the above order, the Declaration of Independence was copied into the town records by vote of the town, the citizens thus adopting the action of the Continental Congress as their own.

Roger Sherman, a native of Newton, was one of the committee who reported the Declaration to the Congress in Philadelphia.

In March, 1777, a committee was appointed by the town of Newton to hire soldiers, if need be, to make up Newton's quota for the next campaign. Among those of whom the town treasurer borrowed money under this vote, thirty-one in number, two were women, and all but three were in the army—by a double sacrifice, devoting their treasure as well as their lives to the cause of freedom. The amount borrowed was £2989 13s. Many loaned smaller sums, whose names are not given. The town paid faithfully to their soldiers the sums that were promised. During the entire continuance of the war Newton was not backward in voting supplies of money and provisions as they were needed by the army, in hiring soldiers and providing for the wants of the families of those in the service. In 1779 a vote was passed to raise more men; the same again in June, 1780, and £30,000 were appropriated to defray the expenses; in the following December, £100,000, depreciated currency, were appropriated for the same purpose. In September, 1781, voted that £400 in silver money be assessed; in March, 1782, £800; in April, 1783, £1000; in March, 1784, £1500.

Finally, October 19, 1781, the end came, and Lord Cornwallis surrendered his whole army to Washington, at Yorktown, Va. Terms were agreed upon, and the British army, to the number of about 7000 men, marched out and capitulated as prisoners of war, with seventy-five brass and 160 iron cannon, nearly 8000 stand of arms, twenty-eight regimental colors and a large quantity of munitions of war.

"These records of the Town," says Mr. Jackson, "and the facts here grouped together, will serve to prove how fully, and at what sacrifices, the pledge of 1776 was redeemed. History, we think, will be searched in vain to find a parallel to the indomitable and long-continued exertion and devotion which, in common, doubtless, with New England generally, the inhabitants of this Town exhibited."

In consulting the military records of the Revolutionary period, we find the names of the following Newton men who bore office among their fellow-soldiers: Col. Joseph Ward, aid-de-camp of Major-Gen. Ward; Michael Jackson, colonel, and William Hull, lieutenant-colonel of the Eighth Massachusetts Regiment; Ephraim Jackson, colonel of the Tenth Massachusetts Regiment; Nathan Fuller, lieutenant of the Thirteenth Massachusetts Regiment; seven captains, nine lieutenants and two ensigns. Almost every one of the families of the early settlers of Newton had their representatives among the soldiers of the Revolution. Forty-four descendants of Edward

Jackson, bearing the name of Jackson, were in the armies, representing the patriotism and the military spirit of Newton; twenty-two bearing the name of Fuller; sixteen, the name of Parker; fifteen, of Hyde; eleven, of Stone; nine, of Clark; six, of Seger. Capt. Henry King, of Newton, was one of the guard at the execution of Major André.

After the close of the war came a period which was marked by few excitements. "Shays' Insurrection," as it was called, ran its brief course, but, though solicited, Newton did not care to be embroiled in it. The Baptist Church at Newton Centre was formed in 1780, and its first edifice built, but that was only a matter of local interest. The most important event of public concern was the settling of the Constitution of Massachusetts. A State Convention met in 1778, to agree upon a form of a Constitution. The plan of the proposed Constitution was, in due time, reported to the Convention, and submitted to the people of Newton, as to the other towns. It was read publicly and fully debated, and rejected. The voters present numbered eighty, of whom only five favored its acceptance. The next year a new form was proposed to the town and approved, and the people of Newton held their first town-meeting under it in 1780, for the election of Governor, Lieutenant-Governor and five Senators from Middlesex County. Hon. John Hancock received the whole number (eighty-six) of votes for Governor. The votes for Lieutenant-Governor were about equally divided; Benjamin Lincoln had twenty-six and Azor Orne, twenty-five. For Senators, Josiah Stone and Abraham Fuller had forty-one and forty votes respectively; the other three Senators, forty, thirty and twenty-three each. At the first meeting for the choice of Presidential electors, December 18, 1788, Nathaniel Gorham and Abraham Fuller had eighteen votes each, and were chosen. At the same meeting, Nathaniel Gorham was elected Representative for the District of Middlesex in the Federal Government. Four times in twenty years the vote of Newton for Governor was unanimous, viz.: in 1780, 1782 and 1784, for John Hancock; and in 1794 for Samuel Adams. From 1789 to 1800 the citizens were apparently very negligent of the right of suffrage; twice in that period the votes cast were over 100 (118 and 117); seven times, less than fifty; average for twenty years, about fifty-nine. The smallest vote was four only, in the year 1785, for John Hancock, his sixth nomination; after one year they returned to him again for six years.

The War of 1812 was unpopular with the people of Massachusetts, and the people of Newton expressed very clearly their disapproval of it and remonstrated against it. Gen. William Hull, of Newton, who was at that time Governor of the Territory of Michigan, two or three weeks after the declaration of war, collected an army of upwards of 2000 men, and crossed the line into Canada, as if he designed to attack Montreal. But, hearing that the Indians had invaded his

territory, and that the British forces were near at hand, he retreated, and was besieged by Gen. Brock, in Fort Detroit. Feeling that he was not adequately supported by his Government with arms and ammunition to sustain an attack, he surrendered to the British general. For this act he was tried by a court-martial and condemned to be shot; but recommended to the mercy of the President, on account of his distinguished services in the Revolutionary War, and pardoned. Many thought his condemnation unjust. He afterwards published a defence of his conduct.

If any of the citizens of Newton were in any of the conflicts of the War of 1812, they must have engaged in the service as individuals only, and no record of the facts remains.

For a considerable period following the war there were few incidents claiming a place in the history of Newton. It was mainly a season of silent growth, and preparations for the stirring periods to come. The most important events were the founding of Newton Theological Institution, and the slow unfolding of the educational spirit, which issued in the change from district to graded schools, from a lower, though necessary, intellectual training, to the broader methods of modern times. But this long period was not without its excitements. These arose from an agitation, which lasted many years, in reference to a division of the town. All the villages were disposed along the edges of Newton and remote from one another, generally not less than two miles apart. The First Church was established at the centre of the town, and in 1830, "after the separation of the civil and ecclesiastical state in the Commonwealth of Massachusetts, the proprietors of the First Parish meeting-house objected to having the town-meetings holden there." The proprietors judged that the time had come when the town ought to have a place for holding its meetings, which should be provided at the town's expense, and be under the town's control. The residents of the four villages, Newton Corner, West Newton, Newton Upper Falls and Newton Lower Falls, had no special interest in the Centre of the town, except that they must travel thither, twice at least every year, to the town-meetings; nor any interest in one another; nor had the Centre any interest in them. Neither business nor social interests, nor the worship of God on the Sabbath, bound them together. As early as 1807, the infelicity of the situation began to press itself upon the attention of the citizens; and they endeavored to meet it by distributing the town into five wards, and ordering that one selectman and two surveyors should be chosen from each ward. For several years they lived in peace under this arrangement. But in 1830 the situation became a matter of heated controversy, which lasted, with varying aspects and with great vigor, full a quarter of a century. Methods without number were proposed; to divide the town into two separate, incorporated organizations, now by one line of division

and now by another; to hold the town-meetings in rotation in the meeting-houses of the several villages; to build a town-house, now in one village, and now in another, and now in the forest in the geographical centre of the town; and again to build two town-houses, one at the Centre and one in the village of the West Parish. The controversy was so earnest that it parted friends, and embittered the relations of social life. A serious proposal was made to set off the Lower Falls to Needham or Weston, but the question was at once dismissed. April 19, 1841, an historic anniversary, a vote was passed to appoint a committee to consider the division of the town; December 22d following, another historic day, the vote was reconsidered. If the town were divided, where should the line of separation be drawn? And which portion should retain the old and venerable name, and which should content itself with a new one, abandoning the prestige of its honorable history? The solution of the question was aided by the cession of the extreme southern part of the town to Roxbury, in 1838, and the "Chemical Village," about 600 acres, in the northwest part, in 1844, to Waltham. The residents in those remote parts of the town were thus relieved from the necessity of traveling many miles to the town-meetings, whether held in West Newton or in Newton Centre. But the minds of the citizens were gradually coming together. In 1848-49 a vote was passed by the town to hold the town-meetings in West Newton. And on the 12th of March, 1855, a resolution was passed "that the inhabitants of Newton will oppose any and all measures for the division of the town, and that they will regard with disfavor the disturbance of their peace and harmony by the further agitation of the subject." The motion was carried by a very large vote. Many who had taken part in the agitation in its earlier stages belonged to a former generation, and had long since passed away. And now, as one great and populous city, one wide, wealthy and prosperous organization, with its churches, its schools, its libraries, its Fire Department, its gas and electric works, its water works, its telegraphs and telephones, and all its common interests, perhaps not a citizen walks in the streets of Newton, through its whole extent, who is not glad that the whole is bound together and cemented in one peaceful union.

CHURCHES.—*Second Congregational Church, West Newton.*—During the ministry of Mr. Meriam in the First Church, as early as 1760, meetings were held in the west part of Newton, a century after the formation of the First Church, and a Second Parish in Newton was thus distinctly foreshadowed. At first, subscriptions were solicited to build a meeting-house, and a minister was hired to teach school during the winter season and to preach on the Sabbath. About

¹ The history of the First Church is given in a separate article, by Rev. D. L. Furler, D.D., pastor emeritus.

eight rods of land for the meeting-house were sold to the Building Committee by Phineas Bond, innholder, for £2 8s., bounded on his own land and land of Isaac Williams. The meeting-house was forty-three by thirty feet. In 1767 Jonathan Williams and others petitioned the town that a sum of money might be granted to support preaching in the meeting-house in the west part of the town in the winter season. The request was refused. The petitioners renewed their request in 1770, 1772, 1773 and 1774, trying the virtue of importunity. In 1775 they petitioned the General Court for a grant from the town treasury to support preaching four months, though it is not clear that that body had any right to assume the management of the finances of an incorporated town. In 1778 the General Court granted an act of incorporation, setting off West Newton as an independent parish. The church was organized October 21, 1781, with twenty-six members. The First Church granted to the organization four pewter tankards and one pewter dish for the communion service; the Second Church in Boston gave a pulpit Bible, and Deacon Thomas Greenough, father of the pastor, Rev. William Greenough, who was elected November 8, 1781, presented a christening basin, two flagons and two dishes for the communion service. One who was present at the ordination service writes: "A small house and a little handful of people." Mr. Greenough's pastorate continued fifty years and two days. In 1812 the church was enlarged and a gallery, spire and belfry added. The house, when Dr. Gilbert began his ministry in West Newton, had fifty windows, above and below, without blinds, and two doors. The poet's "dim, religious light" had no place there. The church was furnished with square pews, seats hung on hinges, and no "great waste of paint, outside or in." The gallery was occupied by children or transient people, and the seats were never very full.

The second meeting-house was dedicated March 29, 1848. The parish included that part of Waltham, south of Charles River, since ceded to Waltham by Newton, Auburndale, Newtonville and Lower Falls, a territory which then included only fifty-five or sixty dwelling-houses. Dr. Lyman Gilbert, then a young man, was elected colleague pastor and ordained July 2, 1828. The new church was extensively repaired in 1870. A parsonage was erected in 1866. The church has had five pastors: Rev. William Greenough, 1781-1831; Rev. Lyman Gilbert, 1828-56; Rev. Joseph P. Drummond, 1856-57; Rev. George B. Little, 1857-60; Rev. H. J. Patrick, 1860—. The Sabbath-school was first held in a school-house, the pupils numbering from twenty to forty. The school was held only in summer. The Newton Sabbath-school Union, embracing all the Sabbath-schools in the town, was formed in the church at West Newton.

First Baptist Church, Newton.—The first Baptist residing in Newton, of whom we have any account, was Mr. Jonathan Willard, of the Lower Falls. For

some years he and his daughter were alone, being members of a church in Boston. In 1749 Noah Parker was added, who was also a member in Boston. In connection with the preaching of George Whitefield a New Light Church was formed in the southeast part of Newton about 1740. The majority of the members, after a time, became Baptists, and the first Baptist Church, of which they were the nucleus, was organized July 5, 1780, the public services being held in the house of Mr. Noah Wiswall, since the estate of Deacon Luther Paul, opposite the lake in Newton Centre. Elhanan Winchester was an effective preacher among them, and many of his name were among the early members. Mr. Wiswall received forty pounds a quarter as rent for the room in which the meetings were held. Often, in mild weather, the congregation assembled under the large elms which still overshadow the yard. Mr. Wiswall gave the land for the building of the first church, which still stands, altered into a dwelling-house, on the west side of Centre Street, on the border of the pond, and where the congregation continued to worship till December, 1836. It was fourteen years from the date of the vote to build till its completion, the congregation, in the mean time, worshiping in the unfinished building. The house was enlarged in 1803. In 1795 the society voted "to procure a stove for the warming of the meeting-house." It was also voted "that the singing be carried on in a general way by reading a line at a time in the forenoon and a verse at a time in the afternoon." The last service held in the old edifice was the funeral of the aged pastor, Mr. Grafton, December, 1836, when a new church, erected on land given for the purpose by one of the members, Mrs. Anna (King) White, was ready for occupancy. The present stone edifice was erected in 1888. The following have been the pastors: Rev. Caleb Blood, 1780-87; Rev. Joseph Grafton, 1788-1836; Rev. F. A. Willard, 1835-38; Rev. S. F. Smith, 1842-54; Rev. O. S. Stearns, 1855-68; Rev. W. N. Clarke, 1869-80; Rev. Edward Braislin, 1881-86; Rev. L. C. Barnes, 1887—.

First Religious Society, Newton Upper Falls.—A religious society was formed in Newton Upper Falls without a church and without denominational pledges,—the first in the village,—in consequence of the gift by the Elliott Manufacturing Company, of land for a meeting-house, that the people might be supplied with religious privileges without the necessity of traveling full two miles away from their homes. The meeting-house was begun in 1827, and dedicated February 27, 1828. The pulpit was supplied chiefly by Unitarian ministers. In 1832 the building was sold for a Methodist Church, and the first religious society was dissolved.

Universalist Church at Newton Upper Falls.—A Universalist Church was organized at Newton Upper Falls in 1841, and a meeting-house erected on High Street, and dedicated in May, 1842. There were twenty-two proprietors. Rev. Samuel P. Skinner

was the only pastor. He served about three years, after which the pulpit was occupied by various supplies. After a career of six or seven years the society was dissolved. The church building became useful as a village hall, denominated Elliott Hall for several years, and finally was utilized for a private residence.

The Second Baptist Church of Newton was organized at Newton Upper Falls in 1835, with fifty-five original members, dismissed from the First Baptist Church, Newton Centre. The meeting-house had already been built by proprietors, of whom Mr. Jonathan Bixby was the most prominent, and was dedicated March 27, 1833. The pastors have been Origen Crane, 1836-40; C. W. Dennison, 1842-43; S. S. Leighton, 1846-47; Amos Webster, 1848-54; William C. Richards, 1865-71.

Methodist Episcopal Church, Newton Upper Falls.—The church edifice of the "Religious Society of Newton Upper Falls" passed into the hands of the Methodist people in 1832, and the Methodist Church was organized November 11, 1832, with fifty-three members. The pastors best known have been Rev. Charles K. True, who was the first minister, and Rev. Z. A. Mudge, known also as an author. Marshall S. Rice, of Newton Centre, bought the church edifice of the original proprietors for \$2660 on his personal responsibility. In 1836, enlarged and improved, it was conveyed to the First Methodist Episcopal Church in Newton. In 1833 a bell was placed in the tower, which served twenty-eight years, and, having been cracked, was replaced by a better one in 1861. The church has been since that date repeatedly enlarged and altered. Two large rock maple trees in front of the church were pulled up out of the grass in New Ipswich, New Hampshire, by Mr. Rice in 1835, and brought home in his chaise-box. Three similar trees in front of his house at Newton Centre, have a similar history.

St. Mary's Church, Newton Upper Falls (Catholic).—The first Roman Catholic services in Newton were held at the Upper Falls from time to time, as early as 1843, and there was a Roman Catholic missionary here from 1852 to 1864, who purchased an acre of land for a church site. The Catholic Church was built in 1867, and enlarged in 1875, so as to accommodate about 1000 hearers. The parish embraces a large territory, including the Catholic population of Needham, Newton Upper Falls, Newton Lower Falls and Newton Centre as far as Beacon Street.

St. Mary's Church, Newton Lower Falls (Episcopal).—For more than fifty years St. Mary's Episcopal Church was the only church at Newton Lower Falls, and people of that persuasion in all Newton, Needham and Weston united in its support. April 7, 1812, an Episcopal parish was organized. Services were held first in the school-house, and afterwards in a hall at the corner of Main and Church Streets, conducted by candidates for the ministry. The parish

was incorporated in 1813. Mr. Samuel Brown, of Boston, gave the parish two acres of land for a church and cemetery. The corner-stone was laid by the Society of Free and Accepted Masons, September 29, 1813, and the house dedicated April 29, 1814. Bishop Griswold preached the dedication sermon. Services were conducted by various clergymen till November, 1822, when the Rev. Alfred L. Baury was ordained priest and rector. The number of families in the parish in 1847, when Mr. Baury preached his quarter-century anniversary sermon, was over one hundred. The rectors have been Rev. A. L. Baury, 1822-51; Rev. Henry W. Woods, 1851-53; Rev. Andrew Crosswell, 1853-56; Rev. Henry Burroughs, 1856-58; Rev. A. F. de Costa, 1859; Rev. W. W. Sever, 1860-65; Rev. Joseph Kidder, 1865-68; Rev. R. F. Putnam, 1868-75; Rev. Henry Mackay, 1876-82; Rev. B. T. Hutchins, 1883-84; Rev. William G. Wells, 1885—.

Methodist Episcopal Church, Newton Lower Falls.—A separate charge, known as the Methodist Episcopal Church of Needham and Newton Lower Falls, began to hold worship in Wales' Hall, Lower Falls, in April, 1867, and afterwards in Boyden Hall and Village Hall. A church edifice was erected and dedicated in 1889. The Village Hall was purchased by the society for its permanent place of worship, previous to the erection of the church.

The Eliot Church, Newton.—Among the most efficient promoters of the Eliot Church, at Newton, were Deacon William Jackson and family, descendants of the founders of the First Church in the town of Newton or Cambridge Village, as it was then called, 180 years before. The Eliot Church was organized in 1845 with thirty-seven members, thirty-one of whom were dismissed from the First Church to constitute the new body. The corner-stone of the First Church edifice was laid March 19, 1845, and the building dedicated, and at the same time the church re-organized by an Ecclesiastical Council, July 1, 1845. The first pastor was ordained December 3, 1845. The congregation increased so much, in connection with the gradual growth of the village, that better accommodations were demanded. The church was therefore sold, and removed a few yards farther north, and changed into a hall, called Eliot Hall, and afterwards destroyed by fire. A new church was erected on the site of the former one, very large and commodious, built of wood, with tall steeple, bell and clock, and dedicated April 4, 1861. Cost, \$42,500. So far as known, twenty-one young men of this church and congregation enlisted in the army during the war for the preservation of the Union. This church was burned in 1887, and the present edifice of stone took its place. It was dedicated in 1889. Pastors, Rev. William S. Leavitt, 1845-53; Rev. Lyman Cutler, 1854-55; Rev. J. W. Wellman, 1856-73; Rev. S. M. Freeland, 1875-78; Rev. Wolcott Calkins, 1880—.

Unitarian Church, Newton.—The Unitarian Church

of Newton held its first meetings in Union Hall. The society was formed in 1851, and the Sabbath-school in 1852. Dr. Henry Bigelow was the first superintendent. The first pastor was Joseph C. Smith. The first church edifice was erected on the south side of Washington Street, and after having been occupied for several years, was changed into an armory for military drill, and the new and beautiful building of stone was erected on Farlow Park. During the war sixteen members of the congregation served in the army. Pastors: Rev. Joseph C. Smith, supply for four years; Rev. Edward J. Young, 1857-69; Rev. Eli Fay, 1870-73; Rev. George W. Hosmer, 1873-79; Rev. F. B. Hornbrooke, 1879—.

Newton Baptist Church.—Worship was begun by this society in Middlesex Hall, April 10, 1859; removed April, 1860, to Union Hall. The church was publicly recognized July 12, 1860. The first church building was erected at the corner of Washington and Hovey Streets, and dedicated March 16, 1864. When the cellar was dug, the remains of five Indians were found in the soil, two feet below the surface, also several arrow heads and copper coins, one of them dated 1720 or 1729, indicating that the spot might have been once an Indian burying-ground. Pastors: Rev. Gilbert Robbins, 1860-61; Rev. J. Chaplin, 1862-63; Rev. J. Tucker, Jr., 1865-70; Rev. Thomas S. Sampson, 1873-80; Rev. H. F. Titus, 1880-88; Rev. George E. Merrill, 1890—. The old church edifice was sold and the location abandoned, and the new edifice of stone erected on Church Street, and dedicated in 1888. The plans were drawn by the celebrated architect, H. H. Richardson, Esq., who was the architect of Trinity Church, Boston.

Grace Episcopal Church, Newton.—The parish of Grace Church was organized in the parlor of Mr. Stephen Perry, corner of Galen and William Streets, just across the limits of Newton, in Watertown. The services were first held in Union Hall. The cornerstone of the first church building was laid May 28, 1858, and the church erected on the southeast corner of Washington and Hovey Streets. It was Gothic in style, and suited to accommodate 225 hearers. Cost, \$4000. The first rector, Rev. John Singleton Copley Greene, erected a parsonage and gave it to the parish. The present stone edifice, on Farlow Park, was first used in December, 1873. The chime of bells was given by Mrs. Elizabeth T. Eldredge, the first chime introduced into Newton. Rectors: Rev. J. S. C. Greene, 1855-64; Rev. P. N. Steenstra, 1864-69; Rev. Henry Mayn, 1870-72; Rev. Joseph H. Jenckes, 1872-74; Rev. George W. Shinn, 1875—.

Methodist Church, Newton.—The Methodist Episcopal Church in Newton held its first service in Union Hall in April, 1864, and the church was recognized in the same place. The church building, on Centre and Wesley Streets, was dedicated September 26, 1867. The land where it stands was originally low and wet, but was raised by filling, forming an

eligible lot, as well for the church and parsonage as for the Methodist Orphans' Home.

The "Church of Our Lady Help of Christians."—This Roman Catholic Church, standing on the corner of Washington and Adams Streets, was commenced November 1, 1872; the corner-stone laid August, 1873, and the first service held in the basement, November 1, 1874. The conspicuous lot on which it is erected was a rough gravel bank when the church was erected. Until August, 1878, the parish included part of Watertown, Newton Centre and Newtonville.

The Newton and Watertown Universalist Society was incorporated in 1827, and built a meeting-house just across the boundary of Newton, in Watertown, which was dedicated in 1827. A church was formed in 1828. Fourteen ministers in succession supplied the pulpit. The society was dissolved about 1866, and the building utilized as a school-house. The bell was sold to the Second Baptist Society, Newton Upper Falls, and removed thither. The communion service was "a set of silver plate, formerly the property of the First Universalist Church of Boston" (corner of Hanover and Bennett Streets), and "one of the cups was brought from England by Rev. John Murray," who founded the Universalist Church in Gloucester, Massachusetts, and was the first minister of that faith in this country. The communion set is now in the possession of the Universalist Society in Newtonville.

The Evangelical Congregational Church of Auburndale was constituted November 14, 1850, with thirty-four members, and religious services were held for several years in the village hall. The church was dedicated July 1, 1857. During a violent storm, March 4, 1862, the steeple was blown down and fell upon the roof, causing much damage to the building. For two or three years the pulpit was supplied by resident clergymen, Rev. Sewall Harding, Rev. J. E. Woodbridge and others. Pastors: Edward W. Clark, 1857-61; Augustus H. Carrier, 1864-66; Calvin Cutler, 1867—.

The Centenary Methodist Episcopal Church of Auburndale began in weekly meetings, held in the house of Mr. John Mero, August, 1860. Afterwards the services were held in a school-house. The first preacher was George W. Mansfield, November 18, 1860. The church at first numbered twelve members. In July, 1865, the hall where they worshipped was destroyed by fire, and a chapel was soon after built on Central Street, and dedicated May 25, 1867. A new church was dedicated in 1889.

Church of the Messiah of West Newton and Auburndale.—Previous to 1858 worship according to the Episcopal form was held in a hall at Auburndale. The hall having been burned, the services, for a season, were suspended, but resumed in the Village Hall, West Newton, July 16, 1871, and continued thereafter in the hall or the Unitarian Church; and then, for several months in 1877, in the chapel of

Lasell Seminary. A church edifice was begun in 1880, on Auburn Street, Auburndale, built of the brown freestone once used in building the Baptist Church in Rowe Street, Boston, which had been taken down and the place of worship transferred to Clarendon Street, on account of the demand for business houses in the original locality. Rectors: Rev. N. G. Allen, Rev. C. S. Lester, 1872-73; Rev. H. W. Fay, 1873-75; Rev. F. W. Smith, 1875-77. During a vacancy Rev. George W. Shinn officiated in addition to his work in Newton. Rev. Henry A. Metcalf is the present rector. In 1888 a commencement was made of an English Gothic church of brown stone, the present building being utilized as a portion of the new structure.

The North Evangelical Church, Nonantum, commenced June 2, 1861, with a Sabbath-school in the railroad depot at Bemis' Crossing, on the Watertown side of the Charles River. A chapel was afterwards erected on Chapel Street, on land given for the purpose by Mr. Thomas Dally, at a cost of about \$1200; this chapel was afterwards enlarged, as the growth of the society demanded it. The church was organized July 11, 1866. Rev. Samuel E. Lowry, the first pastor, was ordained October 21, 1867. The chapel was burned June 2, 1872, and replaced by a stone edifice on the same site, which was dedicated October 16, 1873; the cost, \$18,000, was fully paid before the dedication. Pastors: Rev. Samuel E. Lowry, who died in office, and Rev. W. J. Lamb.

St. Bernard's Catholic Church, West Newton.—The corner-stone of the church was laid November 12, 1871, and the church dedicated about 1874. Cost, about \$38,000. Rev. Bernard Flood was the first officiating priest. Rev. M. T. McManus was pastor from 1876. In 1888 the church was burned, but immediately rebuilt and dedicated in 1889.

Newton Highlands Congregational Church.—Meetings were first held in Farnham's Hall in November, 1871, a church and chapel erected in 1872, and after nearly a year the meetings were removed from the hall to the chapel. The church was dedicated in 1875; the land on which it stands was given by Mr. Moses Crafts. The church was organized June 13, 1872, with twenty-seven members, of whom twenty were dismissed for that purpose from the First Church, Newton Centre. The church has had but two pastors: Rev. S. H. Dana, 1871-77; Rev. George G. Phipps, 1877—.

St. Paul's Episcopal Church, Newton Highlands.—The church building, a modest structure of wood, built in 1884, stands on Walnut Street. The first rector, Rev. Carlton P. Mills, remained in office till the close of 1889, when he became rector of a church in Kalamazoo, Mich. Near the close of his period of service he was instrumental in the commencement of an Episcopal parish at Newton Centre as a mission of St. Paul's, which, after his transferral, was cared for by members of the Episcopal Theological Seminary at Cambridge.

Episcopal Church, Newton Centre.—Worship was first commenced in 1889, Rev. Carlton P. Mills, rector of St. Paul's Church, Newton Highlands, officiating. The services were held in the small hall of the building of the Newton Improvement Association.

The Methodist Episcopal Church, Newton Centre, began with a weekly meeting in the old engine-house in June, 1875. In January, 1876, a Sabbath-school and preaching services followed. It was regarded at first as a mission station of the Methodist Church at Newton Upper Falls. In October, 1877, provision was made for permanent preaching by a stated supply. The late Marshall S. Rice left by will one thousand dollars to the society for a church edifice. The church was organized in 1879. Hon. Alden Speare, ex-mayor of Newton, purchased the lot of land at the corner of Centre and Station Streets, and presented it to the society for a church, which was dedicated July 7, 1880.

The Unitarian Church, Newton Centre, was begun in the fall of 1877 by residents of Newton Centre and Newton Highlands. The first service was held in a hall in the brick block on Station Street, commencing November 11, 1877. The church was dedicated July 1, 1880. The only pastors have been Rev. Rufus P. Stebbins and Rev. Horace L. Wheeler.

The Central Congregational Church, Newtonville, was recognized by public services September 8, 1868; original members, thirty-six. The Methodist Chapel, corner of Washington and Court Streets, was bought by members of the society, and opened for regular services April 8, 1868. The building has been twice enlarged. Pastors: Rev. Joseph B. Clark, 1868-72; Rev. James R. Danforth, 1873-74; Rev. E. Frank Howe, 1876-82; Rev. F. W. Gunsaulus, 1883-85; Rev. Pleasant W. Hunter, 1886-89; D. Henry Taylor, 1890—.

The Universalist Society, Newtonville, was the outgrowth, in 1870, of the extinction of the Newton and Watertown Universalist Church and a society in Waltham. The first meeting was held in a small hall in Newtonville Square, and later in Tremont Hall. The society was legally organized in 1871, and the church dedicated June 26, 1873. It is built of stone, in the Elizabethan Gothic style, to accommodate 300 hearers. Cost, about \$20,000. Rev. J. Coleman Adams, the first pastor, was ordained December 19, 1872. In 1880 he removed to Lynn and afterwards to Chicago. His successors have been Rev. C. E. Nash, 1881-84; and Rev. Rufus A. White.

The Methodist Episcopal Church, Newtonville, began in a Methodist class formed in 1857. The first public meeting was held in a piano-forte wareroom March 24, 1860, and the services were afterwards removed to Tremont Hall. A chapel, since belonging to the Central Congregational Church, built by Hon. William Clafin and Mr. D. Lancey, on the corner of Washington and Court Streets, was hired, and dedicated in

April, 1860, in which year the church was formed with twenty-four members. The brick chapel near the railroad station, begun by another society and sold by them before it could be finished, on account of embarrassment owing to the removal of members, was purchased by the Methodist Society, completed, and dedicated in 1863.

The Swedenborgian Society, or New Church, Newtonville, began with services in the dwelling-houses of Mrs. Davis Howard and Mr. T. H. Carter, soon after 1846, and afterwards were continued in the Village Hall. In eleven and a half years the services were held in four different halls. In 1868-69 the chapel now occupied by the society was built on Highland Avenue, the site having been given for the purpose by Mr. T. H. Carter, and dedicated April 11, 1869. A society of twenty-nine members was instituted, and Rev. John Worcester installed December 26, 1869—. In 1886 a handsome structure of stone was erected in the rear of the chapel for the convenience of social gatherings and other meetings in the interest of the church. The society has been a prosperous one, having more than doubled the number of its original members.

Chestnut Hill Chapel was dedicated in October, 1861. Rev. W. A. Whitwell (Unitarian) was the first pastor, followed by Rev. A. B. Muzzey and Rev. John A. Buckingham. Soon afterwards Unitarian services were discontinued, the number of worshippers of that faith having declined.

St. Andrew's Episcopal Church, Chestnut Hill, under the charge of Rev. Arthur W. Eaton, commenced services here after the Unitarian worship was discontinued, and an Episcopal parish is now (1890) about to be formed, a temporary rector being supplied from the Episcopal Theological Seminary in Cambridge.

Thompsonville Chapel was erected by private subscription by members of the First Baptist Church, Newton Centre, and dedicated November 9, 1867, as a locality for a Mission Sabbath-School and other meetings. At the end of eleven years not a Sabbath had passed without a public service. In this part of Newton, in 1759, the New Light excitement began under Mr. Jonathan Hyde, and after the lapse of a century religious services were again inaugurated.

The First Baptist Church of West Newton is a continuation of the organization which began at Newtonville October 23, 1853, in Tremont Hall. This was the first church of any denomination in Newtonville. The church was organized with sixteen members, and publicly recognized April 20, 1853. The brick chapel near the railroad station in Newtonville was commenced by this church, but the subscriptions being insufficient to meet the expense of building, and the society being depleted by the removal of members, the site and structure, as it stood, unfinished, was sold to the Methodist Episcopal Church, and completed by them for their church edifice. After a temporary suspension of services, the members voted,

June 5, 1866, to revive their organization and to hold their meetings thereafter in West Newton, and to take the name of the First Baptist Church in West Newton. Meetings were held in the Village Hall till their church on Lincoln Park was finished and dedicated August, 1871. Pastors: Rev. B. A. Edwards, 1851; Rev. R. H. Bowles, 1866; Rev. R. S. James, 1869-70; Rev. William Lisle, 1870-75; Rev. T. B. Holland, 1875-78 (died while in office); Rev. O. D. Kimball, 1883-89; Rev. D. W. Faunce, 1890—.

First Unitarian Church, West Newton.—Meetings were held in the hall of the brick hotel, Washington Street, opposite Centre Street, in the summer of 1844, and again in 1847. In the fall of 1843 Rev. William Orne White was ordained the first pastor and a church organized. The services were held in the Village Hall till 1860. A church edifice was dedicated November 14, 1860, enlarged in 1867 and again in 1879. Pastors: Rev. William Orne White, 1848-50; Rev. W. D. Knapp, 1851-53; Rev. Charles E. Hodges, supply for a year; Rev. Washington Gilbert, Joseph H. Allen, two years each; Rev. W. H. Savary, Rev. J. C. Zachos, Rev. Francis Tiffany, Rev. J. C. Jaynes.

The Myrtle Baptist Church (colored) was organized September, 1874, with twenty members. The first pastor was Rev. Edward Kelly. The chapel was dedicated in 1875. The church has often been without a pastor and its pulpit has been dependent on supplies mainly from the Newton Theological Institution.

The Church of Yahveh (Second Advent), at Newton Upper Falls, was organized April 18, 1886.

SLAVERY.—From the records of Newton it appears that slavery, in a mild form, existed many years ago within its borders. The laws of Massachusetts allowed the sale into slavery in foreign countries of some Indians, supposed to be loyal to the colonists, but who took part against them in King Philip's War. This prompted John Eliot, the apostle to the Indians, to send a petition to the Governor and Council in 1675, protesting against the measure. In 1703 a duty of £4 was laid on every negro imported into the town of Boston, and the few persons engaged in such traffic took their cargoes into the southern Colonies or the West Indies. The negro trade declined about the period of the Stamp Act, and in 1788 it was prohibited by law. The abolition of slavery began to be discussed as early as 1766, and was warmly pursued for several years in pamphlets, speeches and newspaper articles. Slaves in the families were generally treated as kindly as if they were children. During the period from 1681 to 1802 about thirty-seven slaves were held by about twenty-five owners; one person owned four, two owned three each, five two each, about seventeen one each. Mrs. Fitch, mother of Mrs. Rev. Jonas Meriam, owned a slave woman, whom Mr. Meriam bought of his mother-in-law for \$100; one day, when he saw her treated unkindly, he immediately set her free. The last slave in Newton was

an incumbrance on the estate of General William Hull, Tillo (Othello) by name, who enjoyed much liberty, apparently working only when he chose to do so. He sleeps in the old cemetery beside his master. Jonathan Jackson had a slave (Pomp) who was in the Revolutionary War, and set free in 1776. He settled afterwards on the banks of "Pomp's Pond," in Andover. Others of the Jacksons were slave-holders, but the wrong has been nobly retrieved by the sturdy opposition to slavery of Hon. William Jackson, Mr. Francis Jackson, leaders of the Liberty and Free-Soil parties in Massachusetts; Hon. Horace Mann, a citizen of Newton; Mr. John Kenrick, first president of the American Anti-Slavery Society, and many others.

TEMPERANCE.—As the Rev. Mr. Eliot took the lead in protesting against selling human beings into slavery, so, also, he took the lead against the sale of intoxicating drinks. In 1648, about the time of his first preaching to the Indians, he presented a petition to the General Court, begging "that there might be but one ordinary in all Boston who may have liberty to sell wine, strong drink, or any strong liquors unto the Indians; and whoever shall further them in their vicious drinking, for their own base ends, who keep no ordinary, may not be suffered in such a sinne without due punishment." In 1816 it is stated that Dr. James Freeman, of Nonantum Hill, "allowed no rum on his place, but paid his men a dollar a month extra in commutation therefor." December 15, 1826, a meeting was held in Newton which took active measures on the subject of Temperance, and addressed a circular to all the inhabitants of the town to awaken general interest in it. A meeting was held at the school-house in Newton Centre early in January, 1827, to form a temperance society, and twenty-seven members subscribed their names. This is supposed to have been the second town organization of the kind in New England, the first being at Andover. Notwithstanding some opposition, hundreds were added to its ranks. Weekly meetings were held in West Newton, which resulted in the formation of a library for the intellectual improvement of the members. It was denominated "The Adelpian Library," and was furnished with several hundred volumes. Through this association was originated the Newton Institution for Savings. At the weekly meetings various subjects were presented and discussed, so that the temperance society was substantially a literary society of a high order, and its meetings were numerously attended. At the second anniversary, Dr. Gilbert delivered a discourse on temperance, which was printed and widely distributed. It was one of the first publications advocating the doctrine of total abstinence. The town from time to time passed resolutions engaging to execute the laws of the State of Massachusetts, regarding the sale of intoxicating liquors. In April, 1850, the selectmen were appointed a committee to prosecute all violators of the liquor law of the town. In 1853 a vote was passed not to

license any to sell intoxicating liquors. In 1862 a certificate was issued to a single individual, signed by the whole Board of Selectmen, appointing him sole agent for the sale of intoxicating liquors in Newton, under the laws of the Commonwealth, for the year ending May 1, 1863. In 1864 the town assumed the responsibility of all such sales through its appointed agent, the stock of liquors being deposited at the alms-house. In 1870 the town voted "that no person shall be allowed to sell ale, porter, strong beer or lager beer, in the town of Newton." This vote was repealed May, 1871, and from that time the subject of temperance has been left to the laws of the State, magistrates being appointed to execute them, and to the voluntary efforts and influence of the citizens.

THE FIRE DEPARTMENT.—The Cataract Engine Company, at the Lower Falls, is the oldest fire organization in Newton. It was 125 years after the incorporation of the town before any public provision was made for extinguishing fires. Previously, all buildings were submitted only to the protection of Providence, or, in case of fire, to the benevolent exertions of the public. In 1813 the Legislature of Massachusetts granted authority to certain residents of Newton Lower Falls to form a fire-engine company. The admission fee of members was five dollars. The company bought their own engine, fire-buckets and other machinery.

Though the temperance movement had not yet been inaugurated, except in the formation in Boston of the "Massachusetts Society for the Suppression of Intemperance," the engine company made stringent rules to prevent the members from the immoderate use of spirituous liquors. Many of the prominent men of the village and town belonged to the organization. They held monthly meetings at the village inn, besides the annual "Enginemen's Supper," which was always regarded as a great occasion. From time to time, at subsequent dates, the town appropriated money to purchase engines and ladders for the several villages, and gradually increased the pay of fireman and the quantity of apparatus, till, in 1878, the amount of property of the Fire Department, in buildings, land and machinery, including the fire-alarm telegraph, was valued at \$148,100. The first fire-warden chosen was Solomon Curtis, of the Lower Falls, in 1818. In 1823 eight fire-wards were chosen, and in 1824, ten. In 1823 a vote was passed "empowering the selectmen to build engine-houses when and where they may deem them necessary, provided that the proprietors of the engine or engines will provide land at their own expense to build said houses upon." In 1824 a vote was passed by the town, offering a reward of \$300 for the detection of incendiaries guilty of causing the late fires in the town. In 1825 there were engines at the Upper Falls, Lower Falls, Newton Centre, West Newton and Elliott Factories, and four fire-wards were chosen to each, which were increased in number

in 1826 and 1827. In 1835 \$1000 were appropriated to put the engines in repair or to purchase new ones. It was part of the duty of the fire-wards to provide refreshments for the engine-men and others who may come from neighboring towns to aid in extinguishing fires, and to present the bills to the selectmen for payment. In 1842-43 \$600 were appropriated for fire purposes to each of the villages of the Upper Falls, Lower Falls, West Newton, Newton Centre and Newton Corner. In 1849, by vote of the town, the firemen were allowed five dollars each and the abatement of their poll-tax, in compensation for their services. The Fire Department, however, caused much anxiety to the wisest of the citizens. It was difficult to decide how much liberty should be granted to the several companies, and yet how they should be kept, so far as was necessary, under the control of the selectmen of the town. And the question seems not to have been fully solved until the city government was established, and the whole matter subjected to municipal regulation. In 1867 there were six engines. In May of that year the first steam fire-engine was introduced at Newton Corner, and a bell for fire-alarm purposes at West Newton. An appropriation was made for a steam fire-engine at West Newton in 1871, and for Newton Centre in 1872, and shortly afterwards the fire-alarm began to strike the noon hour in every part of the city. In 1889 the Fire Department of Newton consisted of three steamers, five hose companies and one hook-and-ladder company, with appropriate buildings and horses.

ALMSHOUSES.—In 1731, more than forty years after the incorporation of Newton as an independent town, the citizens voted to build a work-house; so they denominated the place of shelter and comfort for the poor, probably dreading lest the benevolence of the town might be imposed upon by artful persons, seeking to be supported in idleness. In 1734 the first Board of Overseers of the Poor was chosen. In 1763 a vote was again passed to build a work-house, twenty-four feet by twenty-six, and one story high, "on the town's land near Dr. King's, or some other place," and appropriating fifty pounds for that purpose. In 1768 a code of regulations for the work-house was reported to the town by a committee previously appointed, and accepted. These rules indicate a spirit of strictness and severity which, in these days, seems gratuitous, but they may have been justified by the circumstances of the age. In 1818 the house and land formerly belonging to John Pigeon, in Auburndale, were bought for an almshouse, the price paid being \$2500; there was also a mortgage on the farm of \$1500. This continued to be the locality of the almshouse till it was relinquished by the town, and a lot purchased and the necessary buildings erected near the residence of Mr. Matthias Collins, and in the vicinity of what is now the new village of Waban. It was among the regulations that the poor who were able should regularly attend church. In this last lo-

cation sittings were provided for them in the Methodist Church at Newton Upper Falls. Forty or fifty years ago, Divine service used to be held in the dining-room of the house, and the ministers of the town in rotation preached on Sabbath evenings. When it was Dr. Homer's turn to preach, it is said he always used to preach sitting.

THE HOME FOR ORPHAN AND DESTITUTE GIRLS, first established in Newton Centre, was opened in December, 1866, in the house which was erected as the boarding-house of the Newton Female Academy—Mrs. Rebecca R. Pomeroy, superintendent. The house having been destroyed by fire, the Home was removed to the house of Mr. Ephraim Jackson, and after a short experiment in the new quarters, discontinued. But one or two of the inmates became the nucleus of another Home of similar character, also under Mrs. Pomeroy, and which has pursued its benevolent work for many years in a large dwelling-house on Hovey Street, Newton Corner.

THE PINE FARM SCHOOL for boys, at West Newton, in charge of the Boston Children's Aid Society, was established in 1864. It has continued to be a fountain of good to many of the poor waifs from the streets of Boston, where they are educated, and taught to support themselves by some handicraft, which may render them blessings to society and honored in the world. The farm, of twenty acres, is situated one mile from West Newton. The house is very old, being the old Murdock place. Alterations were made in it, for the time, and a new house was built later. The boys remain at the Home from six months to two years or more, helping in all departments of the work of the institution. Out of school-hours they are also employed in farming, printing, knitting and the use of tools. The barn was destroyed by fire in 1877, and a new one built in its place.

THE HOME FOR THE CHILDREN OF MISSIONARIES (*Congregational*) was established in 1868 on Hancock Street, Auburndale, as a private enterprise by Mrs. Eliza H. Walker, widow of Rev. Augustus Walker, missionary in Turkey twelve or fourteen years. The children of missionaries are boarded here at moderate cost, and have all the privileges of the public schools, and the advantages of other residents, and all the influences of a Christian home. The institution has been very prosperous, and the building greatly enlarged. The house was built for Mrs. Walker by her father, Rev. Sewall Harding.

THE WESLEYAN HOME FOR THE ORPHAN CHILDREN OF MISSIONARIES and others, connected with the Methodist Episcopal Church, is on Wesley Street, Newton. It was commenced in 1884, in a house given for the purpose by Hon. Alden Speare. The sum of \$20,000 has been given by Hon. Jacob Sleeper, of Boston, as an endowment.

THE MISSIONARY HOME AT NEWTON CENTRE (*Baptist*) was established in 1880 by the Woman's Baptist Foreign Missionary Society, with the un-

derstanding that missionaries, or their friends, in their behalf, should pay annually \$200 for each child received, the society standing responsible for any deficit. Two children of Rev. S. B. Partridge, missionary in China, were the first to enter the Home. The building which it occupies, at the junction of Centre and Willow Streets, was erected at the expense of the society in 1881-82, and enlarged in 1889. Mrs. McKinlay, widow of a Scotch clergyman, has been the competent and admirable superintendent from the beginning.

A SINGING-SCHOOL for the whole town was taught in 1780 by a Mr. Billings, well-known as the composer of many popular tunes. This was at the time when the "New Light" excitement in Newton began to have influence, and created a fondness for social singing. Another singing-school was taught in Newton Centre in 1805-06, in the old Deacon Ebenezer White house, which formerly stood on the site of the brick block, near the corner of Centre and Pelham Streets. Another was held at West Newton in 1821, and several in following years. In 1816 there was a musical society in the town, called St. David's Musical Society, which sometimes held its meetings at Bacon's Hotel, on Boylston Street, afterwards the home of Deacon Asa Cook, Newton Highlands. The Newton Musical Association was formed at Newton Corner in 1861. This society, besides several concerts, sacred and secular, gave a number of performances of a high order, with much success—the oratorio of the "Messiah," five times; the "Creation," four times; "Elijah" and "Samson," once each, and Mendelssohn's "Hymn of Praise," twice. At the first National Jubilee Peace Concert, held in Boston in June, 1869, 221 members from Newton attended, and aided during the entire performance; and at the second, in June, 1872, 300 participated.

THE NEWTON SUNDAY-SCHOOL UNION was organized December 18, 1838, representing, at the beginning, only six Sunday-schools, but afterwards all the Sunday-schools in Newton. The association held anniversary exercises for the children of all the schools on the 4th of July, 1839, with a procession of children, addresses and a collation, in a grove at Newton Upper Falls; in 1840, in a grove at Newton Centre, when there was a procession of 1300 to 1500 children, and an audience of between two and three thousand was present at the exercises, followed by music and a collation. The third anniversary was celebrated by services in the First Parish Church, Newton Centre, and a collation in a grove near the pond. The fourth anniversary was at the Methodist Church, Newton Upper Falls. After that date the children's celebrations of July 4th were dropped. The twenty-fifth anniversary was held at Eliot Church, October 16, 1863. The contributions of the Union have been devoted to the support of a Sunday-school missionary in destitute places in the Western States.

THE NEWTON NATURAL HISTORY SOCIETY was

formed in October, 1879, for the purpose of awakening an interest in natural history with special reference to the locality of Newton, and to gather specimens in the geology and mineralogy, and in the flora and fauna of Newton and its vicinity. The society keeps its collections of minerals, birds and other curiosities in a room in the Newton Free Library.

THE CLAFLIN GUARD was organized in September, 1870, by fifty young men of Newton, and was assigned to the First Regiment Massachusetts Militia, and designated as Company L. An elegant American flag was presented to the company by the ladies of Newton, May 30, 1871. The first captain was Isaac F. Kingsbury, 1870; the second, John A. Kenrick, in 1878. The name of the company was adopted in compliment to the Governor of the State, an honored resident of Newton.

WATER-WORKS.—At a regular town-meeting held in April, 1871, a committee was appointed to investigate the best method of supplying the town with water, and to report at a subsequent meeting. The committee reported November 13, 1871, in favor of taking water from Charles River, and the same committee were appointed to petition the Legislature of Massachusetts for full power to carry the report into effect. By an act passed in 1872 the town of Newton was authorized to take "from Charles River, at any convenient point on the same within said town, sufficient water for the use of said town and inhabitants, not exceeding one and a half million gallons daily, for the extinguishment of fires, domestic and other purposes." This act was accepted by vote of the town May 27, 1872.

The work, however, was delayed. Many doubted the expediency of engaging in so expensive an undertaking. Others doubted as to the best source of supply, maintaining that the ponds and streams within the borders of Newton would be preferable to the water of Charles River. In accordance with the views of this portion of the citizens, an act was obtained from the Legislature in 1874, "authorizing the city to take and hold the water of Hammond's Pond, Wiswall's Pond, Bullough's Pond and Cold Spring Brook, all in Newton, for fire and other purposes, together with the waters which flow into the same, and any water-rights connected therewith." And this act was accepted by the City Council October 20, 1875.

In 1874 the citizens were called upon to vote by ballot, "Yes" or "No," on the question, "Shall the City of Newton be supplied with water for fire and domestic purposes at an expense not exceeding six hundred thousand dollars, in accordance with the special Act of the Legislature of 1872, chapter 304, authorizing the same?" The vote was taken by ballot December 1, 1874, and resulted in "yeas," 928; "nays," 443.

Three water commissioners were appointed December 9, 1874,—Royal M. Pulsifer, Francis J. Parker

and R. R. Bishop,—who reported in May, 1875, recommending as a source a "well at a point on Charles River, above Pettee's Works at the Upper Falls;" advising the use of a reservoir for distribution, and estimating the cost at not over \$850,000.

The order constituting the Board of Water Commissioners was passed June 2, 1875; and on the 7th of June the commissioners, the same as above, were elected by the City Council. Their first formal meeting was held June 16th. The board was organized by the choice of Royal M. Pulsifer chairman and Moses Clark, Jr., clerk. On the 12th of June, 1875, it was voted to purchase the reservoir site on Waban Hill. October 25th work on the pump-well was commenced, and October 28th the first pipe was laid on Washington Street, near Woodland Avenue. January 7, 1876, the commissioners voted to request the City Council to ask of the Legislature authority to take land in the town of Needham for the water-works. In compliance with the petition, a law was enacted by which the city of Newton was authorized "to take and hold, by purchase or otherwise, any lands within the town of Needham, not more than one thousand yards distant from Charles River, and lying between Kenrick's Bridge, so called, and the new bridge near Newton Upper Falls, on Needham Avenue, and to convey water from the same to and into said City."

Water was first pumped into the reservoir on Waban Hill October 30, 1876, and the hydrants supplied with water along forty-eight miles of street mains. The first service pipes were laid in October, 1876, and the number of water-takers two years later, in 1878, was about 1600. The cost of the works to November, 1877, was \$766,157.22; the amount of the appropriation was \$850,000; leaving an unexpended balance of \$83,842.78. The reservoir on Waban Hill holds fifteen million gallons. Seven artesian wells were sunk in 1886, capable of drawing from the subterranean currents three hundred thousand gallons per day, supplementary to the supply from Charles River.

CONDUITS OF THE BOSTON WATER-WORKS PASSING THROUGH NEWTON.—The conduit of the Boston Water-works from Lake Cochituate passes through the whole extent of Newton from west to east, from Charles River, near the Upper Falls, to the Chestnut Hill Reservoir. The conduit enters Newton a little below the village of the Upper Falls. The ground for this aqueduct was broken August 20, 1846, and water was introduced into the city of Boston with imposing ceremonies October 25, 1848. The Newton Tunnel is excavated through porphyritic rock of extreme hardness, 2410 feet in length. Two perpendicular shafts on the Harbach property, between the estates of the late Messrs. N. Richards Harbach and John W. Harbach, were sunk to a depth of about eighty-four feet. Several specimens of copper were found in this shaft. The Chestnut Hill Reservoir, at

the time of its construction, was situated in the towns of Newton and Brighton; but by a subsequent cession of land, it is now within the limits of Boston. Beacon Street, which formerly ran in a straight line across the valley, was turned from its course to allow the construction of the reservoir. The reservoir is in two divisions,—the Lawrence Basin and the Bradley Basin. Together they are two and a half miles in circumference. The land bought by the city of Boston for this structure was two hundred and twelve and a half acres. This land was a portion of the Lawrence farm, previously Deacon Nathan Pettee's and owned, before him, by Deacon Thomas Hovey.

THE SUDBURY RIVER CONDUIT.—The supply of water from Lake Cochituate proving inadequate to meet the necessities of the city of Boston, a supplemental source was sought from the Sudbury River, which involved the construction of a second tunnel through Newton. The "Sudbury River Conduit," bringing the additional supply of water to Boston, is about fifteen and three-quarters miles long, from Farm Pond, in Framingham, to the Chestnut Hill Reservoir. It enters Newton in the Upper Falls Village, passes through that village to the north of Newton Highlands and through Newton Centre to the reservoir. The principal features of this work in Newton are the bridge carrying the great conduit of water-works fifty-one feet above the stream, over Charles River to the Upper Falls, and the tunnels near the crossing of Pleasant Street and under Chestnut Hill. The bridge, generally known as "Echo Bridge," is five hundred feet in length, and consists of seven arches—five of thirty-seven feet span; one, over Ellis Street, of thirty-eight feet, and the large arch over the river. It is constructed mainly of solid granite, and rests on foundations of solid rock. The large arch, spanning the river, is the second in size on this Continent, and one of the largest stone arches in the world. To one standing beneath it, the arch has a very slender and beautiful appearance, being only eighteen feet in width at the crown. There is a remarkable echo in this arch, the human voice being rapidly repeated upwards of fifteen times, and a pistol-shot twenty-five times. A shout of moderate intensity is reverberated with so many and so distinct iterations, that all the neighboring woods seem full of wild Indians rushing down from the hills and threatening to annihilate all traces of modern civilization. This bridge was built during 1876 and 1877.

NEWTON COTTAGE HOSPITAL is near the new station of Woodland on the Circuit Railroad, and about one mile from the Lower Falls. It was first suggested by Rev. Dr. G. W. Shinn, rector of Grace Church, Newton, and an Act of Incorporation was obtained in 1881. In 1884 nine acres of the old Granville Fuller estate on Washington Street were procured, and the building was erected in 1885-86. The hospital was furnished by the Ladies' Aid Association. Mrs. Elizabeth Eldridge gave \$10,000 towards

the building and support of the hospital; Mrs. J. R. Leeson, of Newton Centre, gave \$7000; at least twenty other persons gave each five hundred dollars or more. Appropriations have also been added from the city treasury. One Sabbath in every year is termed Hospital Sunday, and on that day a collection is taken up in all the churches in Newton to aid in the benevolent work of the institution. Pupil nurses are taught in the hospital, and lectures are given occasionally on important subjects pertaining to hygiene, by the physicians in charge and others. An additional building for private patients is about to be erected.

WOODLAND PARK HOTEL, in the immediate vicinity of the hospital, the chief public-house of Newton, half a mile from Woodland Station, is an imposing Queen Anne structure, built in 1881-82 by Messrs. Haskell, Andrews and Pulsifer, connected with the *Boston Herald*, and Mr. Frederick Johnson, as a suburban retreat for persons of weak throat and lungs desiring to escape from the rough winds of the New England coast. The first, and hitherto the only landlord is Mr. Joseph Lee, a gentleman from Virginia, once connected with the purveying department of the United States Navy.

Many visitors, especially those in delicate health, from the wealthy portions of Boston and elsewhere, take refuge here in the spring and summer. Woodland Avenue, in front of the hotel, about 1750, and for many years before and after, was one of the most important highways of the town. At the time of the Revolution Burgoyne's captured army were marched over this road to the quarters where they were to be held under guard. In the early part of the present century, and especially after the building of the Worcester turnpike through the Upper Falls, in 1809, it was almost abandoned. But within ten years past it has again become famous. From Vista Hill, near by, sixteen towns can be seen, with Bunker Hill Monument, the Blue Hills and the Atlantic Ocean.

THE TOWN OF NEWTON BECOMES A CITY.—After making history two hundred and thirty-five years from the date of the coming of its first settler, and one hundred and eighty-six years from its incorporation as a separate town, Newton became a city with the beginning of the year 1874. In the warrant issued for the town-meeting, April 7, 1873, was this article: "To see if the town will instruct the Selectmen to apply to the General Court for a City Charter, or for annexation to Boston, or for a division of the Town, or anything relative thereto."

In reference to this article the following action was taken: Gen. A. B. Underwood was moderator—J. F. C. Hyde offered the following, viz., "Voted, that the Selectmen, with a Committee of seven—to be appointed by the Chair—be instructed to petition the General Court, now in session, for a City Charter for Newton."

The whole subject was fully discussed. Some fa-

vored a city charter for Newton; some advocated remaining longer under a town government, and one or two favored a union with Boston. Finally, the motion of Mr. Hyde was put and carried; and the following were appointed a committee, to be joined with the selectmen, to petition the General Court for a city charter: J. F. C. Hyde, C. Robinson, Jr., C. E. Ranlett, R. M. Pulsifer, E. F. Waters, J. B. Goodrich and Willard Marcy.

On the 26th September a warrant was issued for a town-meeting to be held Monday, Oct. 13, 1873, notifying the inhabitants to bring in their votes to the selectmen, "yes" or "no," on the acceptance of the act of the Legislature, entitled "An Act to establish the City of Newton."

The meeting notified was held in the town hall, as summoned, Oct. 13, 1873. At fifteen minutes past eight o'clock, A.M., the chairman of the selectmen called for ballots, "yes" or "no," on the acceptance of Chapter 326 of the General Laws and Resolves passed by the last session of the Legislature of Massachusetts, entitled "An Act to establish the City of Newton."

The ballots were counted by the selectmen, and declared by their chairman as follows: "no," 391; "yes," 1224. And the meeting was dissolved.

On the 4th of November following, the annual meeting was held for the State elections (Governor of the Commonwealth, etc.). After all the returns had been made out, signed and sealed, and after the voting lists and votes had been sealed up in envelopes, endorsed, and delivered to the town clerk, Mr. William R. Wardwell moved that this meeting,—the last town-meeting in the town of Newton,—be dissolved, and the motion was carried unanimously. The following is the closing record of the town clerk:

"The Town-Meeting held Nov. 4, 1873, above recorded, was the last Town Meeting held in the Town of Newton. Newton becomes a City January 5, 1874.

"MARSHALL S. RICE, Town Clerk of the Town of Newton."

Thus Newton was the home of the English colonists as a part of Cambridge, and more or less under the municipal control of Cambridge about fifty years; and a separate town, under an independent government, like other Massachusetts towns, one hundred and eighty-six years. Under the auspices of the city government, the centennial day of Newton's vote to sustain the cause of freedom at any expense, at the beginning of the Revolution, was honored and commemorated by an imposing celebration June 17, 1876. Many historical relics and mottoes were displayed. Several of the descendants of the old settlers were dressed in the costumes of a hundred years ago. Thirteen of the descendants of the original families of Newton took part in the singing. Thirty-nine pupils of the High School represented the thirty-nine States. An historical address was delivered by Hon. James F. C. Hyde, the first mayor of Newton.

On the two hundredth anniversary of the action of

the General Court granting to Newton all the rights and immunities of an independent town, a formal and enthusiastic celebration was held in the auditorium of the City Hall at West Newton. The audience was entertained by addresses, music and poetry, followed in the evening by a banquet at the Woodland Park Hotel.

The following is a list of mayors: James F. C. Hyde, 1874-75; Alden Speare, 1876-77; William B. Fowle, 1878-79; Royal M. Pulsifer, 1880-81; William P. Ellison, 1882-83; J. Wesley Kimball, 1884-88; Heman M. Burr, 1889-90.

MISCELLANEOUS ITEMS.

Many items of historical interest belong to such a sketch as the present which are hardly reducible to any of the heads treated in the foregoing chapters. Some of them are appended here as valuable reminiscences.

THE WORCESTER RAILROAD was opened for passengers from Boston as far as West Newton, April 16, 1834. A locomotive ran from Boston to Newton, and return, three times a day, having from two to eight passengers on each trip. The engine used was the "Meteor," built by Mr. Stephenson, in England. The cars commenced running on the Hartford and Erie Railroad, then called the Charles River road,—which extended from Brookline to Needham,—in November, 1852. At first season tickets by the year between Boston and Newton Centre were sold for \$35. Previous to this time passengers were conveyed from Newton Upper Falls and Newton Centre to Boston by a daily stage, which went to Boston at 9 A.M. and left Boston to return at 3 P.M. Fare from Newton Centre to Boston, 37½ cents. A stage or omnibus also run between the Upper Falls and West Newton, and Newton Centre and Newton Corner to convey passengers to and from the Worcester Railroad.

THE NEWTON JOURNAL, the first newspaper printed in Newton, a weekly, was issued in September, 1866. THE NEWTON GRAPHIC has been issued since 1872. A paper called the *Newton Transcript* was published and edited by Henry Lemon, Jr., in West Newton, from 1878 to 1885, when the subscription list was sold to the *Newton Graphic* and the publication suspended.

A POST-OFFICE was first established in Newton Lower Falls in 1816; Newton Corner, 1820, Newton Centre, not till some time after the foundation of the Theological Institution; the students and professors were obliged to travel two miles to Newton Corner, for their mail. In 1847 there were five post-offices in the town, eight meeting-houses, and about 5000 inhabitants.

LAFAYETTE IN NEWTON.—The Marquis de Lafayette, during his last visit to this country, in 1825, passed through Newton and shook hands with a number of Master Davis' pupils, arranged by the side of the road to receive him.

THE FIRST CONTRIBUTION TO THE HOME FOR

LITTLE WANDERERS IN BOSTON was made at the Baptist Church, Newton Corner; and the first dollar was subscribed by a young girl, a member of that church. In the first fifteen years of its existence that institution cared for 4877 children, many of whom became valuable members of society—lawyers, ministers, clerks, farmers, physicians and representatives of various trades and professions.

CHURCH BELL, WEST NEWTON.—The first church bell in West Newton was raised to its tower in the Second Congregational Church in 1828. It was bought of the town of Concord, having been the gift of an English lady to that town. It was a very small bell for a meeting-house. On its surface, in raised letters, was this couplet:

"I to the church the living call,
I to the grave do summon all."

REVOLUTIONARY REMINISCENCES.—Near the bridge over the Charles River in Watertown village, on the Watertown side, stood, in Revolutionary times, the old printing-office of Benjamin Edes, who removed his type and press hither early in the year 1775, and who did the printing for the Provincial Congress. Near the bridge, on the Newton side of the river, stands a large old house on the east side of the road, called, in the time of the Revolution, the Coolidge Tavern. From 1764 to 1770 it was kept as a public-house by Nathaniel Coolidge, and afterwards by "the widow Coolidge." This house was appointed, in 1775, as the rendezvous for "the Committee of Safety," in case of an alarm. President Washington lodged in this house in 1739. An old house opposite, occupied by John Cook during the Revolution, is one of historic interest. It was in a chamber of this house that Paul Revere engraved his plates, and with the help of Mr. Cook struck off the Colony notes, issued by order of the Provincial Congress. Adjoining this estate were the famous weir lands along the river.

THE FINEST HOUSES IN THE NORTH AND EAST PARTS OF NEWTON were those of Dr. Morse, on the west side of the road, on the heights near the river; Mrs. Coffin's and John Richardson's (the Nonantum House); Hon. Jonathan Hunnewell's, on the road to Brighton; the Haven and Wiggin houses, on Nonantum Hill; John Peck's, Newton Centre, afterwards the Theological Institution; the Sargent place, on Centre Street, now the Shannon place; John Cabot, corner of Cabot and Centre Streets, since removed; a house occupied by Nath. Tucker, afterwards Mr. Thomas Edmands, opposite his son's, J. Wiley Edmands; the Col. Joseph Ward place, afterwards Charles Brackett; the Dr. Freeman place, afterwards Francis Skinner, and Gen. Hull's, now ex-Governor Claflin's. Most of these are still standing (1890), though some of them have been removed to another location.

BURIED TREASURE.—At the time of the Revolu-

tion, three young men of the Prentiss family, living in the Joshua Loring house, on Centre Street, opposite Mill Street, are said to have buried considerable property near the brook north of the old cemetery, and going to the war, they never returned. Parties are said to have sometimes dug for the treasure, but it is not known that any has ever been found.

TWO LISTS OF FREEHOLDERS—that is, of persons holding some estate and competent to vote—remain; the first, dated 1679, contains sixty-seven names; the second, in 1798, contains 211 names. The latter list is a tax-list, taken under an act of the Congress of the United States, levying upon the country a direct tax of two millions of dollars. The list embraced the houses with their valuation, acres with their valuation, and total valuation. Twenty persons are recorded as owning each one-half of a house; one, two-thirds; sixty-five, one house each; one, two, and one, three. We know not on what principle the assessors determined their estimate of the value of houses in Newton a century ago. Possibly they designedly set the value very low, for the purposes of taxation, compassionating the slender resources of the townsmen and their own. But even if they put upon it no more than a two-thirds valuation, it seems to us that the dwellings of the fathers of the town in the fourth generation after its incorporation were ridiculously cheap. According to this list, there were only two houses in the town valued above \$2000; only eleven, above \$1000; only thirty-seven above \$600; more than two-thirds of the whole, less than \$500; sixty-eight less than \$300; forty-five less than \$200; seven less than \$100. The three ministers were not required to pay taxes, though each of them owned both house and land. The largest number of acres owned by any individual was 249; twenty-seven owned between one and two hundred; 141 less than one hundred; four less than twenty; twenty-two less than ten; thirty-four none at all; 531½ acres stood in the names of women.

A LARGE BOULDER IN THE MIDDLE OF CHARLES RIVER, called "the County Rock," marks the spot where the counties of Norfolk and Middlesex and the towns of Newton, Wellesley and Weston adjoin one another.

NEWTON HAS A SURFACE FINELY DIVERSIFIED by hills of considerable elevation. The following, with their respective heights, are worthy of mention: Bald Pate Hill, the highest of all, is 318 feet; Waban Hill, near the Chestnut Hill reservoir, 313; Institution Hill, 301; Oak Hill, 296; Chestnut Hill, 290; Sylvan Heights, 252; Nonantum Hill, 249; Cottage Hill, 230; Moffatt Hill, 223; Mount Ida, 206.

THE POPULATION OF NEWTON, at various periods, is as follows: In 1820, 1850; 1830, 2376; 1840, 3351; 1850, 5258; 1860, 8382; 1870, 12,825; 1880, 16,995; 1885, 19,759.

CHURCHES AND PUBLIC SCHOOLS IN NEWTON.—In 1889 Newton had thirty-two churches and twenty

school buildings, including one High School. After 116 years the First Church saw its first shoot; after 148 years there were three; after 226 years, thirty-two.

THE NEWTON AND WATERTOWN GAS-LIGHT CO. was organized March 18, 1854.

A little below Riverside, on the Waltham side of Charles River, is "the Norumbega Tower," erected by Prof. Horsford, of Cambridge, and dedicated in 1889. The tower marks the site, as Prof. Horsford believes, of the principal settlement of the aboriginal tribe which once roamed over these forests.

STATISTICS.—In 1885 there were in Newton ninety-five farms, valued at \$189,886. The woolen-mills, employing 343 laborers, produced goods valued at \$600,406; the hosiery-mill employed 46 female operators; the watch factory, 40; the cordage factory, 67. Machinists, iron-workers and blacksmiths numbered 192. There were five houses employed in furniture manufacturing and thirty, clothing. The aggregate of goods manufactured was valued at \$2,389,018. Deposits in the two savings banks at the end of 1889, \$1,563,750. At the close of 1888 there were 4018 dwelling-houses in the town. The valuation by the assessors for the purpose of taxation was \$33,278,642.

MOUNT IDA.—The story of Mount Ida is interesting. It is the magnificent swell of land which rises immediately south of the railroad station at Newton, and is adorned with many fine residences. In the year 1816 John Fiske bought the entire hill for \$3300. In 1850 the same was held at \$10,000. After the Civil War it was bought by Langdon Coffin, Esq., who named it Mount Ida and laid it out in building lots. At that date there were only three houses on the whole estate; now the real estate of the same territory is valued at over half a million dollars. From the summit of Mount Ida admirable views are obtained of the valley-towns on the north—Cambridge, Watertown and Waltham, the long and shaggy ridge of Prospect Hill, the blue highlands of Essex, the spires and towers of Boston, the shining waters of Massachusetts Bay, the many villages of Newton and the crests of Wachusett, Monadnock and other inland mountain peaks.

BLOCK-HOUSE ON CENTRE STREET.—On Centre Street, north corner of Cabot Street, the residence of E. W. Converse, Esq., on the site of the mansion, once stood a block-house, with a stone base and openings above for defense, to which the neighboring colonists planned to retreat in case of hostile invasion by the Indians, who had shown at Sudbury, Medfield and Medway how much their attacks were to be dreaded. The old refuge at last fell to decay, having never been practically tested. The present house was erected and the grounds were graded at an expense of \$60,000 by the late Israel Lombard, Esq. The property passed into the hands of the Converse family in 1866. The old garrison-house was occupied in its latter days as a residence by Enoch Baldwin,

whose sons were afterwards known among the able financiers of Boston.

PARKS IN NEWTON.—Besides the Common at Newton Centre, the city has several pleasant open spaces, more or less adorned. The most noted is Farlow Park, at Newton, given to the city by the gentleman whose name it bears, and adorned at the public expense, in 1885. Kenrick Park, also at Newton, was laid out in 1854 by William Kenrick, under the name of Woodland Vale. Linwood Park, between Walnut Street, Crafts Street and Linwood Avenue, was founded by a contribution of \$2000 by citizens in the vicinity, a handsome donation by W. J. Towne, Esq., and an appropriation of \$1000 from the city treasury. Washington Park, at Newtonville, was laid out by Dustin Lancey in 1865. It is one-sixth of a mile long and sixty feet wide. Lincoln Park is a pretty open space on Washington Street, West Newton, in front of the First Baptist Church.

DICKENS AT NEWTON CENTRE.—When Charles Dickens, the renowned novelist, was in the United States he, with three companions—George Dolby, James R. Osgood and James T. Fields—undertook a walking-match, February 29, 1868, from the beginning of the mill-dam in Boston to Newton Centre and back, "for two hats a side and the glory of their respective countries." Dickens and Osgood were the contestants, the other two companions and spectators. Dickens, in describing the contest, says that "at their turning-point, Newton Centre, the only refreshments they could find were five oranges and a bottle of blacking" (which was a fib). Dickens reached the goal first, but Osgood finally won the match by seven minutes; and they celebrated the contest at night, with a few friends, by a dinner at Parker's.

GOODY DAVIS, OF OAK HILL, who lived to the age of one hundred and sixteen years, was thrice married, had 9 children, 45 grandchildren, 200 great-grandchildren and above 800 great-great-grandchildren before her death. She was often seen, after she was a hundred years old, at work in the field. She was at last supported by the town, though she retained her faculties till she was a hundred and fifteen years old. Dr. Homer remarks that "She had lived through the reigns of Charles I., Oliver Cromwell, Charles II., James II., William and Mary, Queen Anne and George I. and II. She was visited by Governor Dudley and also by Governor Belcher, who procured the painting of her portrait, now in possession of the Massachusetts Historical Society.

NEWTON CIRCUIT RAILROAD.—In 1886 the Boston and Albany Railroad Corporation bought of the New York and New England that portion of the road and franchise lying between Brookline and Newton Highlands, about five miles and one-tenth, for \$415,000, to form a part of the Newton Circuit Railroad, and immediately proceeded to complete its line across Elliott and Boylston Streets to Riverside; thus opening three new stations—Eliot, Waban and Woodland—

and bringing into market a large quantity of desirable land suited to residences and business.

CHAPTER II.

NEWTON—(Continued).

THE FIRST CHURCH IN NEWTON.

(At Newton Centre.)

BY REV. DANIEL L. FURBER, D.D.

THE first church in Newton was formed in 1664, and was a colony from the church in Cambridge, of which Rev. Jonathan Mitchel was at that time pastor. Newton was a part of Cambridge and was called Cambridge Village. The people of this place, in going to meeting on the Lord's Day, went through Watertown as we do now.

In 1664 Charles the Second was on the throne of England, Sir Isaac Newton was a young man, John Milton was writing "Paradise Lost," John Bunyan was in Bedford jail, and Richard Baxter was preaching the gospel "as though his soul was drenched therein."

Our early ministers used forms of expression which would sound strange if we should hear them now. One of them says, "We should show thankful resentment to God for his favors to us;" "Let us resent the hand of God in the death of so many of his useful servants;" "I will now shut up all with an exhortation." Another says, "Christians should chew over their former consolations;" that is, they should call them to mind and ruminate upon them as an ox chews his cud, and thus renew their enjoyment of them. The word "ingenuity" is used for "ingenuousness;" "Let us with candor and ingenuity confess our faults."

In 225 years this church has had only nine ministers—John Eliot, Jr., son of the apostle Eliot, Nehemiah Hobart, John Cotton, great-grandson of the famous John Cotton, of Boston, Jonas Meriam, Jonathan Homer, James Bates, William Bushnell, Daniel L. Furber and Theodore J. Holmes. Seven of these nine ministers were ordained here, and the work of six of them was both begun and ended here.

The original members of this church were an intelligent people. Trained as they had been in the vicinity of Harvard College, and listening every Lord's Day to the same preaching to which the professors and students listened, they had been under highly educating influences. No doubt we are in some measure indebted to this fact for the intelligence which now characterizes our people, for the character which is stamped upon a church or town in the beginning of its history is apt to go down to succeeding generations.

Sound doctrine has always prevailed here. In the early part of this century, when ninety-six of the 361 Congregational churches of Massachusetts became Unitarian, and thirty more were nearly so, when all the Boston churches but one abandoned the ancient faith, together with the churches in Roxbury, Dorchester, Cambridge, Watertown, Dedham, Brookline, Brighton and Waltham, the church in Newton and its first-born child in West Newton stood firm. The doctrinal belief of our fathers was thoroughly Calvinistic. John Cotton, of Boston, said that after studying twelve hours a day, he wanted to sweeten his mouth with a morsel from John Calvin before he went to sleep. If our fathers used some liberty, as no doubt they did, in the interpretation of Calvinism, we probably use still more, lopping off what Dr. Woods, of Andover, used to call the "fag ends" of it. Still, we are Calvinists, and we agree with James Anthony Froude, when he says, "If Arminianism most commends itself to our feelings, Calvinism is nearer to the facts, however harsh and forbidding those facts may seem." But we have the warmest Christian affection for those who differ from us, and join hand and heart with them in the grand endeavor to give the Gospel to mankind.

Calvinism, notwithstanding all the prejudice which there is against it, is a mighty system. It has asserted human rights and the equality of all men before God as no other system ever did. David Hume said that England owed all the liberty she had to the Puritans, and George Bancroft says that the monarchs of Europe, with one consent and with instinctive judgment, feared Calvinism as republicanism. John Fiske says that "the promulgation of the theology of Calvin was one of the longest steps that mankind has taken towards personal freedom." We boast of what New England did in the War of the Revolution. It furnished more than half of the troops that were raised. The descendants of the Puritans did that. The Congregationalists at that time were seven times as numerous as all other denominations put together, and they were descendants of the Puritans, and the Puritans were Calvinists. Let this show what kind of moral and religious forces achieved our independence. Everywhere the influence of this system of belief has been to establish human freedom, to educate the masses, to elevate society, and to free the enslaved. "Take the Calvinists of New England," said Henry Ward Beecher; "persons rail at them, but they were men that believed in their doctrines. They put God first, the commonwealth next, and the citizen next, and they lived accordingly, and where do you find prosperity that averages as it does in New England, in Scotland and in Switzerland? Men may rail as much as they please, but these are the facts."

Our church has been blessed with a godly and faithful ministry.

Rev. John Eliot, Jr., was called one of the best preachers of his time. Hubbard's "History of New

England" says he was second to none as to all literature and other gifts, both of nature and grace, which made him so generally acceptable to all who had the least acquaintance with him. We have no sermons from his pen, but there is a record of precious utterances made by him upon his dying bed, which can be found in the *Congregational Quarterly* for April, 1865. It was not known until about that time that the record was in existence. Cotton Mather had said nearly two hundred years ago that Mr. Eliot "upon his death-bed uttered such penetrating things as could proceed from none but one upon the borders and confines of eternal glory. It is a pity," said he, "that so many of them are forgotten." About twenty-five years ago was found in the attic of an old house in Windsor, Conn., in which lived and died Mr. Eliot's son, Judge John Eliot, a portion of a manuscript, yellow with age, in which was a copy of the "dying speech." While containing language of the deepest self-abasement it is a speech of triumph. The prospect of being so soon in glory with one whom he loved with all his soul, filled him with exultation and rapture. As old John Trapp says: "He went gallantly into heaven with sails and flags up and trumpets sounding." This for a young man only thirty-two years old, with the brightest prospects before him in this world, loved and admired by all who knew him, was certainly most remarkable.

After Mr. Eliot's death dissensions arose in the church, about which we know almost nothing. But in 1672 Nehemiah Hobart came and healed the divisions and restored harmony. In him a rich blessing came to the little church, and he is to be reckoned among the eminent men of his time. President Stiles, of New Haven, requested an aged clergyman, Rev. John Barnard, of Marblehead, whom Dr. Chauncy called "one of our greatest men," to give him the names of those New England divines of whom he had conceived the highest opinion for sanctity, usefulness and erudition, and he gave him the names of eighteen men, among whom was the name of Nehemiah Hobart, of Newton. Other names in the list are Samuel Willard and Ebenezer Pemberton, of the Old South Church in Boston; Cotton Mather, of the Old North Church; Benjamin Colman, of Brattle Street Church, and Increase Mather and Benjamin Wadsworth, presidents of Harvard College. But if Mr. Hobart is entitled to rank with such men as these, why is he not better known? The reason may be that he was an extremely modest man. A minister who knew him intimately said that his modesty was excessive, and that he had a singular backwardness to appearing in public.

Mr. Hobart died August 25, 1712. Eight days before his death he preached morning and afternoon, and at the close of the day blessed the congregation in the words prescribed in Numbers 6 : 24-26, which made an impression upon many. They thought that he had taken leave of them and that they should never

hear him again. He had used that form but once before. He said to President Leverett, of Harvard College, who made him a visit a few days before his death, that he had been at forty-nine commencements, never having missed one from the very first time that he had "waited on that solemnity." The President said that he was a great blessing and ornament to the Corporation of Harvard College. Judge Sewall states that the Governor (Dudley) was present at his funeral with four horses. "A great many people there. Suppose there were more than forty graduates." The President was one of the bearers, and the Governor and Judge Sewall followed next after the mourners.

Mr. Hobart's ministry continued forty years, during which time an unshaken harmony subsisted between him and his people. If there were revivals and large additions to the church under his ministry, or under the ministry of Mr. Eliot, we know nothing of them, for the records of our church have been twice burned, once in 1720 and again in 1770.

Our next minister was Rev. John Cotton, who was ordained here in 1714. The desire of the people to secure him for their minister was very strong. Rev. Edward Holyoke, afterward President of Harvard College, had preached here as a candidate, but Mr. Cotton was preferred. When he came, a youth of twenty-one, the whole town went in procession to meet and welcome him. Dr. Colman, of Brattle Street Church, spoke of him as a man in whom the name and spirit of the famous John Cotton revived and shone. Twelve of his sermons were published and are preserved. Fifty persons were added to the church soon after the earthquake of 1727, in consequence of that awful event, and of the use which he made of it in his preaching. One hundred and four were added in 1741-42 in a revival which probably began with the preaching of the celebrated Gilbert Tennent.

As an illustration of the attention which in former times was bestowed upon the young, there were many towns in New England about the year 1727 in which young men set up meetings for religious exercises on the evenings of the Lord's Day. Such meetings were held here, and Mr. Cotton delivered four sermons on the text "Run, speak to this young man." In the revival of 1741 scores of children and young people called upon their minister from week to week for religious conversation. This interest was greatly deepened by the death of Mr. John Park's three children, who died within the space of two weeks, after very brief illness, one of them eighteen years old, another sixteen, and the other ten. These deaths produced such an effect upon the young that the scores who had called upon the minister were increased to hundreds, and Mr. Cotton states that more than three hundred had been with him, expressing a serious concern about the salvation of their souls. This is really a most astonishing instance of deep and wide-spread interest in religion among the young. We are apt to think that the young were not cared for in past times as they are

now, but who ever saw anything like this? Who ever heard of a place before, no larger than this, where three hundred and more of the children and youth were calling upon their minister to know what they must do to be saved? The young came from surrounding towns to attend the meetings here, and in one instance at least Mr. Cotton made a special address to them. Now it is impossible for such a wave of religious interest to roll over this place without leaving ineffaceable marks of itself. Accordingly, when Dr. Homer, forty years after, received his call to this place, he said, "I have noticed the diligent and solemn attention of the people and especially of the youth of this place to the public services of religion, in which I have seldom, if ever, found them equaled elsewhere. This is a circumstance of my call which I cannot resist, and would prefer to every other possible consideration." There is no doubt that we feel to this day the effect of the revival among the young which occurred here one hundred and fifty years ago.

Mr. Cotton died in 1757, in the sixty-fourth year of his age and in the forty-third year of his ministry.

In 1758 began the ministry of Rev. Jonas Meriam, which continued twenty-two years. He is remembered as the minister who bought and gave liberty to a slave nearly one hundred years before slavery was abolished in our country. His second wife was granddaughter of Dr. Zabdiel Boylston, of Brookline, the man who introduced the practice of inoculation for small-pox, in the face of such outrageous opposition that he did not dare to go out of his house in the evening, knowing that men were on the streets with halters in their hands ready to hang him.

During his ministry Anna Hammond, who lived to be one hundred and four years old, joined the church. She married Rev. Joseph Pope, of Spencer, and spent the remainder of her life in that town, occupying one sleeping-room eighty-two years. Her longevity was owing in great measure, it is believed, to her habitual cheerfulness. She believed that she had had the best husband, the best children and the best grandchildren that ever a woman had. "Your grandfather, my child," said she, "was as good a man as God ever made, and no minister ever had a better parish, and no old woman ever had better or kinder care." And so her life was one continued hallelujah.

The doors of the Spencer parsonage were continually open with hospitality. The leading ministers of the time, Emmons, Spring, Bellamy, Backus and such men, were often entertained there, and they made the long evenings lively with their theological discussions protracted to late hours of the night around the old hearth-stone. During the depreciation of the Continental currency, when it is said that a whole year's salary went to buy a block tin tea-pot, the hospitality was still kept up, though nobody knew how, and the large-hearted hostess said she never knew what it was to want. Here was a character of the true New Eng-

land type, in which were piety and intelligence fed by God's word, and by the writings of Edwards, Belamy, Hopkins and men like them.

The allusion to Sprig and Emmons as her guests is the more interesting when it is known that both of them were her suitors. The tradition is, that Dr. Spring, when a young man, was on his way to Newton in search of a wife, when he met Mr. Pope on his way to the same house and with the same intent. The situation was delicate and perplexing. After some deliberation Dr. Spring said, "Brother Pope, you have a parish and I have none; I give way to you."

When Mrs. Pope was a widow about seventy-five years old, and Dr. Emmons was a widower of about eighty-five, he sent her by the hand of a ministerial brother, probably his son-in-law, Rev. Dr. Ide, of Medway, a proposal of marriage. The offer was declined, and when it was pressed with some urgency, with reference, probably, to the eminence of the suitor, she replied, "No elevation of character or circumstances could have a feather's weight toward inducing me to change my name. I hope to bear it while I live, and lie by the side of him who gave it to me when I die."

The ministry of Dr. Jonathan Homer began in 1782, and continued fifty-seven years. When he accepted his call to this place he had declined a call to the new South Church in Boston, the church whose edifice was on "Church Green," in Summer Street, near the head of Lincoln Street. It was a noble triumph of Christian principle for him, for conscience' sake, and on the ground that the "half-way covenant" was in use in the new South Church, as, in fact, it was in most of the churches in Boston, to prefer Newton, with a small salary, to Boston, with a large one, and with its refined and literary society. He had a deeply religious spirit, literary taste, a pleasing style of writing, spoke easily in the pulpit without notes, and excelled in conversation. Blake's "Biographical Dictionary" says he was one of the most beloved clergymen in Massachusetts, universally esteemed as a man of learning and piety. He read Greek, Hebrew and Latin, and learned Spanish after he was sixty years old.

Many of the later years of his life were devoted to an enthusiastic study of the different English translations of the Bible, from that of Wycliffe to that of 1611. He intended to write a history of them. The late Professor B. B. Edwards, of Andover, said he was better qualified to do it than any other person in the country. A conclusion which Dr. Homer reached was that *King James's Bible* was IN NO PART a new translation taken directly from the originals. He had the most ample facilities for ascertaining the truth of this statement. His shelves were filled with rare and choice books bearing upon the subject, many of them obtained from England with great painstaking and expense, and he performed the almost incredible labor of finding out by personal examination the

source from which the translation of every verse in the Bible was taken, and he showed, what he had previously asserted, but what had been denied by Biblical scholars, both English and American, that not a single verse in King James's version was newly translated, but that the whole of it was taken from other versions, and was a compilation. He showed that thirty-two parts out of thirty-three were taken from former *English* versions, chiefly from the Bishops' Bible, and that the remaining thirty-third part was drawn from foreign versions and comments. Having announced this result of his investigations, he quoted the words of the translators themselves, that they "had never thought from the beginning of the need of making a new translation."

It has been generally admitted that in the time of the Unitarian defection Dr. Homer was considerably influenced by his many friends who had embraced the erroneous views, and especially by Dr. John Pierce, of Brookline, and Dr. James Freeman, of King's Chapel, in Boston, whose wife was a sister of Mrs. Homer. But Dr. John Codman, of Dorchester, who was an intimate friend of Dr. Homer, and who preached his funeral sermon, said that he was decidedly evangelical and orthodox, though liberal and catholic in his feelings towards other denominations. "There was no bigotry in him. His heart overflowed with love to all who love the Lord Jesus Christ of every sect and name. *He was not a denominational Christian, but a member of the church universal.*" His heart was full of the tenderest sympathy for the suffering. He took orphans and homeless children to his own house and gave them a home until they could be provided for. More than thirty were cared for by him in this way.

A smile is sometimes awakened at the mention of Dr. Homer's name, because of the many queer and strange things that have been told of him. He was a very absent-minded man, and his wife was constantly expecting some odd event to occur from his eccentric ways. Professor Park, of Andover, says that he and Professor Edwards and others were once invited to dine at Dr. Homer's. When they were called to dinner they went into the dining-room and took their places around the table, their host not being present. Soon, however, he appeared at the door of the room, and seeing that the company were waiting for him, immediately commenced asking the blessing. By the time he had reached his place at the table he got through with the blessing and then saluted his guests. Other stories about Dr. Homer, under the name of "Parson Carryl," may be found in "The Minister's Housekeeper," one of Sam Lawson's "Old-town Fireside Stories," by Mrs. Harriet Beecher Stowe. "You may laugh as much as you will at brother Homer," said Father Greenough, of the West Parish; "there is no man among us who carries with him the spirit of the gospel from Monday morning to Saturday night better than he."

The year 1827 was the crowning year of this long ministry. Seventy-one persons were received into the church in that year, as many as had been received in the previous nineteen years. The revival of that year is remarkable as showing what can be done by a few earnest laymen when religion is low, and when the minister is not the man to be the means of reviving it. Dr. Homer was growing old; he was absorbed in the study of English versions of the Bible, and he had not the faculty for conducting a revival, even if one were in progress. In four years only four persons had been received into the church on confession of faith, and one of these was a woman *in the ninety-eighth year of her age*. During this period Hon. William Jackson, a deacon, and a man born to be a leader among men, had spoken of the good state of feeling in the church. Perhaps his hopeful and enthusiastic spirit made it seem better than it was. Such a spirit is contagious, and he found large numbers in the church in full sympathy with him. "They labored," said he, "and loved to labor, both men and women, in season, and out of season, for Christ and the welfare of souls." Speaking of Elijah F. Woodward, Increase S. Davis and Asa Cook, he said, "We were four brothers indeed! Together in the Sunday-school, together in the prayer-meeting, and together in every good work which our hands and hearts found to do. In these good works we continued with one heart and with one soul, until the fall of 1827, when God poured us out such a blessing that we had hardly room to receive it, and sure I am that none of us knew what to do with it, or how to behave under it. It was the happiest year of my life. Notwithstanding I gave my mind and very much of my time to this work, to an extent, in fact, which lookers on, Christians even, would have thought, and probably did pronounce, ruinous to my business, yet when I came to take an account of stock the following June, I found that it had been the most profitable year of my life, that I had never before laid up more money in one year. This blessed revival continued with more or less strength until 1834, when more than two hundred members had been added to our church. The members of the church, young and old, seemed all to love to pray and to labor, and find their chief happiness in doing their Master's will."

Deacon Jackson's leadership was felt at every step of that revival. He said to Dr. Homer, "There is need of a great deal of work here, and we ought not to tax you at your time of life; if you please, I will call in help from outside." The minister had such confidence in his deacon, that he allowed him to do whatever he pleased. Accordingly, Rev. Jonathan S. Green came and labored here several months, and after him, Rev. Isaac R. Barber. Deacon Jackson went about the parish with them, introducing them to the families and assisting them in conducting neighborhood meetings. Often he conducted such

meetings himself. Saturday night meetings were held at his own house. "This carpet will be ruined," said his wife, "by so many muddy boots." "Never mind," said he, "wait till the roads are dry, and you shall have the hand-omest carpet there is in Boston." Such was the fervor and intensity of his spirit that the meetings were full, even if it was known that he was going to read, as he sometimes did, a printed sermon. He spent much time in visiting the sick, and in more specifically spiritual work with individuals. For four or five years this kind of religious activity went on. Deacon Jackson, Deacon Woodward and others were never weary in well-doing, and we might almost call the revival of 1827 the deacons' revival.

Rev. James Bates was ordained as colleague pastor with Dr. Homer in November, 1827. He was a man whose soul was habitually penetrated with the thought of the infinite and amazing interests which the preaching of the Gospel contemplates. The eternal future of those to whom he ministered was to depend in great measure upon his fidelity. To be the means of their salvation was the passion of his life. Large additions were made to the church under his ministry. It is true that other agencies were at work. The revival of 1827 had not spent itself when he came here. A very successful four days' meeting was held in 1831, at which Dr. Lyman Beecher and Dr. B. B. Wisner were among the preachers, and the period from that time to 1835 was one of those great revival eras in which the windows of Heaven are open all over the land to pour down salvation. These considerations, however, should not detract from the value of the labors of Mr. Bates, for he was equally successful in Granby after he had left Newton.

Mr. Bates had for helpers two such deacons as any minister might be thankful for—Elijah F. Woodward and William Jackson. Deacon Woodward came of a goodly stock. Four generations of his ancestors had lived and prayed and died in the house in which he was born. His father and grandfather were deacons. He was made deacon at the age of twenty-eight, and held the office as long as he lived. He was twenty-nine years superintendent of the Sunday-school. He entered the choir at the age of eleven, and remained there forty-eight years, half of which time he was the leader with voice and viol of thirty or forty singers and players. He lived two miles from the meeting-house, and yet no one was more constant or more punctual than he in attendance upon all the meetings of the church and of the choir, both in the daytime and in the evening. Often he took a shovel in his sleigh to make a path through snowdrifts. He was farmer, teacher, surveyor, town clerk and treasurer, and yet his duties to the church were never neglected. His horse had heard the Doxology in Old Hundred sung so many times that he learned to recognize the singing of it as the closing exercise of an

evening meeting, and when he heard it he backed out of the shed and walked up to the chapel door, where he waited till his master came out. One of Deacon Woodward's duties as town clerk was to announce intentions of marriage. This he did from his place in the choir on the Sabbath, just before the benediction. Few men render the public so much service as he did in so quiet and noiseless a way, and with so little desire to get the glory of it to himself. The appreciation in which he was held was shown by the attendance at his funeral. The meeting-house was full. People came from every part of the town, and from surrounding towns, and the procession of those who walked to his burial was more than half a mile long. This was their tribute to the goodness of a man in whom everybody had confidence.

Deacon Jackson was the champion of every righteous and good cause, whether popular or unpopular. If it was unpopular it had all the more attraction for him, because it needed him the more. He was the first mover in the temperance cause in this town, and delivered the first temperance address. His action upon the subject of license, as selectman of the town, raised a storm of opposition which caused the subject of intemperance to be more thoroughly discussed and better understood than in any other town in the Commonwealth. When he began to agitate the question, he said he knew of but three total abstinence men in the town—Captain Samuel Hyde, Increase S. Davis and Seth Davis. This was in 1826, the year that Dr. Lyman Beecher delivered his famous six lectures on intemperance. In less than two years from that time Deacon Jackson was sent to the Legislature as a temperance man. In the Legislature he opened his lips against Free Masonry and for that was sent to Congress two terms. While in Congress he saw the usurpations of the slaveholders, and this made him an anti-slavery man. When the Liberty party was formed he was its first candidate for Governor. When the American Missionary Association was formed in 1846 he was its first president, and held the office eight years. In 1828 he began to advocate the construction of railroads. For sixteen or eighteen years no subject engaged so much of his attention or occupied so much of his time as this. In 1829 he delivered lectures and addresses in the principal towns of the State, and wrote articles for the newspapers of Boston, Springfield, Northampton, Haverhill and Salem. This was considered by many of his friends to be evidence of partial derangement. In May, 1831, the building of the railroad from Boston to Worcester was commenced, and there is no man to whom the public is more indebted than to him for the railroad facilities of the present day.

William Jackson was a leader among men without trying to be, and perhaps without knowing that he was, by the excellence and force of his character, by his knowledge of men and of affairs, by his quickness and sagacity, by the depth and strength of his con-

victions, by his loyalty to truth and duty, by his capacity for being possessed and controlled by the conclusions to which his judgment and conscience conducted him, by the simplicity, earnestness and public spirit with which he urged his views upon the attention of others, and by his enthusiastic disregard of his own ease and time and money, if public interests might be subserved, and righteousness maintained, and the kingdom of heaven brought nearer; and when men saw in him these qualities and this devotion to the public welfare, they gave him their confidence, acknowledged his leadership and felt safe in following him.

The devotion of this remarkable man to public interests was never allowed to interfere with his duties to his church. He spent a great amount of time and money in promoting its welfare. He knew nothing about the love of money for its own sake, or for luxury and display. He accumulated that he might give, and he could not say no to any person or cause needing aid. He wrote the early history of this church as contained in Jackson's "History of Newton." Though in early life he was a Unitarian and an admirer of Dr. Channing, when he changed his belief he became one of the stoutest defenders of the orthodox faith we ever had. He ever maintained the most cordial social relations with his Unitarian friends, and he gave them his hand and his heart as co-workers with him for temperance and anti-slavery.

The pastoral relation of Mr. Bates and of Dr. Homer ceased at the same time, in April, 1839.

The seventh pastor of our church was Rev. William Bushnell, installed in 1842. As a preacher he was clear, sound, scriptural and instructive. He published sermons commemorative of Deacons Woodward and Jackson. His ministry terminated in 1846.

My own ministry began in 1847, and continued thirty-five years. In 1854 we enlarged the meeting-house and built a new chapel. In 1869 we again enlarged both the meeting-house and the chapel, at a cost of twenty-two thousand dollars. In twenty-six years our contributions to benevolent objects, including gifts of individuals and the work of the Ladies' Benevolent Society, amounted to nearly sixty-three thousand dollars.

The present pastor, Rev. Theodore J. Holmes, was installed in 1883. He has a special gift for interesting children and youth. Their attendance upon the services of religion has been greatly increased under his ministry and additions of young persons to the church have been numerous.

We have no means of knowing how many persons were received into our church by its first four ministers. It is probable that several hundred names were lost by the burning of the church records. Dr. Homer, as sole pastor for forty-five years, received two hundred and fifty-seven. He and Mr. Bates together received, in eleven and a half years, one hundred and ninety-four. Mr. Bushnell in his four years

received seventeen. In my own ministry five hundred and thirty-six were received, or two hundred and fifty-four by profession and two hundred and eighty-two by letter. Brother Holmes has received in six years one hundred and forty-one, or sixty-six by profession and seventy-five by letter.

The men whom this church has sent into the ministry are Ichabod Wiswall, William Williams, Thomas Greenwood, John Prentice, Caleb Trowbridge, Edward Jackson, Joseph Park, Samuel Woodward, Nathan Ward, Jonas Clark, Ephraim Ward, Calvin Park, Increase Sumner Davis, James M. Bacon, Edward P. Kingsbury, James A. Bates, Gilbert R. Brackett, Charles A. Kingsbury, Frank D. Sargent, James A. Towle, Erastus Blakeslee and John Barstow.

An incredible story is told about the strength of Nathan Ward's voice. He was a disciple of Whitefield and was settled in Plymouth, N. H. A family living more than a mile from his meeting-house said they could remain at home and hear the sermon. Jonas Clark, of Lexington, illustrates the remark of the elder President Adams, that "American independence was mainly due to the clergy." He was an intimate friend of Samuel Adams and John Hancock, who often visited him. Increase Sumner Davis was a man who could take a walk of twelve or fifteen miles before breakfast, and call it pleasant exercise. When his preaching places were distant he went to them on foot. On one of his walks in Piermont he met a man who had been drinking, and who came up to him and challenged him to a trial of strength. Mr. Davis tried to avoid him, but the man persisted. "Let me alone," said Mr. Davis, "or you will find that you have caught a full-grown man." But the man would not let him alone, and the result was that he was soon lying on his back in the snow with his head plunged into a snow-bank, where he was held till he promised to be peaceable and begged to be released. On being suffered to get up, he wiped the snow from his face and muttered: "You *are* a full-grown man anyway."

Among the women from this church who have been wives of ministers was Abigail Williams, ancestor of President Mark Hopkins, of Hon. Theodore Sedgwick, judge of the Supreme Court of Massachusetts, and of Catharine Maria Sedgwick. Her first husband was Rev. John Sergeant, and her second husband General Joseph Dwight. She was a woman of fine talents and acquirements, of dignified manners and of elevated Christian character. While teaching Indian girls as a missionary, she corresponded extensively with persons eminent for learning and piety on both sides of the Atlantic. Miss Eliza Susan Morton, of New York, who became the wife of President Josiah Quincy, of Harvard College, gives the following account of her personal appearance: "When Madame Dwight visited us in 1786 she was between sixty and seventy years of age, tall, straight,

composed, and rather formal and precise, yet so benevolent and pleasing that everybody loved her. Her dress was always very handsome, generally dark-colored silk. She always wore a watch, which in those days was a distinction. Her head-dress was a high cap with plaited borders, tied under the chin. Everything about her distinguished her as a gentlewoman, and inspired respect and commanded attention."

Three missionaries have lately gone from us—Harriet N. Childs, to Central Turkey; Bertha Robertson, to Southern Georgia; and Sarah L. Smith, to Micronesia.

Several of the ministers of our church have been nobly connected. Mr. Cotton was great-grandson of the man for whom Bxton was named. Mr. Hobart was uncle to Dorothy Hobart, the mother of David Brainerd, one of the holiest men that ever lived. Mr. Eliot's first wife was great-aunt to Mrs. Jonathan Edwards, and his second wife was an ancestor, by a second marriage, of Josiah Quincy, president of Harvard College. It is enough to say of Mr. Eliot that he was a son of the apostle Eliot, but his brother Joseph, of Guilford, had a son Jared, who was a remarkable man. He was the minister of Killingworth, Conn., where he never omitted preaching on the Lord's Day for forty years. He delighted in the gospel of God's grace to perishing sinners, and yet he was a physician, a philosopher, a linguist, a mineralogist, a botanist and a scientific agriculturist. He knew so much about diseases and their treatment that he was more extensively consulted than any physician in New England. Being on the main road from New York to Boston, he was visited by many gentlemen of distinction. He was a personal friend and correspondent of Bishop Berkeley. Dr. Franklin always called upon him when passing through the town. This man was nephew to Rev. John Eliot, Jr., and he once preached in this place.

The record of the town of Newton for patriotism in the French and Indian Wars, and in the War of the Revolution, is a noble one. The church shares this honor with the town. The name of Captain Thomas Prentice was a terror to the hostile Indians. He was an original member of the church in 1664, and so were two others, and probably more, who fell in the Indian Wars. In the army of the Revolution were four of the deacons of our church—John Woodward, David Stone, Jonas Stone and Ebenezer Woodward; also Col. Joseph Ward, who received the thanks of Washington for his services, Col. Benjamin Hammond, General William Hull, and that brave and impetuous soldier, Col. Michael Jackson, who had with him in the army five brothers and five sons. Two of our men were nearly sixty years old when they enlisted, two were nearly seventy and one was seventy-three. Fifty-seven names of soldiers of the Revolution are on our church roll, forty of whom were members of the church at the time of the war, and seven-

teen joined it afterward. More than half the male members of the church performed military duty. This shows how heavy the draft was that was made upon the population of the country to fill the ranks of the army. The population was small, and every able-bodied man of suitable age was needed in the struggle for independence. In the War of the Rebellion the population was so great that, though the armies were immense in size, the proportion of enlisted men was much smaller. Only nine of the members of this church were in the Union army, and three of these were not members at the time of the war, but became such afterward. Their names are Col. I. F. Kingsbury, Sergeant-Major Charles Ward, Captain George F. Brackett, Major Ambrose Bancroft, Roger S. Kingsbury, Edward A. Ellis, John E. Towle, Captain Joseph E. Cousens and William H. Daly.

Edward P. Kingsbury enlisted and went into camp, but was compelled by ill health to return home.

William H. Ward, brother of Charles, might properly be counted among the soldiers from this church, for here was the home of his boyhood, and this was the church he first joined.

In July, 1862, Charles Ward, who was almost ready to enter college, having the ministry in view, said to his friends: "I believe it is my duty to enlist." They said to him: "If you enlist for three years you will never come back." His only reply was: "I do not expect to come back." On the evening of his enlistment he said: "We hear the call of our country summoning us to her defense in the hour of peril. Is there a life too precious to be sacrificed in such a cause? I do not feel that mine is. I rejoice that I am permitted to go and fight in her defense. I have come here to enroll my name as a soldier of my country, and I hope I am ready to die for her if need be." For a time he was detailed as clerk at division headquarters, but as soon as the call to arms was heard he dropped his pen for his place in the ranks, saying, "I cannot sit here writing when my company are going into battle." This was the battle of Chancellorsville, in which he fought bravely with his comrades.

His moral and religious character nobly stood the test of army life. He was as little affected by its demoralizing influences as the three Hebrews were by the fury of Nebuchadnezzar's furnace, when they came forth from it without the smell of fire upon them. The whiskey that was furnished to the soldiers he would neither drink nor commute for other rations. He regularly took it and poured it on the ground. His religious influence was felt in the soldiers' prayer-meetings, and in his habitual use of his Bible.

His calm and unwavering courage in battle, or in prospect of a battle, was a tonic to the whole regiment. Every man in it knew that he had given his life to the cause of his country, and that he stood ready to complete the sacrifice whenever his duty as a soldier

required it. At Gettysburg, on the very crest of the wave of that gigantic war, he laid down his life. In a charge across an open field under a deadly fire, a bullet pierced his lungs and he fell. He lived several days after this and was left in a barn with other wounded soldiers. One of them said, "I am sorry I ever enlisted." Charles overhearing him, said, "I do not feel so; I am glad I came; this is just what I expected." He sent loving messages home to his friends, and said to them, "Death has no fears for me; my hope is still firm in Jesus."

Such was the death in his twenty-second year of a Christian soldier, a young man who gave his life first to God and then to his country. An officer of his regiment said of him, "A pattern of goodness and worth, he became endeared to all, so refined and cultivated even amidst the rough usages of camp life, a necessity to the regiment." Fitly the Army Post of this city bears the name of Charles Ward.

Our church has supplied for the service of the country in wars early and late, seventy men, and it is believed that in the French and Indian Wars there were soldiers whose names have been lost.

Twenty-two ministers have gone out from us, seventeen ministers' wives, and one young woman unmarried, as a missionary. Twenty-five descendants of these ministers and ministers' wives have been ministers, and twenty-one ministers' wives. No doubt the number is greater than this, but these have been counted. Two of the ministers stayed forty years each in one place, one forty-six years, one forty-seven, two fifty, one fifty-three, one fifty-five, and the husband of one of the wives sixty years. We have then a total of eighty-six persons who have been engaged in ministerial or missionary service,—namely, forty-seven ministers, of whom five were missionaries, thirty-eight wives of ministers, of whom three were missionaries, and one missionary unmarried.

A large number of eminent men have either been members of this church or descendants of members. First of all should be mentioned our own deacon, Isaac Williams, ancestor of a long line of distinguished men. His son William, of Hatfield; his grandsons, Solomon, of Lebanon, Conn., Elisha, President of Yale College, Colonel Ephraim, founder of Williams College; and his great-grandsons, Eliphalet, of East Hartford, Conn., and William, of Lebanon, Conn., a member of Congress and a signer of the Declaration of Independence, are conspicuous representatives of this notable family. Rev. Dr. Joseph Buckminster; his son, Rev. Joseph Stephens Buckminster; Judge Theodore Sedgwick; his daughter, Catharine Maria Sedgwick; President Mark Hopkins, Professor Albert Hopkins, and Mrs. E. S. Mead, president of Mount Holyoke Seminary and College, are descendants still further down the line.

Jonas Clark, of Lexington, minister, patriot, statesman, and his grandson, Henry Ware, Jr., professor in Harvard Divinity School, were eminent men.

Joseph Park, of Westerly, R. I., had a Sunday-school in his church thirty years before the time of Robert Raikes. Thomas Park, LL.D., was professor in Columbia College, South Carolina. Rev. Calvin Park, D.D., was professor in Brown University. His son, Edwards A. Park, D.D., LL.D., has been editor of the *Bibliotheca Sacra* forty years, professor in Andover Theological Seminary forty-five years, a preacher and author sixty years, and is still preparing works for the press.

From John Eliot, Jr., the first minister of our church, descended his son, Judge John Eliot, and from him Henry C. Bowen, Esq. From his widow by a second marriage was descended Josiah Quincy, LL.D., President of Harvard College.

From Mr. Hobart, the second minister of our church, have descended Rev. Dr. R. S. Storrs, of Braintree; his son, Rev. R. S. Storrs, D.D., LL.D., of Brooklyn, N. Y.; Dr. Joseph Torrey, president of the University of Vermont, and Judge Robert R. Bishop, of this place.

From Mr. Cotton, our third minister, were descended Rev. Dr. Nathaniel Thayer and his son by the same name, patron of Harvard College.

Other descendants of members of this church are Rev. Dr. James Freeman Clarke, Rev. Dr. William Hayes Ward and Professor William G. T. Shedd, D.D., LL.D., of New York, a prolific author and the greatest master of the Augustinian theology in our land.

William Jackson, pioneer in temperance and anti-slavery, father of railroads, member of Congress as an anti-Mason, a pillar in the church, zealous in all good works, was a member of this church from 1814 to 1845.

Included in this enumeration are three judges, two members of Congress, several authors, three college professors, three professors in theological seminaries and five college presidents. What opportunities for usefulness do such positions as these afford, and what sense of security we have when the right men fill them! Those who are called to instruct and guide the young in the forming period of their lives are sitting at the very fountains of influence. They direct the thinking of the time, for they teach those who are to be the thinkers. If all our colleges and schools were provided with such teachers as those whose names have just been mentioned, we might almost say that society would be safe in their hands. John Wesley, when a young man, declined a curacy that he might spend ten years at Oxford. If he had taken a pulpit, he felt that he should purify only one particular stream; therefore he went to the University, that he might "sweeten the fountain."

It is exceedingly gratifying to us to find in how many ways the church that we love has been of service to the interests of mankind, through ministers and missionaries and teachers, and gifts of money; through the lives of men and women who, like Moses on the mount, had power with God in prayer, and

through the lives of men who, like Joshua, when the life of the nation was threatened, could go out and fight against her enemies. It is simply amazing to see in how many directions the influence of a single local church may go out, and how its agencies for doing good may extend and multiply in successive generations, when the children of ministers, their grandchildren, and great-grandchildren, and descendants still more remote, are found perpetuating the work of their ancestors and keeping alive the fragrance of their name. This is a kind of fruit which it is the peculiar privilege of an ancient church like ours to gather up. Is it not also the privilege of a *country church* in distinction from a city church? Churches which are remote from the excitements, the diversions and the frivolities which are incident to city life furnish by far the larger proportion of the men who stand in the pulpits of the land, and exert a controlling influence upon society, as well as of those who carry the gospel to the ends of the earth. Establish a local church where one is needed, either in country or city, and you open a fountain of living waters which may flow on to the end of time. Its work goes on quietly, but constantly, like the flowing of a gentle river, in sermons, and prayer-meetings, and Sunday-Schools, in pastoral visitation, and in benevolent contributions, and sometimes we are cast down in spirit because there are no more visible results. But God has said, "My word shall not return to me void; it shall prosper in the thing whereto I sent it." This is always true, and when we look through long periods of time we see it. "Everything lives whithersoever the river cometh."

An ancient church is often a mother of churches. As the banyan tree in the East sends down shoots from its branches to take root in the earth and become the stems and trunks of new trees, so this church sent down a shoot into the soil of the West Parish in 1781, and a new tree sprang up there. In 1845 it sent one down on the spot where Eliot Church now stands, and what a banyan tree is there! Another was dropped at Newtonville in 1858, and another at Newton Highlands in 1872, and the trees all flourish, and their prosperity is our joy. The work of the scores of ministers who have gone out into the world, tracing their roots back to this hallowed spot, sends back its benediction upon us and fills us with thanksgiving. For "so is the kingdom of God as if a man should cast seed upon the earth and should sleep and rise night and day, and the seed should spring up and grow *he knoweth not how*. The earth beareth fruit of herself" under the smile of God, and so does a local church. It is an institution filled with unspeakable blessing to all within its reach. Continually, in one way and another, often in ways that we do not observe, and in ways that we never shall know in this world, it is bringing forth fruit unto God.

If this church through its long history has been a blessing to others, it has been a blessing to this partic-

ular locality. Sound doctrine and true religion bring with them everything that is desirable in human society. We love the city where we dwell, we enjoy its good name and its fair fame among the cities and towns of our Commonwealth. If society among us is established upon right principles, and if the character and conduct of the people are such as to adorn those principles; if all this is true in an eminent degree, as we think it is, we are largely indebted for it to those who have gone before us, and especially to the early ministers. Their faithful preaching and godly living were the foundation on which society was built. They formed the channel which shaped the direction of the stream that has been flowing ever since. Their spirit is in the air, and it has been breathed by every successive generation, and it is in great measure because of this that the lines have fallen to us in such pleasant places and that we have so goodly a heritage.

CHAPTER III.

NEWTON—(Continued).

EDUCATIONAL.

BY MRS. ELECTA N. L. WALTON.

BEFORE NEWTON BECAME A TOWNSHIP.—Previous to the separation of Cambridge Village (Newton) from Cambridge her school interests were identical with those of Cambridge, in which place there was established, in 1636, "A public school, or college," and soon after, by the side of the college, "A faire Grammar Schoole for the training up of young schollars, and fitting them for Academicall learning, that still as they were judged ripe, they might be received into the college." It is not definitely known when this grammar school was established, but it must have been previous to 1643, as the record quoted above was published in that year.

The inhabitants of both Cambridge and Cambridge Village were taxed for this school, and Cambridge Village had an equal right to its advantages, though how far the people availed themselves of the right is not known. Its distance was certainly too great for general daily attendance. It was a good school, for the record further states: "Of this schoole Master Corlet is the Mr., who has very well approved himself for his abilities, dexterity an painfulness in teaching and education of the youth under him." But the school was poorly attended. As late as 1680 a report sent to the County Court states of Mr. Corlet, "his scholars are in number, nine, at present." For the encouragement of Mr. Corlet to continue teaching, various sums were voted by the town from time to time to be added to the fees received from his patrons. The following action is of interest to New-

ton: In 1648 it was voted to sell land off the 'common to raise ten pounds for Mr. Corlet, "provided it should not prejudice the Cow-common." For this purpose, forty acres "on the south side," in or near what is now Newtonville, were sold to Mr. Edward Jackson.

Master Corlet taught nearly half a century, till his death, Feb. 25, 1687, aged seventy-eight years.

There is no record of any public or private school for elementary instruction available to the village before 1698, if we except those named in a report sent from Cambridge to the County Court in 1680, which states that "For English, our school dame is Goodwife Healy, at present but nine scholars," and "Edward Hail, English Schoolmaster, at present but three scholars," which schools Cambridge Village children could hardly have attended. But that an attempt was made to see that all the children were instructed in some way is shown by the following extract taken from the Cambridge records of 1642:

"According to an order of the last General Court it is ordered that the townsmen see to the educating of children, and that the town be divided into six parts and a person appointed for each division to take care of all families it contains."

The order of the General Court referred to, required of the selectmen of every town to "have a vigilant eye over their brethren and neighbors, to see first that none of them shall suffer so much barbarism in any of their families as not to endeavor to teach, by themselves or others, their children and apprentices so much learning as may enable them perfectly to read the English tongue and [obtain a] knowledge of the capital laws, upon penalty of twenty shillings for each neglect therein." Again, in 1647, a law was passed requiring every town containing fifty householders to appoint a teacher "to teach all such children as shall resort to him to write and read;" and every town containing one hundred families or householders was required "to set up a grammar school, whose master should be able to instruct youth so far as they may be fitted for the University." The penalty for non-compliance was five pounds per annum. With such a law and such a penalty there can scarce be a doubt that some provision was directly made for the elementary education of the youth of the entire township of Cambridge, including Newton, even if no records of the same have been preserved. How far the early settlers availed themselves of the opportunities given can never be known; it would not be strange if, in their struggles for existence, many settlers should have neglected them altogether.

AFTER THE SEPARATION OF NEWTON FROM CAMBRIDGE.—For some years after the separation of Newton from Cambridge no school building was provided, but the children, if taught collectively, were accommodated in some room furnished by a citizen. The first movement towards building a school-house, of which we have any record, was made in 1696. Rev. Jonathan Homer, in his historical sketch of Newton written in 1798, says:

"In this year, 1699, the town agreed to build a school-house, either meeting-house, or a house of common prayer, with about fifteen John Staples allowed as a yearly salary. The record is for the whole. To him they gave accordingly that year, and small things some shilling and sixpence per day."

But it seems that the school-house was not then built; indeed, the people had much trouble about its erection, and that they were not able to overcome all the obstacles to their enterprise is shown by the following curious extracts from their town records:

May 7, 1699.—"Then voted that the town shall build a school-house as soon as they can."

March 6, 1699.—"Voted that the town will build a school-house the dimensions sixteen foot long and fourteen foot wide, and that it shall be finished by the first of November, 1699."

Feb. 1, 1700.—"At a town meeting, upon due warning given January ye 1, 1700, the selectmen and inhabitants did here and agree with John Staples to maintain the keeping of the school four days in a week until March, and to have two shillings per day."

March 4, 1700.—"Voted that the school-house be set in the highway, near to Joseph Bartlet's, and that it be finished by the 1 of October, 1700."

[NOTE.—Joseph Bartlet's house was just north of Institution Hill, in Newton Centre.]

At a town-meeting November 25, 1700, "the Selectmen and Inhabitants did agree with John Staples to keep school one month 4 days in a week for one pound fore shillings, and also voted that the Selectmen shall hire a room or place to keep school in, and shall agree with John Staples or some other to keep and continue the school till the town-meeting of election in March."

"March 10, 1701, voted that those that send scholars to school shall pay 3 pence per week for those that learn to read, and 4 pence per week for those that learn to Sylpher and write, and that they may send scholars to other school."

"Voted at the same time that Capt. Peabody, Isaac Spring and John Hyde be joined with the selectmen for a committee to build said school-house."

There is no record of that date or of any earlier date concerning "said school-houses," but reference is probably made to plans given in the following entry, dated a month later, the discrepancy in dates being accounted for on the supposition (borne out by the appearance of the records) that the town clerk made his entries some time after the town-meetings occurred, and in almost any convenient and vacant space in his book:

"At a town-meeting upon warning given April 13, 17 1, the inhabitants generally assembled, and upon mature consideration had, did unanimously vote to build a school-house, to be set at the meeting-house and the dimensions 17 foot square besides chimney room, and the other in the southerly part of the town near Oke Hill, 16 foot square besides chimney room; and farther, there shall be one schoolmaster whose shall teach two-thirds of the time at the school at the Meeting-house, and one-third of the time at the school at Oke Hill; and farther, the town granted twenty five pounds towards the building of said school-houses, to be equally divided between both houses, and what is wanting to be made up by those who will freely contribute towards the building of the same."

This arrangement was carried out and the two school-houses were built; the school-house "at the meeting-house" being north of Joseph Bartlet's, and that "at Oke Hill" being south, thus accommodating the scattered settlers better than before.

It is gratifying to find that the differences concerning sites for the school-houses were thus happily settled. The first "contribution," as recorded for the purpose, was a gift by Abraham Jackson of one acre of land adjoining an acre previously given to the town by his father. The record under date of May 14, 1701, states that

"Abraham Jackson added and gave for the setting of the school-house upon and enlarging of the burying-place and the convenience of the training place, one acre more, which said two acres of land was then laid out and bounded."

The town immediately commenced to build at least one of the school-houses, for we find the following in the town treasurer's account:

"Delivered to Abraham Jackson, May 28, 1701, ye sum of one pound thirteen shillings to by bords and nailes for ye school-house."

The gift of Abraham Jackson's was followed the next February by a similar gift by Jonathan Hyde of "a half-acre near Oak Hill, for the use and benefit of the school at the south part of the town." Gifts of money are also recorded as received and various sums as paid out for the buildings:

"Paid John Hide, one of the comitty for the school-house, September ye 25, 1702, two pounds, three shillings and fore pence;" also

"Paid to Abraham [Jackson], one of the Comitty for the school-house, September ye 26, 1702, one pound, sixteen shillings and eleven pence, being in full of the twenty-five pounds allowed by the town to ye building both school-houses."

[NOTE.—The "meeting-house" stood in what is now old cemetery on Centre Street.]

It is hoped that the site of the Oak Hill school-house was more happily chosen than the site given by Mr. Jackson, at which latter location the child must have imbibed very conflicting impressions from his daily surroundings reminded on the one hand, by his vicinity to the meeting-house, of his obligations to the Prince of Peace, and taught by the near training-place, with all the attractions of music and gingerbread, the enforcement of that semi-barbarous law, "an eye for an eye and a tooth for a tooth," while the exhilaration of "tag" and "I spy" must have been too often hindered by the funeral train by day or tempered by fears of possible hobgoblins at night.

A CHANGE IN SCHOOLMASTERS.—It is possible that about this time John Staples began to tire of school-keeping, for we read, "Voted, also, November 21, 1701, that Ephraim Wheeler, John Hide, Nathaniel Healy, Edward Jackson be joined with the selectmen to treat with and persuade John Staples to keep the school, and if they cannot, to use their best discretion to agree with and hier some other person."

This committee probably procured the services of Mr. Edward Godard, for a record of the treasurer, under date of March 31, 1702, reads, "Paid to Mr. Edward Godard, schoolmaster, fourteen shillings," and there is no record of any money paid later to Mr. Staples for teaching.

It further appears, by the treasurer's account, that Mr. Godard taught till November, 1705, when he was succeeded by John Wilson, Daniel Baker, Caleb Trow-

bridge and Mr. Webb, then by Caleb Trowbridge a second time, who taught till 1714, after which John Brown became knight of the ferule. The names of nine other masters occur up to 1739, making, in twenty-seven years, fifteen different teachers, enough, with no regular system, to ensure but little progress. Of all these schoolmasters John Staples appears to have been most acceptable, and to have taught the greatest length of time. He was a person of note in the town, of which he was an inhabitant from 1688 till the time of his death, November 4, 1740, at the age of eighty-two. Besides being a schoolmaster for some years, he held the office of deacon of the church, was selectman from 1701 to 1709 and town clerk from 1714 to 1734.

CONDITION OF THE SCHOOLS.—Up to this time and for years after, the schools were not free in the sense in which our present schools are free. They were open to all children, but those who attended paid tuition, the amount being generally decided upon by the town, and any deficiency in the master's pay being made up by drafts upon the treasurer. There was little system in the management of the schools, the people from year to year voting in town-meeting how and where the schools should be taught. The duties of School Committees were limited at first simply to hiring a schoolmaster, and at times they shared even that duty with the selectmen. They were chosen for but one year at a time, and the board was often entirely changed. But the aim of the people was always to secure greater facilities for better teaching; and from these small beginnings, as experience dictated, has steadily grown a common-school system of which we are justly proud.

The following record is one of the earliest preserved which shows any additional power delegated to the School Committee :

"May 9, 1712, at a public town-meeting, the inhabitants of this town did pass a vote that the committee chosen at the last town-meeting to take care of the school, shall agree with a schoolmaster as to his salary for the present year."

FURTHER SCHOOL PRIVILEGES DEMANDED.—It was not long before the school at the north, "by the meeting-house" and that at the south, "near Oke Hill," proved insufficient for the needs of the people at the west, who petitioned for further school privileges, and on March 10, 1718, the citizens voted ten pounds to the northwesterly, west and southwesterly inhabitants for the promoting of "Larning" among them "in such plaices as a committy hereafter chosen shall appoint; and to be paid to [such] schoolmaster or schoolmasters as shall teach." About the year 1720 there seems to have been some disagreement in regard to the location of schools and many exciting sessions were held,—

"May 11, 1720. At a towne meeting, appointed by ye selectmen, for to hear the petition of sundry of ye inhabitanc on the westerly side of ye towne for to have three schoole-houses in ye towne, and to have thaire proportion of schooling, as also to hear ye request of sundry of ye inhabitanc to have but one school-house to keep ye grammar schoole in; as

also to hear the propesition of sundrey persous, yt if ye grammar schoole be kept in but one place, yt there should be a consideration granted to ye remoot parts of ye towne for schooling among themselves. The inhabitanc, being lawfully warned by Mr. Ephraim Williams, constabill, to meet att ye meeting house on said eleventh day of May, and being assembled on said day, did first trye a voatt for three schoole houses and was negatived.

"2. Did trye a voate for to have ye grammar schoole to be kept but in one place, and it was voated to have but one schoole-house to keep grammar schoole in for the towne.

"3. Voated to grant the remoot parts of ye Towne a consideration for schooling among themselves.

"4. Voated to choose a Committy to consider whear said one schoole-house should be erected for to keep the grammar schoole in; as also to consider who ye remoot parts of ye towne are yt cannot have ye benefit of but one schoole, and what allowanc they shall have for schooling among themselves; and to make thaire repourt of what they do agree upon at ye next publick town meeting for confirmation or non-confirmation. And then did choose Lieut. Jeremiah Fuller, Mr. Joseph Ward, Mr. Nathaniel Langley, Mr. Richard Ward and Iusine Samuel Hide to be the said committy.

"Recorded per me,

JOHN STAPLES, Town Clerk."

Then follows a remonstrance of the same date, signed by twenty-five citizens :

"Whe, whose names are unwritten, do enter our decents aginst this voate of having but one schoole-house in this towne."

On December 7, 1720, the "Committy" chosen reported a site for the school-house; also recommendation to allow twelve pounds a year to the remote parts of the town for schooling, and thirdly, "did suppose yt there is about sixty fammilies yt are two miles and a halfe from ye meeting-house, and about forty fammilies yt are about three miles from ye meeting-house," which reports were accepted, and votes were passed in accordance with the report. But in three months a different counsel prevailed, and the inhabitants on March 13, 1721,—

"3. Did try a voatt for ye granting ye remoot parts of ye towne twelve pounds annuall for schooling among themselves. So long as ye schoole should be kept in one place, and it was negatived.

"4. Did trye a voatt yt ye grammar schoole should be kept att ye school-house by the meeting-house for ye present year. Negatived.

"5 Did try to have it kept att ye school-house att ye south part of ye town, and it was negatived."

Mr. Samuel Miller, promising before the town in said meeting, that he would find a room in his own house to keep school in, and not charge the town anything for the use of it,—

"7. The inhabitants did voatt yt the school should be kept att ye house of said Mr. Saml. Miller for the present or ensuing year."

Mr. Miller lived in the West Parish. This arrangement of having but one school—and that at the west—was unsatisfactory, and at the next March meeting they voted that the school should be kept two-thirds of the time at the meeting-house, and one-third of the time at the south end of the town.

But apparently the stormiest sessions were in 1723. At the March meeting the inhabitants provided for a school one-half of the year at the west, and at the north and south parts one-quarter each; in October they changed their plan, and changed again in December, at which time they voted twelve pounds ten shillings toward the building of a school-house within forty rods of the house of Samuel Miller, also that the

inhabitants of the town should have the privilege of sending to either school they chose, or to all three. This apparently settled the difficulty. In 1726 Mr. Miller gave four rods of land for the school-house.

SEVERAL MASTERS HIRED, AND SCHOOL TAUGHT ONLY IN THE WINTER MONTHS.—The next change in the management of the schools worthy of note occurred in December, 1751, when winter schools were provided for all the districts, to be kept at the same time, thus requiring two more school-masters. This proved satisfactory, and three winter schools after this were taught from year to year, continuing till March.

THE CHARACTER OF THE "GRAMMAR SCHOOL."—It is difficult, if not impossible, at this late day, to ascertain if the expression "Grammar School," as used in the records, meant a school in which Latin and Greek were taught, and students fitted for the university, or simply a school for English studies. A record of 1751 stands:

"Dec. 4, 1751.—The question was put whether their should be two more school-masters provided to keep English schools in town, that there may be a school kept at each school House until the anniversary in March next, and it passed in the affirmative."

A record of 1754 stands:

"Voted, that the committee that was chosen in March last to provide a Grammar School Master, should be the committee to provide two masters more."

If we look back in the records of 1731, we shall find that a committee was appointed to petition the General Court for a grant of land to enable the town to support a grammar school. As common English schools had been supported by the town ever since its organization, the inference certainly must be that the people in 1731 were looking towards the establishment of a grammar school as defined by the General Court. The record quoted above, as well as the following record, dated March, 1761, certainly seems to imply the existence of such a school, or an attempt to make what schools they had answer the requirements of the law:

"Voted, that fifty pounds of the Town rate shall and hereby is appropriated for the Grammar school."

"Voted, that if the said Fifty pounds shall not be expended for the support of the Grammar School, the remainder shall be laid out in other schooling at the discretion of the Committee that is to provide the Grammar School Master."

Probably some subterfuge was here used, and but little of this was expended for the said "Crammar School," for the next year the town was presented for not setting up a grammar school, as the laws of Massachusetts required, and the selectmen were instructed to endeavor to defend the town before the next Court of General Sessions to be held in Cambridge. The selectmen would hardly have attempted to defend the town if they had not some defense to make. After this for some years it was voted to keep the grammar school at the house of Edward Durant, and then, in 1767, "at such school-house as the committee shall think proper."

INCREASED INTEREST IN THE SCHOOLS.—The year 1763 seems to have been a year of increased interest in school affairs, and several changes were made in the schools and in their administration. First, the people voted for four schools to be opened at the four school-houses "beside the grammar school;" also voted that the selectmen should apportion the school money and school time according to the list of polls and valuation of estates the preceding year, "excepting this allowance, viz.: that those persons who are unable to pay their polls, as large a share as if they had been able and did pay for the same." Under this direction the following apportionment of school money was made. For the school near the meeting-house, £19 9s.; Northwest, £13 11s.; Oak Hill, £10 10s.; Southwest, £6 10s. total, £50.

The apportionment of school time was:—At the Centre, 20 weeks, 2 days; Northwest, 14 weeks, 0 days; Oak Hill, 10 weeks, 6 days; Southwest 6 weeks, 5 days—total, 52 weeks, 1 day.

There had been some trouble in regard to the furnishing of wood for the schools, and after some debate concerning the method of providing it, it was voted that it should be paid for from the town treasury; at the same time the people showed their thrift by choosing one person for each of the five schools to purchase wood "at as low a rate as they can."

This year the School Committee was increased from three to five.

SCHOOL-HOUSES.—As a sample of the school-houses of the time, that located in the Southwest District, near the spot where the railroad station in Newton Highlands now stands (1890), is thus described in Smith's "History of Newton:" "The building was brick, 14 by 16 feet square, and chimney room. It was covered with a hip roof coming together at a point in the centre. A fireplace about six feet wide and four feet deep, with a large chimney, in which they burned wood four feet long, occupied one side of the room. This house became very much dilapidated, and the roof so leaky in its later years, that it was not uncommon for the teacher to huddle the scholars together under an umbrella or two to prevent their getting wet during the summer showers." The house was rebuilt in 1811.

An amusing incident may be recorded here to illustrate the capacity of chimneys in those days. It is related of a Master Hovey, who taught in one of the school-houses last used in 1809, corner of Ward Street and Waverly Avenue, that a roguish boy once let down a fish-line and hook from the chimney-top, which hook an equally roguish boy in the room fastened to the wig of the venerable master, when, presto! the wig suddenly disappeared up the chimney.

WOMEN EMPLOYED AS TEACHERS.—At the May town-meeting in 1766 the people took a new departure, and, "after some debate, voted:—that sixteen pounds be assessed in the polls and estates in Newton, by an addition of said sum to the town rate, and to be

laid out in paying school mistresses for the instruction of children this present year at the discretion of the committee chosen in March last to provide a grammar school-master."

Like appropriations of sixteen pounds a year were made, and school-mistresses employed "for the instruction of young children" till 1774, after which, till 1803, only masters were employed. These "women's schools" were summer schools, while the masters' schools, with the exception of the grammar school, were taught in the winter. In 1773 and for several subsequent years the town voted "that the grammar school be taught in the summer."

INSPECTION AND SUPERVISION OF SCHOOLS.—It does not appear that there was much supervision of the schools in those early days, by any one. In the year 1761 and after, the committee who provided the school-masters were empowered to expend the school money at their discretion; the selectmen were often employed to perform other duties which now pertain to the office of School Committee, while special committees were appointed for many specific purposes—to locate school buildings, to make repairs, to apportion school money and school time, to district the town, to provide wood, etc., etc.

In the record of December 22, 1772, is found the first item that looks towards much supervision of any kind, as follows:

"The question was put whether the selectmen should be enjoined to inspect the several schools in the town and see that the several school-masters and mistresses do their respective duties in keeping said schools, and what proficiency the scholars make in their learning, and the vote passed in the negative."

Then

"Voted that the school committee, so called, be enjoined to visit the several schools and see that the several school-masters and school-mistresses do their respective duties and see what proficiency the scholars make in their learning."

In 1790, also in 1791, in the vote that the School Committee should locate the schools, etc., it was added "the said committee to inspect the several schools and see that they are kept as the law directs," and at a later meeting the same year, after voting that the East School Society might lay out their money as they thought proper, they added to their vote:

"Notwithstanding, the school committee to exercise the same authority as they were directed to when chosen in March last."

This year the Lower Falls District was set off, and the money apportioned accordingly.

OWNERSHIP OF SCHOOL BUILDINGS.—In the year 1793 measures were taken for the purchase of the several school-houses, which were hitherto owned by the several school districts, and a committee of eleven was chosen to draw up a plan respecting the school-houses and schooling and to report at the next meeting. The next year the town voted to reconsider all former votes respecting school-houses and schooling and chose a committee of five to draw up a plan,

Colonel Benjamin Hammond being the only person on this committee that was on the committee of eleven. The report of this committee seemed to satisfy, and the same committee were directed to purchase, as soon as convenient, as many of the school buildings, with the land, as could be obtained on reasonable terms. The price paid varied from £40 to £100.

REGULATION AND GOVERNMENT OF THE SCHOOLS.—In the year 1795 the town voted to choose a committee of six persons to prepare rules and regulations to be observed by the several schools within the town, and made choice of Colonel Josiah Fuller, Major Timothy Jackson, Captain William Hammond, Lieutenant Caleb Kendrick, Dr. John King and Dr. Ebenezer Starr. This committee was directed to give the several ministers of the Gospel within the town an invitation to assist them, and to report at the next May meeting. With a committee thus made up of men devoted either to the spiritual, physical or belligerent interests of the community, it might be supposed that a fine set of rules would be presented and adopted. But, alas! no report appeared; at least, none is recorded.

In 1802 another committee was chosen to join with the ministers for the same purpose, and the next year a third committee, but no report was forthcoming.

YEARLY APPROPRIATION FOR SCHOOLS TO 1800.—The yearly grant for schooling from the town treasury was, from 1761-65, £50; 1766-73, £66; 1774, £60; 1775-76, £50; 1777, £40; 1778, £80; 1782-85, £60; 1786-89, £80; 1790, £90; 1791-94, £100; 1795, £130; 1796-99, \$500.

The school appropriations of 1778-81 are given in depreciated currency; thus, 1779, £200; 1780, £2000; 1781, £2000. The other appropriations are in silver coin.

THE SCHOOLS FROM 1800 TO 1817.—From 1800 to 1817 little can be gleaned concerning the public schools of Newton which is of interest to the general reader. The town owned its several school-houses, and in 1808 it was divided into seven school wards—the West, the North, the East, the South, the Southwest, the Lower Falls and the Centre.

From the winter of 1809-10 to that of 1812-13, and again from 1814-17 Mr. Seth Davis, a well-known centenarian of Newton, taught in the public schools in the West and North Wards. It is related of him that, in 1810, he introduced into his school declamation and geography, with map-drawing. This created a great sensation, and a special town-meeting was called to consider whether such a dangerous innovation should be tolerated. After long discussion on the demoralizing tendencies of the times, it was decided by a large majority that map-drawing might be continued, but declamation must not be allowed. Mr. Davis' determined will undoubtedly chafed under such limitations, and in 1817 he established a private school, a notice of which school will be found later in this article.

FROM 1817 TO 1827.—At the March meeting of 1817 another attempt was made to secure some plan for the better regulation and government of the schools, and a committee of the three ministers, with one person from each school district, Rev. William Greenough, chairman, was requested to draw up a plan and report. On the 12th of May following the report was presented, and, with the exception of the eighth clause, was adopted. The report is given entire as an exponent of the prevailing opinions of the times:

"Your committee, appointed to determine some regulations for the schools in Newton, have attended to that service and report as follows.

"1. For the purpose of exciting in the minds of the scholars a reverence for the Word of God, and of aiding them in reading it with propriety, it is recommended that a portion of it be publicly and daily read in the morning in each school by the Precipitor or Precipitress, and that the scholars shall read the same after him or her.

"2. That whereas there has been long and frequent complaint of great deficiency of books among the scholars in several of the schools, it is earnestly recommended that all parents and guardians procure suitable books for each of the children or youth under their care, and that the Selectmen be requested by the Committeemen of the district to furnish books at the expense of the town for those scholars whose parents or guardians, in his opinion, are unable to purchase them.

"3. That the New Testament be one of the standard reading books in all the schools in this town. And your committee do, in a special manner, recommend Cummings' New Testament, designed for schools, with maps of the countries and places mentioned in the Scriptures and explanatory notes.

"4. That Murray's English Reader or Lyman's American Reader be recommended for instruction in reading in the schools of this town.

"5. That whereas, it appears, upon enquiry, that Walker's Dictionary has become a growing and general standard for pronunciation in the colleges of the State, and in the colleges and academies of the United States, your Committee recommend Walker's Pronouncing Dictionary as, in the general tenor of the work, the best standard to be used by instructors in the public schools; and that the scholars of the first class be provided with the small edition of this Dictionary.

"6. Your committee, however, in recommending Walker's Dictionary, would be understood as having reference principally to the accent, and not as deciding on the propriety or impropriety of his mode of pronouncing virtue, nature, creature,—virtu, natshure, cretshure,—and a few other words.

"7. That the town recommend to every religious teacher of the schools to open and close them daily by prayer.

"8. That every master be desired to comply with the laws of the Commonwealth, which requires him to give moral and religious instruction to his pupils.

"9. As most of your committee have been called frequently to visit the schools in this town, and have been satisfied that the number of children in several of them is greater than can be taught or governed to advantage, they earnestly recommend, as an essential and important aid in instructing and governing the public schools, that no children shall be admitted into the winter schools until the complete age of seven years.

"10. It is recommended to the town that a fourth part of the moneys annually granted for the support of public schools be devoted to the support of summer schools.

"11. That the Town Clerk be requested by the town annually to furnish, at the town's expense, copies of these votes to each school committeeman.

"12. We recommend renewed attention on the part of the town to a former vote of the town, relative to the committeemen of the several schools acting in concert, not separately, in employing instructors."

The adoption of these measures was a great step in advance of previous legislation.

For some years the committee in their united capacity provided the several teachers, but this did not satisfy, and in 1821 the committee of each district was empowered "to employ such instructors and

spend their proportion of money in such a way as they think proper, complying with the law of the Commonwealth for governing schools under the direction of the inhabitants qualified to vote in town affairs in the district for which he is chosen. But it shall be the duty of each committeeman to notify the inhabitants of the district for which he is chosen, qualified as aforesaid, to meet at some convenient place within said district before he proceeds to hire an Instructor to make arrangements for said school." A similar vote was passed in 1823. This arrangement was unsatisfactory, and in 1826 the committee, as a whole, was again required to provide instructors.

The school law of 1826 first made it obligatory upon the towns to elect a School Committee, and by the statutes of 1827 every town was required to elect three, five or seven persons, and towns containing four thousand inhabitants were empowered to choose an additional number, not exceeding five. Newton contained less than three thousand inhabitants.

FROM 1827 TO THE ABOLITION OF THE DISTRICT SYSTEM AND THE ESTABLISHMENT OF GRADED SCHOOLS IN 1852-53.—In accordance with the law of 1827, the town chose a general School Committee of three, consisting of Rev. Alfred J. Barry, Hon. William Jackson and Deacon Elijah F. Woodward; the next year Rev. James Bates and Mr. Seth Davis were added to the committee. After this, Superintending Committees of five were generally chosen. Prudential Committees were also chosen from year to year, one for each district, sometimes by the school districts themselves. The duties of the Prudential Committee of each district were to keep the school-house of his district in repair, to furnish it with all things suitable, to provide fuel, to contract conditionally with the teacher, and to keep the Visiting Committee informed of the condition of the school. The Visiting Committee were required to examine all candidates for teaching, to certify to their ability, and also to have a general charge of all school interests. This subdivision of duties and responsibilities had some few advantages, but they were more than counterbalanced by its disadvantages, and too often caused much friction in the working of the school machinery. Thus, the method of securing and examining teachers was frequently complained of by the Examining Committee. The Prudential Committees would sometimes secure teachers and send them to the Examining Committee for approval without any notice, when it would be absolutely impossible to give a thorough examination. It often happened, even, that the teachers commenced their schools before examination, or were examined and rejected so late as to delay the commencement of school at the proper time, the Prudential Committee being, meantime, in search of another candidate. If a relative or favorite of the local committee chanced to be rejected, hard feelings were thereby engendered. In the report of 1844 the committee complained that teachers had been allowed to

teach through the term and even to draw their pay either without examination or on the approval of a previous certificate, though the statute provided that no teacher should commence without a certificate for the occasion, while the fact that a person had taught the year before might furnish the best possible reason why his application should be rejected.

In their report of 1847-48 the Superintending Committee cited State rules for the guidance of the Prudential Committee, and earnestly and solemnly urged that no pains should be spared and no reasonable compensation refused that might secure teachers of the right stamp. In 1849-50 they urged the advisability of having the teachers chosen and contracted for by the Examining Committee, and reminded the citizens that by a law of the State this should be so, unless a town having an article in the warrant for the purpose should expressly vote to give that duty to the Prudential Committee.

Under the double committee system the schools lacked unity of method and of results, and though steadily improving, yet made slow progress. The duties of Prudential Committee were finally merged into those of the Superintending Committee, and the Prudential Committee was abolished in 1852-53.

Since the first establishment of the general Visiting Committee, names of responsible, painstaking and able persons are found upon the Newton lists, and earnest efforts were constantly made to better the schools. After the establishment of the Massachusetts Board of Education, great assistance was derived from the annual reports of the secretary of the board, which were sent to the School Committee of each town, and perhaps quite as much, from the necessity, imposed upon every town, of reporting in detail the condition of every public school within its boundaries. These reports are on file at the State-House, and afford ample evidence of conscientious, painstaking service.

Rev. Lyman Gilbert and Mr. Ebenezer Woodward were for many years members of the committee, and to them may be attributed much of the progress of education in their day. Mr. Woodward was a practical teacher, and kept a very successful private school in Newton Centre from 1837 till 1843; Mr. Gilbert had, for a short time, been usher in Phillips Academy, Andover. The reports in which their names appear evince ability, patience, interest and fearlessness, and are at once critical and inspiring. The following extract from the report of 1838-39 may not be out of place;

"The idea of having learning enough for common business merely, should be sentenced to perpetual banishment. Learning in any of its branches can be useless to no one. The acquisition of knowledge is moreover a design of life. This consideration should be often present to the mind, as well as the moral obligation all are under to make the most and the best of their faculties, and to be satisfied with no degree of attainment so long as a higher attainment is within their reach."

STATISTICS OF 1839-40.—In the year ending April, 1840, Newton had eleven public schools; the whole

number of pupils was, in summer, 534; average attendance, 420; in winter, 632; average attendance, 520. There were ten female teachers in summer; in the winter nine male and two female teachers. Average monthly wages of male teachers, including board, \$34.88; average board, \$10.44; average monthly wages of female teachers, including board, \$14.50; average board per month, \$6.55; aggregate length of the winter schools, forty weeks; of the summer, forty weeks, fourteen days.

There were two incorporated academies; aggregate number of months in session, twenty-two; average number of pupils, fifty; aggregate paid for tuition, \$800.

BOOKS IN USE.—The books used in the public schools at this time were:

For *Spelling*.—Webster's Spelling-Book and Dictionary; National Spelling-Book.

For *Reading*.—Pierpont's Reading-Books, Abbott's Reading Books, Worcester's Fourth Book, Testament.

For *Geography*.—Olney's Geography.

For *Grammar*.—Parley & Fox's, Smith's.

For *Arithmetic*.—Emerson's, Smith's, Colburn's.

For *Algebra*.—Colburn's, Day's.

For *History*.—Worcester's History, Whelpley's Compend, Goodrich's History of the United States.

Other Books.—Blake's Philosophy and Astronomy, Watt's On the Mind, Book of Commerce.

SCHOOL APPARATUS.—At quite an early period there were those in town whose ideas upon education were much advanced, and in 1833 they succeeded in getting into the warrant for town-meeting an article to see if the town would furnish each school district with a copy of the Family Encyclopedia, but the article was dismissed. In 1835 they induced the town to vote that a terrestrial globe be purchased for each of the district schools, and instructed the committee in each district to provide a box for its safe keeping. But, alas! of what use is the best apparatus without the power or inclination to use it? In 1847-48 the committee reports "Globes in school, but not in use." "They had never seen one in any school." On inquiry as to their whereabouts, some were found buried in dust in broken boxes, some were stowed away in the entries among wood and other rubbish, and some could not be accounted for, "perhaps removed with the old house and regarded as too superannuated to be introduced into a modern structure." . . . "As if the earth was not round still, and America where it was a century since and China its antipodal, and as if these and a thousand other parts of the earth's surface could be made plain as daylight to the learner by any other means than the very miniature of the earth itself."

Not all teachers were thus neglectful, for it is recorded in 1841-42 that one teacher, being unable in any other way to obtain maps and diagrams, supplied them himself, and the committee added, "It is to be hoped that the time is not far distant when the public will be satisfied that something more than a teacher

is requisite to promote the best interests of moral beings."

SCHOOL-HOUSES.—In 1846-47 the town commenced a radical reform in school-house architecture. Two large double school-houses were built on the most improved plans, and a third was thoroughly repaired and new seated. This prepared the way for a general reform through the several districts of the town. That there was need of this reform is evinced by the report of 1845, which speaks of sloping floors so arranged as to make it impossible for pupils to stand up in their seats, and of ventilation so bad that after sitting an hour the visitor marveled that the teacher had succeeded so well, both in instruction and management, "for to say the least, it was utterly impossible for anybody either to study or to impart instruction under such circumstances, vigorously." The next year, when undertaking repairs, some regard was paid to ventilation, and the use of thermometers was recommended.

In 1849 the school-houses were much improved; eight out of eleven were well supplied, and all to some extent provided with suitable apparatus.

FIRST YEARLY SCHOOL IN NEWTON.—On the 7th of December, 1848, a union was formed between School District No. 7, which included West Newton and Auburndale, and the State Normal School, then established in West Newton. The object of this union was the formation of a model school where all the most approved methods of instruction should be adopted and the best talent be employed to develop the young, and to show by example what a true school should be.

By the terms of the agreement, the district was to furnish school-room, etc., and one permanent male teacher, approved by both parties, and to allow such addition to their number by pupils from abroad, on a small tuition, as circumstances might justify.

The State Normal School was to furnish a portion of the apparatus and two assistant teachers, each to observe a week previous to teaching, and to teach two weeks under constant supervision. This was the first yearly public school ever taught in Newton; it was kept in the basement of the town hall. Mr. Nathaniel T. Allen, a graduate of the Bridgewater State Normal School, was appointed its principal at a salary of \$300, to be paid by the district, and the remainder to be paid by pupils admitted from abroad. The whole number of pupils the first year was 125; the number from abroad was 50; the average age of the pupils, 14 years. Thirty-five of the young ladies from the Normal School served as assistants.

By an additional agreement, on May 1, 1850, the Primary School of West Newton became also connected with the State Normal School; at first taught only by students of the Normal School; but in 1851 a permanent female teacher was employed, and one assistant from the Normal School. The number of teachers furnished to this department in 1850 was 22;

the whole number of pupils 75; their average age, 7 years.

The practice which this arrangement offered to the students of the Normal School, of observing and teaching under the eye of an experienced and painstaking critic, was of unmeasured value to them, while the quality of the teaching was such as to attract a large number of visitors continually from Boston and other places, and applications for admission increased so much after the first year, that many applicants were turned away. When the Normal School was removed from the town in 1853, the Model School as such was given up, and the school put upon the same basis and taught in the same manner as the other district schools. The names of a thousand visitors were enrolled on the register of the school during the last year of its existence.

HINDRANCES TO PROGRESS.—Among the hindrances to good progress in the schools at this time may be enumerated frequent absences and tardiness, the patronage of private schools, and the lack of co-operation on the part of parents.

ABSENCES TO TARDINESS.—These hindrances are named and deplored in almost every school report of this period. In that of 1845 the committee state that in many cases more than half the school time is lost by absences, and that the habit is universal. They cite one school in particular, the teacher of which reported that in a term of nineteen weeks there were 3223 half-day absences, equal to an aggregate of more than five and one-half years. In this school seven pupils were absent respectively 115, 117, 121, 107, 102, 117 and fifty-five half school-days. The committee added, "When we take into consideration these obstacles to progress in our schools, what ought we to expect? Who can complain if the teachers should not be able to get much knowledge into the heads of those who rarely put their heads into the school-house?" That parents and guardians are responsible is the burden of the reports. The attendance for some years after this was fearfully low. In the list of 311 towns in the State for the years 1847-48, Newton stood the 244th in attendance. Of the forty-eight towns in Middlesex County, Newton stood the lowest, with an average attendance of forty-three per cent. In the year 1848-49 she stood the 246th in the State, having an average attendance of 57.07 per cent. I quote from the school report of one of these years:

"The question is getting to be seriously asked in high places and in all directions, What shall be done to remedy this evil? Shall it be a penal offence to keep a child from school for any reason short of sickness or what may be thought equally imperative? Shall the vagrant, schoolless boy be provided for by the State as one already an offender against the peace and well-being of society? . . . People will differ very much as to the propriety or justice of adopting such extreme measures. The largest liberty is contended for in this free republic; the liberty to get

drunk and abuse our God-given natures, to eschew the good that is around us and hug the evil, and the liberty to give the hungry and thirsty souls of our immortal offspring stones instead of bread, fire instead of water; to hand them over to the dominion of unbridled passions, uncultivated desires, to let them grow up an everlasting disgrace to their parentage, unmitigated pests to society. What will be done is not for us to say; but only will we heartily affirm that when every child of the proper age shall be receiving that education which can alone fit him to fill aright his place among men and prepare him to receive a holier unction for another kingdom, our eyes shall no longer be pained, as now, with seeing boys spending their springtime of life in mental and bodily idleness at the corners of the streets or in the stable rioting in profanity, obscenity and all malignity. . . . Railroads are a blessing, but not unmixed; their depots are lounging-places for idlers and truant boys wherein to concoct mischief; . . . dram-shops and oyster saloons and candy palaces still hold out their tempting lures, offering to the idle a comfortable repose, to the craving stomach a sweet morsel, but to the gaping mind gall and wormwood. These you have among you. See to it, see to it."

By persistent efforts of the School Committees and teachers, much was finally accomplished by way of school attendance, though it took years and the system of graded schools to permanently fix the rate of attendance at a high rank.

The percentage of attendance and rank therefore in the towns of Massachusetts at the close of the five decades from 1848-49 is as follows:

1848-49—percentage of attendance	57,	rank in the State	246
1858-59	" "	71,	" " " 200
1868-69	" "	76,	" " " 169
1878-79	" "	84,	" " " 104
1888-89	" "	82.8,	" " " 137

The apparent falling away of the percentage for 1888-89 may be accounted for by the increasing popular sentiment in favor of deferring the admission of pupils to school till a later age than five; the parents in Newton now rarely commence sending so early. The percentage of attendance based on the average whole membership in the schools for the year 1888-89 is 92.4 per cent.

PRIVATE SCHOOLS.—As another hindrance to the best success of the public schools the establishment of private schools in the several villages was frequently mentioned. They are spoken of in almost every report; in the early years taking away the most favored pupils, "leaving the a-b-c-darians and other small scholars to constitute many of the schools." In 1849 there were eight private schools, in most of which the languages and many of the higher branches of a good education were taught, and in 1851 not less than 249 pupils attended private schools. Many of these schools were excellent and will be named later. It is a fact worthy of mention, however, that as the

private schools flourished, a corresponding lack of interest was evinced for the public schools, and their attendance and efficiency proportionately decreased. The cause of the establishment of so many private schools and the decline of the public may be traced to the repeal, in 1824, of the law concerning the requirements for teaching the languages in towns of not less than five thousand inhabitants; not because the teaching of languages is absolutely necessary to great culture in other directions, but because the acquisition of knowledge sufficient to teach Latin and Greek, and to fit for the university, necessarily accompanied higher attainments in other directions. After 1824 the quality of the teaching declined, as those best fitted for teaching chose other professions. There was no revival till the movement began which resulted in the establishment of the Board of Education and Normal Schools, and the influence of these was not materially felt over the State for years.

WANT OF CO-OPERATION OF PARENTS.—The extent of the co-operation of parents never entirely satisfied any committee. On the first establishment of a Supervisory Committee they ask if *that* is the reason for the indifference of parents; as if parents thought they thus delegated all responsibility. Some difficulties occurred in one of those early years which were greatly increased by the unguarded utterance by parents of expressions derogatory to the teacher. But the committee were loyal to the schools' best interests, and, among other good things, said, "Is it not advisable that the people of the districts consent to sacrifice individual opinion in some degree and give their co-operation and support to the teacher for the time being, under the supervisory direction of the committee which they have themselves selected for the purpose? By such a course, defects which may really exist would be rendered less injurious, and whatever was good in the management of schools be made more advantageous. Would parents generally enjoin upon their children regular and punctual attendance at school, and subordination and obedience to the teacher; would they notice their progress and examine them occasionally at home as to their proficiency, and in this way encourage and interest them in their studies, many of the difficulties which teachers have now to encounter would be removed, and the character of our schools much advanced."

CORPORAL PUNISHMENT.—It is an open question whether corporal punishment should be spoken of as a help or a hindrance to good government in our schools. At the commencement of one school, in 1842, it was in a very disorderly state, and the teacher, so said the committee, undertook to restore and maintain order by "that mistaken course—a resort to the rod—which many teachers have adopted frequently, and as often experienced not only failure, but a worse state of things than before." "But," the committee continued, "as a whole, the discipline of the schools

has been good throughout the town, especially during the winter, and it is believed this has been the result of a less frequent resort to the birch and ferule."

As the years rolled on, the rod seems to have been less frequently used, and in the report of 1847, the teachers being those generally of experience, "the rod was sparingly used," and the subject made a prominent topic in the report, in which it is stated that "the teacher is in school to represent the parent's kindness, interest and love, as well as the parent's authority," and "the teacher who takes this attitude in school, and respects the feelings of his pupils, wins their affections and gives them enough to do, in a manner to awaken their interest, will have little difficulty in the maintenance of order." An interesting case of discipline for that year might be cited.

The case was one of insubordination on the part of the scholar, who was too large to be reduced to order without the determined co-operation of the parents. The committee, after repeated efforts to reclaim him to obedience, and the exercise of all due forbearance, without success, came to the conclusion to suspend him from the school for the remainder of the term. But that they might act deliberately concerning the case, which was exciting much feeling, and some threats, they availed themselves of legal counsel, through which they obtained the opinion of the chief justice of the Superior Court, and then acted accordingly. The expulsion had the desired effect; the pupil returned to the winter school and behaved himself with such propriety as fully to redeem his character.

This circumstance is of especial interest, as showing the extent of the authority vested in the Superintending Committee, and the futility of any attempt to change an adopted course of action, except through the School Committee itself. But the question may be rightly asked: Ought not a State which provides that a committee may expel a bad boy also provide a good reformatory where the boy can be sent, even before he has committed any crime, except that of wilful disobedience to authority?

FEMALE TEACHERS AND THEIR WAGES.—Inexperienced teachers are frequently complained of, especially the females. Lack of experience is a source, at all times, of much short-coming in both discipline and instruction. But it is pleasant to note that while the committees justly complain of this deficiency, they have the grace to attribute much of it to one true cause. In 1842 they say: "Yet the public generally have established and approved a course directly calculated, not only to continue, but to increase, the evil so universally condemned. It is certain instances of this kind will occur while the services of the sexes are so unequally appreciated. But a few females at service can be found that are not better rewarded than many female teachers of youth. To feel satisfied with uncomfortable school-rooms and encourage the employment of such teachers as can be obtained

at the lowest rate, is a practice which has been somewhat prevalent, consequently the wages offered to female teachers have formerly been of very little inducement for them to make suitable preparations to take upon themselves the arduous and responsible duties of a teacher."

In the winter of 1843-44 females were employed in both the Centre and the South Schools, and the committee reports: "The successful instruction and management of this (the South) and the Centre School by females, has convinced the committee that ladies such as these may be more extensively employed during the winter with great advantage to the schools, since the period of instruction may be considerably prolonged without additional expense, while the instruction itself would be equally thorough. The principal objection would be probably on the ground of government. But we feel bound in justice to them to say that in respect to good order, the schools of these ladies were not behind any other of the winter schools." As we look back upon this record through the vista of nearly half a century, the question forces itself upon us: "Where is the justice of cheapening the salary of either of these women? Of paying them less than men teachers would have received for work no better done?" Under such circumstances what worldly incentive had the female teacher to prepare herself especially for her work, or to do her very best after she had prepared?

But with all the hindrances incident to the times, the schools did decidedly improve, and were taking a stronger hold upon the sympathies and affections of the people generally, who manifested their interest by more liberal appropriations for current expenses and for school buildings.

TEACHERS' MEETINGS.—During the year 1850-51 a town teachers' association was formed to bring teachers and committee together bi-weekly for discussing topics of teaching and government, thus giving less experienced teachers the benefit of learning the methods of those more experienced. The effect was very beneficial.

FROM 1852-53 TO 1890.—At the March meeting in 1852 measures were taken looking towards a radical change in the school system. Six successive articles in the warrant concerning schools were referred to a committee of eighteen citizens to report at an adjourned meeting. Of this committee, Dr. Barnas Sears, then secretary of the State Board of Education, was the chairman. The committee reported in favor of abolishing the district-school system, of establishing the graded system and of authorizing the School Committee to establish either one school embracing High School studies for a term of ten months, or a larger number of schools having such studies for an aggregate period of twelve months.

The town adopted these measures, raised the appropriation for the schools, and voted to build two new school-houses, one at Newton Centre and one at

Newtonville. The houses were soon after erected at a cost of \$9,556.

In the school year 1852-53 all the schools except that at Oak Hill came under the graded system. On account of the small number of pupils, Oak Hill continued as an ungraded school, taught by a man in the winter and by a woman in the summer. The town was divided into six school districts, each containing grammar and primary grades, as follows:

No. 1, Newton Centre, including Oak Hill; No. 2, Upper Falls; No. 3, Lower Falls; No. 4, West Newton, including Auburndale; No. 5, Newtonville; No. 6, Newton Corner. Newton Corner had one intermediate grade also.

It was arranged that the school year should contain forty-two weeks, divided into three terms; the first term to begin the third Monday in April.

The list of books was revised, and measures taken for High School instruction.

ESTABLISHMENT OF THE HIGH SCHOOL DEPARTMENT.—The following is the preamble and vote of the committee establishing the first High School department in the schools:

"WHEREAS, in view of the magnitude and circumstances of the town of Newton, it is obvious that High School principles ought at no distant day to be furnished to more parts of the town than one, and where as it is desirable to meet, as far as possible, the wants and relations of every part of the town present and prospective, and whereas it is expedient that some definite arrangement in this respect be made without delay, at least in regard to one such school—

"Resolved, that a High School department be, and hereby is located by the School Committee at Newton Centre."

The new school building at Newton Centre was arranged to accommodate the High School department and was dedicated Jan. 1, 1853. The school began January 3d, with Mr. John W. Hunt, formerly principal of the High School at Plymouth, as the master, selected out of twelve candidates. This department was open to pupils of the whole town. Pupils outside of the district were admitted on examination by written questions, being expected to read correctly and fluently, to spell words in ordinary use, to write a fair and legible hand, to have a thorough knowledge of intermediate geography and of arithmetic as far as evolution. This department was to teach the languages, the higher English branches and to fit for college. More than sixty pupils were members of this department before the close of the first term, and an assistant was required.

The marked enthusiasm of the teachers awakened enthusiasm on the part of parents and a hundred visitors were recorded where before scarce a parent entered. Many were present at the public examination at the close of the first term of thirteen weeks. Twenty-two pupils had not been absent during the term, and the average attendance of the sixty-one pupils was fifty-seven. Six hundred dollars were subscribed by the citizens for useful apparatus and books, and the school made fair promise of great usefulness.

The next year a High School department was established at West Newton, and, soon after, another at Newton Corner.

SUCCESS OF THE GRADED SYSTEM.—The operation of the graded system generally proved satisfactory, bearing fruit in increased interest of all classes. Out of 1015 children between five and fifteen years of age, 924 attended the public schools; about half of the remainder attended private schools, and most of the others were under seven years of age and were kept at home.

ESTABLISHMENT OF THE HIGH SCHOOL.—With the growth of the town it soon became evident that the establishment of a school devoted entirely to high school studies was a necessity. This was urged in 1857-58 and accomplished in 1859 by a vote of the town at the March meeting of that year. Under the direction of an efficient architect and building committee a fine structure was erected in Newtonville, and the school opened on the 6th of September with seventy-five pupils, under Mr. J. N. Beals as principal, and Miss Amy Breck as assistant. At the close of the first year Mr. Beals resigned and Mr. T. D. Adams became principal, with Miss Breck and Miss Spear as assistants. The school was well supplied with apparatus, much being loaned from the High School department at Newton Centre. It possessed a limited supply of chemicals and some books of reference, among which was the New American Encyclopedia.

In the school report of 1861-62 can be found the course of study then adopted, the questions for admission and other matters of interest.

Two things are essential to the successful working of any advanced school,—a regular and systematic course of study with definite branches for each year and an exact distribution of the pupils into yearly classes. The first of these conditions the High School enjoyed from its commencement, but the second was not attained till after the fourth year. From this time the school advanced with little friction. In 1865-66 a valuable addition of standard works was made to the library, comprising forty-two volumes in history and the natural sciences, and all necessary appliances were freely given as required.

At the close of the summer term, in 1866, a great loss was experienced, not only to this school, but to all the city schools, in the death of Dr. Henry Bigelow, chairman of the School Committee, and the great central force in the school organization. One day's examination of the school was omitted that teachers and pupils might join in the public obsequies and pay their last tribute of respect to the honored dead.

The first decade of the High School, was completed in 1869; the condition of the school was most satisfactory; the school building was enlarged, the force of teachers doubled, the pupils reached nearly one hundred and fifty in number and the course of study was greatly amplified. Fifteen pupils graduated on exam-

ination day, making sixty-one graduates since the commencement.

During the first years of this decade frequent changes in principals had been made, which were unfavorable to discipline and progress; but now, at its close and at the commencement of the second, there seemed to be a fair promise of uniform progress under one competent guiding mind, that of Mr. Francis A. Waterhouse, from Augusta, Me., who had had charge of the school since 1868, and had already attained to eminent success in its arrangement.

In 1873 the committee adopted a modified plan of studies, consisting of three courses, with a large number of electives in each course. The minimum of recitation hours entitling one to a diploma was twelve hours a week,—one in singing, two in drawing and nine in studies which were more difficult and demanded careful preparation. Provision was also made for special students. This new arrangement of courses proved very attractive and a large number of pupils were in attendance. In 1875 a business course was added, making four courses in all—the classical, general and business courses of four years each, and a limited three years' course, which was, in effect, simply the first three years of the general course, provided for such as could not remain longer.

It would be gratifying to trace the growth of the school from this time on, but the limit of this article forbids details. Moreover, the changes of these later years have hardly passed into the region of history and could not well be read with impartial eyes. Suffice it, that in 1880 Mr. Waterhouse resigned to take charge of the English High School in Boston and was succeeded by Mr. Edward H. Cutler, from Providence, R. I., who came with a high reputation as a classical teacher, which reputation he eminently sustained during his connection with the school. At the close of the school year in 1888 he was succeeded by Mr. Edward J. Goodwin, from Nashua, N. H., an accomplished and faithful teacher and a wise disciplinarian.

With his able corps of assistants, of whom it would be a pleasure to speak individually, the school holds a rank of excellence second to no other institution of its grade in the State. Of some of its special features mention will be made in another connection. In 1887 an institute course was added with the design of fitting pupils for institutes of technology. From its organization to the close of the school year in 1889 the number of pupils graduated from the different courses was nine hundred and sixty-six.

The following is a list of names of the successive principals of the school, with their terms of service: Mr. J. N. Beals, from 1859 to 1860; Mr. T. D. Adams, from 1860 to 1867; Mr. E. B. Hale, from 1867 to 1868; Mr. F. A. Waterhouse, from 1868 to 1880; Mr. E. H. Cutler, from 1880 to 1888; Mr. E. J. Goodwin since 1888.

A Newton High School Association was formed in

1861 with the object of continuing the friendships and acquaintances of school life encouraged by an annual re-union. This association has since continued its existence, and is much prized by the alumni. A High School paper, edited and published by members of the association, is regularly issued.

THE EMPLOYMENT OF A SUPERINTENDENT.—The school report of 1853 contains a minority report of the member from Newtonville, suggesting to the citizens the wisdom and economy of creating an office of superintendent of the public schools, to be filled by a competent person whose whole energies shall be devoted to that object. The report is very able and offers cogent reasons for the adoption of his plan. In his earnestness to enforce consideration of the matter he speaks of Newton as behind many other suburban towns in her educational advantages, which is "a great impediment to the choice of Newton as a place of residence for men of wealth who have families of children," and urges the town, as a measure of soundest policy, to acquire a reputation for her schools quite equal, at least, to other towns in the immediate vicinity of Boston, and "such an arrangement as suggested would accomplish this, which it would be difficult to accomplish in any other way."

His advice was sound and his position in advance of his time, whether his estimate of the schools was right or wrong. But it was noticed that he was not elected on the School Committee the following year.

The next year, 1854, the State itself saw the necessity for better supervision of the schools, and a law was passed that any town by legal vote might require the School Committee annually to appoint a superintendent of public schools, "who, under the direction and control of said committee, should have the care and supervision of the schools," etc., etc.

The committee, as a body, do not at this time seem quite satisfied with their attempts at supervision, and from year to year try various plans among themselves. In their report of 1854-55 they say "the more schools brought under the supervision of one man, the more accurate and just would be his estimate of their relative efficiency, and the value of his counsels and encouragement to any teacher would increase with the extent of his observation and experience." "It is hoped at no remote day the town shall decide to appoint a superintendent and authorize him to devote himself mainly, if not exclusively, to the improvement of our schools."

At the March meeting, in 1866, the town voted that "the School Committee of Newton be authorized and required to appoint a superintendent, if, in their judgment, it be deemed advisable." The matter was discussed at subsequent committee meetings, and, on November 22d, it was resolved that "it was expedient to employ a superintendent of schools." But they failed to procure a suitable person for the amount appropriated, \$2500.

In the year 1870-71 the committee again asked for

an appropriation for a superintendent of schools, "without purposing to use it unless we feel convinced that we have secured the right man." The town made the required appropriation, and Mr. Thomas Emerson, from Woburn, was elected superintendent at a salary of \$3000. Under his efficient management many radical changes were made, especially in the grammar department, which was reduced to six years' time, not by crowding more into each year, but by striking out really superfluous matter; so that the course was much improved by omissions made. Thus, in arithmetic, the subjects of duodecimals, alligation, exchange, etc., were omitted; in geography broader outlines and general facts were given, and unimportant details omitted; less technical grammar was taught, and more attention to language was given in all the divisions, and time enough saved for the study of "Hooker's Child's Book of Nature." Many changes were also introduced into the primary schools, perhaps the most important that of substituting writing for printing; and a very detailed course of study was arranged for all grades, for the purpose of systematically developing, in their proper order, the perceptive, conceptive and reasoning powers of the child. A plan for a course of oral instruction in object-lessons was arranged for all but the High School, and systematic and progressive instruction in morals and in manners was made a part of the school curriculum. Regulations were adopted for the school sessions, for the teachers' attendance before school, for recesses, for detention of pupils, limiting the time to fifteen minutes after the morning session, and to an hour after the close of school in the afternoon.

After serving two years as superintendent, Mr. Emerson resigned to accept a more flattering offer elsewhere. The following are the names and terms of service of his successors in office: Mr. H. M. Willard, 1873 to 1876; Mr. Warren Johnson, 1876 to 1877; Mr. Ephraim Hunt, 1877 to 1881; Mr. John E. Kimball, 1881 to 1885; Mr. Thomas Emerson, 1885 to 1890.

It would be gratifying to enumerate in detail the progressive steps in the administration of each of these gentlemen, who served the schools with ability and success, and to whose efficient labors, seconded by an appreciative committee, is largely due the high rank attributed to Newton's schools. It would be unjust in this connection to omit the name of Dr. Henry Bigelow, chairman of the School Committee for nearly twenty years, until his death in 1866, whose services, marked ability and direct personal supervision gave to the schools a service not less efficient than would be rendered by the most accomplished superintendent. Superintendents can accomplish little without the stimulus and co-operation of the School Board. Newton has generally been fortunate in her choice of school officers. That she appreciated the efficient, untiring, unpaid labors of some of them, at least, is shown by their long continuance in the ser-

vise, alike creditable to themselves and to the city. The names of those who have served the longest since the introduction of the graded system, with their term of service, are as follows: Mr. John A. Gould, thirty years; Mr. Isaac Hagar, twenty-two years; Rev. George W. Shinn, fourteen years; Mr. George A. Allen, twelve years; Mr. Noah S. King, twelve years; Mr. Julius E. Clark, ten years; Mr. Lincoln R. Stone, ten years; Mr. Elijah J. Wood, nine years; Rev. William S. Smith, nine years; Miss A. Amelia Smead, nine years.

Mr. John A. Gould, whose name heads the above list, served also for several years as Prudential Committee.

WOMEN ON THE SCHOOL BOARD.—The first attempt to have women represented on the School Board was spasmodic and short-lived, three women being elected in 1873, for one year, and serving only for that time. In December, 1879, Miss A. A. Smead, from Ward Two, was chosen, and served very acceptably till her removal from the city. Since 1879, other women have been elected to the Board, two holding the office since 1887.

STATISTICS OF 1890.—On the 1st day of May, 1889, the number of children between five and fifteen years of age was 4,202, the number attending the public schools was 3359, and 225 were attending private schools, and seventy-four were at work in mills and elsewhere. The remaining number of these children were mostly under seven years of age and kept at home by their parents; 566 children, over fifteen, were attending the various schools.

The average daily attendance during the school year of 1888-89, was 92.4 per cent, an increase of four-tenths per cent. on the previous year. The whole number of tardinesses was 3797, a decrease of seventy-five on the previous year, and less than an average of one to a pupil.

The number of school-houses was 22; of occupied rooms, 106; sittings 4712.

The total value of the school-houses, furniture and land was \$581,600. The value of three of the school buildings, with land, etc., was less than \$10,000 each; the value of the remainder varied from \$10,000 to \$44,000, except the High School building, which was worth \$113,000.

The number of schools was as follows: One High School, 48 grammar schools, 38 primary, 1 mixed—total, 88.

The number of teachers in the High School was 12—males 5, females 7. Special teachers 3—males 1, females 2.

The number of teachers in the grammar schools was 48—males 10, females 38.

The number of teachers in the primary schools was 38, in the mixed school 1.

Special teachers in sewing, 3; in music, 1. Total, 106—male teachers 17, female 89.

Of the teachers in the High School, two have

served over ten years—Mr. Ezra W. Sampson, since 1870, and Miss Jennie E. Ireson, since 1879. Of the principals of the grammar schools, the following have taught ten years or more: Mr. Luther E. Leland since 1858, Mr. Levi F. Warren since 1869, Mr. H. Chapin Sawin since 1871, Mr. Albert L. Harwood since 1876, Mr. George E. Edwards since 1879 and Mr. William A. Spinney since 1879.

Of the other teachers three have served over thirty years—Miss Eliza E. Simmons since 1860, Miss Sarah E. Foster since 1863 and Miss Martha L. Perkins since 1866.

The maximum salary for males is \$3000, that of the High School master; the maximum salary of the grammar masters is \$1900; of the High School assistants: male, \$2000; female, \$1200. The maximum salary of females in the other schools is \$750, the minimum \$500.

The amount expended for schools, exclusive of school buildings, was \$118,706.38. The average cost per pupil was \$33.14, including an average cost of \$1.36 per pupil for books and school supplies.

Comparing the towns and cities with reference to the average cost per pupil, based on the whole number belonging, it will be found that Newton holds the first place in the county and the fourth in the State. If the comparison is based on the percentage of their taxable property, Newton stands the fourteenth among the cities of the State and the thirty-third among the towns and cities of Middlesex County.

The number of diplomas awarded in the grammar schools for the year was 218; the number of High School certificates awarded, 209.

The number of pupils graduated from the High School was 82. Of these 32 had completed the general course, 25 the classical, 12 the institute and 13 the mercantile course.

The number of graduates who took the final examinations for colleges and the Institute of Technology was 25; of these, 17 were admitted without conditions. The whole number of conditions was 11; of honors, 14. Twenty-four took preliminary examinations, 15 were unconditioned. The whole number of conditions was 12; of honors, 6.

Among the features of the Newton school system which are somewhat different from that of other cities, and which deserve especial mention, may be named

THE FLEXIBILITY OF THE ENTIRE SYSTEM, by means of mid-year promotions. This plan, up to 1890 has been in operation four years, with a success which has varied according to the conditions that have attended its execution. It has been especially successful where the teachers have given it the impulse of their faith and enthusiasm, and the care and vigilance it requires. A full explanation of the plan may not be out of place.

The pupils in the schools are classified in thirteen grades according to their qualifications; the first

three grades constitute the primary section; the fourth to the ninth the grammar section, and the tenth to the thirteenth the High School section. Each grade covers a period of one year. Hence the time required for the completion of the full course is thirteen years if the pupil is promoted each year, as is the case with the mass of pupils.

But by the arrangement described below, individuals or sections may be promoted according to their attainments within the year.

Each primary grade is subdivided into sections of ten to fifteen pupils each, three being assigned to each room, thus making thirty the minimum, and forty-five the maximum number of pupils in each room. The pupils are assigned to the different sections according to their attainments, and are advanced by sections, thus making the section rather than the grade the unit of promotion. Hence a room may have at any time one section that is just completing the year's work, another that has done one-half of it, and still another just entering upon it. In some rooms two sections may be upon the work of one year, and the third section upon that of another. This advancement of sections is an advantage to the individual pupil, as the transition from one section to another requires but little effort, and makes the gaining of time an easy accomplishment. The teacher is led constantly to study the conditions of each individual, and to adapt her instruction to his needs, while she feels a personal responsibility for his improvement.

The same general plan is pursued in the grammar grades. "Each room is divided into two sections, and the pupils are assigned to one or the other section according to their proficiency. The pupils in the two sections may belong to the same grade or they may represent two different grades. The latter arrangement is the more common and has its advantages. During the first half of the year each grade passes over all the work prescribed for the year in language and arithmetic, giving attention chiefly to the most important principles and their application in the simplest form of expression and computation. The last half of the year is given to a more minute study of the ground already traversed, together with a more extended application of principles. This adjustment of work enables the individual pupil to pass from one grade to the next higher at the close of the first half-year with no loss of time, with little friction, and without the omission of a single principle that will affect his future progress in these two branches of study. It is not so necessary that the work in other branches should be so consecutive. But work in geography, history, spelling, etc., is so adjusted as to prevent no obstacle to individual promotions, the general knowledge of a subject acquired in one grade becoming the basis of a more minute study of that subject in the next grade.

The condition of individual promotions in every

case are punctual and constant attendance, high rank, good conduct, good health and the consent of the parents. The number of individual promotions since the adoption of this plan has been from five to seven per cent. of the total enrollment.

This plan for promotions has many obvious advantages. It substitutes stimulation for repression, which is a much more powerful and healthful motive for all, and it gives the pupil larger opportunities for personal application, and makes him less of a machine, while it leads the teacher to study the needs and condition of the individual pupil.

Although there are (in 1890), no mid-year promotions in the High School, yet the advantages of the plan are secured by other means in the general and institute courses,—in the general course by the extension of the elective system, the number of electives allowed to each pupil being determined solely by his ability to do the work; to those in the institute course by arranging the work of four years in such a manner that pupils may complete it in three years. Of the eight graduates of this school admitted to the Institute in 1889, four had completed the work in three years. This system may be easily adjusted for the classical course, and probably soon will be by extending the course to five years, and arranging it so that it can be completed in four.

REGULAR GRADE PROMOTIONS.—These are made at the beginning of the school year in September, in which the daily work and conduct of the pupils during the year and the test examinations are considered.

TEST EXAMINATIONS.—The test examinations, written and oral, begin at the close of the first quarter and continue through the year. In the primary and grammar grades not more than one examination is made in any week, and not less than one in two weeks. The questions are prepared by the teacher of the class, the master of the school or the superintendent, and the examination takes the place of the regular class exercise in the branch of study in which the pupils are to be tested, and without previous notice, thus saving any nervous anxiety which might attend a formal examination. The results of these examinations are not made known, except in case of pupils who need spurring to greater effort, when the parents are notified.

The examinations by the teachers are given "to fix the thoughts already awakened in the minds of the pupils; to cultivate their powers of expression; and to ascertain what subjects, if any, need to be reviewed."

The examinations by the superintendent are to test the thinking power of the pupil and to ascertain his ability to work in the next higher grade.

A wise provision is made that "pupils who have been two years in any grade, and who have been faithful and regular in their work, may, on recommendation of their teachers and superintendent, with

the approval of the committee in charge of the school, be advanced to the next grade without having reached the required standing."

QUALITY OF THE TEACHING.—One advantage which the Newton schools enjoy above that of many neighboring towns, is in the fact of the salary being somewhat in advance, thus attracting to her ranks experienced teachers of marked ability. Add to this fact the insight and perseverance of the superintendent who compasses sea and land to find and secure the right kind of teachers, in one case visiting over seventy schools before finding just the teacher for a certain position, and it would be strange if the schools of Newton did not attain a first-class rank in the estimation of the community. From one-half to three-fifths of the teachers are Normal Graduates and more than one-half of these Framingham Normals, no better material than which, according to the superintendent, can anywhere be found.

Each teacher is allowed to exercise his or her own individuality in the details of the methods, unless they are vicious, and provided the results are right. Special attention, however, is given to methods which are natural and philosophic, the schools being supplied with real objects of knowledge, and with simple illustrative apparatus. Subjects, not books, are taught.

TEACHERS' MEETINGS AND TRAINING-SCHOOLS.—It has been conceded for years by the Newton school officials that something more than simple book knowledge on the part of the teacher is needed for a successful school, and that there is both a science and an art of teaching, for the attainment of which previous preparation of the would-be teacher is needed. As early as the year 1840-41 the committee recommended the employment of Normal graduates, and from time to time the teachers sought to improve their methods and results by mutual consultation and comparison of work. Teachers' meetings have been held with more or less regularity since 1869. At first the meetings were general, but since the appointment of a superintendent, grade teachers' meetings have generally been held. These meetings have been of great service in unifying the teachers' work, and giving the superintendent an opportunity of directing specifically the work of any grade. A training-school was established in 1873, and at the close of the first year much was said in its praise, but as a whole the school proved, in the opinion of many, a measure of doubtful utility, and it was abolished in the third year of its existence.

PHYSICAL TRAINING.—In the year 1851-52, through the exertion of the teacher and the generosity of the citizens, a good gymnasium was arranged for the model school, and used by boys and girls alternately. In 1863-64 calisthenics were in use with great acceptance in District No. 1. These and other interesting exercises secured good order and unusually rapid progress in the regular studies. The committee by

special order established gymnastics in the High grammar and intermediate schools as one of the required exercises, but the innovation met with opposition from without. It was feared that "the exercise might cripple and derange the nervous constitution of the children;" "the children had exercise enough already;" "there was no use in it." But the committee did not yield to the opposition, for they were aroused to their action by the fact that of every forty-three who died in the army at this time, forty died from disease, showing a great want of proper physique in the soldiers as well as of better regulations in the army. Since this time physical exercises have been encouraged and more or less practiced in all the schools. In 1877 military drill for boys was introduced into the High School for two hours a week, the drill master being a lieutenant of the regular army on the retired list from disability. It was claimed that this drill developed and strengthened the limbs and chests of the lads in a remarkable degree, and military drill has become a favorite exercise of the schools under a special drill master. Some difference of opinion in regard to the advisability of its continuance has been expressed by many of the citizens, but a majority of the people and of the committee seem to be in favor of it.

In 1879 a special teacher was provided for teaching calisthenics and elocution to girls of the High School, and happily, Miss Jennie Ireson, the teacher, has continued in charge ever since (to 1890), with marked benefit and increased enthusiasm on the part of teacher and pupils.

In March, 1890, the committee established calisthenics as a regular exercise, in the grammar and primary schools, under the supervision of a specialist.

VOCAL MUSIC.—From an early period in the history of the schools vocal music was used to give a variety to the school exercises; some regular instruction in this branch was given by Mr. Allen in the Model School as early as 1849, and by Mr. Adams in the High School in 1862. In 1863-64 vocal music was introduced into the grammar and intermediate schools as a regular study, with Mr. Trowbridge as the special director. The innovation met with favor, some musical entertainments were given, and it was soon found that the teaching of this branch in all the schools below the High, at least, was a necessity, and generally a special music director has since been employed.

In 1869-70, pianos were furnished for the schools. No appropriation has been more faithfully used than that for these instruments, or has gladdened so many hearts.

DRAWING.—The subject of drawing received early attention as a school exercise. It was elevated to a regular study in the grammar department in 1870-71, a systematic course marked out and a set of Bail's drawing charts put in every district. The next year

the services of Mr. Bowler, a very successful writing and drawing master, were obtained. Mr. Bowler continued in the service till his death, in 1874, devoting himself principally to teaching penmanship, Mrs. Bowler having charge of the drawing at first, and after the death of Mr. Bowler, of both writing and drawing for most of the time till 1888. To the skillful teaching of Mr. and Mrs. Bowler, Newton owes much of her success in these departments.

In 1873 art rooms were fitted up in the High School building, and furnished at considerable expense with an imported set of casts, models and flat examples, pronounced by Mr. Walter Smith, State Supervisor of Art, to be unsurpassed by any collection in the State. A carefully arranged course of study by Mr. Smith was adopted, and evening schools for industrial and mechanical drawing established in three of the villages—Newton proper, and the Upper and Lower Falls. For some years after, evening drawing schools continued to be taught, and were often quite fully attended. Drawing continues to be a regular study in the schools with a special supervisor for the primary and grammar grades.

INDUSTRIAL EDUCATION—SEWING.—In 1881 the attention of the West Newton Women's Educational Club was turned to the needs of young girls who were growing up ignorant of the common rudiments of sewing. By permission of the School Committee, one of their number, as an experiment, gratuitously taught a class in the Franklin School without detriment to the regular studies and with much benefit to the children. From six or eight who commenced with her the number soon grew to thirty.

The next year the question of making sewing a regular study was referred to a sub-committee consisting of the two lady members of the School Board with one gentleman, who reported strongly urging its adoption. The entire committee favored the plan; two ladies were engaged as special teachers, a specific and graded plan for teaching was adopted and sewing has since been one of the regular studies of the fourth, fifth, sixth and seventh grades in the grammar schools.

EVENING SCHOOLS FOR COMMON BRANCHES.—As early as 1853-54 an evening school for common branches was established in West Newton of about forty scholars, chiefly children of foreign parents, with some adults, whose circumstances forbade their attendance on the public schools. This was started and sustained by a few benevolent individuals, among whom was Rev. Charles Barnard, of Warren Street Chapel. They were assisted by senior pupils from other schools. It was open two evenings in the week and continued through the winter "with increasing interest and growing numbers." No pupils in town with the same amount of instruction profited more.

By a vote of the town, in the winter of 1859-60, an evening school was taught in District No. 2, and continued three months, but without the eminent success

which attended the private effort in West Newton, and it was not thought best to make these schools a permanent institution.

In 1870-71 an evening school was taught in West Newton with good results; in 1871-72 one was taught in the North Village with flattering success, attended by fifty-eight adults and ninety children; the average attendance of the former being forty-three and of the latter fifty-seven. Progress in the studies was good. Evening schools continued to be taught for some years in the village, and since then evening schools have generally been taught in some village accessible to the others. Sometimes they have been taught for men and boys only, but latterly for both sexes. They have been most successful when under the supervision of one of the principals of the grammar schools.

PRIVATE SCHOOLS, ACADEMIES AND SOME OTHER INSTITUTIONS FOR HIGHER EDUCATION.—Of many of the early private schools and institutions for higher education little is now known; a brief sketch of some of them will be attempted. In West Newton may be named

The Fuller Academy, 1832-34.—In the year 1794, by the death of Judge Abraham Fuller (who had successfully taught a private school previous to 1760), a legacy of £300 was left for the purpose of laying the foundation of an academy in Newton. But the payment of the legacy was delayed and it was not till 1832 that the building was erected. It stood in West Newton, on the corner of Washington and Highland Streets. The academy was incorporated in 1833 and the school opened in the spring of that year, and was taught for the next two years by Master Perkins. The town then decided to abandon the enterprise and the building was sold for \$1600.

Mr. Seth Davis' Private School, 1817-39.—In 1817 Mr. Seth Davis established a private academy on Waltham Street for boys and girls. The best teachers are not always the greatest scholars. Mr. Davis never claimed great scholarship, yet many of his pupils, who have attained the highest culture, admit he was a rare teacher, much in advance of his times. He had knowledge enough to answer all the requirements of his pupils and the power to impart by happy illustrations, no matter how difficult the subject might be. The school was small and he gave personal attention to his pupils with regard to their endowments and tastes, and endeavored to kindle enthusiasm and develop thought. The school-house was unique as the teacher, and apparently designed to secure good order without much trouble. The school-room is thus described by Hon. Alexander H. Rice, who was one of his pupils:

"The centre of the room was a clear space, and around the room ran a series of stalls, each separated from the next by a high partition, after the fashion seen in some eating-houses now, and in each stall was a short and narrow seat, so that its occupant could

see no fellow-pupil except on the opposite side of the room, or at least beyond speaking distance, while each and every one was visible to the master. I say that each one was visible to the master, though it is manifest that when seated in his chair in the centre of the room, the master's back must be towards some of the stalls on one or more of the four sides of the room. But while the fact is recognized as a physical necessity, it seemed then of no practical importance, for any mischievous vibration behind him, though as delicate as the step of a velvet-footed mouse, seemed to reverberate upon his sensitive and expectant tympanum as the summons to an instantaneous and whirling jump that brought him, chair and all, face to face with the entrapped offender. The rebuke of those piercing grey eyes, fixed and imperturbable, was worse than the soundest flogging."

While engaged in teaching, Mr. Davis devoted his evenings to study and giving scientific lectures in Newton and adjoining towns. The study of astronomy was a strong passion with him, and he constructed an orrery designed to illustrate the solar system; this he used in school and in the lecture-room.

The teaching of arithmetic was a problem he could not solve with the facilities offered him, and he compiled an arithmetic which he used in school and which was adopted by the town some years later.

Many eminent persons were once his pupils; among them may be named Hon. Alexander H. Rice and Prof. Daniel B. Hagar, who fitted for college under his tuition.

Miss Harriet L. Davis, a daughter of Seth Davis, was a pupil and an assistant to her father. She was a gifted woman, studious and helpful to all, ever stimulating others to better efforts. Her gentleness and tact enabled her to adjust misunderstandings and promote harmony when necessary. She had a thorough knowledge of the classics and higher mathematics, and was prepared to teach the necessary studies to fit for college when she established her school, after her father retired from his profession, in 1839.

Miss Davis' school was successful.—Her health being impaired from close application, her father assumed the responsibilities of her school and added fresh laurels to his fame as a teacher. Soon after the death of his daughter he gave up teaching, but not his interest in education. He was progressive, public-spirited and far-sighted, and aided in many ways the improvement of the town. He died June 25, 1888, at the great age of 100 years, nine months and twenty-two days.

The State Normal School, 1844-53.—In 1844 the Lexington State Normal School, for women, having outgrown its quarters, it became necessary to seek for better accommodations. The Fuller Academy building, in West Newton, offered more ample room, and was very favorably located on the line of the Boston and Albany Railroad. It was not in use and could be had for \$1500.

But in those days Normal Schools were regarded by many as merely an experiment at best; the State was very chary in its appropriations, and the Board of Education had no means at hand with which to purchase the building. In this dilemma, Hon. Horace Mann, then secretary of the Board, went into the office of his friend, Hon. Josiah Quincy, Jr., and in an emphatic, semi-humorous manner, said: "Quincy, if you know any man who wants the highest seat in the kingdom of Heaven, it can be had for \$1500." An explanation followed, and Mr. Quincy immediately gave his check for the amount to Mr. Mann, directing him to take the deed in his own name, and if the building was ever sold, to apply the proceeds to any purpose that he thought would best promote the interests of popular education.

The citizens of West Newton contributed \$600 towards fitting up the building; \$1300 were also given jointly by Mr. Mann and Rev. Cyrus Peirce, the principal of the school, and the building was properly furnished and ready for occupancy in the summer of 1844. The citizens welcomed the normal pupils to their homes and the school was opened in the early fall under very favorable auspices. The seats were rapidly filled by intelligent and earnest pupils, some of them residents of the town, and the graduates were sought for to teach in responsible and lucrative places. Its proximity to Boston made it easy of access to visitors, and it soon became widely and favorably known. Scarce a day passed but distinguished and interested visitors were seen either seated on the platform or following the various class exercises.

The leading characteristics of the school were perfect sincerity and entire fearlessness in the search of truth, wherever it might lead; the methods inculcated, both of research and for teaching, were natural and objective. All sham of every kind was despised, and for even their public days there was little of what might be called "fixing up;" it was the aim of the teachers then, as on other days, to show things just as they were.

The Normal School and the model department connected with it drew many families from Boston and its vicinity to make West Newton their home, that they might avail themselves of the facilities for education they offered, not only to their daughters, but to their younger children. Among others thus attracted was Hon. Horace Mann, whose presence in the village proved a great uplift not only to the school, but to the entire community.

In April, 1849, Mr. Peirce was compelled by failing health, incident upon overwork and care, to resign the charge of the school to whose welfare he had devoted every power of his body and mind for eight years, three in Lexington and five in Newton. To him more than to any other of the Normal teachers is due the continued existence of our present Normal School system. Hon. Henry Barnard but echoed the sentiments of many distinguished educators when he once

said: "Had it not been for him (Mr. Peirce), I consider the cause of Normal Schools would have failed or have been postponed an indefinite period." In the next annual report of the Board of Education the visiting committee of the Board, in alluding to Mr. Peirce's Normal School work, stated that "Never was a success more signal; never was it more clearly purchased by the sacrifice of health and almost of life."

In September, 1849, Rev. Eben S. Stearns, of New Bedford, took charge of the school. In the interval between the administrations of Mr. Peirce and Mr. Stearns, Miss Electa N. Lincoln, the first assistant, took charge of the school and carried it on successfully. Under the administration of Mr. Stearns it increased in popularity till it became overcrowded, when more rigid examinations were adopted; but it soon became evident that some further measures must be taken to accommodate the school, and in 1853 it was removed to a larger building in Framingham Centre.

On the first establishment of Normal Schools in Massachusetts, determined opposition was manifested by many conservative educators, and efforts were made in the Legislature of 1840 not only to abolish the school, but the Board of Education also. This opposition became gradually less active, but while the school was located in West Newton, the pent-up bitterness of its opponents broke out with renewed virulence, and happily, for the last time. The circumstances of the onslaught are of historical value as bearing upon the progress of education, and will be of interest in this connection.

In 1844 Mr. Mann's celebrated "Seventh Annual Report" appeared, in which he eulogized the schools of Germany to the implied disparagement of the schools in America. This so exasperated the "Thirty-one Boston Schoolmasters" and others, that a whirlwind of opposition was raised, not only against Mr. Mann, but against the measures he advocated. Old teachers set themselves once more against the school because it taught methods which interfered with their ways of doing things, and was a standing declaration that there was something in the art of teaching which experience alone did not give. Religious fanaticism, at first busy against the school and only quieted because it had nothing to fight against, was again roused. "The school was opposed to the Bible" because it discouraged the use of Solomon's sovereign remedy; "it was irreligious" because it did not teach the dogmas of "their" church, or encourage exclusive attendance on "their" places of worship. These and many more charges were maliciously circulated. The attacks finally culminated in a disgraceful article which appeared in the *Boston Recorder* of June 3, 1847, maligning the morality and even decency of the school, and which so aroused the indignation of the students, more than half of whom were of that religious faith against which the principal was represented as plying his se-

ductions, that, without any communication with the principal, they unanimously adopted and published a series of resolutions in which the charges were, without any qualification, forcibly denied. (These may be seen in the Report of the Board of Education for the year 1889-90, article "Historical Sketch of the Lexington-Framingham Normal School," and in the *Boston Courier* of June 10, 1847.)

The principal himself challenged his enemies to prove their charges, but no proof appeared, and in their next report the visitors of the school declared them to be groundless, and the board added that "the charges referred to could only be attributed to a culpable ignorance or perversion of facts." Thus ended one of the stormiest epochs in the history of the new education.

PRIVATE SCHOOLS AT NEWTON CENTRE.—*The Boarding-School of Marshall S. Rice, 1825-47.*—This school was opened in Newton Centre, on the first Monday of May, 1825, and was continued until November, 1847, a period of twenty-two years and a half. The location was selected because it was healthful, without tavern or grog-shop, and in daily communication by stage with Boston. The homestead of Mr. Obadiah Thayer, nearly opposite the Congregational meeting-house, and often called the "Gibbs Place," was first rented for a year and then purchased by Mr. Rice, as well suited to the needs of such a school as he wished to establish, the purpose of which, as defined by himself, was to "train up young men and women to be teachers in common schools, and to fill important places in business." The school year was divided into four quarters of twelve weeks each, and the tuition of day scholars was fixed at \$5.00 a quarter, while the boarding scholars were charged \$24.00 a quarter, unless they were children of widows, in which case the usual charge was diminished one-fourth. Yet during the last few years of the school \$30.00 a quarter appears to have been the customary price for boarders. Thirty boarding scholars and ten day scholars were considered a full school, though more than forty scholars were often in attendance. The whole number of pupils from first to last was not less than a thousand. Some of these, after further study, entered the Christian ministry, several became professors in colleges, the legal profession was chosen by some, and the medical by others; but a large part of the pupils engaged in business, and many of them with marked success. The names that appear on the school catalogues are generally household words with the people of Newton, though many pupils came from Boston, and some from distant places.

The eminent success of this school was due in great measure to the energy, decision, promptness and sterling character of Mr. Rice, seconded by the motherly care of his excellent wife. By their earnest co-operation it was made one of the best schools in New England. Mr. Rice had remarkable tact in the management of boys; his methods of discipline were

various and often original. For example: an offender was sometimes tried by a court and jury of fellow-students, and their decision as to his guilt or innocence, and the extent and quality of punishment of the guilty, was respected by Mr. Rice. The severest punishment imposed upon the offender by the court was confinement at meal times and during play hours for one, two or three days, according to the gravity of the offence, in "*the dungeon*," a dark closet under the front stairs. A jailor was appointed to carry bread and water to the culprit.

It is said that among the pupils were sometimes boys who preferred to stay from church on Sunday, and who would complain of illness as meeting-time approached. Master Rice always respected their excuses, kindly put them to bed for the day, and fed them on gruel. It may be superfluous to say that this treatment not only cured the disease, but generally prevented any recurrence.

Mr. Rice was also ingenious in methods of awakening interest in study, and in testing the self-control of his pupils. He would occasionally give them a difficult example in arithmetic, and while they were doing it, tell a most interesting story. His unswerving integrity and religious life were also sources of power, and it would be difficult to estimate more highly than we ought, their effect on the characters of the young people under his charge.

Mr. Rice became interested in temperance and joined the Friendly Society, a temperance organization, about the year 1830, at which time he had in his cellar a quantity of cherry bounce and other home-made liquors, closely sealed in kegs, and the question rose: "What shall be done with it?" It stayed in the cellar two winters, but the following spring Mr. Rice had made up his mind as to its disposition, and, calling his boys together, he directed them to take the kegs to an adjacent hill-side, out with the bungs, and let it run down the water-courses, thus effectually giving them an object lesson on the best use of intoxicants.

He was very successful in interesting his pupils in gardening, giving each a plot of ground which he could plant with vegetables or flowers, and tend at his pleasure. If any of his pupils have failed to be good citizens or capable men of business, or sincere Christians, it is not for want of wise counsel and worthy example on the part of their teachers, Mr. and Mrs. Rice.

Mr. Moses Burbank's School.—The next year after Mr. Rice closed his school, Mr. Moses Burbank opened a private school for boys in the basement of the old Baptist Church, and kept it till 1852.

The Academy at Newton Centre, 1831-60.—In September, 1830, several persons who realized the poverty of the public schools, and desired to furnish for their girls an opportunity for higher and better education, met and took measures to establish a female academy in the village. Mr. Rice's school was mostly for boys,

and he heartily entered into the project, and sold to the Building Committee land for a site, for the small sum of fifty dollars. The academy was incorporated March 5, 1831, under the name of "The Newton Female Academy." Miss Leach was appointed its preceptress March 9th, with a salary of \$250 for six months, or, if she should remain a year, \$350 for the year. Tuition was fixed at \$5 per term, the year to contain four terms. A boarding-house was erected in 1831, and provision made the next year for furnishing dinner to outside pupils, if they desired, at ten cents a day.

In 1832 the preceptress was changed, and again changed in 1833. In 1834 Mr. Elbridge Hosmer took both the academy and boarding-house; these he bought in 1836 for \$3500, and sold the same in 1837 to Mr. Ebenezer Woodward, who kept a very successful school for six and a half years, when he sold to Mr. Wood, who resold the property in 1848 to Rev. John B. Hague. Under Mr. Hague the school took high rank. During the year ending April 9, 1850, it numbered fifty pupils, with special teachers in Latin, German, French and Italian, also in music and drawing; Dr. Alvah Hovey, afterwards president of the Newton Theological Seminary, instructing in Latin and German. Attention was paid to the higher mathematics, rhetoric and belles-lettres, intellectual and moral science, the natural sciences and history. The school year was divided into three terms; price of board and tuition, fifty dollars a term.

The academy seems to have been very unfortunate in the frequent changes of teachers. Mr. Hague closed his interest in 1851 to Mr. E. H. Barstow, who changed it into a school for boys and young men, receiving many of Mr. Burbank's pupils (Mr. Burbank having closed his school about this time). Mr. Barstow taught about nine years, when his health failed and the school was abandoned, the building being sold and changed into a boarding-house.

OTHER PRIVATE SCHOOLS.—Many other private schools might be named in this and the other villages, but of which little is known. There was Dr. Charles Siedhof's fine classical school, kept for some years in Newton Centre, on the German system; here half a dozen boarding pupils and a dozen day pupils were ably instructed in ancient and modern languages; an excellent boys' school, opened by Mr. Hunt when "his occupation was gone," on the closing of the High School department in the Centre Public School. There was a good girls' school in the same village, established about 1860, and kept for some years by a Miss Cornelius, daughter of the Mrs. Cornelius whose cook-books have added much since their publication to the health of our tables and the comfort of our homes.

The Preston Cottage and Hillside School, near Newton proper, and Mr. Weld's school in Auburn-dale, about 1850, should be named. Undoubtedly, many more might be numbered and teachers might

be named who labored faithfully and well, but who cannot now be singled out from the shades of the past.

Young Ladies' Academy, Newton.—But there was one famous school and one famous teacher in Newton in the very earliest part of this century, of whom much can be gleaned—the private school for girls commenced some time previous to 1807, and taught for about twelve years in the brick part of the Nonantum House by Mrs. Rawson, who, with her husband and son, resided in the building. Mrs. Rawson was a noted woman in her day, brilliant and versatile, "an authoress, poet and editor." "Charlotte Temple," the well-known novel, was from her pen. She wrote several other novels and some popular songs; among them, "America, Commerce and Freedom," and "When Rising from Ocean." Her father, who had been retired from the British navy, was a Tory, and lived in Revolutionary times in Hull, Mass., till he was banished from thence in 1778, when he went to England, and there his daughter Susanna married William Rawson, a trumpeter of the Royal Horse Guards.

Mr. Rawson was a famous trumpeter, and after coming to this country he used to play the trumpet for the Handel and Haydn Society in Boston. It is said that when his trumpet sounded in the "Messiah," at the passage, "The trumpet shall sound and the dead shall be raised," one could almost see the graves opening and the dead quickening into life.

While in Newton, caring for her sixty young lady pupils, whom she instructed in manners and in morals as well, she published a volume entitled "Miscellaneous Poems," by Susanna Rawson, Preceptress of the Ladies' Academy, Newton, Mass., a volume of 227 pages with 245 subscribers, whose names were printed in the book. She also prepared and published many other books while teaching. Her adopted daughter, Miss Frances M. Mills, assisted and succeeded her, and afterwards became the mother of Mrs. Georgianna Hall, the authoress, and by a second marriage, of Richard S. Spofford, the Essex County statesman.

It is said that Mrs. Rawson's school was among the first, female seminaries if it was not the very first in the United States. The date of its establishment is put by one author at 1803, by another somewhere after 1804, and by another at 1800, which makes it difficult to decide which should claim seniority and bear the palm for being the first female seminary of the United States, this or the Ipswich Female Academy, founded in 1803.

Mrs. Rawson numbered among her pupils young ladies from far and near. Many a beautiful girl from the West Indies made her home with her, and two young daughters of Governor Claiborne, of South Carolina, graced her fireside. The following announcement of her school appeared in the *Columbia Sentinel*, April 15, 1807:

YOUNG LADIES' ACADEMY, NEWTON.

MRS. RAWSON and Mrs. Haswell beg leave to inform their friends

that their spring quarter will commence in April, and that every accommodation is provided for the comfort of their pupils, and every attention will be paid to their manners, morals and improvement. The drawing will be taught, the ensuing season, in a new and superior style. Mrs. Rawson having received instructions lately for the purpose from a professional master of the art. Terms as usual. Music by Mr. G. Graupner. Dancing by Mr. G. Shaffer."

After leaving Newton Mrs. Rawson established a similar school in Roxbury.

PRIVATE SCHOOLS IN SUCCESSFUL OPERATION IN 1890.—*Lasell Seminary for Young Women, Auburn-dale, established in 1851.*—Lasell Seminary was founded by Edward Lasell, Professor of Chemistry in Williams College, and incorporated in the same year. It was fortunately placed in Auburn-dale, a charming and healthful ward of Newton.

Professor Lasell lived only long enough to see his plans for a girls' school of high rank successful. For ten years after his death the work was carried on by his brother Josiah, and his brother-in-law, George W. Briggs.

In 1862 Rev. Charles W. Cushing became principal and proprietor. In 1873 he sold the seminary and grounds to ten prominent men of Boston, who became a body of trustees. They refitted the institution with steam heat, gas, new furniture, pianos, etc., and in 1874 made Mr. Charles C. Bragdon principal. He soon proved to be the right man for the place. Though young, he had had seven years' experience in teaching. Graduated by a university at home, he had entered one abroad, and while continuing his studies gained much from travel and keen observation. Of great energy and perseverance and "extraordinarily independent in mind and character," he takes the broadest views, yet is patient with the smallest detail. He put a determined shoulder to the wheel and the progress, year by year, has been phenomenal.

In 1874 there were twenty pupils; now there are more than six times as many. The building was doubled in size in 1881 at a cost of over thirty thousand dollars, yet every year from thirty to forty applicants are refused for want of room, the persistent policy being in favor of a small school. And while paying off heavy debts the improvements without and within make the old place almost unrecognizable.

Among these improvements are the pictures that turn the beautiful studio into an art gallery, adorn the walls everywhere, and fill the folios and the cabinet. There are a goodly number in color, oil and water,—a fair number originals,—with many photographs and engravings. In all, the catalogue has nearly nineteen hundred, and additions are frequent. Mainly the collection was made by the principal in Europe, where he takes summer parties of the pupils and their friends.

The library is the nucleus of a fair one for reference. The old dining-room has given way to a large and handsome successor. The old gymnasium is now a well-fitted laboratory for class and individual work. The new gymnasium, built in 1883, an uncommonly

fine one, is in charge of a pupil of Dr. Sargent, of Cambridge, is carried on upon the principles of which he is the chief apostle, and is in some sense still in his care.

The lower story holds a ten-pin alley and natatorium. The water in the ample tank is heated and changed often. An accomplished instructor in swimming is employed.

A resident physician looks after the health, habits of dress, recreation, etc., of the pupils. With the care and regular hours many a weak girl gains strength, and to be "delicate" is no longer in good taste.

One teacher is devoting herself to the training of the nerves, having recently studied the subject in London. The direct object is not health,—though it must serve it,—but concentration of the faculties to obtain the highest activity by self-control.

In 1877 Lasell took a new departure. Believing the chief business of women to be home-making, and seeing that the conflict with the present dire domestic problems is often greater than they can bear, experts and specialists were brought to counsel and instruct. Mrs. Helen Campbell treated of domestic science in general; Mrs. Croly (Jennie June), of dress. Miss Marion Talbot, of Boston, gives annually a course of lectures upon home sanitation. This, with practical illustrations, visiting buildings to examine the plumbing, etc., is a feature of the school of much importance—a unique one it is believed.

Miss Parloa began giving demonstrations in cooking, and has had several worthy successors, while volunteers and advanced pupils cook in small classes, and prizes are given for the best bread. Dress-cutting and making have long proved a success, and one notable class of juniors at their reception wore dresses of their own handiwork, and served the guests with viands of their own cooking.

Millinery is taught, also photography, short-hand and type-writing. Some pupils have found in these lines their natural power, and means of pecuniary profit.

Lasell is a pioneer in another direction. In 1882 Mr. Alfred Hemenway, of Boston, gave a course of lectures explanatory of the principles of common law. This has become a yearly course, but now in 1890 he also sends a lady, a practitioner of Boston, who especially emphasizes the peculiarities of the law as applied to women. The girls receive her simple, untechnical instruction gladly. They begin to understand that women have suffered bitterly from ignorance on these points.

With all the practical work, the standard of the school has constantly risen. Algebra is now a study of the Preparatory year, and the demands for entrance to the Freshman class are on a scale commensurate with this level. The work in history, literature, English and natural sciences is specially ample. Mr. William J. Rolfe has a class in Shakespeare, and

eminent specialists in various departments use all the time that can be spared in the most valuable lectures, free to all pupils. The persistent refusal to gratify a natural ambition for a *large* school bears its fruit in the more careful attention to those who share its many rich opportunities.

The pupils edit and publish a monthly, the profits of which form a loan fund to help girls in education.

The pupils are not required to pass regular or fore-known examinations, nor to recite in public on any occasion. The whole plan shows intelligent and fearless consideration of the serious problems of the education of girls. The overflowing patronage proves the estimate of thoughtful parents of their solution at Lasell.

West Newton English and Classical School was established 1854. This school is an outgrowth of the Normal School system of the State; the principal and associate principals having been trained in the Normal School at Bridgewater.

On the removal of the West Newton State Normal School to Framingham the building and grounds which it had hitherto occupied were purchased, and the school was opened under its present title in 1854, by Mr. Nathaniel T. Allen, who had successfully taught the Model School for the six previous years, and Rev. Cyrus Peirce, former principal of the Normal School. Among its early patrons and constant friends were Hon. Horace Mann, Rev. Samuel J. May (second principal of the Normal School,) Dr. Samuel G. Howe (superintendent of the Blind Asylum, Boston,) Hon. Charles Sumner, Hon. George B. Emerson, Rev. Theodore Parker and Dr. Thomas Hill, ex-president of Harvard College.

In 1855, an act of incorporation was secured from the Legislature. The incorporators were Nathaniel T. Allen, George E. Allen and James T. Allen. Mr. George E. Allen died in 1888; the Messrs. Nathaniel T. and James T. Allen are still (1890) at the head of the institution. Mr. Peirce taught in the school but a short time and died in 1860.

Among the former and present teachers of the school may be named many of a world-wide reputation. Dr. William A. Alcott's book on "The Laws of Health" was first delivered in the form of lectures to this school; Dr. Dio Lewis was connected with the school for eight years, and here taught his first class in free gymnastics in Massachusetts; Mr. Joseph Allen, the successful superintendent of the Westboro' State Reform School, was for many years an associate principal in the school; Rev. T. Prentiss Allen, Mrs. S. R. Urbino, Rev. Joseph H. Allen, professor at Harvard University, William F. Allen, professor in Madison University, and many others might be named.

The instruction is based on the principles of Froebel and Pestalozzi, and aims symmetrically to develop the body, mind and heart. Here the first kindergarten in Massachusetts was established in 1864.

The course of study embraces full English and classical courses for a secondary education; also preparatory studies. The regular academic course occupies five years; the classical course, four years. Throughout the latter, written translations and analyses of the authors studied are required. Provision is made for pupils who require direct personal attention, as in the case of exceptionally backward pupils, or those pursuing an advanced course of study or of foreigners. Among the teachers are those who speak French, German, Spanish and Italian.

The library contains five hundred volumes. The mineralogical cabinet is large; the natural history collection is good; the apparatus is excellent; the drawing-room is well supplied with casts and models. There is a complete supply of apparatus for heavy and light gymnastics. Instruction is given, and exercise is required of all in the gymnasium. A swimming pond at the residence of one of the principals is an added attraction. Music and dancing are taught.

In addition to the instruction given in school-hours, the pupils enjoy the privilege of the School Lyceum and Natural History Society. The weekly meetings of the Lyceum, conducted by officers of their own number, chosen by the members, afford in many ways opportunity for manly development, mental discipline and self-reliance, to which graduates of the school look back in grateful remembrance. One of the principals is present at all the meetings of the Lyceum. With this constant supervision the Lyceum is regarded as among the most valuable advantages offered by the institution.

From the first this has been a family school for both sexes. It is believed by the proprietors of the school that in many ways association of the sexes in the family and in the school has great advantages, affording a better moral development and a more healthy stimulus than is possible where the sexes are educated separately. Pupils from out of town are grouped in families. This secures a careful oversight of each of the number grouped together and provides for much of family life and of individual study and discipline. It is believed that this school, by rigid discipline, wise training and careful culture of all the powers with reference to individual peculiarities and needs, educates its pupils to useful citizenship, to single-hearted patriotism, and to a noble Christian manhood and womanhood.

Since its organization, up to 1890, over one thousand pupils have graduated from the school; more than one hundred have come from foreign countries, between three and four hundred from States outside of Massachusetts, and nine hundred from towns outside of Newton.

Miss Spear's English and Classical School.—This school was established in 1865, on Washington Street, Newton. Its aim is to furnish a thorough practical English and classical education for girls. To this end the school is divided into three departments, each

under charge of a special teacher and all under the general supervision of the principal. The work of each department occupies from three to four years. The average number of pupils is fifty; their ages from six to twenty years. There are five regular teachers and three pupil teachers, also special teachers in French, German, Music and Elocution.

Riverside Home and Day School for Girls.—This school was established in 1882. Its special design is to prepare girls for Wellesley and other colleges. The resident pupils are limited to twenty, under the care of the principal, Miss Delia T. Smith. The course of study is regular and systematic. Pupils who satisfactorily complete the college preparatory course are received at Wellesley College without further examination. French and German are taught by resident native teachers of successful experience. Lectures and concerts at Wellesley College are open to pupils of this school.

Mr. E. H. Cutler's Preparatory School for Boys and Girls, Newton.—In September, 1887, Mr. E. H. Cutler opened a preparatory school for boys. At the close of the second year seven of the graduates were prepared for college. At the commencement of the third year, at the solicitation of some citizens of Newton, a department for girls was established, and up to March, 1890, the total number of pupils was: boys, thirty; girls, four; total, thirty-four. By limiting the number of pupils, Mr. Cutler is enabled to give each pupil his personal attention; and, having had a long and successful experience in preparatory work, is admirably fitted to prepare pupils for college or for technical schools.

The Misses Allen's Day and Boarding-School, Vernon Street, Newton, 1888.—Here girls can be prepared for college with all the advantages of a home life. There are special teachers in the classics, modern languages, music, drawing and painting. Miss Alice Ranlett is the acting principal. Although in the second year only, of its existence, the school is pronounced a success.

[NOTE.—Since the above was written, this school, by reason of the death of one of the proprietors, has been given up.]

CHAPTER IV.

NEWTON.—(Continued).

NEWTON THEOLOGICAL INSTITUTION.

BY PROF. ALVAH HOVELY.

This school was opened at Newton Centre on the 28th of October, 1825, and was incorporated by an act of the General Court of Massachusetts, approved by Governor Levi Lincoln on the 22d of February, 1826. It was the first theological seminary of a high

grade established by Baptists in the United States, and it will therefore be suitable to mention a few things which led more or less directly to its establishment.

At the annual meeting of the Boston Baptist Association on September 21 and 22, 1814, the letter of the Second Baptist Church in Boston, written by Dr. Thomas Baldwin, suggested "the propriety and importance of forming an education society to afford aid to those of our young brethren who are desirous of engaging in the ministry, in obtaining literary and theological information." This suggestion was received with favor, and referred to a committee of three,—the Rev. Daniel Merrill, the Rev. Luther Rice and Mr. Ensign Lincoln. The report of this committee recommended the formation of the society proposed, and presented the draft of a constitution, which was promptly adopted." Thus the Massachusetts Baptist Education Society came into existence. In the eleventh annual report of this society, written by Rev. Ebenezer Nelson, and presented in 1825, occurs the following paragraph:

"Besides attending to the ordinary duties the past year, your Committee have, in compliance with the recommendation of a large meeting of ministers and other brethren convened in Boston, May 25, 1825, taken into consideration the establishment of a Theological Seminary in the vicinity of Boston. This measure has for many years been in contemplation. Your Committee are now convinced that the time has arrived to build this part of the Lord's house. Although attempts have been made to establish Theological departments in connection with two of our colleges, and some success has attended them, yet your Committee are of opinion that a Theological Institution established by itself alone, where the combined powers of two or three or more men of experience, and men of God, can be employed in instructing and forming the manners and habits and character of young men for the work of the ministry, is greatly to be preferred. They have therefore appointed two sub-committees—one to draw up a general plan for an Institution and inquire concerning a suitable place for its location, and the other to solicit donations and subscriptions, both which have made some progress. The Committee are well aware that the step they are about to take is a very important one. The work before them involves great responsibilities. Whatever is done in relation to this Institution will have a bearing upon the great interests of the Redeemer's Kingdom, and especially upon the denomination with which we stand connected."

The "two colleges" which had Theological Departments connected with them were located, one in Waterville, Me., and the other in Washington, D. C.—now Colby University and Columbian University. At the head of the former was Dr. Jeremiah Chaplin, an able scholar and divine, and in the faculty of the latter was Dr. Irah Chase, afterwards so influential in fixing the character of Newton Theological Institution. But the trustees of Waterville College had, at length, become satisfied that they could not build up a good seminary and college together with the resources at their command, and about the same time Dr. Chase had reached the conclusion that a satisfactory course of theological instruction could not be maintained in Columbian College. The way was therefore open for the establishment of an independent seminary wherever it could be most useful, and providentially there were at that time a number of far-seeing and liberal Baptists in Eastern Massachusetts who were

prepared to commence the important work. But they did not expect to finish it in their own day. For it has been truly said: "The denomination was not yet strong enough in men of intelligence and wealth to justify an effort on a large scale. The beginning must necessarily be small; but men of faith and hope felt that the beginning should not longer be delayed. They would do what they could by laying a foundation on which their successors might build, and thus gradually make the school such as the growing wants of the churches might demand. They had no experience in such an enterprise; they had no precedent as a guide; but they understood what was needed, and were disposed to do their best towards furnishing a supply."

Although the founders of this institution had no expectation of completing the work which they began or of making a great school at the start, with large appliances in the way of teachers, books and buildings, they had a very definite grade of instruction in mind, and purposed that it should not be inferior in quality or amount to that furnished by the best theological seminaries of which they had any knowledge. Those seminaries were Andover, founded in 1807, and Princeton, founded in 1812, in both of which a full course occupied three years. It was their purpose to establish a school of equal excellence with those at Andover and Princeton, yet differing from them in the emphasis which should be laid upon biblical study. The following statement was published by the Executive Committee of the Massachusetts Baptist Education Society, November 9, 1825, less than two weeks after the seminary was opened by the Rev. Iraha Chase, who had been appointed, for the time being, Professor of Biblical Theology:

"The regular course is to occupy three years, and embrace the Hebrew language and antiquities, with the Chaldee and Greek of the Scriptures, Ecclesiastical History, Biblical Theology, Pastoral Duties, and, in short, the various studies and exercises appropriate to a theological institution designed to assist those who would understand the Bible clearly, and, as faithful ministers of Christ, inculcate its divine lessons the most usefully." More particularly:

"To the department of Ecclesiastical History will be referred instruction on the evidences of the Christian religion; on the formation, preservation, transmission and canonical authority of the sacred volume; on the history, character, influences, and uses of the ancient versions and manuscripts of the Old Testament and of the New; on modern translations, especially on the history of our common English version; on the principal editions of the original Scriptures; on the ancient and the subsequent history of the Hebrews, and, as far as may be requisite, of the nations with whose history that of the Hebrew is connected; on the history of Christianity, and the various opinions and practices which, under its name, have been supported, with the causes and the consequences; on the attempts of reformation, and on the present state as well as the origin of the different denominations of professed Christians, and of unbelievers, and the unevangelized throughout the world.

"To the sphere of Biblical Theology it will belong to aid the students in acquiring a knowledge of the sacred Scriptures in the original languages, as well as in the English; to guide them to correct principles of interpretation, and habituate them to employ, in seeking to understand the various parts of the Bible, all those helps which may be derived from the different branches of biblical literature; to analyze, and lead the students to analyze, in the original, the most important portions of the Old Testament, and the whole, if possible, of the New, exhibiting the scope of the respective parts, and whatever of doctrinal or of prac-

tical import they may contain, and showing how they are applicable at the present day, and profitable for doctrine, for reproof, for correction, for instruction in righteousness; and having thus surveyed the rich field of Scripture; and viewed the products as scattered profusely on every side by the bounteous hand of God, the professor is, for the sake of convenient reference, to classify and arrange the particulars, and, for this purpose, to bring the students to the examination of a series of theological subjects, in such a manner as most to awaken the efforts of the genuine disciple of Christ, and lead him to search the Scriptures.

"Under the head of Pastoral Duties, it will be required to give instruction in the nature, objects, difficulties, responsibilities and supports of the pastoral office; on the great work of preaching the Gospel; on the various ways and occasions of promoting the welfare of a church, and commending the Gospel to the consciences of men by private labors as well as by public preaching, exhortation and prayer; on the dangers of the preacher, and the appropriate guards; on his visits to persons in health and in sickness, and in other affliction; and on administering consolation, or reproof, or instruction, or entreaty, as different individuals may need, and as becomes one who is to watch for souls as they that must give account."

This *prospectus* establishes two points; first, that students for the ministry were believed, by the founders of the seminary, to need a course of instruction more thorough and extended than could be given by any pastor; for no one can read it without recognizing the importance of nearly every part of the course proposed, and, at the same time, the vast amount of investigation which it presupposes; and, second, that the range of study thus marked out was pre-eminently Biblical, comprising the history, the criticism, the interpretation, the analysis, the application, and the influence of the sacred Scriptures, together with suitable training for the work of preaching and pastoral duty, but assigning a very subordinate place to systematic theology, and avoiding the expression altogether. It may be added that the *prospectus* quoted above bears internal evidence of having proceeded from the mind and pen of Professor Chase. One of his early pupils, the Rev. William Hague, D.D., testifies that the paragraph describing the work to be done in Biblical Theology "was of his own framing," and "was the definition of his own life-work." But that paragraph was of a piece with all the rest, and must have emanated from the same source. And if, as Dr. Hague affirms, "it is radiant with the idea that had been the secret of his strength," an idea "which imparts a living freshness and energy to every scholar, teacher or preacher that apprehends it, and is yet destined to unfold a hidden power in composing the strifes of Christendom," it is proper to state the fact that this idea of making instruction in theology primarily and chiefly Biblical, instead of systematic or speculative, has been adhered to through all the history of the institution. A committee of which the Rev. Baron Stow, D.D., was chairman, thus refers to the influence of Dr. Chase upon the character of the seminary: "He was the central mover in the enterprise of founding it, and around him the friendly elements crystallized and coalesced. The plan of the institution was his; and scarcely a principal feature in its organization has been changed. For twenty years his labors as professor were unwearied and self-denying, and, through all the subsequent years, he never

faltered in its support, or in hope of its perpetuity. So long as Newton Institution shall remain, it will bear the impress of his formative hand."

As before stated, the work of the institution was begun October 28, 1825, and the act of incorporation approved February 22, 1826. Eleven trustees were named in the act, viz.: Joseph Grafton, Lucius Bolles, Daniel Sharp, Jonathan Going, Bela Jacobs, Ebenezer Nelson, Francis Wayland, Jr. and Henry Jackson, clergymen; and Ensign Lincoln, Jonathan Bacheller, Nathaniel R. Cobb, laymen. At the first meeting of the trustees, held in Boston, March 13, 1826, the act of incorporation was accepted, a professorship of Biblical Theology established, and the Rev. Irah Chase elected professor. At the annual meeting, in Newton Centre, September 14, 1826, a professorship of Biblical Literature and Pastoral Duties was established, and the Rev. Henry J. Ripley elected professor. Six years later, on September 13, 1832, this professorship was divided, and the Rev. James D. Knowles, of Boston, elected to the chair of Pastoral Duties, an office which he ably filled till 1836, when he resigned that he might become the editor of the *Christian Review*. Yet, at the request of the trustees, he continued his services as professor of Sacred Rhetoric and Pastoral Duties until his death, in May, 1838. The Rev. Barnas Sears was chosen professor of Ecclesiastical History in 1836, and the Rev. Horatio B. Hackett professor of Biblical Literature and Interpretation, in 1839. There were now four professors, and in the adjustment of their work, Barnas Sears was made president and professor of Christian Theology, Irah Chase, professor of Ecclesiastical History, Henry J. Ripley, professor of Sacred Rhetoric and Pastoral Duties, and Horatio B. Hackett, professor of Biblical Literature and Interpretation. By unceasing and enthusiastic labor, these men were able to do a large part of the work contemplated by the founders of the institution.

But what was done meanwhile for the financial support and general equipment of the institution. It has been already stated that the Executive Committee of the Massachusetts Baptist Education Society appointed two sub-committees in the summer of 1825, "one to draw up a general plan for the Institution, and to inquire concerning a suitable place for its location, and the other to solicit donations and subscriptions." The site fixed upon was in Newton Centre, about eight miles from Boston, containing eighty-five acres, on elevated ground commanding a delightful prospect." Upon the summit of the hill was a large dwelling-house, with other buildings, adapted to a genteel country residence. It was known as the "Peck Estate." "The main edifice was of sufficient capacity for all the immediate purposes of the institution, and the whole property was purchased for \$4250. The necessary alterations in the so-called "Mansion House," were promptly made at an expense of \$3748; so that the whole cost of the prem-

ises, fitted for use, was \$7998." This sum was contributed by thirty persons and one missionary society. The committee which solicited and expended this money was composed as follows: Levi Farwell, Jonathan Bacheller, Nathaniel Ripley Cobb, Heman Lincoln, Ensign Lincoln.

These names should never be forgotten. The men who bore them were distinguished in their day for Christian enterprise and liberality. They were pillars in the churches to which they belonged, and steadfast supporters of the foreign mission work. With moderate incomes, and connected with a denomination of little wealth, they yet had faith to begin a school, which, as they foresaw, would never cease to call for pecuniary assistance. Each of the first three contributed \$1070.15 to the sum raised for the purchase of the estate and the alterations required in the "Mansion House," while the Lincolns gave respectively \$500 and \$250, as much perhaps, when measured by their ability, as was given by the others.

Levi Farwell, of Cambridge, whose name stands at the head of this committee, was the first treasurer of the institution, an office which, as Dr. Baron Stow testifies, "he filled eighteen consecutive years, until the time of his death—a period when the institution was an experiment, and, in many minds, of doubtful success; when it had no endowment, and when the funds for current expenses were often procured with difficulty. Many a time he stood under heavy burdens, sometimes bending, occasionally well-nigh disheartened, yet giving money with a liberal hand, and personal service to an extent little known and imperfectly appreciated." Mr. Farwell was a dignified and courteous gentleman, moving with grace in the best society. For many years he was registrar of Harvard College. In 1833, when the Constitution of Massachusetts was so amended that, for the first time, "the support of ministers became wholly voluntary," he was representative from the town of Cambridge, having been elected with reference to his vote and influence in favor of religious equality.

Jonathan Bacheller, of Lynn, was a diligent, clear-sighted, trustworthy man, a Christian of settled principles and definite aims, who spent little on himself and put much into the treasury of the Lord. He was in business over fifty years, beginning at the age of twenty-two, with a capital of \$200. "He accumulated," according to the statement of Mrs. Bacheller, after his death, "about one hundred and fifty thousand dollars, one-third of which he gave away while living, one-third he lost in business, and the remaining third he gave away at his decease." His ample forehead, clear eye and firm mouth were expressive of character, intelligence and efficiency.

Nathaniel R. Cobb was a Boston merchant. He is said to have been a man of great business capacity, of "acute penetration, rapid decision and unconquerable perseverance." Yet he was less distinguished for the rapidity with which he accumulated

property than for the method with which he disbursed it. His alms were a steady stream, increasing as his means increased. Soon after entering into business for himself he drew up the following document: "By the grace of God, I will never be worth more than \$50,000. By the grace of God, I will give one-fourth of the net profits of my business to charitable and religious uses. If I am ever worth \$20,000 I will give one-half of my net profits; and if I am ever worth \$30,000 I will give three-fourths; and the whole after \$50,000. So help me, God, or give to a more faithful steward, and set me aside. N. R. Cobb." Under these resolutions he was enabled, within thirteen years to give away more than \$40,000.

These three original friends of the institution, Messrs. Farwell, Bacheller and Cobb, gave it, in about equal sums, during life and at death, the aggregate of \$57,150—a small sum in comparison with the munificent gifts of millionaires in our day—but a generous sum for the time in which they lived and for the property which they possessed. Others gave less, but with equal love to the institution.

During the first twenty-eight years of its history, the institution had no permanent endowment. It lived from hand to mouth in a constant struggle with want. More than once its trustees were on the point of giving up the enterprise. Less than two years after the seminary was opened, it became evident that the Mansion House would not long accommodate the increasing number of students. "In 1827, a committee was appointed to devise a plan for a new building and to procure the means for defraying the expense." The work was accomplished, and "in 1829 the treasurer reported that such a building had been erected and paid for by subscriptions collected, amounting to \$10,594.12. Towards this sum, the Hon. Nicholas Brown, of Providence, gave \$4,000." But it was found more difficult to meet the current expenses of the Institution than to obtain subscriptions for the erection of a necessary building. These expenses were constantly increasing. In compliance with a petition addressed to the trustees in 1827, an English and Preparatory Department was connected with the seminary; but after a few years it was discontinued. Increase in the number of professors was, however, indispensable, and every additional professor cost at least \$800 a year. On the 11th of March, 1829, between \$5000 and \$6000 were reported due to the treasurer, and Professor Ripley was requested to act as agent during his next vacation. In April, 1830, the Rev. E. Nelson was appointed agent to provide for the professors' salaries by procuring subscriptions for the annual payment of fifty dollars a year for five years, and on the 9th of September sixteen shares, enough to support one professor, had been obtained. Soon after it was proposed to raise a sinking fund of \$20,000, to support two professors twenty years. On the 13th of April, 1832, the trustees were informed that this sum had been subscribed. But at the same

session they received from Professor Ripley a request for the appointment of a third professor. Thus the struggle between the growing wants of the seminary and the inadequate resources of the Board went on from year to year, and from lustrum to lustrum. Plan followed plan; expedient succeeded expedient; the cloth was not enough for the garment. For a short time the Institution was free from debt, but soon its property must be mortgaged, or the work cease.

In April, 1848, the Rev. T. F. Caldicott was appointed financial agent to raise the sum of \$30,000, but his efforts to accomplish this were unsuccessful. In August, 1849, the treasurer was authorized to sell a part of the Institution lands to remove a mortgage of \$10,000 on the property, and soon after ten shares of stock in the Western Railroad, to meet the needs of the treasury. In April, 1851, the Rev. J. W. Parker, D.D., was invited to raise \$50,000, but his attempt to do this was attended with only partial success, for it was seen that the sum was not large enough to place the seminary out of danger. Hence the Rev. Horace T. Love was chosen financial agent on the 23d of February, 1852, and on the 15th of the next month it was voted to raise a permanent fund of \$100,000, and the trustees subscribed on the spot \$35,000 towards this amount. In due time the whole sum, \$117,228.38, was raised, and of this \$100,000 was made the beginning of an endowment to meet the regular expenses of the school.

But the joy of the guardians of the Institution soon gave way to anxiety and fear. For, contrary to the hopes of many, it soon appeared that the interest of \$100,000 would not support a first-class seminary. The foe, which it was fondly thought had been vanquished, was still in the field, and was preparing to come upon them again, "like an armed man." But they naturally dreaded the encounter, and more than ten years were passed in feints and skirmishes and guerilla warfare, before the trustees and friends renewed the battle in earnest. It was decided in December, 1867, that "an additional endowment of \$150,000 ought to be raised at an early day," and after two or three unsuccessful experiments, the Rev. W. H. Eaton, D.D., was appointed in December, 1869, to raise money for this endowment. By his well-directed efforts, supplemented, at the last, by the powerful exertions of a few distinguished brethren, especially Gardner Colby, the president of the Board, and the Hon. J. Warren Merrill, the sum of \$211,404.00 was raised by subscriptions varying from \$1 to \$18,000. This was expected to net, after expenses and possible losses, at least \$200,000. It was felt to be a great and wise contribution to the cause of sacred learning, and those who shared in it were certainly entitled to rejoice.

In 1866 a new building for the library, chapel and lecture-rooms was completed at a cost of nearly \$40,000, and was dedicated on the 10th of September. It was named Colby Hall, in honor of the largest con-

tributor, Mr. Gardner Colby. In 1870-71 Farwell Hall, the central building, was refitted, provided with a fourth story, mansard roof, and with apparatus for heating it with steam, at an expense of \$12,000. In 1872-73 Sturtevant Hall was erected at a cost of about \$40,000, more than one-half of which was contributed by Mr. B. F. Sturtevant, of Jamaica Plain. About the same time the Mansion House was taken down and a brick edifice built for a gymnasium.

During the last twelve years the scholarships of the institution have been increased to the number of forty-two (\$42,000), a Professorship of Elocution has been founded (\$50,000), the Library fund has been raised from \$10,000 to \$22,450; \$60,000 have been added by two bequests to the general endowment, and a special bequest of \$20,000 towards a new library building will probably be soon paid into the treasury. It may also be stated, in this connection, that a member of the North Orange Baptist Church, N. J., gave \$500 yearly to five students selected by the Faculty, during a period of about sixteen years; that Mr. D. S. Ford paid for three courses of lectures, delivered to the students by distinguished scholars, at a cost of about \$300 a course; that the Hon. J. Warren Merrill provided five courses of eight or ten lectures each, at a cost of \$2700, and that a great number of practical addresses, at once instructive and inspiring, have been made without charge to the students by ministers and laymen. The following are the names of paid lecturers from a distance: Drs. George P. Fisher, Henry G. Weston, George Dana Boardman, Edwards A. Park, George Ide Chace, Ebenezer Dodge, John A. Broadus, John C. Long, William H. Green, G. D. B. Pepper, Samuel L. Caldwell, James B. Angell, John Hall, Frederick Gardner, David J. Hill, Selah Merrill. The full course of lectures by William Henry Green, D.D., on "The Hebrew Feasts," was published by the Appletons, N. Y., 1885, and the course by President David J. Hill, LL.D., on "The Social Influence of Christianity," by Silver, Burditt & Co., Boston, 1888. The lectures of Prof. George Ide Chace, LL.D., on "The Existence of God," were printed in "A Memorial" after his death, and are worthy of general circulation.

This reference to lectures and addresses by distinguished gentlemen not belonging to the Faculty, during the last twelve years, furnishes a natural point of transition from the financial history of the institution to the enlargement of its curriculum and work. For, in education, buildings and funds are only means to an end, while occasional lectures and addresses have an immediate though intermittent relation to that end. But the character and growth of a theological seminary depend chiefly on its teachers, that is, on the enlargement and improvement of their work. This may be easily shown in the present case by tracing the widening range of instruction in several departments.

At first the Professor of Biblical Literature and In-

terpretation was required to give instruction in Homiletics also. This continued about seven years. During the next twelve years the professor was relieved of his work in the Department of Homiletics, but still had sole charge of the work in Hebrew and Greek literature and interpretation. During the next twenty-two years he was provided with an assistant instructor in Hebrew, whose service covered a little more than half the academic year. During the eighteen following years two professors were assigned to the Department of Biblical Literature, one for the Old Testament and one for the New, while a course of interpretation in the English Scriptures was given by other officers to those who could not take Hebrew and Greek. Since 1886 two professors have given their whole time, and a third half his time, to the Biblical department. And the amount of instruction in this department has increased *pari passu* with the increase of the teaching force. This will not surprise any one who is familiar with Biblical inquiries.

Thus, instruction is now given in the Syriac, Arabic and Assyrian languages, as well as in the Greek, Hebrew and Aramaean. In relation to the New Testament, textual criticism has been raised during the last fifty years to the dignity of a science, while in relation to the Old Testament it is claiming more and more attention. Hence textual criticism has been introduced into the course of studies. Again, the so-called higher criticism, which discusses all questions respecting the age, character and authorship of the several books, paragraphs or sentences of Scripture, has become an engrossing study, thrust upon scholars by the advocates of religious evolution. Meanwhile geographical research in the lands of the Bible has been prosecuted with wonderful success, and the fruits of it have a distinct place assigned to them in the curriculum. The topographical surveys of Palestine, the exhuming of cities, palaces and temples in Egypt and Babylonia and the deciphering of inscriptions in stone and brick, have cast a flood of light on the sacred record. Jewish Antiquities are revealed, not only by the Bible and Josephus, but also by uncovered pillars and walls.

Again, no regular provision was made in the early years of the seminary for instruction in elocution. Occasionally a small sum of money was contributed by the students, and duplicated by the trustees, for the purpose of securing a dozen or twenty lessons in elocution from some professional teacher; but the state of the treasury forbade anything more than this until, in 1870, the Rev. Alva Woods, D.D., of Providence, established an elocutionary fund of \$3000, soon increased by him to \$5000. By reason of this fund the senior classes, during the next fourteen years, had the benefit of vocal training once a week by such teachers as Stacy Baxter, Lebrun T. Conlee and L. A. Butterfield. The results were encouraging, but not perfectly satisfactory. Too little time was

given to the culture of the voice; and when, by a bequest of Samuel C. Davis, of Roxbury, in 1884, \$20,000 was offered to the trustees, provided they would raise \$30,000 in addition to this bequest, and with the whole sum of \$50,000 establish a Professorship of elocution, the condition was fulfilled by the friends of the institution, and since 1885 Mr. S. S. Curry, of Boston, has been Acting Davis Professor of Elocution, to the great advantage of the students.

Looking back over the history of the institution, the following gentlemen have contributed for its support not less than the sums put after their names: Gardner Colby, \$100,000; J. Warren Merrill, \$50,000; Samuel C. Davis, \$30,000; B. F. Sturtevant, \$24,000; J. C. Hartshorne, \$22,000; Levi Farwell, \$19,050; Jonathan Bacheller, \$19,050; Nathaniel R. Cobb, \$19,050; Gardner R. Colby, \$11,000; Lawrence Barnes, \$10,000; George S. Dexter, \$13,000; Thomas Nickerson, \$9000; J. H. Walker, \$7000, and Michael Shepherd, Elijah Corey, Nicholas Brown, H. K. and H. A. Pevear, H. S. Chase, George Cummings, George D. Edmunds, Robert O. Fuller, George Lawton, Alva Woods and Lewis Colby, from \$5000 to \$8000 each, while hundreds more have given smaller sums with no less sacrifice.

It is needless to describe the increase of work in other departments, but it may be said, with truth, that in every one an attempt has been made to keep pace with the progress of sober, theological inquiry, so that the school may fulfill the purpose of its founders. The amount of work to be done has increased as rapidly as the number of teachers who are expected to do it. Neither Dr. Chase nor Dr. Ripley, neither Dr. Sears nor Dr. Hackett, had more instruction upon his hands than any one of the six professors now engaged in service. Yet for many years there were but three professors in the seminary. Then and now the field of investigation was practically unlimited. And then, during the first twenty-five years of the seminary, the professors were men of eminent worth and ability. Frequent reference has been made to Dr. Ira Chase, the first professor. It is not too much to say of him that he was distinguished for patient investigation, accurate learning and consistent piety. Though slow of speech, what he said was always to the point and worthy of confidence, so that he commanded respect when he did not excite admiration. Many of his writings were controversial, but they were models of candor and courtesy. "On all the pages that he has written," said Dr. Hackett at his funeral, "you will search in vain for one censorious word." And Dr. Ripley testified on the same occasion that "religion in him was all-pervading and absorbing." Such a man was the first professor.

And the second, Dr. Henry J. Ripley, was his peer in Christian devotion and learning. A native of Boston and a medal scholar of its Latin School, he was graduated from Harvard College in 1816, and from Andover Theological Seminary in 1819. Then he

labored several years as a missionary pastor in the State of Georgia. In the autumn of 1826 he entered upon his work in Newton, where he filled a professor's chair thirty-four years. As a teacher and writer he was distinguished for exactness of knowledge, soundness of judgment, clearness of expression and sweetness of spirit. He was loved and revered by his pupils, trusted by his brethren and respected by Christians of every name. Firm without being obstinate, he was gentle without being weak. In controversy he united the utmost firmness of mind with a strict adhesion to truth. His commentaries on the four Gospels, on the Acts and on the Epistles to the Romans and the Hebrews, were both scholarly and perspicuous, while his volumes on Church Polity and Sacred Rhetoric were highly useful. The value of such a teacher's influence is inestimable.

The Rev. James D. Knowles, the third professor, was graduated from Columbian College, D. C., where he also took his theological course. For nearly seven years he was pastor of the Second Baptist Church, Boston, and for nearly six years, until his sudden death (May 9, 1838), Professor of Sacred Rhetoric and Pastoral Duties in Newton. Dr. Baron Stow speaks of his character and attainments in these words: "Hundreds admired him for his superior talent, his pure taste, his literary culture, and his refinement of manners, but only those whom he admitted to his confidence understood the warmth of his heart. With the appearance of cold reserve and self-satisfaction, he was really one of the most simple-hearted and child-like of men. . . . I have never known the man whom I loved more, or who proved himself, on long acquaintance, worthy of greater respect." He was the author of two admirable biographies, one of Roger Williams, and the other of Mrs. Ann Haseltine Judson, and he proved himself to be an accomplished teacher.

The fourth professor appointed was Dr. Barnas Sears, a graduate of Brown University and of Newton Theological Institution. On his return from a considerable period of study in Germany, he was chosen Professor of Ecclesiastical History (1836), a position which he honored with eminent service three years. At the close of this period (1839) he was transferred to the chair of Christian Theology, and, at the same time, made president of the seminary. Nine years later (1848) he resigned the place which he had so ably filled, that he might become secretary of the Massachusetts Board of Education. This office he held for seven years and then relinquished it for the presidency of Brown University (1855). The presidency of Brown he held about twelve years, and then (in 1867) became secretary of the famous Peabody education fund, retaining this position until his death, in 1880. As a teacher of Christian Theology in the seminary, he brought all his varied attainments to bear upon the student's mind with remarkable skill, and succeeded wonderfully in stimulating

thought and research. "He made his pupils feel the greatness and the richness of the treasures to be sought in the domain of inspired truth. The peculiar charm of his teaching was due in part to his enthusiasm, in part to his confidence in the ability of his pupils to judge for themselves, and in part to his habit of pointing out and commending to them the sources of knowledge. They were made to feel that, without concealing his own belief, he would give them, as nearly as possible, 'all sides of every question,' and lead them to answers founded on reasons, rather than on human authority." And it will not be deemed superfluous if we add a testimony as to his connection with the Peabody fund. "It is quite doubtful whether any of Mr. Peabody's princely bequests has been administered more judiciously, or whether ever a great capital devoted to popular education has been applied more successfully and more effectually than Dr. Sears applied the fund of which he held charge during a most trying and responsible period of over twenty-three years."

A very large part of the published writings of Dr. Sears must be found in reports and addresses pertaining to education, but he published in 1846 "Select Treatises of Martin Luther in the Original German," with valuable notes, and in 1850, "Life of Luther," with special reference to its earlier periods and the opening scenes of the Reformation. Other less important works need not be specified in this article. His influence on the students was powerful and wholesome.

The fifth professor in the order of appointment (1839) was Dr. Horatio B. Hackett, a graduate of Amherst College and of Andover Theological Seminary. As adjunct Professor of the Latin and Greek Languages in Brown University from 1834 to 1839 he achieved distinction as a classical teacher, and, during the twenty-nine years (1839-1868) of his connection with the Newton Theological Institution he gained a national reputation for the accuracy and extent of his Biblical knowledge and for his skill and enthusiasm in the work of instruction. Few men have excelled him in the class-room. His preparation for it was uniformly thorough, while the music of his voice, the richness of his thought and the beauty of his language moved and charmed those who were under his tuition. He was a safe and a great teacher. But, in 1868, he resigned his place in the faculty for the purpose of giving his undivided strength to literary work, and the Department of Biblical Literature was assigned to Dr. Oakman S. Stearns and Prof. Ezra P. Gould. Yet, missing the grateful variety and stimulus of contact with young men, Dr. Hackett, after two years, accepted the Professorship of New Testament Interpretation in the Rochester Theological Seminary, where he remained five years (1870-1875), until his death. During his connection with the Newton Theological Institution he spent about three years abroad, residing first in Germany (1841-42), and pursuing the studies of his

department, then traveling (1852) in the East, and especially in Palestine, besides revisiting Germany, and finally residing in Athens six months (1858-59), and exploring those parts of Greece mentioned in the New Testament, under the auspices of the American Bible Union. He went to Europe again in 1869-70, and a fifth time shortly before his death, in 1875. Two or more of these later journeys were occasioned, in part, if not altogether by the impaired state of his health. The published writings of Dr. Hackett are somewhat numerous, and a few of them may properly be mentioned, *e. g.*: "Exercises in Hebrew Grammar" (1847); "Illustrations of Scripture suggested by a Tour through the Holy Land" (1855); "Commentary on the Original Text of the Acts of the Apostles" (1st ed. 1851, 2d ed. 1858, last ed. [edited by A. Hovey] 1882); "Notes on the Greek Text of the Epistle to Philemon" (1860); thirty articles in the first ed. of Smith's "Dictionary of the Bible" (1863); and "The Book of Ruth," published in 1876, after his death. To the American edition of "Smith's Dictionary," edited by himself and Dr. Ezra Abbott, he made very numerous and valuable contributions.

Of the late professors, and especially of Drs. Robert M. Pattison, Albert N. Arnold, Arthur S. Train, Heman Lincoln and Samuel L. Caldwell, who have all passed away from the seen into the unseen, it would be interesting to speak more at length than space will permit. But the life of the institution cannot be described without a brief reference to each one of them. Mr. Pattison was called to be the successor of Dr. Sears in the chair of Christian Theology. It was not an easy place to fill, but he held it with credit to himself and advantage to the school more than five years, until he was called a second time to the presidency of Waterville College (now Colby University). He was one whom it was only necessary to know in order to trust. A thoughtful student, a sound theologian and an effective preacher, there were in his spirit and manner a certain indescribable sincerity, friendliness and frankness which secured the love and confidence of his pupils. They found in him not only a teacher, but a counselor and a father, and they sometimes spoke with admiration of the episodes in his lessons, when, giving free play to his rising emotions, and illustrating his thoughts by incidents drawn from his own experience, he strove to kindle in their hearts a holy ardor for the work of God. During his lustrum of service, and in pursuance of his advice, the trustees obtained a modification of the charter by which their numbers could be doubled (made forty-eight instead of twenty-four), and the duty of electing one-half that number could be assigned to the Northern Baptist Education Society. Dr. Arnold, a graduate of Brown University and of Newton Theological Institution, had been several years a missionary in Greece, but, upon his return to this country, he was elected Professor of Church History in his theological *Alma Mater* (1855), an

office which, owing to the straitened finances of the school, he retained but two years. Yet while he was here a singular and beautiful union of culture and principle, of courtesy and firmness, of wit and learning, made his presence a well-spring of delight and his friendship a Christian benediction.

Dr. Train, a graduate of Brown University, which he then served for a time as tutor, was elected to the chair of Sacred Rhetoric and Pastoral Duties in Newton (1859), after ministering to the First Baptist Church of Haverhill, Massachusetts, twenty-five years with marked ability and usefulness. Though to a stranger his bearing may have seemed unduly self-reliant and almost careless of the opinion of others, yet upon closer acquaintance he was found to be gentle as well as manly, sympathetic as well as resolute, tender-hearted as well as conscientious. Naturally a superior scholar, he was also distinguished for good sense and practical sagacity. After seven years of faithful service in the seminary, he preferred to resume his favorite calling in Framingham, Massachusetts.

Dr. Heman Lincoln, a son of Ensign Lincoln, one of the founders of the school, was a graduate of Brown University and of Newton Theological Institution, was elected Professor of Church History in 1868, and served in that department, or in the chair of Homiletics and Pastoral Duties nineteen years, until his death, in October, 1887. He was remarkable for diligence, energy and versatility; he was a voracious reader, a rapid writer and a fluent speaker. It was his custom to preach every Sabbath, and rarely did he fail of doing this during the nineteen years of his service in the institution. He was also accustomed to write one article at least weekly for the religious press, and often two; of course, upon current topics. Feeling at times a profound solicitude as to political issues, he resorted to the daily secular press for the communication of his views to the public, and some of his articles were exceedingly vigorous and trenchant. In a word, he was an incessant toiler, with hand and voice and pen, in garden, study, public library, class-room and pulpit, in behalf of learning, virtue and religion. But this rich variety of service rendered it impossible for him to make original investigations in church history, or to produce any standard treatise in that department. He labored for his pupils and cotemporaries, and he will live in their characters and memories. But neither his newspaper correspondence, however brilliant or timely, nor his more extended essays which found their place in reviews, are likely to be collected into volumes.

Dr. Samuel L. Caldwell was a graduate of Waterville College and of Newton Theological Institution. Soon after leaving the seminary he was settled as pastor of the First Baptist Church in Bangor, Maine, where he labored twelve years, and then as pastor of the First Baptist Church in Providence, R. I.,

which he served fifteen years. From 1873 to 1878, a period of five years, he was a professor in the Newton Institution. His work was divided between homiletics and church history. And the amount of labor which he performed can never be understood by one who has not delved in the same mines and tried to polish the same kind of gems. Think of church history: how vast the libraries to be explored! how difficult the task of just interpretation! how numerous and vital the disputed questions! how rare the discernment that can cast away the error and preserve the truth! and how remarkable the power which can reproduce in a well-ordered narrative the results of faithful inquiry! Yet this wide and difficult field was ably cultivated by Dr. Caldwell, though only for a brief period. Of his service in homiletical instruction it is enough to say that it was faithful and excellent. All looked up to him as a master of expression. In the faculty he was courteous and wise, a helper in council, and loved as well as honored by his associates. But after a term of five years he accepted a call to the presidency of Vassar College, an office for which he was thought to be pre-eminently qualified by character and culture.

Dr. Caldwell was editor of "The Bloody Tenet of Persecution," by Roger Williams, and of "The Bloody Tenet of Persecution yet more Bloody by Mr. Cotton's endeavor to wash it white in the Blood of the Lamb," by the same author, in the "Publications of the Narragansett Club." His editorial work in pre-faces and notes is scholarly and just. Moreover, in connection with Dr. A. J. Gordon, he prepared for publication a hymn and tune-book, "The Service of Song," which is one of the best ever offered to the churches. The task of selecting and editing the hymns, a part of which consisted in restoring their original text, is understood to have been performed by Dr. Caldwell. A considerable number of his sermons and addresses were published from time to time during his life, and a volume of his lectures and essays is soon to be issued by a Boston house.

Of the professors now living (1890) seven are connected with the seminary and three are teaching in other schools. Dr. Galusha Anderson, who was Professor of Homiletics from 1866 to 1873, fills the same chair at present in the Baptist Theological Seminary at Morgan Park, Ill.; Dr. Ezra P. Gould, who was Professor of New Testament Interpretation from 1868 to 1882, is now teaching in the same department at the Episcopal Seminary in Philadelphia, and Dr. E. Benjamin Andrews, who filled the chair of Homiletics from 1879 to 1882, is now president of Brown University. All these were accomplished teachers, making a deep impression on the minds of their pupils. The positions which they now hold are such as none but able men could fill.

The faculty is at present composed of the following persons: Alvah Hovey (since 1849 instructor, since 1853 professor—first of Church History and later of

Christian Theology—and since 1868 president), Oakman S. Stearns (Professor of Biblical Literature, Old Testament, since 1868), John M. English (Professor of Homiletics and Pastoral Duties since 1882), Chas. R. Brown (Professor of Hebrew and Cognate Languages since 1883), Earnest D. Burton (Professor of Biblical Interpretation, New Testament, since 1883), and Jesse B. Thomas (Professor of Church History since 1888). Mr. S. S. Curry has been an acting professor since 1885, though giving but a part of the time to this seminary and not being a member of the faculty. Professor Shailer Mathews, of Colby University, has also assisted in New Testament interpretation a part of the time during the last year and the present. It may be remarked, in this connection, that the members of the faculty are not called upon to subscribe their names to any particular creed. As members of regular Baptist Churches they are presumed to believe in the divine authority of the Scriptures and in the essential truths which they teach, or, in other words, to be in accord, as to all great principles and duties, with the founders and trustees of the school. The trustees have authority to depose them, should their teaching prove unsatisfactory.

But the character of a professional school may be inferred more or less correctly from the work of its alumni. Indeed, its history would be as incomplete if no notice was taken of their work, as the history of a family would be if nothing were said of the children after leaving the parental roof. And the case will be still clearer if it be remembered that the work of the ministry embraces several forms of Christian service, besides the pastorate; *e.g.*, that of teaching in some of its higher ranges, that of missionary service in all its branches, that of editorial work for the religious press, that of providing a Christian literature in book-form for the people, and that of conducting the work of evangelical or reformatory societies as agents and secretaries.

About eleven hundred candidates for the Christian ministry have studied in this school, and not far from three-fourths (725) of them have served the churches of their native land. Of these very many have been simply intelligent pastors, able to instruct the people by truth drawn from the sacred record, and content to labor for the Master wherever the providence of God directed their way. Many of them, though little known to the world, have been earnest and wise builders of the Lord's house. It is to this class of ministers that churches located in villages, East and West, have been indebted for much of their intelligence and stability, while it is from these churches that many young men of sterling worth find their way to the academy, the college, the seminary and the pulpit. The influence of a village pastor in a rural district, if he is well-informed, sound in faith, pure in life and earnest in work, is something which an angel might covet. Some of these pastors have held on their way in the same village until their influence be-

came far-reaching and inestimable. Two or three may be named as specimens of a class: Cornelius A. Thomas, D.D. (Brandon, Vermont), Elijah Hutchinson, D.D. (Windsor, Vt.), and Daniel W. Phillips, D.D. (Medfield, Wakefield, Massachusetts; Nashville, Tennessee), William H. Eaton, D.D. (Salem, Nashua, Massachusetts; Keene, New Hampshire), and Charles M. Bowers, D.D. (Lexington, Clinton, Massachusetts). Without possessing the gift of eloquence in such a degree as to draw after them the multitude hungry for excitement, they have known how to speak well, commending truth to the minds and hearts of men, so that their influence was ever growing and salutary. Still more conspicuous and perhaps useful have been such city pastors as Drs. William Hague (Boston, Providence, Albany, New York), Rollin H. Neale (Boston), Samuel B. Swain (Worcester); Joseph W. Parker (Cambridgeport, Boston, Washington, D. C.), William Lamson (Gloucester, Portsmouth, Brookline), William Howe (Boston), William H. Shailer (Brookline, Portland), Elias L. Magoon (Richmond, Cincinnati, New York, Albany, Philadelphia), Thomas D. Anderson (Salem, Roxbury, New York, Boston), J. Wheaton Smith (Lowell, Philadelphia), George Dana Boardman (Barnwell, Rochester, Philadelphia), James B. Simmons (Providence, Indianapolis, Philadelphia, New York), George Bullen (Skowhegan, Wakefield, Pawtucket), Henry A. Sawtell, (Limerick, San Francisco, Chelsea, Kalamazoo,) Henry M. King, (Roxbury, Albany,) A. J. Gordon, (Jamaica Plain, Boston,) Henry F. Colby, (Dayton,) and numbers more (like Drs. D. N. Burton, J. W. Warder, Edwin T. Winkle, John H. Luther), whose names command respect wherever they are spoken. Many of those given above were selected because their fields of labor were in Eastern Massachusetts, and they will be remembered by the citizens of Middlesex County.

Next to the graduates whose field of labor has been their native land must be placed those who have devoted their lives to service in foreign countries. For in so far as the religious atmosphere and instruction of a theological school tend to foster a missionary spirit, it may be regarded as doing good to men. And in this respect the institution has made an honorable record. For not less than one student for each year of its history has gone to the foreign field. John Taylor Jones pursued his theological studies in Andover and Newton. He was a missionary in the East twenty years, eighteen of which were spent in Siam. During this time he translated the New Testament into the Siamese language. Francis Mason, D.D., a classmate of Dr. Jones in the seminary, preceded him about three months in the voyage to Burmah. His term of service extended over a period of about forty-four years. He translated the Scriptures into the Sgau Karen and Pwo Karen dialects, and published two works on Burmah, one entitled "Terasserim; or, Notes on the Fauna, Flora, Min-

erals and Nations of British Burmah and Pegu," and the other, "Burmah; its People and Natural Productions." He wrote also a memoir of his second wife, and a "Life of Ko-thah-byu," and still later, "The Story of a Working-Man's Life."

He was studious, hopeful, enterprising: "a mathematician, a naturalist, a linguist, and a theologian." Rev. William G. Crocker finished the full theological course in 1834, and in July of the next year embarked for Liberia to preach the Gospel among the Bassas. Within less than nine years his work was finished, and he was called to his reward. But his missionary record was a noble one, for during that short period he endured extraordinary hardships on the burning and sickly coast where he was stationed. He was distinguished for sweetness of temper, simplicity of manners, large good sense and intense activity. Josiah Goddard was graduated from Newton in 1838, and sent out the same year as a missionary to the Chinese. For that people he labored earnestly and wisely sixteen years, first in Bankok, next in Shanghai, and lastly in Ningpo. Besides his work as a preacher, he translated the whole New Testament and the first three books of the Pentateuch into a dialect understood by the people. He was a man of fine judgment, scholarship and temper, mastering the difficulties of the language as few Americans can, and accomplishing a very important service in a comparatively short period. In his place, and worthy of his name, labors to-day a son, Rev. Josiah R. Goddard, also a graduate of the seminary. Rev. Benjamin C. Thomas, of the class of 1849, sailed for Burma soon after graduating, and toiled for the Karens twenty years in Tavoy, Henthada and Bassein, though more than half of this period was passed in Henthada. His temperament was ardent and poetic, his piety deep and fervent; but he was at the same time a man of sound judgment and practical spirit. His enthusiasm was intense, but it was guided by reason, and he united in himself nearly all the qualities most useful to a missionary. Rev. Nathan Brown, D.D., was graduated in 1831, was a missionary in Assam more than twenty years, returned to his native land in 1859, and then after fifteen years went to Japan, where he labored fourteen years. He was a man of vigorous intellect and unbending principle. In addition to his other work he translated the New Testament into the Assamese and the Japanese languages. Rev. Edward O. Stevens, D.D., graduated in 1836, was a missionary to the Burmese more than fifty years, serving the cause which he loved with a clear head and true heart till the day of his death. His son, the Rev. Edward D. Stevens, class of 1864, has been a faithful missionary in Prome, Burma, from that time till 1889, when he was transferred to Maulmain. Another consecrated man, the Rev. Lyman Jewett, D.D., class of 1846, whose gentleness of manner and of spirit is only surpassed by his devotion to the will of Christ, labored among the Telugus about forty

years, until he was compelled by the impaired health of Mrs. Jewett to return home. He is a superior scholar as well as an heroic servant of the Master. The Rev. Chapin H. Carpenter, of the class of 1862, was a missionary in Rangoon, Burma, six years, being most of the time in charge of the Karen Theological Seminary, located in that city, and twelve years in Bassein, where he was in charge of a large and important field. He was a devoted servant of Christ, a thorough scholar, and an earnest believer in the wisdom of calling upon the native churches to support all their pastors and schools, though not the missionaries sent to them from this country. His volume entitled "Self-Support, illustrated in the History of the Bassein Karen Mission from 1840 to 1880," must be reckoned a classic on the subject which it discusses. Much of the narrative is of thrilling interest, independently of the theme which it is used to elucidate. The Rev. Josiah N. Cushing, D.D., class of 1865, has been since his graduation a missionary to the Shans of Burma, and has translated the whole Bible into their language. He is a fine scholar and teacher, as well as preacher. The Rev. D. A. W. Smith, D.D., class of 1863, was a missionary in Rangoon three years, Henthada ten years, and since 1876 president of the Karen Theological School, Rangoon, Burma. An accurate scholar and teacher, he is also (like his father, the Rev. Samuel F. Smith, D.D.), said to be a writer of beautiful Christian hymns in the Karen language. Besides this work he has translated or composed a brief commentary on the whole Bible for the use of the Sgau Karens.

This enumeration of faithful missionaries might be carried much further, embracing other names as eminent as those mentioned; but enough have been specified to show that the institution has always been friendly to the work of heathen evangelization. And it may, with equal truth, be said that it has been a source of laborers for the destitute parts of the home field. Many of the freedmen's schools at the South have been presided over by graduates of Newton. The Rev. D. W. Phillips, D.D., Nashville, Tenn.; Charles H. Corey, D.D., Richmond, Va.; Henry M. Tupper, D.D., Raleigh, N. C.; G. M. P. King, D.D., Washington, D. C.; Edward C. Mitchell, D.D., Nashville, Tenn., and New Orleans, La.; Charles Ayer, Jackson, Miss.; J. L. A. Fish, Live Oak, Fla., have been and are at the head of superior schools in the places named. And whether they be called missionaries or presidents, uniting as they do these two forms of Christian service, they are doing a great and good work in a very satisfactory manner, and are to be numbered with the choice jewels which adorn the brow of their *alma mater*.

The institution has likewise furnished presidents for a considerable number of colleges and theological seminaries. Of these may be named: Drs. Eli B. Smith and James Upham, New Hampton Literary and Theological Seminary; Barnas Sears, Newton

Theological Institution and Brown University, Joel S. Bacon, Columbian College, Washington, D. C.; David N. Sheldon, Henry C. Robins, G. D. B. Pepper and Albion W. Small, Colby University; E. G. Robinson, Rochester Theological Seminary and Brown University; George W. Samson, Columbian College, Washington, D. C., and Rutgers College, N. Y.; Martin B. Anderson, Rochester University; Henry G. Weston, Crozier Theological Seminary; Ebenezer Dodge, Madison University; Kendall Brooks and Monson A. Willcox, Kalamazoo College; Basil Manly, Georgetown College, Ky.; Samuel L. Caldwell, Vassar College; Samson Talbot and Alfred Owen, Denison University, Granville, O.; Artemas W. Sawyer, Acadia College, Wolfville, N. S.; D. A. W. Smith, Karen Theological Seminary, Rangoon, Burmah; S. W. Tindell, Carson College, Tenn.; S. B. Morse, Oakland College, Cal.; Charles S. Corey, Richmond Theological Seminary, Richmond, Va.; Alvah Hovey, Newton Theological Institution and probably several others.

A still greater number have served as professors in colleges or theological seminaries, and of these it may be proper to mention, in addition to those previously named, Professors John S. Maginnis, D.D., John L. Lincoln, LL.D., James L. Reynolds, D.D., James S. Mims, D.D., Robert A. Fyfe, D.D., Peter C. Edwards, D.D., Samuel K. Smith, D.D., John B. Foster, LL.D., Joseph H. Gilmore, David Weston, Sylvester Burnham, D.D., Fletcher O. Marsh, Richard S. Colwell and Samuel Brooks, though others have done as good work as these. It would not be easy to overrate the service rendered to higher and Christian education by this body of presidents and professors, or to determine how much of their influence and usefulness were increased by their course at Newton.

Moreover, the institution through its Alumni, has had an influence on public thought by means of the press. Its sons have contributed much to the religious literature which has moulded the belief and life of the people, and especially of those connected with the Christian denomination supporting this school. But no record of the books written by the sons of Newton is known to have been kept, and no statement of the number of graduates that have been editors or sub-editors of quarterly, monthly or weekly periodicals would be more than conjectural. Yet it is easy to form a considerable list of names that will suggest the character of the service which has in this way been rendered to mankind. Reference has already been made to the published writings of Barnas Sears, one of its earliest graduates, and of its most distinguished professors. It will be sufficient to mention the names of others, with an accompanying word as to the kind of literary work performed by each. The abbreviation, *auth.*, will be used for the writer of anything published in book form; *ed.*, for the editor-in-chief or an assistant editor of any periodical or important work, and *com.*, for an interpreter of any book of

Scripture. The other abbreviations need no explanation. Francis Mason (*auth. and transl.*), William Crowell (*ed. and auth.*), Joseph Barnard (*auth.*), David N. Sheldon (*auth.*), Ezekiel G. Robinson (*auth., ed. and transl.*), Lucius E. Smith (*ed. and auth.*), Elias L. Magoon (*auth.*), Martin B. Anderson (*ed. and auth.*), Edwin T. Winkler (*ed. and com.*), Basil Manly (*auth.*), Nathan Brown (*ed., transl. and poet*), Albert N. Arnold (*auth., com.*), Ebenezer Dodge (*auth.*), George W. Samson (*auth.*), John L. Lincoln (*auth.*), Heman Lincoln (*ed.*), Franklin Wilson (*ed.*), Samuel L. Caldwell (*auth.*), Alvah Hovey (*auth. and com.*), George Dana Boardman (*auth.*), Oakman S. Stearns (*auth.*), Nathaniel M. Williams (*auth. and com.*), John H. Luther (*ed.*), Samuel K. Smith (*ed.*), Edward C. Mitchell (*auth.*), Chapin H. Carpenter (*auth.*), H. Lincoln Wayland (*ed. and auth.*), David B. Ford (*auth. and com.*), Henry A. Sawtelle (*auth. and com.*), D. A. W. Smith (*com. and auth.*), Joseph A. Gilmore (*poet*), Theron Brown (*poet and ed.*), Henry S. Burrage (*auth. and ed.*), D. W. Faunce (*auth.*), W. S. McKenzie (*poet*), George E. Horr, Jr. (*ed.*), George E. Merrill (*auth.*), J. B. G. Pidge (*com.*), W. A. Stevens (*com.*), E. P. Gould (*com.*), E. Benj. Andrews (*auth.*), Sylvester Burnham (*auth.*), A. J. Gordon (*auth. and ed.*). More than a hundred volumes worthy of attention have been given to the people by the persons named above, to say nothing of the much greater amount of valuable truth discussed by them in newspapers and reviews.

CHAPTER V.

NEWTON—(Continued).

THE LIBRARIES.

BY ELIZABETH P. THURSTON.

WEST PARISH SOCIAL LIBRARY.—As early as 1798 a library was organized in the west part of the town by a society called "The Social Society in the West Parish in Newton." The constitution provided that a library be formed of the value of \$150; that it be divided into a number of equal rights of the value of \$3.00 each, and that each proprietor pay annually twenty-five cents upon each of his rights. The librarian was required "to be possessed, in his own right, of an estate of at least double the value of all the books which the library may contain." The books selected, about 165 in number, were mostly of a serious nature.

ADELPHIAN LIBRARY.—The Adelpian Library was formed about 1827. Quite a valuable collection of books was procured by William Jackson through earnest efforts in various ways: many volumes were gathered through the Newton Temperance Society, formed in 1826, which believed that "if the people

staid at home and saved their money, they would need books to read." One part of the library was placed in the West Parish in the Academy of Seth Davis, who was for a time librarian; the other part was under the care of Marshall S. Rice, librarian in the East Parish.

WEST NEWTON ATHENÆUM.—The West Newton Athenæum was the name of an association formed in 1849. District No. 5 had accepted the offer of the State to donate fifteen dollars to any district which would raise the same and furnish the District School Library. Mr. Nathaniel T. Allen, as school-master in District No. 5, had charge of the District School Library, which he kept in the school-house, now the City Hall Building. Being interested in starting the Athenæum, Mr. Allen sent for and obtained possession of the Adelpian Library of the West Parish, which, added to the District School Library and the books of the old library of 1798, formed the nucleus of the Athenæum Library. Many volumes were presented by citizens, Captain Charles T. Savage giving the largest number, and new books were purchased. The value of the shares was placed at ten dollars each. The Athenæum started with William B. Fowle, Sr., as president; Rev. Joseph S. Clarke, secretary; Captain Charles T. Savage, treasurer; Nathaniel T. Allen, librarian. The meetings of the shareholders were held in the old Town Hall under the school-rooms, and the library was kept in a small side room until removed to the room over the market, corner of Washington and Chestnut Streets. One aim of the West Newton Athenæum was to promote liberal culture and social improvement, and the details of the history of the institution will be found in the chapter on Clubs, Societies, etc.

NEWTON BOOK CLUB.—In January, 1848, an association was formed at Newton Corner, known as the "Newton Book Club," to which there were originally twenty-six subscribers, and a form of by-laws and regulations was adopted, placing the club in the care of a committee of five, who should see that the books were "treated with care, as they are intended to form a Permanent Library for the benefit of the village." The annual assessment for membership to the club was placed at five dollars, and any person approved by the committee might join. More than 100 volumes were purchased the first year.

NEWTON LIBRARY ASSOCIATION.—In January, 1849, the members of the Book Club, "desirous of promoting the cause of Intelligence and Literature in this place," formed themselves into a corporation under the title of the "Newton Library Association," and 117 volumes were given by the Book Club to the new organization. The records at the close of the year 1850 showed that the number of volumes had been increased by gift and purchase to about 1000, and that 2000 books had been drawn from the library during the year, while not one had been lost or ma-

terially injured. It was voted that the library be open Wednesday afternoon and Friday evening of every week, and that a copy of the catalogue be sent to every house in the village not occupied by either a stockholder or subscriber to the library. At the annual meeting in 1852 an amendment to the constitution provided that "the directors shall have authority to loan books to other persons upon such terms and under such regulations as they may deem expedient."

LIBRARY LAND FUND ASSOCIATION.—For a long time the public-spirited citizens of Newton had had it much at heart to establish a free library, which should be open to all, and many efforts were made to bring the subject to the notice of the citizens. In June, 1866, a subscription paper was circulated to buy the lot of land, 20,550 square feet, upon which the present Newton Free Library building stands, on condition that it be offered to the Newton Library Association, or, if declined by that association, to any other organization which would agree to erect such a structure as the trustees of the Land Fund should require. The names of the subscribers to this paper are as follows: D. R. Emerson, J. C. Chaffin, Albert Brackett, Joel H. Hills, Joseph N. Bacon, Fred Davis, Geo. H. Jones, Wm. O. Edmunds, H. D. Bassett, J. W. Wellman, I. T. Burr, F. Skinner, G. D. Gilman, Louisa S. Brown, A. B. Underwood, Aaron F. Gay, Jas. French. The subscription amounted to \$3320.

On Sept. 20th the subscribers to the Library Land Fund met, organized and chose a board of trustees. It was voted "that the trustees are empowered to collect the amounts subscribed to the fund, to have the transfer of the property made to them, to receive the deeds of the same, and to hold the property for the proprietors for the use and purposes of the subscribers as set forth in the subscription-paper." It was also voted "that the trustees take the initiative in any measures that will promote the interests of a Free Public Library in this place, and in the erection of a suitable building on the land purchased by the subscribers to the fund." On Jan. 6, 1868, the trustees tendered to the Newton Library Association the lot of land as a site for a library building, on these conditions: The building to be of brick or stone, two stories high; the building to be completed on or before June 28, 1871; the building to cost not less than \$10,000; and received from the association this reply: "Voted, that while the Association tender to the Trustees their thanks for the offer made in the communication presented, the Association is compelled to decline the gift. Voted, that the Association will transfer all its books and other property to the Trustees of the Library Land Fund, when any Association shall accept the lot of land named in the communication of the Trustees, and guarantee to erect such a building as is therein mentioned, to be held in trust by said Trustees until the completion of the said building, when they shall transfer the same to the new association, provided it shall be maintained as a

free library, and be located in that part of this town called Newton Corner."

The trustees then called a meeting and reported that the Hon. J. Wiley Edmands had offered to contribute fifteen thousand dollars, ten thousand towards a building and five thousand in yearly instalments, for the purchase of books, on the following conditions: "First, that a like sum, or \$15,000, shall be fully secured by the Trustees previous to the first day of March next; second, that a building shall be erected under the general supervision of the present Trustees or their successors in office, and in accordance with plans which shall be satisfactory to him; third, that when completed it shall be organized under the name of the *Newton Free Library*, with a board of control consisting of eleven managers, three of whom shall be the present Board of Trustees or their successors, the remaining number to be elected from the contributors to the above specified amount; fourth, that all contributors of \$10 and upwards shall have a right to vote; fifth, that these conditions shall be fully entered in the subscription book." By persistent effort, public meetings and private exertions the subscriptions were obtained and the sum of \$36,683 was secured.

In June, 1868, ground was broken for the present library building, and on Aug. 13th the corner-stone was laid. In it are deposited copies of the town and school reports for 1868, the *Newton Journal*, Boston papers, the *American Almanac*, specimens of coins, bank-notes and currency in use, the "History of the Newton Free Library," and reports of public meetings, with a copy of the subscription-book engrossed on parchment, giving the names and amounts subscribed. The material of the building is Newton stone with granite trimmings from New Hampshire. The style is English Gothic. The cost was, for land, \$3300; for grading and finishing the same, \$1650.20; for the building and fixtures, \$31,745; total, \$36,695.20.

The land and building were conveyed to the Newton Free Library, and the Newton Library Association delivered to the same its books, amounting to sixteen hundred and twenty volumes.

NEWTON FREE LIBRARY.—The Newton Free Library was organized September 29, 1869, with a board of eleven managers, composed of the following names: Geo. H. Jones, John C. Chaffin, Isaac T. Burr, Hon. J. Wiley Edmands, Geo. W. Bacon, John S. Farlow, A. B. Underwood, Joel H. Hills, Geo. S. Bullens, Geo. S. Harwood and Abner I. Benyon. It was found that the cost of the building, with all its surroundings and furnishing, had somewhat exceeded the estimate, and it was not deemed expedient to dedicate the building until the bills could be paid, and until a sufficient sum be raised to provide a suitable supply of books, papers, etc., in order that the institution might be opened in a proper manner. It was therefore neces-

sary to procure a further subscription, and at this critical period the managers received a letter from a gentleman who desired his name withheld, promising four thousand dollars provided the further sum of ten to twelve thousand dollars be obtained. The managers pledged themselves to raise the balance needed, which was subsequently done, and six thousand dollars was then appropriated for the purchase of books under the supervision of the Library Committee. The building was dedicated June 17, 1870, and the library was opened with about seven thousand books on the shelves, obtained partly from purchase and partly from gifts. Geo. W. Bacon was elected superintendent and Hannah P. James and Cornelia W. Jackson assistant librarians. In 1871 the Legislature of Massachusetts passed an act to incorporate the Newton Free Library, granting the corporation leave to hold real and personal estate to the value of one hundred and fifty thousand dollars. In 1873 the Newton Centre Library Association presented its valuable collection of between fourteen and fifteen hundred books to the Newton Free Library.

In his inaugural address in January, 1875, relating to the Newton Free Library, Mayor Hyde said: "I venture to express the hope that at no distant day this library will pass into the hands of the city and become the city library."

At the annual meeting of the subscribers on November 3, 1875, it was "*Resolved*, that the managers are empowered to make a transfer of the franchise and property of the Newton Free Library to the City of Newton, on the city's assuming the conditions of trust of its present organization." The gift was accepted by the Mayor, Aldermen and Common Council on behalf of the city, and the Legislature of Massachusetts passed an act authorizing the transfer, which was formally made on the evening of March 16, 1876. The title deeds of the property and the keys of the building were tendered to the city through Mr. Edmands, president of the Board of Trustees, and the response was made by Mayor Speare. Addresses were also made by ex-Mayor Hyde, Messrs. Farlow and Peirce, and a copy of the remarks intended to have been made by Mr. Jones, who was unable to be present, was furnished to the mayor. A code of by-laws was adopted by the City Council for the government of the library, placing it in the hands of seven trustees to be elected by the City Council, one from the Board of Aldermen and one from the Common Council to serve for their elected terms of office, and five members chosen at large. The first Board of Trustees consisted of the following men: Hon. J. Wiley Edmands, John S. Farlow, Bradford K. Peirce, D.D., Hon. Julius L. Clarke, and Hon. Jas. F. C. Hyde, as members at large, and Wm. W. Keith from the Board of Aldermen, with Wm. I. Goodrich from the Common Council. At its first meeting the board elected Hon. J. Wiley Edmands, president; Frederick Jackson, superintendent; Hannah P.

James, librarian; and Caroline B. Jackson, assistant librarian.

In 1877 Hon. Alden Speare, then mayor of Newton, gave to the library \$250. During the following year he increased the gift to \$1000, desiring that the income from the whole amount be used for the purchase of works upon manufactures and the mechanic arts. The gift was called the "Alden Speare Fund for the Promotion of Manufactures and the Mechanic Arts." Thus the library has been enabled to add many valuable works to the great satisfaction and advantage of those interested in these branches of industry. In 1880 the trustees received from the estate of Mrs. Lydia M. Jewett a legacy of \$5000, with which a fund was established called the "Jewett Art Fund," and the income was to be used for the purchase of works of art, including such books as may not properly be bought with the regular city appropriation. A large copy of Raphael's Transfiguration had been previously received from the executors of the will, given in conformity with her late husband's intention. The library has been able to obtain, through this fund, a great number of beautiful books and pictures, including a valuable collection of five or six hundred photographs of sculpture from the Italian galleries. It has also added four massive volumes of photographs of the English cathedrals. These photographs were collected in England and mounted by Miss James, and title pages, elegantly illuminated, were furnished by the artistic skill of Gen. A. Hun Berry, Miss L. P. Merritt and others. Each cathedral has a title page, with the coat of arms of the See, the autograph of the Bishop, ground plan of the cathedral, etc., thus producing a work unique in design and execution.

Through the bequest of Charles A. Read, a citizen of Newton, the library has received yearly, since 1884, about \$400, which income is known as the "Read Fund," and is used for the addition of books of a general nature. A fourth fund was given to the library in 1887, through the liberality of John S. Farlow, president of the Board of Trustees. He has contributed \$5000, the income of which is to be spent for books for the Reference Library, and the fund to be called the "Farlow Reference Department Fund."

In 1881 the Jersey Stock Club, of Newton, presented to the library a full-length portrait of Hon. J. Wiley Edmands, which was hung in Edmands Hall. The next year the same club made a second gift of a full-length portrait of George H. Jones, following it in 1890 by the presentation of the portrait of John S. Farlow; thus the library now has portraits of its three presidents, who have all proved themselves such warm friends and liberal benefactors of the institution.

In 1886 the City Council made an appropriation for a much-needed enlargement of the library building, so that its capacity is now more than double

that of the original building. An excellent reference department is furnished, a spacious, well-lighted book-room, an admirably designed librarian's room, also a room specially intended for teachers from our public schools and their classes, and on the lower story a commodious room for a magazine and periodical reading-room, with a room exclusively for public documents. About \$25,000 was required for the additions. The library was closed for three months in the spring of 1887 while the work was being completed, and re-opened after the exercises of rededication, on the evening of June 17th. With the re-opening the library suffered a loss in the withdrawal of its librarian, Miss James, who had held her position from the establishment of the institution, seventeen years previous, and who was thoroughly identified with it and its progress. She had been a moving spirit in all the improvements inaugurated, and largely to her practical judgment is due the present attractive and convenient building. The library has always been very fortunate in having among its officials men ready to devote both money and time to its service. Its superintendents, George W. Bacon, Frederick Jackson, Bradford K. Peirce, D.D., Warren P. Tyler, and John C. Kennedy, have been deeply interested in its advancement, and spent many hours and much labor and thought over its affairs.

The library shows a steady growth from the beginning in size as well as in usefulness to the community. About half the number of volumes circulated are delivered at the library itself, and the remainder are distributed through nine agencies in other parts of the city. As early as 1874, while the institution was supported by private subscriptions, the practice was begun of sending the books to the other villages once a week at first, and oftener as soon as practicable, until now, 1890, seven wards receive daily a basket of books, and two others once and twice a week respectively. The librarian, in 1885, feeling how important is a close connection of the library and the schools, began extending especial privileges to the teachers of the public schools. Since that time teachers have been allowed ten books at a time for the use of their classes, and have availed themselves very generally of the opportunity. Works on history, geography, natural science and constitutional history have been most in demand, and the teachers are almost unanimous in affirming that the books have been of inexpressible value to them. They are usually sent to the schools by the expressman who carries the books to the agencies. During the year 1889, 4496 volumes were distributed to the schools.

The city government makes an annual appropriation for the support of the library of upwards of \$10,000.00. The Board of Management for 1890 consists of John S. Farlow, Julius L. Clarke, Wm. Claflin, A. Lawrence Edmands, Edwin B. Haskell, mem-

bers at large; E. S. Hamblen, from the Board of Aldermen; and Edward L. Collins, from the Common Council; John C. Kennedy, superintendent; Elizabeth P. Thurston, librarian.

The library now contains 30,700 volumes, and the circulation during the past year was 105,230 books.

NEWTON CENTRE LIBRARY ASSOCIATION.—The Newton Centre Library Association was founded in 1859 by "sundry individuals who subscribed out of regard for the public good," Hon. James F. C. Hyde being the chief mover in its establishment. The value of the shares was ten dollars each. Any person, by paying one dollar and a half per annum or twenty-five cents per month, was admitted to the use of the library, which was open one afternoon each week. The officers for 1860 were J. Wiley Edmonds, president; R. W. Turner, vice-president; Chas. L. Fowle, secretary; Jas. F. C. Hyde, treasurer; David H. Mason, Leverett Saltonstall, Alvah Hovey, Wm. Claflin and Jas. F. C. Hyde, directors. In 1873 the association, by vote of the proprietors, merged its library in the Newton Free Library and presented to it its valuable collection of books, numbering from fourteen to fifteen hundred volumes.

THE NORTH VILLAGE LIBRARY ASSOCIATION.—The North Village Library Association was instituted January, 1866, in order "to cultivate better general intelligence and afford suitable facilities for perusing valuable books and wisely employing valuable time." The management was in the hands of eleven officers. The shares were fixed at fifty cents each, and members were required to pay a monthly fee of ten cents each. The library was open two evenings in each week, and nearly four hundred volumes were gathered.

NEWTON LOWER FALLS FREE LIBRARY.—The Newton Lower Falls Free Library was established in 1869. Rev. R. F. Putnam, rector of St. Mary's Church, first proposed the formation of a parish library, but his suggestion met with so ready a response that the plan was changed and a village library was organized. Donations of books from private libraries were received, supplemented by purchases from funds contributed for the purpose, and the library was placed in Mr. Pillsbury's apothecary shop under the charge of Mr. W. W. Jackson as librarian. Mr. Wm. Wailis acted as treasurer, and the management was vested in a board of trustees,—Judge George White, and Samuel G. Thaxter being the members in addition to the gentlemen already named. It contained a very good selection of works, and additions were made to it from time to time, either from donations or purchases from contributions. In 1871 there were between thirteen and fourteen hundred volumes in the catalogue. The library was largely used by the inhabitants of Wellesley, who contributed liberally to its support. Its usefulness began to decline when the Newton Free Library was established, and the system adopted later of a free local delivery seemed to render

its continuance unnecessary. At the desire of parties in Wellesley the trustees agreed to its being removed to that town. On the establishment of the Hunnewell Library the books that had been contributed by Newton parties were returned, and are now in the possession of St. Mary's Parish. Many of the standard works are valuable, and will be kept for public use in the parish library of that society.

NOTE.—In connection with the foregoing excellent history of the Libraries of Newton it may not be unprofitable to make note of some of the steps taken by the enterprising and benevolent citizens of Newton from time to time and which led up to the completion of the present beautiful Library Building. Meetings of citizens for mutual improvement were held at Newton Corner, and on October 20, 1859, a definite organization was formed under the name of the *Newton Debating Society*. Among the early members were R. W. Holman, F. H. Forbes, H. R. Wetherill, Wm. D. Thayer, Chas. Sturtevant, J. S. Watson, S. Chism, H. D. Bassett, A. G. Brown, John Warner, Wm. Preston, A. B. Ely, Wm. Guild, David K. Hitchcock, Rev. E. D. Moore, H. L. Vinton, F. W. Pelton, H. M. Hagar and others. The early meetings of the Society were held in Middlesex Hall, but when that hall was demolished the place of meeting was changed to the private residence of Hon. David K. Hitchcock, where for many years the current questions of the day, both State and National, were ably discussed. At a meeting held February 16, 1865, by a vote of the Society its name was changed to *The Newton Literary Association*.

Dr. Hitchcock, who for eight years had been appointed one of the committee on the examination of the library of Harvard University, became much interested in the matter of a Free Public Library for Newton, and frequently at the meetings of the Literary Association urged a consideration of the value of the free system where the public could have the advantages to be derived from such a valuable source, and at the meeting of March 2, 1865, he offered, as appears from the report of the secretary of the Association, the following resolution: "WHEREAS the ancient and highly favored town of Newton, with all its wealth and enterprise, and with its rapidly increasing population is alike remarkable for intelligence, public spirit and benevolence, and WHEREAS the best interests and claims of the people have in one important particular been overlooked, therefore *Resolved*, That the town should be furnished with a Free Public Library." March 16, 1865, a standing committee on the subject of a Free Public Library for Newton was appointed, consisting of Dr. D. K. Hitchcock, Dr. Henry Bigelow, Geo. W. Bacon, Geo. C. Lord, H. M. Hagar and others, whose duty it was from time to time to bring up the subject for consideration by the Association and to report progress. As by the members of the Association Dr. Hitchcock was considered the father of the agitation of this subject, so also was he the one to take the first definite step towards its fulfillment as attests the following:

"Boston, March 21, 1865.

"This certifies that Hon. David K. Hitchcock has deposited with me the sum of one hundred dollars towards the endowment of a *Free Public Library* in Newton. The above sum, which is the *first subscription* towards the object named, is subject to call on demand by the treasurer on completion of such organization as is necessary for the safety and accomplishment of the object above named.

"Signed H. D. BASSETT, President of the Newton Literary Association."

This money was paid into the treasury of the Newton Free Public Library, August 12, 1868.

The standing committee of the Association, at a meeting held March 22, 1865, decided that the time had come to take steps to interest the general public in the matter of a free library, and Dr. Hitchcock, Dr. Bigelow and G. W. Bacon were chosen as a committee to secure the co-operation of certain gentlemen of standing and property, enlisting their support and influence in the enterprise. A public meeting was held April, 1865, at which Hon. D. K. Hitchcock was elected chairman and presided. Addresses were made by the president, Governor Bullock, Judge Russell and others. Much enthusiasm prevailed, and the matter of a free library was subsequently taken in hand by the citizens and carried forward to the desired consummation, "The Newton Literary Association," with its library, being merged in "The Newton Free Public Library."—*EDITOR.*

CHAPTER VI.

NEWTON—(Continued).

BANKING INTERESTS.

THE NEWTON NATIONAL BANK—The institution which now bears the name of "The Newton National Bank" originated as a State Bank, and was known as the "Newton Bank." It was first projected in the fall of 1847. At that time there was, with the exception of the bank at Brighton, no such institution in this section of the county. The idea of establishing a bank in Newton seems to have been first suggested by Joseph N. Bacon, the president of the bank to-day. Mr. Bacon was in 1847 engaged in erecting a business block at Newton Corner, and it occurred to him that, in view of the activity in real estate which was making itself evident in the village, a bank would be found very useful to a large class of citizens. This notion he communicated to his friend, Hon. William Jackson, who, after some consideration, became convinced that the scheme was feasible, and together they concluded to carry out the project.

It was decided to try to raise a capital of \$100,000. A meeting of prominent landowners and investors was shortly afterward, January, 1848, called at the residence of Mr. Jackson. At this meeting there were present, among others, Capt. Samuel Hyde, Otis Pettee, Capt. Joseph Bacon, Benjamin Dana, John H. Richardson, Levi Thaxter, Marshall S. Rice, Allen C. Curtis, Seth Davis, Amos Tenney, Joseph N. Bacon and William Jackson. This meeting adopted the plan suggested by Messrs. Jackson and Bacon, and \$32,000 of stock were subscribed on the spot. This amount was within a short time increased to \$42,000, but when this last point was reached the subscription seemed to have come to a standstill. By dint of personal solicitation, however, Mr. Bacon, aided by Mr. Jackson, succeeded, after considerable difficulty, in pushing the figures up to \$87,000, some of the original subscribers increasing their amounts against their names now that the success of the enterprise seemed assured.

Meanwhile, the subscribers had been considering the questions of site, salaries, etc., and it had been decided that a separate building isolated in a public square, if possible, would be most desirable for safety—for it must be remembered that this was before the day of time-locks—and the site which the bank has ever since occupied was selected as best fitted for a bank building.

The necessary preliminary steps having now been taken, the subscribers organized as stockholders on June 21, 1848, meeting in the vestry of the Eliot Church. The charter was accepted at this meeting, and the following Board of Directors was chosen:

William Jackson, John H. Richardson, Joseph Bacon, Levi Thaxter, Andrew Cole, Allen C. Curtis,

Otis Pettee, Marshall S. Rice, Pliny B. Kingman, Henry B. Williams and Edward Walcott. This board of directors met at the same place on June 26th, and elected William Jackson to be their president. They also appointed committees to engage a cashier and to make arrangements for a banking-house. A week later they voted to erect a building on the present location. The work of erection of the banking-house was pushed along very rapidly during the summer, so that October found the building ready for occupancy, and on October 10, 1848, the bank opened for business, and in its own house. Daniel Kingsley, formerly of the Brighton Bank had been chosen cashier, and arrangements were made for procuring clerical assistance.

The bank proved a success from the start. Its capital, as has been said, was limited to \$100,000, which was finally subscribed in full and was all paid in by November 2, 1848. The first report of the condition of the bank was made at the directors' meeting of March 26, 1849, and showed net earnings of \$4472. A dividend of three and a half per cent. was accordingly declared and \$972 carried to the reserve fund.

It was in this year of 1849 that a somewhat singular incident occurred. Two sheets of bills disappeared most unaccountably. In those days, as in these, the bank-bills were signed by the president and cashier, and it was then not unusual for these officers to perform this formality at their homes in the evening. Now it so happened that one night President Jackson, after signing a bunch of bills, put them under his pillow for safe-keeping, but in the morning when he returned the bills to the bank he overlooked two sheets of them which he had left in his bed. The disappearance of the bills was a deep mystery to the bank officers until some days after, when, on Mr. Jackson's inquiry, his servant-girl confessed to finding the bills and appropriating them. One of the sheets was recovered and the other was charged to profit and loss. The directors soon after this passed a vote that the bills should at all times thereafter be signed at the banking-house.

The second dividend was four per cent., and \$2270 was carried to the reserve, and soon after the stockholders voted to petition the Legislature for an increase of capital. This was in October of 1849, and in April of the following year, an act of Legislature having been obtained, the directors voted an increase of capital of \$50,000. This amount was all paid in by June 4, 1850.

Business continued good for many years. Between 1849 and 1859 the deposits gradually rose from \$12,000 to \$47,000. The amount of paper discounted also increased largely—from \$193,000 in 1849, to \$284,000 in 1859. During these ten years the semi-annual dividends were uniformly four per cent., and the reserve was constantly growing.

In this period the presidency of the bank twice changed hands. William Jackson, who had been the

first president, and who had seen the bank attain success under his careful management, died in February, 1855, and Hon. Levi Thaxter was chosen to fill the vacancy. Mr. Thaxter's failing health, however, did not allow him to hold the office long, and in the fall of 1857 he resigned, and Joseph N. Bacon, one of the original projectors and founders of the bank, was elected to the presidency, which position he has ever since held. Mr. Bacon had been a director since 1850, and during Mr. Thaxter's illness had done a large share of the president's work.

The number of directors had originally been eleven, but this number was, in 1849, cut down to nine, in 1852 to seven, in 1855 to six, and in 1857 to five. But in 1860 the number was restored to seven, and has since remained there.

The Boston business of the bank had for several years been done through the Suffolk Bank, which was the depository of most of the New England banks. But in 1855 the Newton Bank joined in the general secession of the country banks from the Suffolk, subscribed \$5000, and subsequently \$2500 more, to the capital of the new "Bank of Mutual Redemption," and in 1858 transferred its deposit to this new institution.

In this period of the bank's history came the temporary suspension of specie payment, which affected the whole country in 1857. Money had been tight for some time and the suspension had been, to a certain extent, foreseen. On the morning of October 14th, of that year, Mr. Bacon, the president, went to Boston as usual to make the exchanges, and on arriving there learned that the Boston banks were then deliberating whether to suspend or not. Within an hour he learned that suspension had been decided upon. This was before the days of the telegraph and telephone, and the quickest way to get word out to Newton was by railroad. There was no train to Newton for an hour or more, so he took the horse-car for Watertown, and arrived at the bank ten minutes before it closed for the morning, and half an hour before steam-cars were due. News of the suspension of specie payment by the Boston banks had not yet reached Newton, so that there had been as yet no unusual demand at the bank, but the news was certain to arrive with the train from the city and unless some action was taken before the re-opening of the bank at two o'clock, it was sure to be stripped of its specie during the afternoon. This being the case, it became necessary to call immediately a meeting of the directors. This was not an easy thing to do at that time of the day, when most business men would be in the city; but after some difficulty a quorum of the Board of Directors was got together in a special meeting, and just before the bank opened for business in the afternoon it was voted to suspend specie payment owing to similar action having been taken by the city banks. Only one deposit had been withdrawn that morning in anticipation of this sus-

pension, and within a few days, when it was seen that it would be but temporary and confidence was partially restored, this deposit was returned into the bank by its owner. Following again the lead of the Boston banks, the Newton Bank resumed specie payment December 17th of the same year.

From 1859 until the breaking out of the Rebellion the bank was still more prosperous. After paying a semi-annual dividend of four per cent. for ten years, a dividend of four and one-half per cent. was voted in March of 1859, and this rate was kept up until September, 1861, when it fell off to three per cent. for a time.

The presence of the Civil War is indicated in the bank records only by temporarily reduced dividends, and by the following vote, which was unanimously passed by the directors on April 18, 1861: "In view of the present national emergency, this bank tenders to the Commonwealth a loan of \$25,000,"—a monument to the patriotism of the directors and their confidence in the government. During the war, as has been said, the dividends fell off. Four successive semi-annual dividends of three per cent. were paid, but were followed in the fall of 1863 by one of three and one-half per cent. and in 1864 by dividends of four per cent.

The National Bank Act of 1863 was not regarded with very general favor by the stockholders, who voted seventy to sixty-six, not to become a national bank under its provisions. The act of 1864, however, met with general acceptance, and in October of that year the stockholders voted unanimously—ninety-nine votes being cast—to authorize the directors to take the necessary steps to become a national bank under that act. The directors soon after this voted to organize as a national institution, the articles of association as a national bank and the organization certificate were duly signed, and in January, 1865, the cashier was instructed to forward to the treasurer of the United States a sufficient amount in United States bonds to receive \$100,000 in national currency. The "Newton Bank" ceased to exist as such at the close of business March 31, 1865, and commenced business as the "Newton National Bank" on the following day.

The bank now entered upon a long period of great prosperity. Just at the time of its conversion into a national institution an extra dividend of eight per cent. was declared, the balance available for division having been nearly \$27,000. This extraordinary dividend was followed by successive semi-annual payments of five per cent., which continued, with but one slight interruption, for eleven years, from 1865 to 1876. The only instance in this period when the semi-annual dividend fell below five per cent. was in March, 1870, the capital having recently been increased from \$150,000 to \$200,000. The dividend that month dropped to four per cent., but the wisdom of the increase of capital was soon made apparent by

additional business and a speedy return to five per cent. dividends, on the enlarged capital.

The bank was without the services of a regularly appointed cashier during a part of 1874 and 1875. Daniel Kingsley, who had faithfully and efficiently performed the duties of that position during the twenty-six years since the organization of the bank, was, in 1874, so disabled by continued sickness that he was obliged to give up work. In September of that year, at the annual meeting, although still without the services of a cashier, the directors did not elect any one to take the position, hoping that Mr. Kingsley might yet be able to return to work. This state of things lasted until the spring of 1875, when B. Franklin Bacon, who as messenger and later as assistant cashier, had been connected with the bank from its beginning, was chosen to take the higher post made vacant by the prolonged illness of Mr. Kingsley. Mr. Bacon has held the position ever since and has most acceptably filled the place of his predecessor.

The history of the bank from 1876 to the time of writing, 1890, may be shortly stated. Owing to the large increase in the number of banks, and the low rate of interest obtainable, the dividends fell off, as has been the case with all banks; but with a better rate for loans the earnings and dividends are once more increasing satisfactorily. The bank has never in its history "passed" a dividend. The semi-annual payments have run as low as two per cent. and once as low as one and one-half per cent., but they are now three per cent. and the earnings are constantly increasing. The salary expense account has never been large. On the contrary, in comparison with the amounts paid the officers of similar institutions in the county, the salaries in the Newton Bank have been small. When it began business the amount paid yearly for salaries was \$1500. This has been increased as the business has grown and now amounts to \$5300 per annum, this sum paying for the services of the cashier, president, bookkeeper and messenger. The banking building has been twice enlarged to meet the needs of the bank and of the savings institution which occupies a wing of the same building. The bank's Boston correspondent is now the Maverick National Bank.

The statement of the condition of the bank at the close of business March 31, 1890, just prior to the payment of the last semi-annual dividend of three per cent., shows the deposits to be \$237,291.23; discounted notes, \$376,094.96; surplus, \$40,000 on capital of \$200,000; circulation, \$45,000; dividend No. 50, \$6000; and undivided profits, \$3164.19.

The Board of Directors is composed as follows: Joseph N. Bacon, president; George Hyde, B. Franklin Bacon, Charles E. Billings, Francis Murdock, W. Henry Brackett, John R. Farnum.

THE FIRST NATIONAL BANK OF WEST NEWTON.—The credit for the establishment of the First National Bank of West Newton is due Mr. James H. Nickerson.

For a number of years he had carried on at West Newton a private bank under the name of "The Exchange Banking Company." The success of this private enterprise was so material, and its business grew so rapidly, that he was led to believe that there was an opening in Newton for another National Bank. He broached the project to a number of the leading residents of Newton, and it was received with so much favor, that he immediately took steps to carry out his plan. The result of his efforts was, that on January 1, 1887, the "First National Bank of West Newton" opened its doors. The capital was \$100,000, and its place of business was Nickerson Block, Washington Street, West Newton.

The first Board of Directors was made up as follows: J. E. Bacon, A. L. Barbour, P. C. Bridgham, E. W. Cate, F. E. Crockett, A. R. Mitchell, J. H. Nickerson, George Pettee, C. A. Potter.

The first president of the bank was Mr. James H. Nickerson, and Mr. Austin R. Mitchell was the first vice-president. Mr. M. L. Parker was the first cashier. The same officers and Board of Directors have been retained to the present time with two exceptions. Mr. J. E. Bacon, after a service of something more than a year, resigned from the Board of Directors, and Mr. B. F. Houghton was chosen to fill his place. Mr. M. L. Parker also resigned his position after a time, and Mr. E. P. Hatch now holds that office.

The bank has been in operation for so short a period of time, that there is little to say of it except that it has been transacting a profitable and growing business. The number of depositors has rapidly increased; the amount of the deposits at the present time is about \$200,000; and the increasing transactions of the institution have fully justified the belief of its projector, that the city of Newton was not only large enough to maintain two National Banks, but that the needs of the community required their existence.

THE WEST NEWTON SAVINGS BANK.—Soon after the opening of the First National Bank of West Newton, it became apparent to the directors of that institution that the establishment of a Savings Bank would be of benefit to the community. Steps were at once taken to secure one, and on March 10, 1887, Austin R. Mitchell, J. Upham Smith, Fred. E. Crockett, Edward W. Cate and Alfred L. Barbour were incorporated as the West Newton Savings Bank, with its place of business at West Newton. The bank began business May 1, 1887, with the following list of officers:

President, Austin R. Mitchell; treasurer, James H. Nickerson; clerk, Alfred L. Barbour; trustees, Austin R. Mitchell, Benj. F. Houghton, Dwight Chester, Edward L. Pickard, Prescott C. Bridgham, Samuel Barnard, Fred. E. Crockett, Alfred L. Barbour, Edward W. Cate, Adams K. Tolman, George Pettee, Lyman K. Putney.

The officers of the bank still remain the same, ex-

cepting that Messrs. Pettie and Putney have retired from the Board of Trustees, and their places have been filled by the election of Messrs. C. F. Eddy and F. E. Hunter. The business of the bank has been uniformly successful, the amount of the deposits has reached the sum of \$140,000, and its future growth is no longer problematical, but is assured.

CHAPTER VII.

NEWTON.—(Continued).

INDUSTRIES AND MANUFACTURES.

BY OTIS PETTIE.

OF the early history of the industries and manufactures in the town of Newton, Massachusetts, previous to the War of the Revolution, or in the Colonial period of the history of our nation, but little is known beyond a few traditions and an occasional record, or from recollections handed down from generation to generation. Nearly every farm-house had its hand-cards and spinning-wheels, and foot-power looms for providing clothing for the families from wool or flax; and in the long winter evenings the ordinary duties of farm life would be laid aside, and a miniature factory put in operation by the good housewives and daughters, before the blazing fires of winter upon the hearth, to spin and to knit or weave the fabrics for the next season's wear; while the sires and the sons would be engaged at the bench, in their little workshops, making and repairing their farming tools for spring time and summer's work; or very likely some of them were employed in making boots and shoes or other articles required to make the household comfortable.

The increase in the population of the Colonies brought with it a corresponding increase in the labor of producing supplies to meet the demands. The energies of the early settlers were of necessity put forth to provide shelter, food and raiment for themselves, and a comfortable protection for their cattle and implements of husbandry. While the many were engaged in agricultural pursuits, a few who were endowed with mechanical ingenuity and inventive powers turned their attention towards better and more rapid and convenient facilities for simplifying the means of production. Power saw-mills were built to take the place of the old hand-pit saw and hewer's axe. Grist-mills displaced the mortar and pestle for grinding corn. Large factory buildings fitted with power machinery sprang up here and there, for the spinning and weaving of cotton and woolen fabrics, thus assigning the spinning-wheel with spindle and distaff to some quiet nook in the farmer's garret, nevermore to be disturbed by the nimble and cunning hands that used them.

In rambling over the town of Newton, and visiting the old historic spots, we find sufficient evidence to warrant the assertion that Newton can well and truly be placed in the front ranks of progress in manufacturing industries, although but little was done during the Colonial period, beyond the erection of a few saw and grist-mills and forges.

The ruins of an old grist-mill a little to the north of the territorial centre of Newton, and quite near the junction of Walnut and Mill Streets (formerly known as Mill Lane), indicates very nearly the spot where the first power-mill stood. This mill was built on Smelt Brook by Lieutenant John Spring, in 1664, for grinding corn and other grains. Mr. Spring was an Englishman by birth, and very early in life came to this country with his parents, who settled in Watertown, where he is supposed to have resided until he removed to Newton about the time he built the mill. He was an energetic man of more than ordinary ability. In addition to his occupation as a miller, he served the town as selectman, representative in the General Court a number of years, and sealer of weights and measures; and in various other ways made himself a valuable and honored citizen of the town of his adoption.

The precise length of time that Mr. Spring operated his mill solely on his own account is uncertain. There is a record previous to 1690 of the transfer of the property to John Spring, Jr., John Ward, Jr., Thomas Park and Captain Isaac Williams, each a quarter part. In the settlement of the Thomas Park estate in 1694, his part was set off to his son Edward. In the division of Captain Williams' estate in 1708 his son Isaac received his share, who sold it to his brother Ephraim in 1722. John Ward, Jr., by will in 1727 gave his portion to his daughter's husband, Deacon William Trowbridge, who by will in 1744 gave it to his son, Thaddeus Trowbridge. In 1777 the property passed into the hands of Captain Edward Trowbridge. It is impossible to obtain the names of all parties engaged in the mill. A Mr. Brigham and his son George ran the mill in the early part of the present century. Their successors were Mr. John Bullough, Messrs. White & Bullough, Mr. John Jennings, Mr. Brackett Lord and probably others. This mill being the largest one in town, and centrally located, had a large share of the patronage. It contained two sets of mill-stones, a corn-cracker, and other apparatus for doing a large business.

The scarcity of water in the mill-pond in dry seasons prompted the owners of the mills to negotiate with the land-owners abutting upon the northerly side of Wiswall's Pond (now Crystal Lake), a short distance southerly and upon a higher level than the mill pond, to open a small canal from that pond to the mill-pond brook, as a feeder to supply the deficiency. This incroachment upon their rights caused the owners upon the other side of the Wiswall Pond to rebel, and after a few years the feeder was discontinued and filled up again.

Mr. Bullough had an extensive trade from the home market. Mr. Lord was an operator in Western grains, and shipped large quantities to the Eastern market, to sell in bulk, or to grind for retail trade at the mill. Very soon after the death of Mr. Lord, in 1872, the mill was closed, and finally destroyed by fire, July 5, 1886.

In the Reverend Dr. Jonathan Homer's "History of Newton," published in 1798, we find the following account of a brewery then in operation in the town; and it is the only record of it that can be found. He says: "A very capacious brick building has lately been erected by General William Hull, for brewing ale and strong beer, and is occupied by an eminent English brewer. It is one of the most favorable situations within the State for a brewery, as it is supplied with the purest spring water proceeding through tubes from living springs of superior quality, and from its situation upon the Charles river, it furnishes an easy and cheap conveyance of its manufactures to the capital." The brewery was partly in the ravine northeast from the Nonantum House, and near the Brighton line.

Hammond's Pond, in the easterly part of Newton, is the most elevated sheet of water in the town. It has an area of about twenty acres, and is one hundred and sixty feet above tide water. Palmer Brook, sometimes called Pond Brook, the principal outlet to this lakelet, flows in a southeasterly direction through a large tract of flat, swampy land localized as Troublesome Swamp. Great Bald-pate Meadow, Little Bald-pate Meadow and Stake Meadow (which derived its name from a stake or wooden post driven there to define an angle formed by boundary lines between Newton and Brookline.) From thence the brook winds its way on to the Charles River. In the seasons of high water there is an overflow from Hammond's Pond westward to Smelt Brook, near the grist-mill of Mr. John Spring. Bald-pate and Oak Hills border the meadow on the south, and were once covered with a heavy growth of timber; in fact, the whole region thereabouts was a dense forest. The growing demand for manufactured lumber brought this wealth of timber lands into the market, and in the year 1683 Mr. Erosmond Drew, an energetic young man of Irish parentage, purchased a large tract of land near the foot of Bald-pate Hill, lying partly in the town of Brookline, and partly in Newton, and built a saw-mill and water-power just about on the boundary line between the two towns. His mill pond overflowed a considerable portion of the meadow lands in that vicinity. There are no records or traditions that impart any knowledge of the amount of business done by Mr. Drew, but he undoubtedly had a ready market for all the lumber that he could furnish.

In the year 1726 Mr. Drew conveyed his mills to Nathaniel Parker, who continued the business already so well established by his predecessor. In addition to the timber cut upon their own lands, there can be

no doubt but that the settlers for miles around carried their logs to this mill for sawing into dimension lumber for various uses; and until within the last fifty years the old mill was in a running condition and last operated by Mr. David Wardwell. There are still sufficient ruins remaining to mark the spot where the old Erosmond Drew saw-mill was built.

A little more than a mile distant, across the divide from Drew's mill in a southwesterly direction, the ruins of an old dam across South Meadow Brook still remain. The object for which it was constructed is somewhat of a mystery. There is a tradition that this dam was built for the sole purpose of flowing the Great Meadows, to kill the alders and other shrubbery in that low ground; but it hardly seems possible that such massive retaining walls, with earth-work and flumes, would have been built, unless there was some object to be accomplished other than the extermination of the undergrowth of a forest, particularly when there could be no appreciable value to the land when cleared. As early as 1724 this tract of land was owned by Mr. David Richardson, a blacksmith by trade, and having a forge upon his premises. It is possible that he built the dam to obtain water-power to drive a hammer-mill, or bloomery in connection with his forge, but history fails to impart any positive information in that direction. There is, however, traditionary evidence of there once being a saw-mill upon that spot.

A mile and a half farther on our trail brings us to the Charles River—the Quinobequin of the Indians—at the Upper Falls; and as we stand upon the brink of the falls, and view the narrow gorge between the bluffs of rugged rocks that tower above us on either side, between which the river tumbles and rolls on its way to the ocean, and contemplate the primitive grandeur of this,—one of the most charming and picturesque spots in Eastern Massachusetts,—we cannot wonder that the Indians selected these bluffs as a place of rendezvous. It was here they built an eel-wier of large stones across the channel to entrap the fish as they came down the stream. It was here, too they built a stone house, with thatched roof, for the double purpose of a shelter, and a place for preparing their game and fish upon the bare rocks around them. This place evidently was the ideal of the Indians, for when they sold their rights in the land to the white men, they reserved this spot for the sole use of their race, together with the rock house, and game-drying grounds, absolute and forever. The natural fall in the river at Upper Falls is about twenty-six feet, and is divided into two sections of fifteen and eleven feet respectively, by dams about a hundred rods apart.

In the year 1688, Mr. John Clark, of Watertown, purchased a large tract of land bordering upon the Charles River at the Upper Falls, in Newton. His purchase included the water-power of the river, and the right to build mills there; and before the end of the year he built the upper dam across the river, and

erected a saw-mill,—thus inaugurating one of the principal manufacturing industries of the town. He died in 1695, and by will gave his mill, with eight acres of land adjoining, to his two sons, John and William Clark. In May, 1708, John Clark 2d conveyed one-quarter part of the saw-mill and water privilege, with half an acre of land to Mr. Nathaniel Parker, for twelve pounds sterling. A short time afterwards Mr. William Clark conveyed a quarter part of the mill to Nathaniel Longley. These sales made Messrs. John Clark, William Clark, Nathaniel Parker and Nathaniel Longley equal owners in the mill property. The new company increased their business by enlarging the mill building, and adding a grist-mill and fulling-mill. A fulling-mill is a mechanical device to thicken or shrink woolen cloths by the use of fuller's earth and water and by the same operation any oily substances that may be in the wool are extracted. The goods to be fullled are laid in a trough partially filled with water, and fuller's earth, and pounded by a system of pounders or beetles arranged perpendicularly over the trough, which are lifted and dropped alternately by means of a series of revolving cans placed in a horizontal shaft, in a manner that will allow the beetles to drop upon the cloth as it lies submerged in the water. Fuller's earth is a variety of lithomarge, which is a valuable absorbent for extracting oils used in the manufacture of wool. It is composed of aluminum, silex, oxide of iron, magnesia and other chemicals, which impart to it a diversity of color; and it is rapidly dissolved in water to a very fine powder.

Between the years 1717 and 1725 the several owners of the mill property conveyed their entire interest to Mr. Noah Parker, son of Nathaniel Parker. And in 1725 Mr. Noah Parker sold his fulling-mill, with one-quarter of an acre of land, for one hundred and twenty pounds in bills, to Mr. Samuel Stowell, of Watertown, upon the condition that Mr. Stowell, his heirs or assigns, were never to build any other than a fulling-mill upon this land: and that Mr. Parker or his heirs or assigns were never to build a fulling-mill on the adjoining lot, under a forfeiture of one hundred pounds, for violation of contract.

There is no record of any change being made, either in the mills or the ownership, until the time of the death of Mr. Noah Parker, in 1768. Of these gentlemen but very little is known beyond their business abilities. The Middlesex Court records inform us that Mr. Joseph Bartlett sued Mr. John Clark for pulling down a frame house, and received judgment against him in the sum of one pound and fourteen shillings sterling. Mr. Nathaniel Parker served the town as selectman in 1716. Mr. Nathaniel Longley, perhaps, was more identified with the public wealth than any of the others. He was a member of the School Committee in 1721, a selectman in 1725 and also a member of a committee appointed by the town

to assign the seats and pews in the meeting-house to the parishioners, according to their rank or station in society.

In the year 1768, Mr. Thomas Parker, eldest son of Noah Parker, was appointed by the Probate Court as administrator of his father's estate. In 1771, Thomas Parker conveyed to Jonathan Bixby, a blacksmith by trade, one-quarter of an acre of land, with water privilege and right to build a scythe-mill, and operate a power trip-hammer and bellows for the same. The same year Mr. Bixby granted to Mr. Parker the free liberty of erecting fulling-mills upon his own land adjoining the mill-pond, with a free use of the stream; also a right of way past the scythe factory to get to his mills.

Mr. Thomas Parker was a leading and honored citizen of the town, an influential member of the Board of Selectmen for three years, and occupied a seat as Representative in the Great and General Court of the Commonwealth for six years. He was an active member of the Baptist Church, and made himself generally useful in the society in which he dwelt.

In the autumn of 1778, General Simon Elliot, a wealthy merchant and tobaccoist of Boston, purchased a portion of the factory property belonging to Mr. Thomas Parker, for 300 pounds, lawful money, and built a snuff-mill. Four years later, in 1782, Mr. Elliot bought the balance of the Parker mills property, including water privilege and all other rights thereto belonging, for the sum of 1400 pounds, lawful silver money, and enlarged his facilities for manufacturing snuff to four mill buildings, containing twenty mortars for crushing the tobacco leaf. Mr. Elliot took up his residence in Newton, and lived in the Noah Parker house. He purchased large tracts of land upon both sides of the Charles River, and built a farm-house, barns, cider-mill and other buildings requisite to carry on the farming business. The snuff-mills gave employment to quite a number of workmen, under the supervision of Mr. John Clough, of German nativity,—a professional snuff-maker.

Under the United States excise laws, enacted in 1798, Mr. Elliot was assessed and paid a direct tax to the government on lands and mill property valued at \$8730. He also held by appointment a major-general's commission in the State militia. It is said that in the year 1800 but three family carriages were owned in Newton, and one of them belonged to General Elliot.

In January, 1809, Mr. Jonathan Bixby, for a consideration of ninety dollars, paid by General Simon Elliot, conveyed to him three undivided ninth parts of his privilege to turn one or more grindstones by water-power at the iron-mill, a few rods below the snuff-mill property.

The early part of the present century witnessed a marked change in the textile manufacturing interests of the country. The work, already so well commenced in previous years, was rapidly extended by building

larger factories, and filling them with improved machinery for spinning and weaving cotton and wool fabrics. The War of 1812 created a temporary reaction in most mechanical pursuits, but at the close of hostilities, every branch of industry was again prosperous.

In November, 1814, General Elliot sold his entire mill property at the Upper Falls, consisting of four snuff-mills, one-grist-mill, one wire-mill, a screw-factory, blacksmith-shop, annealing-house—with all of his rights in the water-power of the Charles River, together with fifty-seven acres of land, tenement-houses and farm buildings, and all privileges thereto belonging—to Messrs. James & Thomas H. Perkins, merchants of Boston, for the round sum of twenty thousand dollars. The object of their purchase was to build immediately a first-class cotton-factory of six thousand spindle capacity, for making sheetings. But before these gentlemen had matured their plan of operations the United States Congress enacted tariff laws adverse to the interest of home manufacturers, and by so doing opened the market to foreign competitors, and the overwhelming influx of goods from abroad brought with it a corresponding stagnation of business at home; and the Messrs. Perkins postponed their factory enterprise until a better market could be secured. At the end of seven years there was a healthy improvement in the market, and work was once more resumed upon the manufactory. For the purpose of increasing their capital and business, they obtained an act of incorporation from the General Court in the spring of 1823, under the corporate name of the Elliot Manufacturing Company—for the purpose of manufacturing cotton-goods at Newton, in the county of Middlesex—with a capital not exceeding three hundred and thirty thousand dollars. The new company organized by electing Mr. Thomas H. Perkins, president; George H. Kuhn, Esq., of Boston, as treasurer; and Mr. Frederick Cabot, as resident agent. The directors employed Mr. Otis Pettie to superintend the mechanical department of their factory. Mr. Pettie was a native of the town of Foxboro', Massachusetts, and a son of Mr. Simon Pettie. Very early in life he exhibited a remarkable interest in mechanical works, and even in infancy this development was apparent. His father—a man of superior judgment and ability, and endowed with great inventive powers—was a blacksmith by trade, and carried on an extensive business in Foxboro'. During the War of 1812 he was employed by the United States Government to manufacture implements of warfare. His son Otis, then a youth of sixteen or seventeen summers, was particularly interested in the various designs and mechanisms of the articles to be made, and rendered valuable assistance to his father in the work-shops. His education was limited to the advantages of the ordinary district schools of his town, arithmetic being his favorite study. While he took a great interest in mechanical

works generally, he made a special study of textile machinery and manufactures, and qualified himself for almost any position in a cotton factory. Mr. Pettie had served several brief engagements elsewhere, and owned a small thread-factory in his native town before he engaged with the Elliot Company, in 1823. The limited facilities for procuring machinery from shops already established caused considerable delay in the completion of their factory; so the company decided that they would put up a large machine-shop, and build a portion of the machinery themselves; and with the addition of a brass foundry, they were enabled to make castings for the more delicate parts. Early in the season of 1824 the hum of the spindle and the clashing of the loom testified to the outside world that they were in full operation, making thirty-six inch wide sheeting. We copy from a label placed upon the cloth as it is baled for market: "The whole process of manufacturing these goods is performed by water-power machinery, which makes them more even and uniform than can be done by hand, and every piece warranted perfect." From twenty to twenty-five yards of cloth a day per loom was a fair production, for machinery sixty years ago was not run upon the high pressure principle of the present day; and when we compare the time required for a day's work then, with the hours of labor now, we can truly say that the machinery of other days ran at a very moderate speed.

In order that the reader may make a comparison between old rules governing a day's work and the rules laid down at the present time, we will give a copy of an old poster that occupied a conspicuous place in each department of a well-regulated manufactory, viz.: "Machinery will be put in motion at five o'clock in the morning, from March twentieth to September twentieth, and all workmen or operatives are required to be in their places ready to commence work at that hour. A half-hour is allowed for breakfast—from half-past six to seven. At twelve o'clock three-quarters of an hour is allowed for dinner, and at seven o'clock in the evening the day's labor will end. From September twentieth, during the winter months, to March twentieth, breakfast will be taken before commencing work, and the wheels will be started at early daylight in a clear morning; cloudy or dark mornings artificial light will be used; the dinner hour the same as in the summer; the afternoon run will continue until half-past seven in the evening, with the exception that Saturday's work will end with the daylight." These rules were not limited to any particular class of industries, but were general throughout the land.

Lighting up day in September would be ushered in with a kind of gloomy, funereal aspect by the workmen. While, on the other hand, blowing-out time in March would be greeted with much joy and a deal of good humor. Frequently the old jacket-lamps would be sent hurling through the workshops by

some over-jubilant workmen, while others might be seen going out of an open window or under a bench, and the day's jubilee end with a grand "blow-out" ball in the old tavern hall or some other convenient place, and be kept up until the wee sma' hours of the morn.

After awhile the question of reduction of service was agitated, and workmen asked that twelve hours be considered as a day's work, and in process of time the request was granted, only to be followed by agitating the eleven-hour system. At the end of a more protracted consideration by the employers this request was granted, with the proviso that there should be no more agitation of the hours-of-labor question. It required but a comparatively short time, however, to lose sight of all compromises, and the question came up anew, and more vigorous than before, demanding that ten hours must be recognized as the maximum time for a day's work. The arguments advanced were that the laboring classes needed more time for reading and study to improve their minds. At length the ten-hour rule was adopted, and all was quiet again. But now the working people are as anxious and earnest to bring about an eight-hour system, and even more so than were the agitators of a twelve-hour system fifty years ago. This is simply a matter of history, and is incorporated here without comment or criticism.

Previous to 1840 the best mechanics or skilled workmen would command a dollar and a half per day, and others a less price, according to their rank as workmen; apprentices usually a half-dollar per day for the first year, seventy-five cents per day for the second year, and a dollar per day for the third year; and when we consider the number of hours required for a day's work then, as compared with the present time (1890), it will be looked upon as a very moderate compensation. In many ways the cost of living was less; good board and lodging at regular lodging-houses could be had at two dollars per week for men, and for boys, at a dollar and a half per week. The aim of very many of the family men was to procure a small lot of land and build themselves a comfortable little home, and cultivate a small garden-patch for table use in its season; and in many other ways a family could save a trifle here and there, and have a few dollars left from their yearly earnings to lay aside for support in their old age.

About the year 1824 there was a great demand for thread. The Elliot Company had completed their Mill No. 1, and were putting in foundations for Mill No. 2. The growing pressure for thread induced them to fill the new factory with thread machinery. Mr. Pettee had previously made thread in a small factory of his own at Foxboro', and was thoroughly familiar with the details of the business. The labor of building the requisite machinery was pressed forward to the utmost to complete the mill, and the next year the thread factory was doing a thriving

business, the company finding a ready market for all the thread they could make. Other manufacturing companies started the thread business simultaneously with the Elliot Company, and in accordance with true Yankee enterprise, it took but a very few years to overstock the market and fill up the shelves and store-houses with large stacks of thread. Meantime, the market for sheetings, that had been dull for a considerable time past, rapidly increased and prices advanced. The Elliot Company were divided as to the best course to pursue, but at length concluded there never would be any further demand for thread, and their success in manufacturing was in the loom, rather than in the thread-twister. Mr. Pettee was disposed to look farther into the future than the stockholders of the company and advised them not to disturb their thread-mill, for there surely would be a greater call for thread in the near future than there had ever been before. The company, however, were very decided in their conclusions to discontinue the thread business, and gave orders to take out the machinery and replace it with looms. This change of machinery consumed nearly a year's time, and when it was just about half completed there was a loud call for thread again. Ware-houses were cleared and shelves made vacant, and thread-makers urged to a greater production. It was now that the Elliot Company waked up to a realization of their mistake in not listening to the advice of their mechanical men; but it was too late, and their only alternative was to complete the alterations already so far advanced; and by the time they were ready to weave in Mill No. 2 the market was dull for sheetings.

After the Elliot Company had completed the machinery for their own use they were prepared to build for other parties; in fact, they already had filled a few small orders from neighboring factories at Dedham, Waltham and other places. About this time the Jackson Company were building a large factory in Nashua, New Hampshire, and entered into negotiations with the Elliot Company for machinery. On account of the magnitude of the job and the limited time allowed to complete the work, the directors hesitated in deciding whether to undertake to do it or not. Mr. Pettee was sanguine as to their ability to fill the contract in a satisfactory manner and within the specified time; still the directors hesitated. Meantime Mr. Pettee canvassed the country for material and workmen, and found that there would be no delay in that direction, urged the company still more earnestly to undertake the work, which they at last reluctantly decided to do. Unfortunately for the company there had been a little friction in the management, which still existed to a moderate extent. There is no doubt but that this element had many times been a barrier to more prompt actions in the board; and when we consider the contingencies attending such an undertaking, at a time when the facilities for accomplishing it were anything but reliable, we may not be sur-

prised at the delay in deciding the best thing to be done. Now that the question was settled, the next step to be taken was to procure the requisite material for the job—which was no small task. Previous to this time a very large percentage of cotton and woolen manufacture had been done in the State of Rhode Island and in the Massachusetts towns bordering upon that State. This very naturally made the city of Providence the mercantile centre of the business, and the market to be depended upon for that line of goods, although Boston and Salem sustained a fair market for manufacturers' supplies.

The slow process of travel and transportation was another item for consideration. No railroads for rapid transit, no telegraph to transmit orders, no telephones to communicate with parties at a distance; mail-coaches were slow, driving one's horse was tedious, and heavy cartage by ox-teams with snail-like pace was exceedingly trying to the patience of any progressive parties. Nearly three months of the time had already elapsed, with very little apparent progress in the work, while the real advance was almost marvelous. Drawings and designs had been perfected and patterns made; and in the foundries for castings at Walpole, Foxborough and Easton, lumber, bar-iron and other commodities ordered from Providence and elsewhere, and *in transitu*. Such was the condition of things when the company became alarmed at the prospect before them, and called a special meeting to take council together as to the best course to pursue. The same element that retarded action at the commencement was still more decided that work could not be done, and so a vote was passed to cancel their obligations with the Jackson Company. Mr. Pettee laid the whole matter before them, insisting that the work was really progressing rapidly, and could be accomplished—but to no avail. And for the time being, he took the responsibility upon himself and carried it through to completion, satisfactorily to the Jackson Company, as the following inscription upon a silver service presented to him by them will testify: "Presented to Otis Pettee by the Jackson Company, in token of their approbation of the machinery he built for their mills in the year 1831."

There had been for a long time a growing necessity among cotton manufacturers for improvements in speeders, or roving machinery. Mr. Pettee turned his whole attention to the end that this long-needed improvement should be brought about, and it at length led him to the discovery of a process of making roving, or roping, as it is called, upon thoroughly scientific principles, which were based upon mathematical calculations. This process required a machine in which any desirable change in the velocity of some of its parts could be automatically produced without changing the velocity of other parts of the same machine. To illustrate: the top rollers of a roving frame will deliver to the flyer a given number of

yards of roving in a given time, and by a tube in the bow of the flyer, it is conveyed to an aperture midway between the top and bottom of the same, where it passes out and is wound upon a spool. The twist in the roving is regulated by the velocity of the flyer. So far in the process of making roving, the motions are arbitrary and of uniform speed. The spool upon which the roving is wound traverses up and down alternately within the bows of the flyers to receive the roving as it passes out from the aperture already mentioned. This traverse motion of a spool upon a spindle is slow and variable. The rotating velocity of the spool when empty must be adjusted so as to wind the roving upon it in precisely the same time it is delivered to it from the flyer; otherwise it would stretch or kink, or pull apart, as the case may be. The traverse motion must always be arranged to lay the delicate roving side by side. Now, as the diameter of the spool is increased by the layers of roving coiled upon it, the velocity of the spool must be decreased in proportion to the increasing diameter in order that the surface, whatever the diameter may be, shall always retain a uniform speed; while, at the same time, the speed of the traverse motion must correspondingly decrease. To produce all of these combinations and variations by a gear, cone or double speeder, with gears in hyperbolic series, was a mathematical problem that taxed the inventor's brain to the utmost for more than three years to solve; and when it was perfected and put into practical use it proved to be the crowning effort of his life, and was pronounced by one of the most celebrated practical philosophers and engineers of this country to be absolutely perfect; and he added that its principles are eternal, and can never be improved upon so long as the world stands.

The old method of producing similar results with treacherous leather belts moving upon conical drums, was superseded in this invention by inflexible metallic gear-work, and with the mathematical precision thus only attainable, all the relative movements, with all the changes in series by variables, dependent upon other changes in series by variables, necessary to spin and coil on spools the delicate rovings, of whatever fineness.

The first one of Mr. Pettee's letters patent for his speeder bore the date of March 15, 1825, as for "a new and useful improvement for producing any required change in the velocity of machinery while in motion, etc." Other improvements were covered by patents granted a few years later. This improved double-speeder went into general use by nearly all cotton manufacturers—in fact, it was about the only one used for the next twenty-five years following its invention.

Before the end of the year 1831 Mr. Pettee left the employ of the Elliot Company, and started the cotton machinery business on his own account. He built extensive works, about a half-mile distant, in a south-

easterly direction from the Elliot factory. At the same time the Elliot Company discontinued the machine business, and gave their undivided attention to cotton manufacture, and sold their shop equipment to Mr. Pettee. The demand for machinery from all parts of the country kept the new works continually supplied with orders, and this establishment became one of the foremost in New England. An iron foundry was added to the "plant," and the first cast made on 7th day of August, 1837. While his geared double-speeder was a specialty of these works, the proprietor was prepared to furnish any and all machinery used in the manufacture of cotton, from the opener to the loom.

Although the workshops, when built, were considered ample to accommodate all of the business that would be likely to come to them, time developed a different result. Large additions had to be made from year to year, and within five years after commencing operations the principal shop building had reached to the length of 365 feet; and the greater portion of it was three stories in height. With the exception of the foundry buildings and patterns, all the entire works were destroyed by fire, during a fierce southerly gale, on the evening of November 25, 1839, entailing a loss of nearly \$100,000, which was partially covered by insurance. As soon as the embers had cooled off, work was commenced on reconstruction, and by the end of six weeks' time wheels were again in motion, but not to so great an extent as before the fire.

In the year 1832 the Elliot Company discarded a large portion of their old machinery and replaced it with new and improved machinery, and by so doing were enabled to make sheetings at a less cost per yard than before. A part of the new machinery was purchased in Paterson, N. J., and the balance of it from Mr. Pettee.

A long way back in the history of the Colonies there was an effort made by parties in interest on the Neponset River to divert a portion of the Charles River water in that direction, as a feeder to that river. By what authority or by whose order this was done there seems to be no record.

About half a mile eastward from Dedham Court-House a ditch was opened across the meadows towards East Dedham and Hyde Park. And when parties were interviewed in relation to it, the only reply to it would be that the draining of the meadows was a necessity to the land-owners. There is a record, in 1639, in which it is ordered that a ditch shall be dug through the upper Charles meadow into East Brook (now Mother Brook) for a partition fence and also for a water-course to supply a mill there. Little by little the ditch became widened and deepened as more factories were built upon it. Meantime the manufactures along the river in Newton and Waltham became alarmed at the prospect before them by this diversion of the water from its natural flow in the Charles River. Litigation and ill feeling followed

the line of this encroachment upon their rights, and not until a lapse of more than two hundred years after the first act was done was the vexed question settled in the courts, ordering water-gauges to be placed both in the river and Mother Brook, allowing the former to receive two-thirds, and the latter the remaining third, thus legalizing a wrong that should never have been inflicted upon the legitimate business of the river owners. For these reasons, and from a system of drainage that was gradually going on, conducted by the farmers, to reclaim their meadow lands and swamps bordering upon the river, the water-power annually decreased in value, so that by the year 1836 the Elliot Manufacturing Company was obliged to put in a powerful steam-engine for an auxiliary power to bridge over a dry season.

The fluctuations in prices and sales of cotton fabrics had a tendency to arouse the diversity of opinions which had so long existed in the management of the company's business; this variance finally resulted in the stockholders voting, in 1839 or '40, to purchase no more cotton, but to work up what they had on hand, in bale, and in process of manufacture—close their books in liquidation, and sell their property.

The loss of the machine-shops by fire in 1839 and the closing of the cotton factory in the spring of 1840 had a damaging effect upon the village people who were dependent upon them for a livelihood. However, this embarrassment proved to be but temporary, for Mr. Pettee had already built large workshops to replace the burnt ones, and in September of 1840 he purchased the entire cotton factory property, and put it in operation under the title of "Elliot Mills;" and once again, all wheels were in motion and the community made happy.

At this time the demand for print cloths was sufficient to warrant the changing of machinery from the broad sheeting loom to the calico width, and at the same time enlarge the factory buildings and put in additional machinery sufficient to nearly double the productive capacity of the mill, by these changes. Two hundred and fifty-two new looms were placed in a single room, and all driven from below instead of the usual method of belting down to them from lines of shafting overhead. This system presented a very neat and attractive appearance to the beholder, and the room was reputed to be the largest of its kind in New England; and when in full operation would weave 60,000 yards of cloth per week.

About the year 1835 or '36 the Mexican Republic interested itself in the work of encouraging home manufactures, by enacting stringent excise laws that would almost prohibit the importation of foreign goods that could be made from raw material found within its borders; and by the same acts left their ports open for free admission of the requisite machinery and other apparatus necessary for establishing the various industries that might be carried on within their own limits. This enactment was intended to encourage

home productions, and had its desired effect, more particularly in the manufacture of cotton and paper.

Mr. Ithamar Whiting, a New Englander by birth, who had been employed in that country about a dozen years in gold and silver-mining, at once grasped the situation, and from the little knowledge he had of the success of our New England manufacturers, was very sanguine of similar results in Mexico. He earnestly advocated the introduction of machinery, and solicited capital to embark in the manufacturing of cotton fabrics. At length he succeeded in finding a few capitalists who would make the venture; but when it was estimated to cost from seventy-five to a hundred thousand dollars for a very small factory, all but one firm declined to undertake it. Further efforts to procure funds were unavailing, and finally the remaining company, Messrs. Barron, Forbes & Co., of Tepic, concluded to take the entire responsibility upon themselves, and arranged with Mr. Whiting to come to the "States" and procure a complete outfit for a cotton factory.

Early in the spring of 1837 Mr. Whiting started from the city of Tepic near the western coast of Mexico, to fulfill his mission, and after a two months' journey he received a cordial welcome from the loved ones under the roof of the old homestead, in the town of Dover, Massachusetts,—once more to breathe his native air, and tread his way over old and familiar highways and byways, as he was wont to do in the days of his childhood.

After visiting most of the principal factories in New England, he left his order for machinery with Mr. Otis Pettee, of Newton, to execute. The substance of the contract was embodied in a very few words, to wit: "We want machinery that will produce seven hundred and fifty yards of sheeting per day, of about No. 16 yarn,—including all of the supplies of whatever kind, to put it in operation,—water-wheels and shafting, plans for factory buildings, window-frames, sashes and glass, door frames and doors, etc. The buildings are to be built of adobe, or mud-bricks, dried in the open air, as is the custom in hot climates. The machinery when finished must be taken apart and securely packed in strong boxes, to be shipped *via* Cape Horn and the Pacific coast to Port San Blas; and so far as possible the gross weight of each package not to exceed one hundred and seventy-five pounds, for convenience in transportation upon mules' backs from the port of entry to the factory at Tepic, a distance of about sixty miles." While the machinery was building, Mr. Whiting spent considerable time in the workshop in order to familiarize himself with the details of construction, which he considered would be of valuable service to him in after life. Upon his return to Tepic he took with him a number of men experienced in the art and mystery of manufacturing cotton, to have the supervision of the several departments of the factory, and to instruct the natives how to spin and weave cotton by power machinery,

as their only knowledge of the business up to that time was limited to the hand-work done at home.

By this experiment of Messrs. Barron, Forbes & Co. the early history of cotton manufacture in the Mexican Republic is associated with the industries of Newton. About five years later the same company built another factory for carding and spinning warps to supply a demand from country towns and farming communities for hand-weaving.

Mr. Whiting, in a letter to Mr. Pettee, dated February, 1848, says, "So far we have done very well with our factory, but I am afraid our harvest is nearly over. The state of the country is such at this time as to induce the belief that no business will prosper much longer. The last two years have been the best we ever had,—not because our manufactured articles have sold better, for the price has fallen,—but because we have got our cotton on better terms, as well as of better quality. In 1846 we made \$113,419.82, and in 1847, \$180,331.17; and since we commenced work we have cleared \$873,077.12; and this has nearly all been made by the first machinery. We did wrong in putting in spinning. We should have followed your advice, and put in the same kind of machinery as the first, with more looms, and then we should have made more money."

The venture of this company was closely watched and studied by moneyed men throughout the Republic, and as soon as their success was made known, other companies were formed and more factories built. The first one to follow Messrs. Barron, Forbes & Co. was a German gentleman from Durango, a Mr. Stahlknecht, who ordered machinery from Newton in 1839. He afterwards built another factory in Tunal. The last time he visited Newton, he remarked that he had given up the cotton manufacturing business, as he was quite too near the Texan frontier, and goods were run over into their country. Eighteen cents per yard was all he could get for his cloth and it cost him thirteen cents per yard to manufacture it, and five cents profit on a yard did not pay. What will our new New England manufacturers say to that?

A company was organized in Guadalajara in 1840, under the corporate title of the Guadalajara Spinning and Weaving Company, and they sent their treasurer, Mr. John M. B. Newbury Boschetti, to Newton to buy machinery. They also took out machinery for making paper. Other factories were established at Santiago, Guymas, Mazatlan, Colima, Curaçoa and elsewhere, and filled with Newton machinery. Although these factories proved to be profitable investments to their owners, none of them were as remunerative as the Tepic Mills. Orders were received from the Mexican customers for machinery and supplies by Mr. Pettee as long as he lived.

In addition to his New England and Mexican trade, Mr. Pettee frequently received orders from the South and West. Several large cotton factories in

Tennessee were filled with machinery from his workshops; and consignments were made to Georgia, the Carolinas, Maryland and elsewhere.

Mr. James Lick, of telescopic fame throughout the world, and whose name is associated with the astronomical study and research of all nations, was a customer of Mr. Pettee's in 1852, for a large invoice of machinery for his extensive flouring-mills at San Jose, California.

Mr. Pettee was not only engaged in the business interests of the town, but was largely interested in its general welfare and prosperity. He was an earnest and indefatigable worker to construct the Woonsocket Division of the New York & New England Railroad (then the Charles River Branch), through the southerly section of the town, to the Upper Falls and Needham, in 1851 and 1852. By his simple consent to a proposal of the Boston & Worcester Railroad Company in 1844, they would have, at their own expense, extended the Lower Falls Branch of their road from Riverside to the Upper Falls. But he declined to accept the proffered branch, because he considered it would be doing great injustice to the future welfare of the village, by placing it at least fifteen miles by rail from Boston, when the same terminus could easily be reached by a more direct route within a distance of less than ten miles.

He actively co-operated with all benevolent and philanthropic movements and real reforms. A thorough temperance man and worker from his youth up; a despiser of the use of tobacco in any form whatever; a friend of the slave and down-trodden; an old time Whig, but one of the foremost to come out and organize the Abolition party; and was a delegate to the National Liberty Convention held in Buffalo, October 7, 1847.

As to the spirit of his business qualities, eminent Boston merchants with whom he had dealings bear testimony, not only to his business capacity, but also to his being the most thoroughly honest man they ever knew. He was, in short, an upright man of great inventive genius, solid judgment, extensive enterprise and beneficent life. He died on the 12th day of February, 1853, at the age of fifty-seven years.

The next following June the cotton factory property and tenement houses belonging with it were sold to a company of Boston merchants under the corporate name of Newton Mills, with F. M. Weld, treasurer. This company continued in the business until August, 1884, and then closed up for an indefinite period.

In the autumn of 1853 the machine-shop property was sold to Messrs. Otis Pettee, (2d), George Pettee (sons of the late Otis Pettee) and Henry Billings, who formed a co-partnership in the name of Otis Pettee & Company; and continued in the business until January 1, 1880, when the partnership was dissolved, and the property sold to a stock company, who assumed the name of Pettee Machine Works, and still continue the business of building cotton machinery.

In the Massachusetts Charitable Mechanics' Association report for 1841, No. 998, we find the following, viz.:

"Otis Pettee, Newton Upper Falls—Cotton Looms;—an attempt to improve upon the usual method of delivering the warp, and simultaneously to wind up the cloth while weaving by power.

"This operation is performed in a manner similar to other older machines by suspending the reed-frame at the top, and allowing the bottom to yield, although opposed by a spring, as each thread of the filling is inserted; the spring in yielding loosens a friction-strap passing round the warp-cylinder, thereby allowing the warp to unwind without unnecessary strain upon the threads, the spring at the same time operating on a ratchet-wheel connected with the cloth-cylinder, causing it to wind up the cloth at the same rate it is woven."

Turtle Island divides the Charles River about an eighth of a mile below the snuff-mill-dam, and the rapids there afford another good water-power. In 1782 Mr. Thomas Parker, who owned the island and land on the Newton side of the river, purchased a small lot on the Needham side (now Wellesley); he built a dam at this point, and started a saw-mill upon a rocky bluff in Newton just abreast of the head of the island. As Mr. Parker was now well advanced in life he retained the saw-mill but a very few years, and then sold all his mill property to his son-in-law, Mr. Jonathan Bixby, who continued the business until he sold his entire interest in the estate upon both sides of the river, including water-power and other privileges in the river, to the Newton Iron Works Company, a co-partnership formed principally of Boston gentlemen, for the purpose of manufacturing iron. Mr. Rufus Ellis was appointed general manager and resident agent, and assumed the duties and responsibilities of his office in 1799. And by the beginning of the year 1800 he had built a permanent dam across the river, and erected a building upon the island, and put in the required furnaces and machinery for rolling and slitting iron into a variety of sizes and shapes.

For the first twenty-five or thirty years after the mill was started, wood was the only fuel used for heating the furnaces and ovens. Anthracite coal lay quietly slumbering in the depths of the mountain passes and ravines of Eastern Pennsylvania and other places, and unknown to man as an article of fuel which so soon came into general use the world over. It may be true that the hunter and trapper, Philip Ginter, while in search of game in the forests of the Lehigh Valley, did accidentally make the discovery of anthracite coal in the year 1791. One day, while hurrying down a steep declivity on the side of Sharp Mountain, homeward bound, his attention was arrested by a peculiar black rock formation, recently uncovered by the uprooting of a large tree in his pathway. He gathered a few samples, and sent them to Philadelphia for scientists to examine, which resulted in the decision that it was a kind of coal of considerable value. With the exception of a few trials of the new fuel by country blacksmiths, it was thirty years before any really successful test was made of its combustible merits as a

substitute for wood. This experiment was made by a nail-maker near Philadelphia. A half-day's time was spent by the workmen in trying to make the black stones burn, as they called it, but of no avail, and at the noon hour they left the furnace in disgust, for their dinner, with the determination that upon their return they would clean out the fire-box, and fire up in the usual way for the afternoon's work. But much to their surprise, when they came back the furnace was seething and roaring with a white heat, such as they had never seen before: and the year 1817 marks the era in revealing the true secret of burning anthracite coal, which is to let it alone as much as possible, and to manipulate the fires from beneath. As soon as the burning of hard coal ceased to be an experiment, it was brought into general use, and the Newton Iron Works Company reconstructed their furnaces, by putting in a system of coal-burning apparatus.

Nail-making is an industry that occupies a place in the list of early manufactures. Quite a number of nail factories were built in this country in the tenth decade of the last century and the first decade of the present century—one at Fairmont, near Philadelphia,—one at Pittsburgh, Pennsylvania,—and several in New York State. Massachusetts had its share of the pioneers in the business; a factory at Wareham, one at Bridgewater, another at Weymouth; the little town of Dover boasted of a nail factory, and in several other places the click, clack of the nail-machine was heard.

The increasing demand for nails called for better machinery for making them. It is now (1890) about a hundred years since the introduction of power machinery for cutting nails from rolled iron plates. Previous to that time a greater proportion of the nails used were made from rods of iron cut off the required length for different sizes of nails, and headed by crude machinery, or forged by hand on the anvil. Occasionally a blacksmith made a specialty of forging nails as a partial supply to the market for builders' use.

From 1790 to 1800 the nail-making business was greatly enhanced by the valuable improvements on inventions of earlier dates. The priority of these inventions has been claimed by a number of persons, notably Benjamin Cochran, in 1790, Ezekiel Reed, of Bridgewater, Jacob Perkins, of Newburyport, and Walter Hunt, of New York. The first letters patent in this country for nail-cutting machinery were granted to Josiah G. Pearson, in 1794. And while Jacob Perkins perfected his invention in 1790, he did not obtain his patent until 1795.

The present century opened with a continuation of the study for better machinery. Jesse Reed, a son of Ezekiel Reed, so far advanced the process of nail-making machinery as to cut off the plate, and head the nail by a single turn of the machine. Still another device was applied to the same machine by a Mr. Ripley. His attachment consisted of a pair of

nippers, so adjusted as to grasp the nail as soon as it was cut from the plate, and then turn it so as to give it what is termed a flat grip, instead of the edge grip in use previous to his inventions. Mr. Thomas Odiorne, of Milford, Massachusetts, was the inventor of a very good machine for cutting small nails and brads. His machine was said to be a complicated invention that required a skilled workman to operate it. Still another nail-machine was patented by Mr. Jonathan Ellis, one of the proprietors of the Newton Iron Works. His machine was rather cumbersome, and never very much used.

Mr. Seth Boyden, a son of the old town of Foxborough, Massachusetts, but who removed to Newark, New Jersey, in early manhood, invented a nail-machine, and secured his patent in 1815. Mr. Boyden was one of the greatest inventors of his generation. The world to-day is indebted to him for malleable iron, and "patent" or enameled leather, and valuable improvements in both stationary and locomotive steam-engines, and many other inventions of a lesser magnitude.

In 1809 the Newton Iron Works Company built a nail factory, and at first used the Odiorne machines. These machines were securely fastened to the top and sides of heavy, white-oak post, about a foot and a half square, and firmly set in the ground. Whether the "Odiorne" was not adapted to their class of nails, or whether it was too complicated and inconvenient to operate, or for other reasons, it was soon laid aside, and the Reed machine, with Mr. Ripley's improvements, was put in its place.

The annual production of manufactured iron from the rolling and slitting-mills was about 2000 tons; and 1200 tons of nails per annum were shipped from the nail factory. None but the best quality of Russian and Swedish irons were used in the mills—imported direct from those countries by the company's ships. In addition to the home markets large consignments of manufactured goods were shipped to the West India Islands, New Orleans, Savannah, Charleston and other Southern ports.

In 1814 Mr. Rufus Ellis built a cotton factory of 3000 spindles on the Needham side of the river, for weaving sheetings, which he ran on his own account until 1840, when he leased it to Mr. Milton H. Sanford, of Medway, to manufacture Osnaburghs for the Southern market. At the close of his lease permanent improvements were made in the cotton-mill property by putting in new water-wheels and flumes and other connections; and in 1844 Mr. Barney L. White took a lease of it and replaced the sheeting machinery and continued the business for nearly five years, and gave it up to Mr. Salmon S. Hewitt; and, under his direction, it was operated until the factory, building and machinery were totally destroyed by fire on May 8, 1850, and never rebuilt. As a whole, this factory had been a successful and profitable business enterprise.

In 1821 Mr. Rufus Ellis purchased the entire interest of the Newton Iron Works Company, which he held for two years, and then formed a new company consisting of seven stockholders, under a new corporate title of Newton Factories, with Mr. Ellis as resident manager, the same as heretofore. After ten or twelve years of successful business the co-partnership was dissolved, and Mr. Rufus and David Ellis became sole owners of the property.

In 1844 Mr. Frederick Barden leased the rolling and slitting-mill property from the Messrs. Ellis and put the same in thorough repair by building new and larger furnaces, new and improved trains of rollers and new water-wheels and gearing; and by the use of an additional heating furnace he was prepared to manufacture at least 5000 tons of iron annually, and gave employment to quite a number of workmen. After a very successful run of twenty-five years or more, Mr. Barden fully realized that close application to business was undermining his health, and retired from active duties in 1870. The mills remained idle for a few years, and finally were broken up, thus ending a thriving iron business of nearly three-quarters of a century.

A short time after the loss of the cotton factory by fire Mr. Ellis erected a new nail factory building upon the same site, and removed the machinery from the old factory into it. At the end of five or six years the nail business was abandoned and the machinery sold out—mainly as old iron—which terminated a thrifty nail-making business that had given steady employment to the nail makers for more than fifty years. The building was subsequently used for a grist-mill and planing-mill, and at last licked up by the flames in 1873.

The old nail factory building was leased in September, 1863, to Mr. Benjamin Newell, of Dover, Mass., who fitted it up for a paper manufactory, and, after a profitable business for twenty years, making coarse paper, he sold his interest in it to Mr. Hudson Keeney, of the town of Everett, in 1873. The old rolling-mill, made vacant by removing the machinery, was leased to Mr. Keeney in 1880, and filled up with paper machinery, thus doubling his facilities for filling his orders. Mr. Keeney availed himself of a good opportunity to sell his property in the mills, in 1882, to Charles P. Clark, Jr., and William F. Wardwell. In 1886 they sold to the Superior Wax Paper Company. They laid out several thousand dollars in preparing to make the paper, but were financially obliged to discontinue the business and close up the works before really getting ready for operation.

In 1888 Mr. Willard Marcy and Mr. Eugene L. Crandell, of Newton, and Mr. John M. Moore, of Baldwinville, Massachusetts, under the title of E. L. Crandell & Company, purchased the paper-mill property belonging to the Superior Wax Paper Company, and the real estate connected with it, which included the entire interest in the water-power of the Charles

River and reservoirs and land adjoining, of the David Ellis heirs, and engaged in making wrapping and sheathing papers of good quality; and by additional machinery and improvements can make about four tons per day when in full operation.

In 1843 Mr. William E. Clarke built a shop on Boylston Street, at the Upper Falls, and employed about fifty men mainly on cotton-spinning machinery for New England manufacturers. He also furnished the machinery for a small cotton factory in Rio Janeiro, South America. The next year, 1844, Mr. Pliny Bosworth built a shop on High Street, on proportions similar to that of Mr. Clarke, and carried on the machinery business. His specialty was cotton cord-making machines. The value of the machinery sent out by these two shops while in operation would aggregate about a hundred thousand dollars. At the end of a term of five years' business they were both closed up by the owners, and the buildings taken down or removed; and before the year 1850 they had become items of history.

In 1849 Messrs. Jenkins and Inman started a braided shoe-string factory upon a small scale in a leased room in one of the factory buildings at the Upper Falls. The enterprise, on their part, was at the time experimental, but proved to be a success. For the want of more room to accommodate their rapidly-growing business they removed, in 1852, to Carver, Massachusetts. The outcome from their experiment in Newton has been the establishment of one of the most extensive shoe-string and lacing factories in the country.

In 1859 Mr. Norman C. Munson, of Shirley, Massachusetts, a contractor for filling in a large tract of flat and marshy land in the Back Bay of Boston, partly belonging to the Commonwealth, partly to the Mill-dam Water-Power Company, and partly to the city of Boston, came to Newton Upper Falls as a convenient central station for carrying on the work. He purchased a range of gravel hills along the line of the Woonsocket Division of the New York and New England Railroad, adjacent to the Charles River upon the Needham side. A large building upon the Newton side was leased by him for a machine-shop and engine-house, with a large area outside for storage and repairs to rolling-stock; two powerful steam excavators were placed in position by the hill-sides to load the trains. New and powerful locomotive engines that would handle forty heavily-laden cars, aggregating one hundred and fifty cubic yards of gravel to each train, were used for transportation; and by day and by night for a period of at least ten years a train was loaded and started off from the pit at very nearly regular intervals of forty-five minutes. Switching engines were used in the pit in loading and making up trains, and a similar system was in use at the dump. This arrangement prevented any loss of time or delays to the train men. Mr. Munson furnished employment to about two hundred workmen, and lev-

eled more than a hundred acres of gravel hills in fulfilling his contracts.

In 1872 Mr. Phineas E. Gay, a contractor from Boston, took several jobs of filling the marshes, and opened a gravel pit at the Upper Falls in a large sand bluff, formerly belonging to the Amasa Winchester estate, bounding on Needham Street, and ran steam excavators and gravel trains to Boston most of the time for two or three years.

After Mr. Munson had finished his Back Bay contracts, he made others for filling a large area of South Boston flats, and removed his machinery to Readville for gravel. At the end of Mr. Gay's orders for filling flats, he went out of the business.

One of the finest and most perfect pieces of stone masonry in the world is the massive bridge of the Sudbury River Aqueduct, across the Charles River at the Upper Falls. The principal arch spans the river from Needham to Newton, a distance of 132 feet between abutments. It is segmented in shape, and nearly seventy feet high,—twenty feet broad at the base, and eighteen feet at the keystone. Six arches of lesser proportions are required to complete the span across the chasm, a distance of five hundred feet between the headlands. This spot is peculiarly adapted for a structure of this kind, for the bluffs upon either side of the river are of solid rock formation. The trestle frame across the river, to support the arch while building, was firmly secured upon solid foundations in the bed of the river, and upon a platform above high water there were placed a large number of jack screws, upon which the trestle rested. These jack-screws had a triple mission to fulfill,—first, to sustain the burden,—second, to raise the superstructure in case of settling, and third to let down and loosen the trestle, so that it could be easily removed after the arch was finished. More than a hundred thousand feet of timber were required to form the trestle and supporting platform; the arches are built of Rockport granite, and was all dressed at the quarries. The contractor, Mr. Phelps, of Springfield, Mass., an expert bridge builder, had the work in charge, and proved himself to be thoroughly master of the situation. 2700 tons of stone had to be held up by the trestle before the key-stones were placed. It required nearly two years to complete the job, which was finished in 1876, at a cost of nearly \$200,000; and, during the whole time, no injury was done to any of the workmen; neither was there any breakage of hoisting machinery or other appliances for doing the work.

Thousands of people visit this charming spot every year, not only to admire the symmetrical proportions of the bridge, but to hear the repeating echo that is produced under the main arch by reverberating tones from a shout by the visitors. As a piece of mechanical work it is attractive to the eye, an honor to its designers, and of great credit to the builders.

I have heard it said that more than a hundred years

ago, a Newton man, with a good degree of "push" in him, and I think he must have been of that type of man termed "a live Yankee,"—who had a desire to turn an honest penny, so started an industry entirely upon his own account and resources, by placing a grindstone in position under a shed, and by means of a rude water-wheel improvised for the purpose, applied power to turn the stone, and no doubt but that he had up his "shingle" with the words plainly chalked out, giving notice to the passer-by that "Grinding was done here."

His neighbors could have the use of the stone to do their own grinding by paying the toll of a fourpence ha'penny, or a ninepence, or a pistareen, according to the time wanted:—no dimes, half-dimes, or nickels in those days. Or, if parties preferred, they could leave their edged tools with him to grind, which he was always ready to do for a consideration.

LOWER FALLS.—By following the river banks from below the Upper Falls for a distance of two miles we reach the Lower Falls. Here the river makes a leap of sixteen feet over a ledge of rocks, and an eighth of a mile farther down the stream there is another fall of six feet, making a total fall of twenty-two feet. Dams have long since been placed across the river at each of the Falls, and furnish water-power for many manufacturers' use.

In the colonial days of two centuries ago, the lands in this vicinity upon the Newton side were supposed to be owned in common by the Town of Cambridge in Middlesex County; and the land upon the Needham (now Wellesley) side belonged to Suffolk County.

A forty acre lot, a little distance easterly from the Falls had already been assigned to the Harvard University; and in 1694 Mr. Samuel Green, of Cambridge conveyed a lot of four acres of land more or less, to John Leverett, bordering upon the river, including the Falls, together with all woods, water rights, commonage liberties and privileges thereto belonging. Whether Mr. Green had previously purchased this land of the Town of Cambridge, or whether he sold it as a representative of the Town, is uncertain.

In 1704 Mr. Leverett sold his land and water rights, and all other interest in the same to Mr. John Hubbard, of Roxbury, a blacksmith by trade, this land now being the present site of all the paper mills, and other works on the Newton side of the river.

Mr. Hubbard formed a co-partnership with Mr. Caleb Church, a bloomer by trade, of Watertown, and improved the water power by building a dam at the head of the rapids, and a forge shop with two fire hearths and a hammer wheel for manufacturing iron. Just what kind of machine or piece of apparatus a hammer wheel is, we will leave for the mechanical experts of the present time to determine for themselves, as they peruse these pages.

In 1705 Mr. Hubbard conveyed to his son Nathaniel Hubbard, one-half of the four acre lot bounded north by the highway, and south by the river, to-

gether with a half interest in the iron works, with as much of the stream as may be required to drive the machinery, including half of the dam, flume, slueways, utensils and appurtenances thereto belonging. The new company continued the business until the death of the senior Mr. Hubbard, in 1717. For the next four or five years the premises were rented to Mr. Jonathan Willard, a bloomer who had previously been in the employ of the company; and in 1722 Mr. Willard purchased the Hubbard interest in the works. In consequence of the death of Mr. Caleb Church about the same time, his interest was deeded by John Cooledge of Watertown, administrator of the Church estate, to his son, Caleb Church, Jr., on April 11th, 1723.

A few years after his purchase of the iron works, Mr. Willard built a saw-mill, a short distance below the forge-shop, and did quite a large business in the manufacture of lumber.

October 27th, 1740, Mr. Church, then residing in the town of Westerly, Rhode Island, sold his moiety of the iron works to Mr. Jonathan Willard and Henry Pratt, former partners in the concern. Who Mr. Pratt was, or when he first bought an interest there, we find no record.

May 26th, 1739, Mr. Jonathan Trowbridge, of Newton, conveys to Henry Pratt, bloomer, three acres of land adjoining said Pratt's land at the Lower Falls. To show how accurately lines were defined in those days, we copy from the deed. "Bounded westerly by said Pratt's land, northerly and easterly by land of John Parker, easterly and southerly by Trowbridge's land—northwesterly corner being a stake and heap of stones; thence to a stake and stones between Parker and Trowbridge, thence to a white oak tree, thence to a black oak tree, thence to a white oak stump with stones on it, thence to two black oak trees, thence to stake and stones at southwesterly corner."

By an indenture made on the 10th day of November, 1748, by and between Henry Pratt and Jonathan Willard, who were equal owners in the iron works property and land, it was divided, giving to each a separate and distinct moiety of the same, each giving to the other certain rights and easements for convenience in the transaction of their business. Special mention is made of the great dam belonging to them, which is to be maintained and kept in repair jointly by them and their successors, each to pay half of the cost; and the said dam shall not be made any higher than is indicated by a hole in the face of the rock in the stream. And it is further agreed that when there is a scarcity of water in the river, it shall be equally divided between them and their successors in ownership.

Mr. Jonathan Willard continued to carry on the iron-works, and was closely identified with the manufacturing business for more than fifty years. A prominent citizen and an ingenious man, he lived to

the ripe old age of ninety-five years, and died May 22, 1772.

Mr. Joseph Davenport, a clothier by occupation, settled at the Lower Falls about the year 1730 or 1731, and built a dwelling-house a third of a mile distant from the forges on the Boston Road (now Woodward Street); and opened a shop near the fulling-mills and gave employment to a number of workmen in the manufacture of clothing, until his death, in 1752. As we find no record of other clothiers in Newton at that time, it is fair to presume that he held a monopoly in the business among the inhabitants for several miles around.

Mr. Azariah Ware may have been a successor of Mr. Davenport in the clothing business. His name is mentioned as a clothier in a deed given by him to Moses Grant & Son, in 1809. In his description of the property conveyed to said Grant, he included clothier's-shop and fulling-mill as one building.

Mention is made of other industries at the Lower Falls, including a grist-mill, a snuff-mill with four mortars, and a calico printing-works. But these were discontinued, and passed into history more than sixty years ago, so it is difficult to procure satisfactory information as to ownership or the amount of business done by them. Mr. Simon Elliot may have been the owner of the snuff-mill, and may have run it in connection with his extensive factories at the Upper Falls.

October 20, 1789, Mr. John Ware, of Sherborn, brother of the Rev. Henry Ware, professor in Harvard University, bought of Timothy Ware, of Needham, about fourteen acres of land at the Lower Falls, including dam, stream, water courses, saw-mills and forge, also a dwelling-house and barn. The next spring he built the first paper-mill in the village. The old hand method of paper-making was in vogue at that time, and we presume Mr. Ware had his stone vats for prepared pulp, and rectangular moulds with wire cloth strainers and deckles to form the sheets of pulp to be placed in layers, alternating between sheets of felting cloth for pressing out the water, as well as to give them a uniform thickness. Two or three repetitions of re-packing and pressing are usually sufficient to give the pulpy fibres an affinity to held together while hanging in the drying lofts. This slow process of paper making was superseded in the early part of the present century by power machinery for spreading the pulp upon an endless felt carrier, and passes it along to a series of steam-drying cylinders, and is finally rolled into large coils for the rotating shears to divide into sheets of uniform dimensions, when it is ready to be bundled into reams for market. The latest improved paper-making machine was patented in England or France by Mr. Fourdrinier, and has since been in general use by all fine paper makers. From the records of the late Benjamin Neal, Esq., we learn that one of the first Fourdrinier machines imported into this country was placed in a mill at the Lower Falls.

August 29, 1808, Mr. John Ware sold to Mr. Azariah Ware a small lot of land, with clothiers' shop and fulling-mill thereon, and on the fourth day of September of the next year Azariah Ware sold the same property to Moses Grant & Son, of Boston, reserving a perpetual right of way over the land, for teams and workmen from the county road to Curtis and Elliot's paper mills and other mills. The Messrs. Grant built a paper mill upon the land for the manufacture of glazed book-board, and other use, and on August 9, 1811, Moses Grant, Jr., conveyed his interest in the property to his father, who then became the sole owner of the same.

Between the years 1812 and 1832 upwards of thirty sales and transfers of property were made among the several mill owners that depended upon the water from the river to operate their machinery; and so far as the water-power was concerned, it became a common interest to them all. These divisions and subdivisions of mill property conveyed with them corresponding divisions of the water-rights each enjoyed in the river; questions were continually arising, particularly in the seasons of low water, relative to this or that owner's draught from the stream. The growing complexity of this difference of opinion created a question of paramount importance to the several proprietors, which terminated in the spring of 1816 by a new apportionment of the water.

The old adjustment of water-rights by and between Jonathan Willard and Henry Pratt in 1748 was still in force, but was not considered sufficient to answer the present requirements, and July 26th a new apportionment was made and agreed to by all parties in interest, to-wit:—Simon Elliot and Solomon Curtis owned the two southern paper mills; Hurd and Bemis owned one paper-mill and the saw-mill; Moses Grant owned one paper-mill, and John Ware one fulling-mill, all on the Newton side. Simon Elliot and Solomon Curtis owned two-thirds of the paper-mill and two-thirds of the saw-mill, and Hurd and Bemis owned the remaining one-third of the mills on Needham side. By this agreement all of the paper-mills and fulling-mills were to have the first right of water, the saw-mill on Newton side the second right, the glazing machines in the several paper-mills to have the third right, and the saw-mill in Needham to have the fourth water-right.

This indenture further entailed upon the several parties in interest an apportionment of the cost of keeping the main dam in the best of repair, and to keep the flumes and water-ways to their respective mills in good order, and perfectly tight at all times. This indenture was signed and sealed by Simon Elliot, Solomon Curtis, Moses Grant, William Hurd, Charles Bemis and John Ware; and for a season the vexed question was amicably adjusted.

In the year 1834 important changes in ownership were made upon both sides of the river. These changes may have been brought about by a destructive fire

that swept down the river bank on the morning of May 19th of this year, totally destroying Messrs. Amos Lyon & Co.'s paper-mill, and Messrs. Reuben Ware and William Clark's machine-shop, all on the Needham side of the river.

In October Mr. Lemuel Crehore, by purchase, became the sole owner of the Moses Grant and William Hurd mills on the Newton side, which included the old saw and fulling-mills, and the John Ware paper-mill. And at the same time Mr. William Hurd purchased Mr. Crehore's rights in a paper-mill upon the Needham side. More than two years previous to this transaction, Messrs. Allen C. and William Curtis, sons of Solomon Curtis, had acquired the entire fee in the Solomon Curtis and Simon Elliott mill. By these sales of property the varied interests upon the Newton side were separated from the Needham property, and grouped into the hands of two ownerships.

Mr. Lemuel Crehore commenced the paper-making business in company with Mr. William Hurd in 1825, and at the time of his purchase of the property in 1834, the partnership heretofore existing was dissolved, and Mr. Benjamin Neal became a partner with Mr. Crehore and remained in the business until 1845. For the next following two years Mr. Crehore was alone. In 1854 his son, George C. Crehore, was admitted as a partner under the title of L. Crehore & Son. The next change made was in 1867 by Mr. Charles F. Crehore taking the place of Mr. George C. Crehore, deceased; and the next year the senior Mr. Crehore retired from the business and soon after died, which left the mills in the hands of Mr. C. F. Crehore until 1883, when Mr. Fred. M. Crehore was admitted to the business, and the company thus formed assumed the name of C. F. Crehore & Son.

Messrs. Allen C. and William Curtis built a new and commodious stone mill, with new machinery and all modern improvements in 1834, and removed the old and worn-out buildings and machinery. They continued the paper manufacturing business until reverses in fortune compelled them to make an assignment about the year 1860. Their property was sold by the assignees to Hon. J. Wiley Edmands and Gardner Colby, Esq., co-partners in the manufacture of wool.

Instead of improving the mills, as at first intended, they sold it to Messrs. William S. and Frank Cordingly in 1864. The new firm made thorough repairs and built additions to the buildings, and put in special machinery for the manufacture of wool extracts, and have done a large and prosperous business since their occupancy of the premises.

A difference in opinion as to the ownership of the fulling-mill water-rights had existed for a long time between William Hurd, Allen C. Curtis and others, which finally resulted in a lawsuit between them in 1845; and in the April term of the Supreme Judicial Court it was agreed between the parties to refer the whole case to three arbitrators—the decision of any

two of them to be binding on the parties, not only as to the questions in controversy, but in award of damages to either party, if any may be found; and they shall further arbitrate and determine finally the future respective rights of both parties in the use of the water forever. The result of this arbitration was reported to the Court, and in the October term of 1847 Chief Justice Shaw decided the said fulling-mill water-rights belonged to the Messrs. Curtis and others to be used at their pleasure. New and more accurate water-gauges were now placed in position along the water-courses to distribute the water proportionately to its several owners; and all interested parties upon either side of the river acquiesced in this adjustment of the difficulties heretofore existing.

The mills upon the Needham side were owned successively as follows: The upper mill by Amos Lyon & Co., Wales & Mills, Thomas Rice, Jr., and the Thomas Rice Paper Company. The second mill, owned by William Hurd, Charles Rice, Jr., and Moses Garfield, Thomas Rice, Jr. and Thomas Rice Paper Company. The third or lower mill, on the upper dam, owned by John Rice and Moses Garfield, Thomas Rice, Jr., and the Dudley Hosiery Company since 1862.

The machine-shop built by Mr. Reuben Ware and William Clark in 1832 went into the hands of Mr. Joseph Stowe in 1846; and in 1850 Messrs. Henry P. Eaton, Rufus Moulton and Harvey Eaton formed a co-partnership and bought the shop of Mr. Stowe. In the autumn of 1853 the present stone-shop building was put up to replace the old wooden one, burnt the preceding June.

Mr. Harvey Eaton died in 1852. In 1876 Mr. Adam Beck, who had been a partner in the business since 1858, by purchase became the sole owner of the works, and still continues in the business.

The second, or lower dam, at the Lower Falls, was probably built by Mr. William Hoogs about the year 1800. He started the leather tanning business about ten years before, near the ford across the river, below Pratt's Bridge (now Washington Street Bridge). Mr. Hoogs next built a paper-mill, which he ran in connection with his tannery, until he sold out to Mr. Peter Lyon, June 21, 1809. Mr. Lyon increased his business by building a grist-mill. In 1809 he conveyed the paper-mill to Mr. Joseph Foster, with one-half of the water-right, and reserved the other half for the grist-mill. March 8, 1822, Mr. Allen C. Curtis bought the paper-mill, and in 1823 he re-conveyed the same to Mr. Foster. On the same day Mr. Foster conveyed it to Mr. Peter Lyon and William Parker. Parker and Lyon sold to Amasa Fuller, January 28, 1824; and on September 3, 1830, the paper-mill was sold to Mr. Joseph H. Foster by the executors of the estate of Amasa Fuller, deceased. Mr. Foster continued the paper-making business until his death, December 7, 1853. His son, Joseph Foster, Jr., then ran the mill for two or three years, when it was sold

to Thomas Rice, Jr., who rented it to Mr. Charles Rice for a term of years, and finally sold it to Augustus C. Wiswall & Son, who still continue the paper manufacture.

On the Needham side of the river there are two or three mills that depend upon the water from the lower dam for their power, but the complications in relation to the division of water have been comparatively few and far between.

It would be impossible to enumerate the different varieties or kinds of paper manufactured at the Lower Falls for the past century. Prominent among the varieties are wrapping papers, book-binders' board and cardboard. The Messrs. Crehore have always made the manufacture of Jacquard cards and press papers a principal business, while the Messrs. Curtis gave their attention to a fine quality of book paper. Three or four other mills have been kept busy on newspaper work. Great quantities of this paper have been printed by the daily press and popular journals and magazines of the day, that have been scattered broadcast all over the civilized world.

While the manufacturers have been busily engaged in the daily routine of their duties, many of them have found time to serve the State and the town in public capacities with credit to themselves and with honor to their constituents. Mr. William Hoogs, Joseph Foster and Thomas Rice, Jr., have been placed upon the Board of Selectmen and School Committees. Mr. Allen C. Curtis, Joseph Foster, Lemuel Crehore and Thomas Rice, Jr., have been honored with seats in the popular branch of the General Court of the Commonwealth. Mr. Rice was twice a Senator and twice in the Governor's Council.

The manufacture of sulphuric acid (oil of vitriol) was started in Waltham by Mr. Patrick Jackson, in 1819. About the year 1825 the works were removed across the Charles River, into the town of Newton, very nearly opposite to the Waltham cotton factories and were incorporated as the Newton Chemical Company. The chemistry buildings covered a large area of land upon the rising ground about an eighth of a mile distant from the river. Under the excellent management and executive ability of Horatio Moore, Esq., resident agent of the company, the works were enlarged to a capacity that made it one of the leading vitriol manufactories of New England.

Mr. Moore was a leading and much respected citizen of the town, and was frequently appointed in town-meetings upon important committees, and occupied a chair in the Board of Selectmen of Newton. The business of the chemical company was so completely identified with the town of Waltham that it was deemed expedient by them to be set off to that town, which, by act of the General Court, was done in April of 1849.

After a continuous and successful industry of more than half a century, the business was discontinued and the buildings removed in 1872.

The late Hon. William Jackson, of Newton, when at eighteen years of age, was apprenticed by his father to a Boston firm to learn the soap and candle business. At the age of twenty-one years he started a small factory in his own name in that city. As he depended largely upon the Southern markets for the sale of his goods, he concluded it would be more profitable for him to transfer a branch of his business to the South, and in 1813 he built a factory in Savannah, Ga., and the next year he built another one in Charleston, S. C. The wars of 1812 made these factories profitable; but when peace was restored, in 1816, the profits dwindled away, and they were given up. In consequence of the death of his parents, Mr. Jackson sold his Boston manufactory in 1820, and returned to the old homestead to take care of the farm. The monotony of farm life was insufficient to satisfy his active business habits, and in 1823 he built a factory near his residence, and continued the candle business until his death in 1855. Mr. Jackson had already erected a factory building in Brighton, for doing a portion of his coarser work, and after his death the whole business was transferred to the Brighton factory. A very large proportion of his goods were consigned to the West Indies and most of the principal Southern ports of this country. Large importations of tallow were made from Russia and England to make up the deficiency in home productions for supplying his works.

Mr. Jackson became a leading and honored citizen of the town; he was a true philanthropist and benefactor. He occupied a seat in the National House of Representatives at Washington from 1832 to 1836. He was a strong Abolitionist, and a friend to the slave; a member of the first temperance society organized in Newton in 1826, and ever after kept the pledge. As was the custom fifty years ago, Mr. Jackson kept his grog in the factory for his employees, and regularly at half-past ten he dealt out to each one his ration. This custom of grog-drinking so antagonized his principles that he offered his workmen an advance in wages if they would give it up; and it was not very long until it was his privilege to remove the accursed thing from his sight.

A few rods to the west from Mr. Jackson's works there was a small calico printing works, and near by a large laundry building and small mill-pond. Very nearly upon the same site Mr. Artemas Murdock had a chocolate factory a hundred years ago. These buildings long since were removed, and the land is now occupied by the Roman Catholic Church of "Our Lady, Help of Christians," corner of Washington and Adams Streets.

Mr. Thomas Smallwood, an Englishman by birth, and a cabinet-maker by trade, came to this country with his family and landed in Boston July 4, 1817. After a few months' residence in Charlestown he removed to Newton, and started the furniture business in a small building a little way north from the

Nonantum House, and about on the dividing line between Newton and Watertown. Before the expiration of two years he was obliged to seek more convenient and commodious quarters for his business, and built a new shop on Washington Street, near the Brighton line. He continued in the manufacture of furniture until 1846. Mr. Smallwood was one of the leading builders of hair-cloth and plush parlor furniture in New England, and probably in the country. He had in his employ about sixty workmen most of the time. His son, Edwin A. Smallwood, was his successor. He built another factory in the valley, on Waverly Avenue, and more than doubled the production of goods. Still another factory was built by him on the corner of Waverly Avenue and Washington Street in 1848, which he ran for a few years, and then rented to Mr. George F. and William Whall for about two years. This building was destroyed by fire September 29, 1857. Previous to the Rebellion of 1860 Mr. Smallwood had regular trade customers in every State in the Union, as well as from Egypt, Australia and elsewhere. The march of local improvements made inroads upon his premises, and he abandoned the business in that neighborhood in 1875, and the shop buildings were removed to Brighton.

The north village of Newton, bounding upon the Charles River and Watertown—now called Nonantum—is another locality of considerable historic interest in manufactures. Like the Lower Falls, this water-power is available upon both sides of the stream. It was first utilized by Mr. David Bemis, who owned the adjacent land in Watertown, and Dr. Enos Sumner, the proprietor on the Newton side. There seems to be a little uncertainty as to the exact date when these gentlemen first commenced business. Mr. Jackson, in his "History of Newton," informs us that the Bemis dam was built about 1760, and at the same time a paper-mill was built there.

The *Waltham Sentinel* of April 29, 1864, in an historical article, gives the time of building the dam as 1778. Which of these dates, if either, is correct, we have been unable to ascertain. It appears that Dr. Sumner sold his interest in the enterprise to John McDougall, of Boston, Michael Carney, of Dorchester, Mass., and Nathaniel Patten, of Hartford, Conn., who erected a paper-mill in 1779. A large proportion of the requisite machinery for paper-making was imported from Europe.

About two years later Mr. David Bemis acquired a controlling interest in the business, and, in connection with his son, Captain Luke Bemis, carried it on until his death, in 1790. By this event the property passed into the hands of his sons, Luke and Isaac Bemis.

In the winter of 1792, or the early spring of 1793, the paper-mill was burnt, entailing a total loss upon the owners. The rebuilding of the factory was con-

sidered of so great importance by the community at large that a petition was presented to the General Court, on June 19, 1793, representing the great sufferings of Luke and Isaac Bemis in the loss of their paper-mill and stock by fire, and praying for aid to rebuild the same; and, in consideration of the public advantages to be derived from the encouragement of the manufacture of paper within the Commonwealth, it was,—

"Resolved, That there be loaned from the treasury of this commonwealth the sum of one thousand pounds to the said Luke Bemis and Isaac Bemis, upon their bonds, with good and sufficient collateral security to this commonwealth for the repayment of the same sum at the end of five years; and also to be conditioned that the said Luke and Isaac shall rebuild or cause to be rebuilt, within two years from the making of such loan, suitable paper-mills of at least equal size and extent of the mills lately destroyed by fire, and by themselves or their assigns shall prosecute the manufacture of paper therein."

Supplementary resolves were passed January 30, 1799, and June 17, 1799, in relation to the detail of payment of said loan.

The work of rebuilding the mills was hardly completed before there was another interruption in the business, caused by the death of Mr. Isaac Bemis, in 1794. After this, Mr. Luke Bemis continued the business, either alone, or in partnership with his brother-in-law, Mr. Caleb Eddy, of Boston, until 1821, when the whole property was purchased by his brother, Mr. Seth Bemis. Soon after this time the Boston Manufacturing Company, who were using the water-power of the river in the manufacture of cotton cloth in Waltham, were considerably annoyed by the water from the Bemis dam backing up to their water-wheels, and interrupting their works; and for a relief to their wheels, they offered Mr. Seth Bemis a thousand dollars an inch, for each and every inch he would reduce the height of his dam. This very tempting offer induced him to take off twelve inches,—for which he received twelve thousand dollars.

Mr. Seth Bemis became interested in the cotton and woolen manufacture, and built a factory on the Watertown side. The paper business was abandoned on the Newton side, and the buildings were used for the manufacture of dye-woods and drugs by Mr. Bemis, until 1847, when he sold out the logwood business to Messrs. William Freeman & Company, who continued in the dye-stuff business for a number of years. In 1860 the Messrs. Freeman & Company purchased the Watertown mills, and soon after sold the whole plant on both sides of the river to the Etna Mills Manufacturing Company, for the manufacture of woolen goods.

Before the days of bells and steam whistles in Newton, Mr. Bemis used to give a shrill blast upon a huge tin horn to call his workmen together at the appointed hours for resuming their labors; hence the name of "Tin Horn" by which this section of Newton was called for several years, but now obsolete.

The small factory near the Watertown line, vacated by Mr. Smallwood, was occupied by Mr. John and

Ebenezer Bilson, church organ-makers. They built a very good instrument, and filled a number of orders. The first organ placed in the New Baptist meeting-house at Newton Centre was made by the Messrs. Bilson in 1836: and at that time it was considered to be one of their best productions, both in volume and mellowness of tone. This whole business enterprise went into history between thirty and forty years ago.

Nearly a half-century ago, the manufacture of glue in Newton employed considerable capital, and in the season of making it, several workmen were employed at the factories. The Hon. Edward J. Collins was one of the first men to start the business. A few years later, his brother, Frederick A. Collins, built a factory. Mr. Samuel N. Woodward was another of the prominent manufacturers of glue.

The season for glue-making was limited to the summer and early autumn months, when it could be dried in the open air, protected from the rain or night dampness by a shed covering, while drying.

For a period of from thirty to forty years the glue-makers reaped quite a harvest in the business. Of late years, with improved facilities, glue can be made in winter as well as in summer, and the old methods of manufacture have been discontinued.

Since the year 1825 quite a number of small factories and workshops have started business in Newton, some of which are worthy of brief mention.

Dr. Samuel Clark, of Boston, built a small chemistry building on Cold Spring Brook, a half-mile above the John Spring grist-mill; but beyond a little experimental work, nothing was done. Perhaps the most important result of his effort was to successfully bleach bees-wax to a pure white. The factory was burnt in 1830, and a few weeks later the doctor died.

Mr. Rufus Bracket purchased the property, and built a morocco factory upon the same site; he made a good quality of morocco for a number of years. Nothing now remains of the works but the ruins of the old dam, within the Newton Cemetery grounds.

Sixty years ago there was a demand for iron ore to supply blast furnaces in Eastern Massachusetts. Several pockets of bog ore, or limonite, were found in the meadows and swampy lands of Newton; and considerable quantities were dug in the more southerly districts of the town and sent to Walpole or Foxborough furnaces for smelting.

Mr. Joshua Jennison was a successful manufacturer of bar soap of superior quality for a period of fifty years; and since his death the business has continued in the hands of his son, Edward F. Jennison, in the northern part of the town, near the Watertown line.

Mr. A. Hayden Knapp, an inventor of a lamp for burning rosin oil, started a small laboratory for generating oils from crude rosin. The project was abandoned within two or three years, however, as the introduction of kerosene oil superseded the rosin oil.

A large factory building on Cherry Street, West

Newton, was occupied by Messrs. James H. Bogle & Co., for making oil-cloth carpeting. At the end of five or six years they removed from Newton, and in 1861 this building was burnt.

Mr. Bradstreet D. Moody, from Bangor, Maine, came to Newton in 1859, and built a large hat factory on Pearl Street, where they employed a large number of workers on gentlemen's hats.

Mr. Joseph White, of English parentage, had a small factory on Brookline Street, and employed a number of weavers and knitters in the manufacture of gentlemen's underwear and hosiery; this business he carried on for a period of thirty years or more, and at the time of his death, about thirty years ago, it was discontinued.

The Silver Lake Company was chartered for manufacturing solid braided cord and steam packing, and commenced operations with a paid-up capital of \$80,000, in 1866. They built a large four-storied brick factory with buttressed walls and mansard roof, on Nevada Street, near Newtonville. Charles C. Burr, Esq., was its first president, and Mr. Charles Scott, treasurer. The general management of the factory was placed in the hands of Mr. William J. Towne. Financially this company was not a success, and closed up their books in 1869, and the original stock became worthless. The next year a new company was formed, with more capital. They bought the old factory and machinery, and started business upon a firmer basis; and since that time they have been successful, under the management of Henry W. Wellington, Esq., treasurer and selling agent. A large addition was made to their factory in 1880, which about doubled its capacity for business. This company has an extensive trade throughout the United States and Canada, and a share of the patronage from European and Australian consumers.

Window-weight cords, curtain cords and numerous other varieties of lines, and small rope and steam packing are annually shipped from this establishment, to the value of \$300,000 or more.

Mr. Thomas Dalby, an Englishman by birth, came, to this country when a young man, and in 1852 he started a few hand-looms for knitting or weaving hosiery in the north village of Newton. He found ready sale for his goods as fast as he could make them, and pressing demands caused him to import more machinery, and build larger work-shops to enable him to fill his orders. In 1858 he built a large factory building at a cost of about \$12,000, and put in machinery adapted to making a greater variety of goods. When the Rebellion broke out, in 1860, he had a large lot of woolen yarn and manufactured goods on hand, which he sold at a high rate, and from the profits upon these sales he built a large brick factory with heavy buttressed walls, in 1862, and put in carding and spinning machinery for making woolen yarn. On February 1, 1865, he sold all of his factory property to the Dalby Mills Company, a

corporation organized with a capital of \$200,000. The new company, unfortunately, was of short duration, from shrinkage in values and other reverses. After the Rebellion they were compelled to make an assignment to their creditors, and the property was sold in 1867 to Lewis Coleman, of Boston. The large wooden building erected in 1858 was destroyed by fire on August 5, 1871.

The most extensive manufactory at the north village of Newton, and one of the most important, is that of the Nonantum Worsted Company, a corporation organized under the State laws, in 1867, with a capital of half a million of dollars, for the manufacture of worsted yarn. Mr. George S. Hall was its first president, and Mr. George F. Hall its first and only treasurer. This company purchased the factory property vacated by the Dalby Mills Company, and at once started business by putting in new machinery and apparatus especially adapted to their class of worsted goods. The whole process of manufacturing wool from the sheep's back, to the spinning, twisting and weaving of the same into the finest and most delicate fabric, is performed under their roof; and the almost endless variety of color, and beautiful tint of soft shades to the yarns are produced by the artisans of the dyeing and coloring departments connected with their works. Hence, the name of "Starlight" Worsted, by which these goods are known to the trade.

In 1880 another large factory building was added to the "plant." The demand for a superior quality of worsted machinery for their own use, and by the worsted manufacturers generally, incited this corporation to take a controlling interest in the Newton Machine Company, who built a large shop adjacent to the worsted company's factory in 1886. The design and quality of their machinery is unsurpassed by any in the country. The worsted company give employment to about six hundred operatives, and are consigning their goods to all parts of the country as well as to foreign markets.

The Newton Rubber Company has an establishment which for completeness of equipment is fully equal to any other similar concern of its size in New England. Their factory is situated upon the banks of the Charles River at the Upper Falls, a few rods below the wonderful "Echo Bridge." Their buildings and machinery are entirely new, having been built in 1888. The machinery consists of washers, mixing mills, calendars, presses, vulcanizers, etc., all from the latest and most approved patterns and workmanship. A "Putnam" steam-engine of one hundred and twenty-five horse-power is required to drive the machinery, and the steam used for power, and for drying and heating purposes in the rubber manufacture is generated in a "Hazelton" boiler. This company make a specialty of manufacturing springs, adapted to all kinds of machinery. Another branch of the manufacture is insulating material in sheet, rod or tube, as

well as boxes or cases for secondary or storage batteries, etc.

Perhaps one of the most important branches of manufacture at the present time is that of fire and police system of telegraphy, or code of electric signals for calling out the various departments. The application of electricity for transmitting signals or alarms was first mentioned in an article in the *Boston Daily Advertiser*, in June, 1845, which article very likely was written by Prof. William Channing, of Boston, a gentleman who gave the subject considerable study in its early conception, and in connection with Mr. Moses G. Farmer, of Salem, a practical electrician of those days, succeeded in making an apparatus of sufficient perfection to test the experiment. The Hon. Josiah Quincy, Jr., then mayor of Boston, recommended its adoption in his inaugural address before the City Council in January, 1848. Beyond the recommendation of the mayor, nothing was done until 1851, when the City Council appropriated \$10,000 to test the practicability of the system; and under the direction of Mr. Farmer the apparatus was built and placed in position, and the first successful official fire alarm was tolled upon the bells of Boston in 1852.

About the year 1855 a co-partnership was formed by Mr. John N. Gamewell and others of New York, for continuing the fire alarm telegraph business, who purchased all of the patents and interest belonging to Messrs. Channing and Farmer, and they were successful in the work of placing the system in most of the principal cities in the country. Every improvement which inventive genius and mechanical skill could develop was secured by the company. Mr. Moses G. Crane, who had been manufacturing fire-alarm telegraph apparatus, moved his business from Boston to Newton Highlands in 1873, having fitted up a factory for that purpose. His first year of manufacturing in Newton demonstrated that the business would not be a success under old conditions. Boston workmen would not stay here without extra wages. Expert workers being scarce and in great demand, he could see no way out of the difficulty but to get young men and train them. He did so and soon found that graduates of the high and grammar schools made rapid progress, and in a few years he had a corps of over fifty as expert and reliable workmen as could be found in the State.

His manufacturing was done almost exclusively for John M. Gamewell & Co., of New York, until that firm was succeeded by the Gamewell Fire Alarm Telegraph Company, a New York corporation formed in 1877 with a capital of \$750,000. Mr. Crane contracted to do all their manufacturing, they to have free use of his patents during the contract time, which arrangement continued until 1886, when Mr. Crane sold to the above company his manufacturing business and everything pertaining to it. The company occupied his factory until 1890, when they moved into their new and commodious quarters at Upper

Falls, where they employ above a hundred workmen. It may not be out of place here to state that it is generally conceded that to Mr. Moses G. Crane is to be credited a very large share of the great success of telegraphic fire alarms as shown in its practical working to-day. His inventions, the mechanical construction and conscientious and perfect manufacture of the instruments and machines used therein, have been greatly admired for their simplicity and for the perfect manner in which they perform their functions.

Their systems of fire and police alarm telegraphy are in use in most of the large cities and towns of this country, as well as in foreign lands.

Including machinists, linemen and operators, this company furnishes employment to more than five hundred men during the working seasons of the year.

The United States Fire Works Company was organized at Portland, Maine, in February, 1886, with a capital of \$10,000, for the manufacture of pyrotechnics. The next winter it was reorganized with a paid-up capital of \$20,000, and the works removed to Newton Upper Falls, with its business offices and salesrooms in Boston. This company manufacture the highest grade of goods in their line of business; and have given some of the finest and most elaborate exhibits ever given in this country. Among the most notable may be mentioned the displays given at the National Military Drill at Washington, D. C., in May, 1887, and witnessed by the vast assemblage gathered at that festal occasion. These displays gave the company a national reputation, and since that time they have filled orders from all sections of the country—particularly from the fashionable watering-places in the vicinity of Boston.

During the busy season the company employ from fifty to sixty workmen in the manufacture of their fireworks, and have an annual sale of at least \$50,000 worth of goods from their laboratories.

Silk culture and manufacture is an industry that is already well established in this country, and is one that is rapidly increasing year by year; it already occupies a prominent place in the manufacturing community.

The first attempt at silk culture on this side of the Atlantic of which we find any record was made in Virginia in 1623. Twenty-five years later it was ordered by the colonial authorities that every planter should raise at least one mulberry tree for each and every ten acres of land they owned, or pay a fine of ten pounds of tobacco. A few years later the government of Virginia offered a bounty of 5000 pounds of tobacco to any one who should produce a thousand pounds of wound silk in a single year. This impetus given to silk culture so increased the production that the bounty was withdrawn in 1666. This withdrawal virtually ended the silk culture, for a time at least, and planters turned their attention to the more profitable crops.

Several brief attempts at silk manufacture were

made during the latter years of the colonial period; and one that probably was more successful than many of the others was made by Major William Molineaux, of Boston, in spinning, dyeing and manufacturing silk. The authorities, in 1770, gave him the free use of a suitable building in which to carry on his business.

In 1790 the silk manufacture was commenced in the town of Ipswich, Massachusetts, but was limited to handkerchiefs, ribbons, laces and edgings.

During the early part of the present century quite a number of small silk manufactories were started in Massachusetts. Mr. Jesse Fewkes had a small factory in Newton about the year 1822, where he manufactured a superior quality of fine laces, from linen or silk fabric. A thread as fine as No. 250 or 300 was required for his goods, and even a thread of No. 360 would be used on his finest work.

Perhaps the factory of Mr. Jonathan H. Cobb, of Dedham, in 1830 or thereabouts, was one of the most thriving and successful in Eastern New England. His production of sewing silk in 1837 amounted to more than \$10,000, and the entire production of the State aggregated at least \$150,000 the same year.

Mr. Cobb early interested himself in silk culture, and gave considerable attention to growing the mulberry tree and the feeding of silk-worms. The *Morus Multicaulis*, or Chinese Mulberry, was the most prolific in foliage and furnished a tender leaf which was a favorite of the worm. But our climate proved to be too cold to admit of its economical culture. Still, there was quite an interest manifest in the agricultural community generally in regard to the propagation of the mulberry, and the principal nurserymen of Newton were among the numbers to enter largely into the growing of the *Multicaulis*. Several large fields of the Chinese Mulberry were cultivated in the years 1838 to 1840, and thousands of silk-worms were fed. But beyond the reeling of small quantities of silk from the cocoons, nothing was done; and for the next ten or twelve years the silk culture and manufacture in Newton was an item of history. But in 1852 Mr. Joseph W. Plimpton built a large ribbon factory on Margin Street, West Newton, and employed a number of skilled workmen in weaving a great variety of fancy ribbons and dress trimmings. In the statistics of industries of the Commonwealth, in 1855, we find that Mr. Plimpton's productions amounted to \$38,000, and the silk products of the State aggregated \$750,000.

In 1857 Mr. Plimpton sold his factory to his superintendent, Mr. Charles R. Garratt, who continued the business about two years, when the works were destroyed by fire in 1859.

Early in the sixties, Mr. Isaac Farwell, Jr., started a sewing silk factory, at Newton Lower Falls, and was quite successful in his enterprise. About the year 1870 he removed his machinery to Newton Village, near the Watertown line, and continued the business for a few years longer, then removing to Connecticut.

The cotton factory property belonging to the Newton Mills Company at the Upper Falls, which had been idle for about two years, was purchased by Messrs. Walter T. Phipps and Franklin M. Train, co-partners in business—late in the summer of 1886. The old cotton machinery was taken out, and silk machinery put in its place, thus establishing one of the largest and most flourishing silk factories in the State. The company give employment to about 225 operatives, and require 100,000 pounds of raw material annually to supply their mill. The raw material used is commercially known as "waste silk," and is imported principally from Japan and China, with occasional invoices from Italy. The manufactured goods are, in the main, spun silk warps, used in plushes, upholstery and dress silk goods—and some hosiery work. The coloring department furnishes any variety of shade required by the purchasers.

To follow a pound of raw material through all of its various stages of manufacture would occupy more space than this article will allow, but, in brief, an outline of the process may be given. The first operation is to tease up the waste or raw material into a loose and flaky condition, and then plunge it into large vats to steam or boil, to eliminate the gum and other foreign substances adhering to it. Next it is rinsed and placed upon a system of crates for drying. After becoming thoroughly dried it is taken to the filling and dressing machines, where the process of separating and straightening the conglomerate mass of fibre is commenced. And by repeated operations upon these machines, the fibres are laid out perfectly straight. It is next put through a process of gill machinery, and from thence to the spinning-frames.

The drawing and spinning machinery used for silk is in many respects similar to worsted machinery, with the exception of the adjustment of the draught rollers, which must be made to conform to the difference between the lengths of the staple or fibre.

After the thread is spun to the required fineness for the web, it is ready for finishing. By examination with a microscope a soft down or fuzz will be seen along its surface, which must be removed. This is done upon what is termed a "gasing" machine, where the threads are drawn rapidly through a mild gas flame, so regulated as to remove the fuzz without in any way injuring the thread. Now the silken threads receive their final finish, and are grouped into the required numbers of threads for a warp, or are reeled into hanks, as may be required for weaving.

The demand for this company's goods has at times been so great, that they were obliged to employ a duplicate number of operatives, and run their machinery during the entire night-time, for weeks, and sometimes for months together, to fill their orders.

In the summer of 1867 Mr. George E. and William H. Wales, who lived on Greenwood Street, in the Oak Hill district of Newton, started the fruit preserving

business in a small way, under the firm-name of Wales Brothers.

From the want of better accommodations, the first season's work was done with an old cooking stove set up under a large elm tree near their house.

The year's production was about fifty dozen tumblers of jams and jellies, and the gross amount of sales realized nearly \$600. The next season a small building with two rooms about ten by twenty feet each was provided for the business. In 1873 Mr. George E. Wales purchased his brother's interest, and since that time he has remained the sole proprietor. The same year he built a new building twenty-four by forty feet, and two stories high, to accommodate his steadily increasing demands for preserves.

In the year 1884 the works were removed to Cedar Street, Newton Centre, and a commodious new factory erected, with about 8500 square feet of floor space; and last year (1889) the production of preserves reached 2500 dozens of tumblers, at a value of nearly \$25,000.

The value of the works in 1867 was about twenty-five dollars, and at the present time about \$7500 are invested in building and apparatus for carrying on the business.

At first the sales of the Messrs. Wales' goods was slow, for they adopted the rule to commence with, that nothing but good fruits and the best of sugar should be used in their manufactory, which enhanced the cost beyond that of other manufacturers. This standard they have strictly adhered to.

They also adopted at the beginning the name of "Home-made" preserves, a name well earned by the scrupulous care taken at all times to keep everything clean, pure and free from adulteration by chemicals or coloring materials. These merits have given them the first prizes at several exhibitions in mechanics' fairs and other places. The goods are largely sold in Boston and vicinity, although consignments are frequently made to some of the principal Southern and Western cities. Certain varieties are shipped to England, China, and even to Africa and elsewhere.

In the year 1807 Mr. Ziba Bridges removed from the town of Holliston to Newton, and purchased about two acres of land with a forge-shop thereon, of Edward Fisher, at the Lower Falls, where he started what proved to be a thriving and profitable business. A few years later he purchased a few acres of land upon the top of the hill near the Newton factories at the Upper Falls, and built a brick dwelling-house, and a frame forge shop upon the premises, thereby extending his business, in which he continued for about twenty years.

Mr. Bridges had two sons, twin brothers, who developed in childhood a strong mechanical turn of mind. These lads had for playmates the sons of Mr. Joseph Davenport, a near neighbor to them,—and as the Davenport boys were also mechanically

inclined, it was very natural for them to spend their leisure hours in rudely constructing mechanical devices with jack-knives and hammers. In after-life these lads formed a co-partnership in business for building railway cars.

Mr. Charles Davenport and Albert Bridges located in Cambridgeport, and Mr. Alvin Davenport and Alfred Bridges in Fitchburg, and carried on their works with a firm-name of Davenport & Bridges.

They made valuable improvements in the railway car, first by building the long eight-wheeled car, with end doors and platform such as are now in general use.

Their second improvement was a peculiar mechanical arrangement to give the body of the car an easy and graceful motion while running.

From the Massachusetts Charitable Mechanics' Association report for 1837, No. 429, we make the following extract, viz.:

"The improvement here claimed by Davenport & Kimball (Mr. Kimball was father-in-law of Mr. Albert Bridges), we understand to be first, the manner of attaching the cars to the engine, as well as to each other, by which the sudden shock in starting or stopping will be avoided. And secondly, the cars are to be connected by a platform at the ends. By this means one may pass through the whole length of the train on the inside, as the doors are at the ends of the car, and you enter by stepping upon a platform between them."

In the report of the same association for 1841, No. 378, we copy another extract, viz.:

"Most persons who travel by railroad experience a continual repetition of sudden jars or shocks, arising from the sideway movements of the flanges of the wheels of the car against the rails of the track. The improvement made by Messrs. Davenport & Bridges is to obviate the above effects of the lateral motion by springs, suitably arranged. And in order to accomplish this the body of the car is supported on springs by means of suspending or pendulous bars, which permit a lateral motion of the running machinery, independent of the body of the carriage, and side-springs are disposed so as to reduce the shock of the wheels upon the rails. A letter written in a car with these improvements, while running at the rate of twenty-five miles per hour was exhibited, which to all appearances was as well written as if done in a counting-room."

The inventors of these improvements in passenger cars received a silver medal from the association.

By the foregoing extracts and descriptions it will be seen that the valuable improvements in railway carriages at that time belonged to Newton's sons. And very likely the early conceptions of them were made in their native town, before developing them in their workshops in other places.

In the extreme northeasterly part of Newton, quite near to the Brighton line on South Street and upon the eastern slope of the Norcross, or Waban Hill, was the residence of Mr. Hiram Tucker, who was a painter by trade, and who followed the business for several years of his early life. He had a desire to improve the quality of painters' supplies, and gave the subject special study, which resulted in his compounding a liquid bronze, for coating metals used in the manufacture of chandeliers, lamps, bedsteads and other metallic household goods. The Penrhyn marble, or

painted slate, or other stone or iron used for mantels and fire-frames, is another of his inventions.

About the year 1872 he built a large varnish factory at a cost of ten thousand dollars, near his dwelling, and manufactured a superior quality of coach-varnish, which he was enabled to produce by a peculiar method he had of treating or preparing the oils and other compounds used in its manufacture. From eight to ten thousand gallons of varnish was considered by him to be a fair annual production. He carried on this branch of his business in connection with manufacturing enterprises he had in other localities outside of Newton, until his death, only a few years ago, when the works were discontinued, and his buildings utilized for other purposes.

In my research for historical matter and incidents I have spent considerable time in looking up old records at the Middlesex and Norfolk registries of deeds, and at other places where information could be found. The Boston Public Library has been a prolific source of valuable information—so has the Newton Library; and the town and city records have been of value in preparing this article.

I am also indebted to quite a number of the older inhabitants of our city for valuable assistance in procuring many facts pertaining to the earlier industries, both from record and memory, or tradition.

I am specially indebted to Dr. Charles F. Crehore, of the Lower Falls, for valuable records and documents connected with the paper manufacture of that village; and from the citizens generally, whom I have interviewed, I have received a willing and hearty response to my interrogatories, for which I return thanks for their kindness in assisting me in the work.

CHAPTER VIII.

NEWTON—(Continued).

CLUBS, SOCIETIES, ETC.

BY EDWIN B. HASKELL.

NEWTON is a city of villages, mainly the homes of people whose business is in Boston. Eight flourishing villages have grown up on the lines of the two railroads which run through the city limits. These are thoroughly equipped with post-offices, stores, churches, schools and public halls, making each section essentially a distinct community. There are several others still in embryo about the new stations of the so-called Circuit Railroad, which forms an easy means of communication between the different sections. The number of villages has naturally led to the formation of an unusually large number of clubs and societies in proportion to the population, each

village having its full quota, while some of more general interest have all parts of the city represented in their membership. Of the latter class the Newton Horticultural Society is a good example, and, as it is one of the oldest and most useful societies in the city, it is proper to give it the place of honor.

THE NEWTON HORTICULTURAL SOCIETY.—This society was the outgrowth of a series of meetings held at Newton Centre by the active and enterprising young men of that place. The first annual meeting was held in Lyceum Hall, October 16, 1854.

The officers of the permanent organization were: President, Alfred Morse; Vice-Presidents, John Ward, Jr., and B. W. Kingsbury; Secretary, C. N. Brackett; Treasurer, Henry Paul; Executive Committee, Geo. K. Ward, B. W. Kingsbury and E. J. Collins.

The society started under very favorable circumstances financially, and its affairs were conducted by those who were very much interested in its workings, some of whom are the active members to-day.

The meetings were at first held at the houses of the members, where horticultural and agricultural questions were discussed, but they soon outgrew the limits of private accommodations.

It was the custom in the early years of the society to hold monthly meetings during the winter, at which refreshments were provided, and the social part was quite an important feature.

At the annual exhibition of the year 1856 every section of the town (now city) was represented.

In 1862 an exhibition and festival was held at Newton Corner, the proceeds of which were placed in the hands of a committee of three to be divided among the soldiers of the town. Winter meetings were held that year and they were addressed by persons well known in horticulture. In April, 1866, a member made a report in the form of an address, urging a more systematic effort to destroy the caterpillar. The address was printed and distributed among the residents of Newton. Successful efforts were being made from time to time to increase the membership of the society and, by a vote, ladies were invited to join the society.

In the season of 1866-67 committees were appointed to study the habits of birds beneficial to horticulture and to awaken an interest in the citizens to set shade-trees by the side of the streets. A series of prizes were offered for the best and most successfully grown group of shade-trees.

A committee was appointed in April, 1868, to cultivate and propagate various plants, seeds and vegetables to be distributed among the members. Mr. Henry Ross was chosen chairman of that committee, and under his supervision a report was made in the following spring that there were several thousand plants and many bushels of improved potatoes awaiting distribution among the members.

For a number of years past the Agricultural Bureau

at Washington has distributed seeds to the citizens of Newton through the society.

In 1875, in an essay read at one of the meetings on "How to Beautify our City," the removal of fences from the front of residences was advocated. The society passed the following vote: "*Resolved*, That the members of the Newton Horticultural Society use their influence toward beautifying the City of Newton by advocating the removal of fences from fronts of residences, thus giving the effect of a series of parks without the outlay of large sums of money."

A committee was appointed to prepare a list of the best varieties of pears, which list was printed and distributed among the members and others.

The society has had a continuous existence for over thirty-five years, and its members claim for it a fair share of the praise given to Newton for its beautiful streets, set with fine trees, the taste displayed in laying out private places, and the absence of fences.

The thanks of the residents of the city are due to the members of the society who were present at its birth, who have clung to it through its many years of existence, who have given it energy and the ability to perform its work and shed an influence over the whole city. Among those who can be mentioned are J. F. C. Hyde, Geo. K. Ward, John Ward, C. N. Brackett, John Stearns, Geo. F. Stone, Lyman Morse, H. H. White, Wm. Aiken and Henry Ross. Among those who joined later we find E. W. Wood, Geo. S. Harwood, Chas. W. Ross and many others.

The present officers are:

President, D. D. Slade; vice-presidents, A. T. Sylvester and N. W. Farley; treasurer, E. A. Wood; auditor, W. H. Gould; executive committee, E. W. Wood, C. N. Brackett, J. R. Leeson, C. W. Ross, L. H. Farlow.

THE JERSEY STOCK CLUB OF NEWTON.—On the 17th of May, 1866, a meeting was held at the residence of Hon. Wm. Claflin for the purpose of organizing a club having for its prime object "The breeding and improvement of Alderney or Jersey Cattle." At this meeting a committee was appointed to prepare a constitution and by-laws, and to nominate a list of officers for the club. The first organization was presided over by the following list of officers, elected June 11, 1866: President, Hon. William Claflin; vice-president, Geo. C. Rand; corresponding secretary, Edwin F. Waters; recording secretary, James T. Allen; treasurer, E. Porter Dyer; board of directors, J. J. Walworth, George Frost, Wm. E. Plummer, J. F. Edmands, Henry Billings, N. P. Coburn, Thos. Rice, Jr.; herd book committee, Thomas Drew, George E. Allen, Joseph Walker.

A constitution and by-laws were adopted June 20, 1866. The club immediately provided itself with pure blood Jersey bulls for the improvement of the herds owned by members, and yearly exhibitions of stock were held until the year 1870, when the mem-

bership becoming so large as to make the club too cumbersome as a social institution, it was dissolved in January of that year.

Immediately after the first club was dissolved it was thought best to form another one, limiting the membership to twenty persons, and making it eminently a social club, holding meetings at the residences of various members once in two months.

This new organization was formed on March 14, 1870, and the list of officers elected at that time was as follows: President, George H. Jones; secretary and treasurer, J. F. Edmands; executive committee, George Frost, John C. Chaffin, John C. Potter, Jr.

A constitution and by-laws were adopted at this meeting and the club named "The Jersey Stock Club of Newton." The object of the club, as declared, was to promote the keeping and improve the breeding of Jersey stock in Newton, and social intercourse among the members.

The membership of twenty is always full, and is composed of the most prominent citizens of the city. The original members were: Isaac T. Burr, John C. Chaffin, Hon. Wm. Claflin, Nathaniel T. Coburn, E. W. Converse, Fred'k Davis, Hon. J. Wiley Edmands, D. R. Emerson, J. F. Edmands, George Frost, Joel H. Hills, David B. Jewett, David H. Mason, George H. Jones, George C. Lord, John C. Potter, Jr., George C. Rand, Hon. Alden Speare, J. C. Stanton, Jos. H. Woodford.

The club has done a good work in this section of the country in the introduction, by selection and importation from the Isle of Jersey, of a superior class of cattle, and it is quite probable that the fine taste for Jersey butter and rich milk has been cultivated by its influence.

The club occasionally holds exhibitions of stock owned by members; the last show of this kind was held on the ample grounds of the late Hon. John S. Farlow, when forty-one head of the beautiful pure-blood Jerseys were brought together, and eminent breeders and prominent gentlemen from other parts of the country were congregated at that time to pass judgment on the cattle and their products. Actual demonstrations like the above are felt far and wide, and it is pleasant to note the influence as expressed in all the country fairs, and more particularly at the late State Fair of the New England Agricultural Society, where Jersey cattle and their products were more prominent than all the other cattle on exhibition.

The present officers of the club are: President, E. B. Haskell; Vice-president, John S. Farlow;¹ Secretary, Jos. H. Woodford; Treasurer, A. Lawrence Edmands; Executive Committee, George Frost, John C. Chaffin, John C. Potter.

NEWTON NATURAL HISTORY SOCIETY.—The Newton Natural History Society dates from the autumn

¹ Deceased March, 1880.

of 1879. The first regular meeting was held October 28th of that year. Its avowed objects were the study of natural science and the development of interest in such matters among young people and in the public schools.

The membership and attendance soon outgrew the capacity of a private house, and a small room was rented in Eliot Block, in Newton, and this was afterward exchanged for the lower hall in that building. The interest shown at this time has not always been maintained, as the membership changed through removals and deaths, but at the present time the society has a live membership, and is probably doing more than ever to justify its existence. Its usual programme includes an essay on some scientific subject by a member of the society or by an invited essayist. Valuable features of the meetings are the short talks given by members upon subjects which they have been investigating. These talks, illustrated by the blackboard, are especially calculated to assist beginners, and to call attention to the many points of interest in things easily accessible. The society has made a collection of objects pertaining to natural history, and by the donation of several valuable private collections it has formed a nucleus of a useful collection. Among its recent gifts may be mentioned a fine collection of plants by the late Gen. A. B. Underwood, a collection of minerals from Mr. Edward Fearing, and another from the late Judge J. C. Park. Until the society shall have a building of its own, it will labor under a serious disadvantage. To be of use, its specimens ought to be accessible, and available for study and comparison. Since February 26, 1883, the society has been incorporated under the laws of Massachusetts. With the organization it already possesses, it is easy to claim a far higher degree of usefulness when sufficient public interest can be awakened to provide it with proper means for extending its work. Its meetings are held on the first Monday evening of each month at Eliot Lower Hall, Newton. The public is invited to attend.

ELIOT MEMORIAL ASSOCIATION.—One of the earliest incidents in the history of Massachusetts is associated with a portion of Middlesex County, and the scene lies in what is now the city of Newton. Nothing but Plymouth Rock antedates, in historic interest, the Hill Nonantum, where the Apostle Eliot began his work among and for the Indians. The Eliot Memorial Association has secured a plot of ground on the southern slope of Nonantum Hill, off Kendrick Street and Waverly Avenue, and erected a handsome stone terrace with freestone balustrade, ornamented with allegoric design and with appropriate inscriptions. On the completion of the memorial by the introduction of a fountain, or other suitable decoration, the Eliot Memorial will be given over to the city of Newton, and form one of the most effective wayside monuments within its borders. The scene is one of the most attractive

possible, overlooking the valley between Nonantum and Waban Hills, and embellished, towards the east, by two pleasant lakes and the spires of Brighton and Boston. Newton has for its seal a representation of Eliot preaching to the Indians, and the Eliot Memorial fixes upon the landscape the scene so thoroughly identified with her history. The principal inscription upon the memorial itself puts, with historic accuracy, the events commemorated. It is as follows:

"Here at Nonantum, Oct. 28, 1646, in Waban's Wigwam, Near this spot, John Eliot began to preach the gospel to The Indians. Here was founded the first Christian Community of Indians within the English Colonies."

Carved in the corbels of the balustrade are the names Waban, Heath, Shepard and Gookin; these are the names of Eliot's companions at that first service in 1646.

Eliot wrote in a little pamphlet, published in England ("Day-breaking of the Gospel"): "Upon October 28, 1646, four of us (having sought God) went unto the Indians inhabiting within our bounds with desire to make known their peace to them." They met Waban, "one of their principal men," and proceeded to his wigwam, where the first service was held, Eliot preaching in the Indian tongue, he having, with infinite pains, learned their language, and he was already engaged upon his translation of the Bible. The interesting details of this and following services have been often rehearsed. Eliot now brought the Indians together in a village, gave them spades and other tools, encouraged them to plant apple-trees and build walls and dig ditches. To civilize and Christianize at the same time was his aim. "Wee have much cause to be very thankful to God, who has moved the hearts of the General Court to purchase so much land for them to make their towne, in which the Indians are much taken with." "This towne the Indians desired to know what name it should have, and it was told them it should be called 'Noonatomen' (sic), which signifies in English, 'rejoicing,' because they, hearing the Word and seeking to know God, the English did rejoice at it, and God did rejoice at it, which pleased them much." (From "Day-breaking if not the Sun Uprising of the Gospel to the Indians.")

Five years later this community of Indians was removed to Natick. Nonantum was too near the white man's fire-water and attendant vices. The westward march of the Indians then commences and has never ceased, and now we have come back to the Apostle Eliot's thought that civilization and Christianity must go hand-in-hand to benefit the Indian.

In 1676, when the praying Indians were brought up from Deer Island, after King Philip's War, many of the Indians returned to Nonantum and settled "near where Mr. Eliot first preached to them." A school-house was built for them on land of Deacon Trowbridge, and here Mr. Eliot continued to preach

to them, and Daniel Gookin, a magistrate, held court every fortnight.

Abraham Hyde, who was born a quarter of a century later, remembered well the orchard and walls and ditches of Nonantum, and spoke of their location to Jonathan Homer, who wrote of the same in his sketch of Newton, printed in 1793.

Thus history and tradition unite in the site of Nonantum, the Indian village, and it has been the good fortune of the Eliot Memorial Association to fix upon the landscape a memorial, as enduring as history itself, of the scene where John Eliot began his work for the Indians.

THE NEWTON COTTAGE HOSPITAL.—The need of the city of Newton for an institution for the care of the sick was first publicly suggested in the autumn of 1880. It was seen that the Boston hospitals were usually full, that the danger from severe accidents was increased by transportation to them, and that a better result in all diseases was probable when treated in the purer air of the suburbs. For these and other reasons it seemed to some of the citizens desirable that a hospital should be established in a healthful location in Newton. A number of gentlemen met on November 10, 1880, in response to an invitation signed by the mayor of the city and others, and voted unanimously that it was expedient to establish in Newton a "Cottage Hospital." This name was adopted from England, where for several years small buildings for the care of the sick, frequently a cottage-dwelling converted from its original use, had been established, and with such favorable results in the treatment of disease, as compared with the large city hospitals, that their number increased rapidly.

These were called Cottage Hospitals, and even where moderate-sized buildings were erected, especially designed for the purpose, the same term was applied to them. It is an attractive designation for an institution usually regarded with dread, and therefore was selected by the Newton organization. At the meeting of November 10th a committee of twelve was appointed to take the matter into consideration and report a plan of action at a subsequent meeting. The committee met November 26th and voted to establish the hospital as a private corporation, and articles of association and by-laws were considered and laid over for future action. The committee met again December 18th and adopted a set of provisional by-laws as a basis of action. The association, which was subsequently constituted the Newton Cottage Hospital Corporation, was formed December 18th by the committee of twelve and nine other gentlemen. This association met Jan. 4, 1881, and organized a corporation by adopting a code of by-laws and electing a clerk, a treasurer and five trustees. The trustees met January 6, 1881, and elected a president and vice-president. The certificate of incorporation was granted January 11, 1881. The first annual meeting of the corporation was held January 17, 1881, when

forty-three ladies and gentlemen who were present were elected members, and twenty-four trustees, twelve ladies and twelve gentlemen, were chosen, and a clerk and treasurer elected. At a meeting of the trustees January 22d, a committee was appointed to investigate the subject of hospital buildings and report upon the character of such as would be required. At a meeting of the trustees, March 16th, the president, Royal M. Pulsifer, announced that he had secured twelve subscriptions of five hundred dollars each, and a committee was appointed to decide upon a location for the hospital and purchase the necessary land. This committee examined several sites and reported to the trustees from time to time; but no definite action in the matter was taken until June 27, 1884, when the trustees voted to purchase a lot on Washington Street, containing about nine acres, at \$400 per acre. This lot is beautifully situated, with a southwestern aspect, and has a frontage of 468 feet on Washington Street. January 2, 1885, the trustees examined plans and estimates for buildings, and appointed a building committee with full powers.

In the summer of 1885 the ladies of the city formed a Ladies' Aid Association, which has always been an invaluable adjunct to the hospital. At the trustees' meeting, March 23, 1886, the Executive Committee submitted a code of rules for the management of the hospital which were approved. May 11, 1886, the Executive Committee reported that they had appointed a Medical Board, and that this Medical Board had prepared rules for the medical government of the hospital. The buildings were erected in the winter of 1885-86, and the hospital was dedicated June 5, 1886. The hospital was furnished by the Ladies' Aid Association. The land and buildings cost about \$14,000. A peculiarity of the organization of the hospital is that the two leading schools of medicine are equally represented in the Medical Board. The executive officer of the hospital is the matron. A training-school for nurses has been established, which performs an important use both to the hospital and the community. A much-needed addition was made to the hospital by a new ward, built by one of the citizens of Newton, Mr. J. R. Leeson, as a memorial to his wife, at a cost of \$6240. This new ward, which is used for women, was dedicated May 4th, 1890.

The hospital is supported by an annual appropriation from the city of Newton, by subscriptions of \$300 each for the support of free beds, by donations, by contributions in the churches on Hospital Sunday, by income from funds which have been given by sundry individuals, and by the amount received for board and care of patients. For the year ending December 31, 1888, over \$8000 was received from these sources; the expenses for the year being about \$6000. The total number of patients in the hospital for three years and five months was 373. There were, Dec. 1, 1889, accommodations for twenty-nine patients,

and in 1890 a new ward was added which nearly doubles the accommodations.

NEWTON HOSPITAL AID ASSOCIATION.—In June, 1885, the trustees of the Newton Cottage Hospital issued a call to the ladies of Newton. In response to this call, thirty-three ladies, representing all the Newton villages, held a meeting at the Eliot Church, Newton, July 3, 1885. Mrs. Alvah Hovey was chosen chairman. She announced that it was the desire of the trustees that the ladies of Newton form themselves into an association to furnish the rooms and provide for the running expenses of the hospital. The following resolution was adopted:

"Resolved, That the ladies of Newton associate themselves as a Ladies' Aid Association for the purpose of working for the hospital."

A committee were appointed to arrange by-laws. September 24, 1885, an organization meeting was held at Grace Church, Newton. A board of officers were elected, and it was voted to adopt the name, "The Newton Hospital Aid Association."

The furnishing of the hospital was accomplished through the association by contributions from individuals, churches, literary societies and Sunday-schools.

Two directors are chosen each year to visit the hospital before each meeting, and consult with the matron in regard to the needs of patients.

The directors have been responsible for the collection of membership fees in their various districts and by their earnest efforts have interested the people to care for the sick and give of their abundance to alleviate suffering and pain. There is a membership of over three hundred ladies.

THE NEWTON ATHENÆUM.—The Newton Athenæum was organized at West Newton in 1849 under the general statutes of Massachusetts.

The stock was held in shares of ten dollars. Its object was to maintain a library for the use of its shareholders.

Mr. Wm. B. Fowle, Sr., was chosen the first president and the Hon. Horace Mann one of its directors.

The library was opened in a small room in the Town Hall building February 25, 1850. It numbered 640 volumes, many of them gifts from members and others.

At first the library was open on Mondays—afternoon and evening—and "on Town Meeting days during the hours of each meeting."

As some fifty to one hundred citizens of both sexes and all ages would be meeting at the library on these Monday evenings "to exchange books and salutations," the suggestion was soon made that they should adjourn to the Town Hall, the use of which they could have by furnishing fuel, lights and care, and with the simplest organization devote a half-hour or more to the discussion of some interesting theme, usually suggested by the last new book. The experiment proved satisfactory, and the meetings were

kept up from March 18th until late in the autumn, when they gave place to a course of lectures given under the auspices of the Athenæum.

From that time on (with a few short lapses) meetings of the same general character have been held each season, the exercises usually consisting of short lectures, discussions and music, "home talent" being mainly depended upon for their support. These meetings of the "West Newton Lyceum" have become somewhat noted beyond the town limits as being almost the sole survival of a class of institutions once held in high esteem throughout New England.

In May, 1860, the library, containing 2000 volumes, was moved to better quarters and deliveries made three times a week.

Until 1867 only the families of shareholders and persons paying a small annual fee used the library. In that year the directors were authorized to allow any resident of Newton to take out books. For several years thereafter this was the only free library in Newton.

In 1875 the library was removed to still more spacious quarters, a reading-room was opened and a daily delivery established. The directors were led to this by the action of the town, which in town-meeting had adopted, upon the petition of the Athenæum and upon the recommendation of the Hon. J. Wiley Edmands, the policy of appropriating money in aid of free incorporated libraries. The city government endorsed and continued this policy until, in 1876, it assumed the entire support of the Newton Free Library at Newton (Corner), since which time it has ceased to do anything for the West Newton Library. It has, however, for several years paid a part of the expenses of the reading-room.

The library contains (in 1890) 5590 volumes, and is especially strong in history, biography and travels. The annual deliveries range from 8000 to 12,000, besides from 4000 to 4500 volumes which are distributed by the Athenæum as the agent of the Newton Free Library.

THE NEWTON CLUB.—Early in April, 1887, a circular was addressed by Mr. Austin R. Mitchell to some forty or fifty gentlemen, requesting them to meet at his residence, Walnut Street, Newtonville, to consider the advisability of forming a social club for Newton. The project was not a new one, as several previous attempts to form a social club, which should embrace in its membership gentlemen from all parts of Newton, had been made, but none with success.

The present, however, seemed ripe for such a project. The Newton Circuit Railroad had recently been completed, rendering communication between the different sections of the city easy and expeditious, and the "Roberts House," so-called, the historic mansion formerly occupied by General Hull, had lately changed hands and become available for club purposes, for which use its large and numerous rooms and close proximity to the railroad station made it peculiarly fit.

The greater part of those receiving Mr. Mitchell's circular attended at his house on the evening of April 12, 1887, and it was unanimously decided to attempt the formation of a club. A committee of twenty-two was appointed to secure an act of incorporation from the Legislature, and also to take all other necessary preliminary steps.

The act of incorporation was signed by Governor Ames May 26, 1887, and the club immediately organized. The first officers to serve the club were as follows: President, Royal M. Pulsifer; Vice-Presidents, William Claflin, Robert R. Bishop, Isaac T. Burr, Levi C. Wade; Secretary, Edward W. Cate; Treasurer, Francis A. Dewson; Executive Committee, Henry E. Cobb, Prescott C. Bridgham, William M. Bullivant, Moses G. Crane, Edward H. Mason, William J. Pollett, J. Edward Hollis, Samuel L. Powers, John W. Carter, Arthur C. Walworth; Committee on Elections, Lewis E. Coffin, George F. Churchill, George L. Lovett, Henry C. Churchill, Eben Thompson, Harry W. Mason, Sydney Harwood, Austin R. Mitchell, Frederick L. Felton, James W. French.

The Roberts House was at once leased, but it was not until the following October that the necessary alterations in it and its furnishing were completed. On the evening of December 19, 1887, the club-house was formally opened with a reception, which was attended by some three or four hundred of the most prominent citizens of Newton. While the membership of the club is composed exclusively of gentlemen, it has always been the policy of its management to extend its privileges in some degree to ladies. With this end in view, a number of entertainments have been given each winter in the club-house parlors, and a reception has become an annual feature. The club is now in its third year; its membership has steadily increased, and includes many of the best-known and most influential residents of the city, and gives promise of being a permanent feature in the social life of Newton.

NEWTON CIVIL SERVICE REFORM ASSOCIATION.—The Newton Civil Service Reform Association had its origin in a suggestion made by Rev. Henry Lambert at a meeting of the West Newton Book Club, held April 1, 1881. At this meeting Messrs. Henry Lambert, E. P. Bond and N. T. Allen were appointed a committee to secure the co-operation of other citizens of the ward in forming a civil service reform organization. In accordance with a notice published in the *West Newton Transcript*, and signed by these gentlemen and twenty-two others, a meeting was held at the City Hall, West Newton, April 20, 1881, at which was adopted a preamble and constitution for the "West Newton Civil Service Reform Association." The organization started with nearly eighty members and the following list of officers: President, Rev. Henry Lambert; vice-presidents, Rev. Increase N. Tarbox, Henry A. Inman; treasurer, John J. Eddy; secretary, Fisher Ames; directors, Thomas B. Fitz,

F. F. Raymond (2d), Arthur Carroll, Alfred L. Barbour.

At the annual meeting, April 24, 1882, the name of the society was changed to the "Newton Civil Service Reform Association." Since that time it has aimed to make its lists of members and officers representative, as near as may be, of the entire city.

The officers elected at the annual meeting April 22, 1889, were: President, Rev. Henry Lambert; vice-presidents, Leverett Saltonstall, John S. Farlow, Edwin B. Haskell, Robert R. Bishop, Wm. P. Ellison, Edwin P. Seaver, Nathaniel T. Allen; treasurer, Stephen Thacher; secretary, James P. Tolman; directors, Thomas B. Fitz, Edward P. Bond, F. F. Raymond (2d), H. E. Bothfield. The number of members December, 1889, was 127.

The association, by its executive committee, has adopted and published resolutions on many occasions of moment in the progress of the reform. It has usually sent several representatives to the meetings of the National Civil Service Reform League, and has always sent delegates to the Massachusetts League; has each year contributed to the support of the National League, and has distributed the literature of the reform very freely among its members and others.

In 1885 the association published and circulated a historical sketch of the movement, in the form of a pamphlet, by President Lambert, entitled "The Progress of Civil Service Reform in the United States."

In behalf of the association the executive committee has frequently addressed letters of inquiry to public officers and candidates for office. Its correspondence with Hon. John W. Chanler, then Representative to Congress from the district, led to the organization of the independent movement which elected Hon. Theodore Lyman to Congress in the fall of 1882, and apparently much hastened the passage of the National Civil Service Act in January, 1883.

PINE FARM SCHOOL.—In the year 1863 a farm containing about twenty-five acres on Chestnut Street, corner of Fuller, West Newton, was purchased and fitted as a home for boys living in such exposed and neglected circumstances as to be likely to fall into vicious habits.

In June, 1864, the place was dedicated by appropriate exercises to the purposes for which it had been obtained.

In 1865 an act of incorporation was granted by the Legislature to the Boston Children's Aid Society, the members of which had been united in starting and carrying forward the enterprise. Mr. Rufus R. Cook, familiarly known as "Uncle Cook," acted as agent, and sent to the home such boys as he found in the city morally exposed, and who in his judgment could be saved if placed under better influences.

The number of boys to be in the school at one time is limited to thirty, and it is designed to be a home in

the truest and highest sense. The boys attend school every day except Saturday, and on Sunday attend the Congregational Church and Sunday-school. The day-school is upon the grounds, the teacher residing on the farm. The boys are given up by the parents or guardians to the care of the society till eighteen years of age, being received between the ages of nine and fifteen years.

After remaining in the school until, in the judgment of the superintendent (usually between one and two years), they are sufficiently trained to do well, they are placed in some family, but are still under the care of the society, a visitor being continually employed in visiting them to see that they are well cared for in their new homes. Between twenty and thirty boys are usually sent out in a year, and the results show that a very large percentage of these boys, taken from their parents and placed under better influences, may be saved from the criminal life almost certain to follow as the result of their evil surroundings. Indolent and injudicious parents, to say nothing of those who are intemperate and criminal, make many homes the training-school for lives of lawlessness and criminality. During the quarter of a century of the existence of Pine Farm School there has been no death among the boys and but little serious illness. They soon yield to a kind but firm discipline, and with regular diet and sleep, improve in bodily health.

REBECCA POMEROY NEWTON HOME FOR ORPHAN GIRLS.—In the year 1872 Mrs. Rebecca R. Pomeroy, with the aid of friends, assumed the care and support of four little girls who were made homeless by the disbanding of the "Girls' School" connected with the "Boston Children's Aid Society." This was the nucleus of what has grown to be the "Rebecca Pomeroy Newton Home for Orphan Girls." With rare industry, tact and thrift combined, it has been enabled to feed, clothe and educate its twenty inmates during the past seventeen years, mainly from the gifts of the women of Newton, although generous aid has been given by friends, both old and young, in neighboring cities.

The present location of the home on Hovey Street, Newton, was purchased by the citizens of Newton as a memorial to its founder, Mrs. Pomeroy.

There have been connected with the home fifty-two orphan and destitute girls. The number who have completed a full course of training, and have gone out prepared to enter upon life-work well equipped to earn a livelihood, is eighteen; the number returned to friends, able to furnish good homes for them, ten. Three are married. Nineteen are now earning a support. Not one has died at the home, and only two since leaving it.

When thoroughly prepared each girl goes to service in a place carefully secured in a good family, a country home preferred. A bank-book is provided and all savings above necessary expenses are depos-

ited in the Newton Savings Bank. The treasurer of the "Home" corporation has now in her care nine such books with an aggregate of six hundred dollars invested.

One of the lady directors, in connection with the superintendent, continues watchful care and oversight of these girls after leaving the home, as would a good mother.

The principle involved in the management of the home is unique. From each of the twenty-seven Protestant churches of the city one or more ladies or gentlemen are secured. These constitute a Board of Corporators, who, at an annual meeting, elect a Board of Directors, upon whom devolves the immediate management of the home.

It is an unwritten law that each of the Protestant religious sects in the city shall, if possible, be represented upon this Board of Directors. It is not true that sectarianism in any objectionable sense ever has been or could be justly charged to the home.

The public are cordially invited to visit the home and witness the spirit which animates the whole household, and to remember it is only by the generous gifts of its friends that the home has been enabled to seek and save many a friendless orphan girl and elevate them to virtuous womanhood.

FIREMEN'S RELIEF ASSOCIATION.—The above association was organized August 2, 1878, and incorporated December 4, 1884, with the following list of names as incorporators:—Henry L. Bixby, F. H. Humphrey, W. S. Higgins, Bernard Early, H. H. Easterbrook, George H. Haynes, Charles W. H. Boulton, J. E. Trowbridge, F. D. Graves, T. C. Nickerson, W. S. Cargill, John Dreary.

The object of this association is set forth in the following preamble:

"WHEREAS, the members of the Fire Department of the City of Newton are liable, in the discharge of their duty, to many casualties to which citizens are generally not exposed, and,

"WHEREAS, These casualties are frequently very injurious, and sometimes ruinous to health, comfort and pecuniary circumstances of those on whom they fall—

"It is therefore,

"Resolved, by the undersigned, being all members of the Newton Fire Department, that we form ourselves into a society for the purpose of material aid and assistance, under the calamities to which the public duties of firemen may expose them, and for the better management and control thereof we accept the following constitution, by which we mutually agree to be governed."

The present fund is maintained by annual assessment of each member, by public contributions, and the small amounts realized from public entertainments.

The present amount of this fund is \$2200, deposited in savings banks.

The officers for 1889 are Henry L. Bixby, president; W. S. Cargill, vice-president; Willard S. Higgins, secretary and treasurer.

YOUNG MEN'S CHRISTIAN ASSOCIATION.—Some time during the summer of 1877, Dr. H. E. Jones was impressed with the necessity of doing some special

work for temperance, and for that purpose invited about a dozen gentlemen to meet at his house to consider the subject.

While discussing the temperance question it was brought to the notice of those present that there were a number of young men in Newton whom the church did not reach, and it was considered desirable to take some united action to supplement the church work, and at the same time do more for temperance than was being done. To this end it was suggested to unite Christian workers from all the evangelical churches as a Young Men's Christian Association. A public meeting to consider it was called at Eliot Lower Hall, October 16th. Quite a large number of gentlemen responded to the call and the meeting was organized with Mr. E. P. Wright as chairman and Mr. George S. Trowbridge as secretary. Dr. H. B. Jones eloquently presented the object of the meeting, and was followed by several others, awakening considerable enthusiasm in the matter. It was voted to organize an association and a committee was appointed to prepare a constitution and report in one week, to which time the meeting adjourned. At the adjourned meeting the organization was perfected, a constitution adopted and the following board of officers elected: President, George S. Harwood; vice-president, Geo. S. Trowbridge; secretary, Geo. C. Dunne; treasurer, F. M. Trowbridge; directors, Edward B. Earle, Edward W. Cate, J. M. Kalloway, Dr. H. B. Jones, Daniel E. Snow.

The association was fairly launched, and has been an active organization ever since, doing good work in its chosen field. Its anniversary occasions are always of special interest, and at its last one, when Eliot Hall was well filled, the erection of a Y. M. C. A. building was advocated, which has so awakened public opinion to its necessity that active efforts are being made in that direction with very gratifying results.

The presidents since its organization have been: George S. Harwood, one year; G. D. Gilman, three years; H. J. Woods, three years; D. E. Snow, two years; R. F. Cummings, two years; and D. Fletcher Barber, who is now serving his second year.

THE NEWTON SUNDAY-SCHOOL UNION.—This Union of the Sunday-schools of the town of Newton for the discussion of practical questions, designed to prepare teachers and officers for better work, was organized December 18, 1838, with Hon. William Jackson as its first president. Six schools comprised the Union at its birth, and its earliest anniversaries were held in groves, with processions of children, addresses from prominent citizens, and large gatherings, as their features. Its regular meetings were then held monthly, but afterwards made quarterly, changing from village to village on Sunday evenings, each Sunday-school there reporting its condition. Through its enterprise a colporteur was maintained in 1849 and subsequently to labor in West Virginia and Ohio.

October 16, 1863, the Union celebrated the twenty-fifth anniversary of its organization with an address by Rev. A. L. Stone, D.D., of Park Street (Boston) Church, in the first Eliot Hall. June 27, 1863, the 100th anniversary of the organization of Sunday-schools by Robert Raikes was celebrated in the new Eliot Hall, with an historical address by Rev. Bradford K. Pierce, D.D., and a centennial hymn by Rev. S. F. Smith. The singing upon this occasion was by a choir of 350 children from the various schools, trained and conducted by Mr. George S. Trowbridge. In 1860 the Union represented a Sunday-school membership of 1405; in 1870, 2870; and in 1880, 3085, teachers and scholars. Meetings have been held regularly all these years. October 19, 1881, a gold medal was offered as a prize for the best essay on "Sunday-School Interests." It was subsequently awarded by the committee to Mr. D. E. Snow, who had served as secretary of the Union from 1869 to 1877 and as its president during the year 1878. Among the prominent citizens of Newton who have served as its presidents may also be mentioned Messrs. Marshall S. Rice, Deacon Ebenezer F. Woodard, Frederick A. Benson, George S. Harwood, Joseph A. Newell, General A. B. Underwood and Hon. J. C. Park.

THE GODDARD LITERARY UNION.—The Goddard Literary Union was organized October 28, 1874, in the Universalist Church at Newtonville with forty-four members and the following officers: Robert P. Gould, president; Lewis E. Binney, secretary; C. B. Fillebrown, treasurer. Its object was "Religious, Mental and Social" improvement. Its membership consists only of those connected with the above church.

Regular meetings are held twice a month, and "Public" concerts or plays are given about four times a year. The vestry, where meetings are held, is finely adapted to these plays, being fitted with stage, scenery, foot-lights, etc., and combining this advantage with the fact that plenty of talent is available, and earnest, working committees can be easily chosen. Some fine plays as "Once Upon a Time," written by Mr. H. N. Baker, a member; "High Life," by Mr. Monday, another member; "Longfellow's Dream," a fine amateur play, and "Among the Breakers," one of Walter Baker's famous dramas, have been most successfully rendered to crowded houses. By this means the Union has been able to make handsome contributions to the church funds, its yearly subscription having been as high as \$500.

At present (1889-90 season) the membership has grown to about 165, including prominent business men, and a large percentage is composed of real active, working members.

The Union is in a flourishing condition and governed by the following officers: President, Rev. R. A. White; Vice-President, F. M. Whipple; Secretary, W. Henry Cotting; Treasurer, Alfred B. Tainter.

THE TUESDAY CLUB.—The Tuesday Club was organized November 1, 1877, for social and literary

purposes. No constitution or by-laws were adopted, but instead a few simple features were agreed to, such as that there should be from twenty to twenty-five members, that meetings be held fortnightly, and that the proceedings include essays and discussions. The club has been in existence now for nearly fourteen years, and the interest of its members appears to be unabated. Among those who have been on its list, but who have passed away from this life, are the following gentlemen: The Rev. Dr. G. W. Hosmer, Lucius H. Buckingham, Ph.D., Mr. Calvin Brooks Prescott, Hon. William S. Gardner, General Adin B. Underwood, the Rev. Dr. B. K. Peirce, the Hon. John C. Park.

The present list of members is as follows: Mr. William C. Bates, Rev. Dr. Walcott Calkins, Hon. William Claflin, Mr. E. H. Cutler, Rev. J. B. Gould, Mr. E. B. Haskell, W. S. Hutchinson, Esq., Rev. F. B. Hornbrooke, Hon. R. C. Pitman, Mr. Edward Sawyer, Rev. Dr. George W. Shinn, Rev. Dr. L. E. Smith, Rev. Henry G. Spaulding, Dr. Lincoln R. Stone, Hon. Heman M. Burr, Dr. William W. Jacques. The officers for the current year are: President, E. Sawyer; Secretary, G. W. Shinn; Treasurer, L. R. Stone.

NEWTONVILLE WOMAN'S GUILD.—The Newtonville Woman's Guild was founded March 21, 1884, by a few ladies, who, led by one who had given the subject much careful thought, had succeeded in maturing a broad and comprehensive plan for a society, which, it was hoped, would unite the women of Newtonville from all churches and all neighborhoods, for the purpose of charitable work, intellectual improvement and social intercourse.

It was thought, in the beginning, that the Newton Cottage Hospital, which then existed only in the minds of its projectors, would form a good basis for the work of the society, and with the hospital the Guild has always been identified in the minds of Newton people, a standing committee having its interests in charge.

Aside from this work, however, the Guild has done far more, through its charitable committee, to relieve such local need as exists in Newtonville, than is generally known, and has always responded, to the extent of its means, to any outside call for aid.

On its social side, it has done a work eminently worth doing in bringing into agreeable intercourse many Newtonville women, who might otherwise never have known of each other's existence.

Meetings are held once a fortnight from October to May, for literary instruction and entertainment.

At present, December, 1889, the Guild has an active working force of more than 100 members.

NEWTON CENTRE WOMEN'S CLUB.—In January, 1887, Post 62, G. A. R., invited from the pulpits of the churches in Newton Centre all interested in the relief of disabled soldiers and their families to meet on the afternoon of January 11th, to devise means for raising additional funds for that purpose.

At that meeting a board of five officers and a committee of twenty-one, representing the four churches of Newton Centre, were chosen to co-operate with similar organizations in other wards in the city in the management of a Soldiers' Fair.

At the close of the fair this committee, with its officers, twenty-six in all, formed a permanent organization called "The Ladies' Union." A constitution was adopted and a president, vice-president, secretary and treasurer at the Soldiers' Fair were elected to the same positions in the new club.

In February, 1888, the membership was doubled, and in November of the same year a new name was adopted—"The Newton Centre Women's Club."

It is both a literary and charitable association. According to its constitution, "At each regular meeting there shall be a paper read, by some person engaged for the purpose, or some entertainment of a literary or educational interest."

Its charitable work has been chiefly in connection with the purchase of "The Children's Play-ground." The first contribution, twenty-five dollars, received by the Newton Centre Improvement Association for this purpose was made by this club in October, 1888, and by a recent entertainment, "The Festival of Days," about \$2500 was realized for the same object.

The club now numbers about fifty. It holds its meetings the last Friday in each month at the house of one of its members. Its original and present officers are:—Mrs. R. R. Bishop, president; Mrs. Charles Grout, vice-president; Miss Anna C. Ellis, secretary; Mrs. D. B. Claflin, treasurer.

"**THE NEIGHBORS.**"—On the evening of January 15, 1878, at the house of Rev. Alvah Hovey, D.D., LL.D., in Newton Centre, the following-named gentlemen met and organized a club for the purpose of literary culture, and for the promotion of social intercourse among its members, viz.: Robert R. Bishop, Edwin F. Waters, Alden Speare, William E. Webster, Alvah Hovey and Thomas L. Rogers. The same evening it was voted that the name of the club be "The Neighbors." The number of members is limited to twenty-five.

The meetings are held upon the first Monday evenings of every month from October to May inclusive, at the houses of the members, in rotation, the host upon each occasion acting as chairman. The secretary for eleven years, until his removal from the city, was Thomas L. Rogers.

An executive committee of four, annually elected, together with the secretary, attend to the appointments, presenting new names for membership, and whatever other business may arise. The members are expected to present in rotation essays upon subjects selected by themselves and previously announced, followed by comments by the other members and guests.

Among the subjects presented to the club are two at least which have led to lasting and beneficial re-

sults in the village. In December, 1878, Rev. A. E. Lawrence gave an address upon "Village Improvement," which was the immediate cause of the organization of the Newton Centre Improvement Association, still in the height of its vigor and usefulness. In April, 1888, Hon. Robert R. Bishop read a paper entitled, "What Can We Do for Newton Centre?" in which was first presented the plan of improving the low land in the centre of our village and laying out an extended public park and play-ground.

The present members are: Charles C. Barton, Elisha Bassett, Robert R. Bishop, Dwight Chester, Judson B. Coit, George E. Gilbert, Albert L. Harwood, Alvah Hovey, William E. Huntington, Amos E. Lawrence, Edward H. Mason, Theodore Nickerson, Herbert I. Ordway, William E. Webster, Avery L. Rand, Thomas L. Rogers, J. Herbert Sawyer, Edwin P. Seaver, Alden Speare, Oakman S. Stearns, Arthur C. Walworth.

Formerly members: Samuel F. Smith, Edwin F. Waters, Charles P. Clark, Albert D. S. Bell, William C. Strong, Samuel L. Caldwell, Emil C. Hammer, Bradford K. Peirce, Walter Allen.

THE YOUNG MEN'S SOCIAL UNION OF NEWTON CENTRE.—In the autumn of 1882 the Rev. Edward Braislin conceived the idea of a non-sectarian club which would unite socially the young men of Newton Centre. To carry out this idea a meeting of young men was called.

A constitution and by-laws were adopted and the following officers were elected to serve six months: President, R. W. Waters; secretary, G. G. Sanborn; treasurer, E. S. Lyon.

Executive, membership and missionary committees were also chosen for a term of three months. Admission to membership was made conditional only upon the acceptance of the candidate by the membership committee and his signature to the by-laws. No membership fees were asked, as it was the wish of the founders of the Union that no obstacle should be put in the way of any one who wished to become a member of the Union.

The offer of the free use of the Baptist Church Chapel for meetings was accepted and the monthly meetings soon interested nearly all of the young men of the village.

Programmes of literary and musical exercises and debates were given, and the Union had the cordial support of the citizens of Newton Centre.

In the year 1884 a course of popular entertainments was given under the auspices of the Union, but the main financial support has been the voluntary contributions of its members and friends. In 1885 the membership was ninety-five, and until its dissolution in 1886 it was highly successful in fulfilling the purpose of its organization.

AUBURNDALE IMPROVEMENT SOCIETY.—The organization of the Auburndale Village Improvement Society dates from October 31, 1883. Its objects, as

defined in the first article of the constitution, are the beautifying and adorning of the streets and public grounds of the village, especially by planting trees and shrubs, and caring for and preserving the same; to create and encourage in the community a spirit of improvement that shall stimulate every one to seek to make his own surroundings more attractive; to attend to matters affecting the public health; and to provide such entertainments as the Board of Government shall think proper. Soon after the organization of the society an opportunity offered itself to secure a public hall in the village, by obtaining control of the lately disused Williams School building. The society promptly raised about \$1000, and fitted up a neat hall, having leased the building from the city for five years. Another public benefit aided largely by the society is the tunnel beneath the tracks of the Boston & Albany Railroad uniting the two sections of the village. Whenever there has been opportunity to carry out its purposes the society has striven to do all it could. It has assisted in clearing the streets of rubbish; it has set out and cared for shade-trees; it maintains bulletin boards in various locations. At the present time it is interesting itself in securing access for the public to Charles River over ways that have been unlawfully closed up. In all ways where public interest is aroused, the society stands ready to push matters through its organization and, numbering, as it does, on its roll the names of a large number of the most influential citizens, its influence is capable of accomplishing much by way of permanent improvement.

WEST NEWTON WOMEN'S EDUCATIONAL CLUB.—This club was formed in July, 1880. In the autumn of that year its membership was largely increased, and the meetings were held at first monthly and afterwards fortnightly. The club soon outgrew the accommodation of private parlors, and was fortunately able to secure the commodious parlor and supper-room of the Unitarian Society for its regular meetings. Its range of discussion has been broad, including Woman Suffrage, Temperance, Domestic Economy, History, Biography and Art. It has made a special study of municipal affairs, going through, as an object lesson, all the forms of an election. One afternoon in the year is devoted to descriptions of summer outings; another is given to short essays of ten minutes on practical or literary subjects. The club has a "gentleman's night" at New Year's, and an annual supper in May. It interests its members in the public schools, and was instrumental in introducing the regular instruction of the girls in sewing. It supports a scholarship at the Tuskegee Normal School for Freedmen in Alabama, and every year sends to it contributions of money and clothing.

WOMAN SUFFRAGE LEAGUE.—The Newton Non-Partisan Woman Suffrage League was organized in West Newton in March, 1885. The objects of this association, as stated in its constitution, are "to procure

the right of suffrage for women, to effect such changes in the laws as shall place women in all respects on an equal legal footing with men, to combine the woman suffrage sentiment in Newton, to circulate woman suffrage petitions and woman suffrage literature, and to endeavor to have men of integrity nominated and elected to the Legislature who favor municipal suffrage for women."

Hon. William Claflin was chosen president; Mr. S. Warren Davis, secretary; Mrs. James P. Tolman, treasurer, and Mrs. E. N. L. Walton, chairman of the Executive Committee.

At the close of the first year Mr. Claflin resigned, and Hon. Robert C. Pitman was elected and served two years. The present officers (1890) are: Mr. Nathaniel T. Allen, president; Mrs. Louise A. Chapman, secretary; Mrs. James P. Tolman, treasurer; with three vice-presidents and an Executive Committee of ten representatives, men and women.

The League has been the means of exciting much thought on the subject, and of extending a belief in the value of equal suffrage, to man as well as to woman.

It has held each year one or two public meetings in the City Hall and elsewhere, and several smaller parlor meetings in the various villages from Auburn-dale to Newton.

It has also furnished speakers to the West Newton Lyceum when the subject of woman's suffrage has been debated, thus reaching a large class not otherwise approachable. Among the most interesting speakers at their various meetings have been Mrs. Lucy Stone, Mr. H. B. Blackwell, Mrs. Julia Ward Howe, Mrs. Mary A. Livermore, Mrs. E. D. Cheney, Mrs. Laura Ormiston Chant, of England; Mrs. S. S. Fessenden, of the W. C. T. U.; Hon. J. C. Wyman, of Rhode Island, and T. W. Higginson. Some meetings have been held in the interest of school suffrage especially, and they have done much toward placing and keeping women on the School Board. Mrs. Electa L. N. Walton and Mrs. Abby E. Davis have been the most active and influential members of the Executive Committee of the League.

"THE PLAYERS."—This is the name of a dramatic association, organized March 16, 1887, composed of active and associate members. The active members take part in dramatic performances, of which six are given every season at City Hall, West Newton. The associate members are limited to 150, each paying an annual fee of eight dollars, and receiving two tickets for every entertainment. The associate membership has been full from the beginning, with from fifty to seventy-five names on the waiting list. The first performances were on the evenings of May 13 and 14, 1887, when Byron's comedy, "Our Boys," was given. Among the other plays produced have been "London Assurance," "Old Love Letters," "Rough Diamond," "A Russian Honeymoon," "Randall's Thumb," and "Engaged." These plays have been given with dra-

matic skill and ample stage effects. The officers of the association are as follows: President, George H. Phelps; vice-president, John A. Conkey; treasurer, Edward C. Burrage; secretary, Pierrepont Wise. The above named, together with William T. Farley, T. E. Stutson and Herbert S. Kempton, constitute the Board of Directors.

THE MONDAY EVENING CLUB.—This club was established at the suggestion of Mr. J. H. Nichols and Dr. Wm. E. Field. The first meeting was held November 5, 1880. The number at first was limited to twenty-five members, but it has since been changed to thirty.

Meetings are held twice a month for five months of each year beginning in December.

The club has a constitution and by-laws. The office of chairman is filled by members, succeeding alphabetically each evening from season to season. The secretary is chosen annually by ballot.

Each member has to subscribe to the constitution and by-laws.

Four successive absences forfeit membership, unless excused by vote of the club.

The secretary organizes the meetings at eight o'clock and selects the chairman. The period from eight to nine is devoted to regular business and to five-minute talks by members in turn, at the call of the chairman. From nine to ten there is an essay by one of the members and its discussion. After the essay a collation is served. The meetings are held at the residences of the members in turn.

NEWTON CONGREGATIONAL CLUB.—In the minds of many members of the Congregational Churches in Newton there had existed a feeling of the necessity of some organization which would bring together the Congregational Churches from the different sections of the city for the sake of a more intimate acquaintance, and thereby more concerted action in church work. The great drawback had been the lack of a ready means of communication between the churches on the south and north sides of the city.

During the year 1885 a communication written by James F. C. Hyde, appeared in the *Newton Journal*, calling attention to this need of the churches, and expressing the hope that, when the "Circuit Railroad," which was then building, was completed, affording the desired communication between the different portions of the city, a Congregational Club might be organized.

On October 13, 1886, in accordance with this suggestion, an invitation, signed by five pastors and three deacons, was sent to the pastors, the deacons, the standing committees, and Sabbath-School superintendents of each of the seven Congregational Churches in Newton, to meet on Wednesday evening, October 20th, at the parlor of the Second Church, West Newton, to consider the expediency of forming such a club.

Rev. Henry J. Patrick was chosen chairman of this

meeting, and William B. Wood, secretary. It was voted to form a Congregational Club, and a committee was appointed to draft a constitution and by-laws.

An adjourned meeting was held at the same place the following Wednesday evening (Oct. 27th), and a constitution and by-laws were adopted. The objects of the club, as expressed in the constitution, are "to encourage among the members of the Congregational Churches of Newton, a more friendly and intimate acquaintance, to secure concert of action, and to promote the spiritual life and efficiency of the churches." Regular meetings are held on the third Monday of each month, from October to March inclusive. The January meeting is the "annual meeting" for the choice of officers, etc. The membership is limited to 150; each church was entitled to ten members (this was afterwards amended so that the largest church, the Eliot, is entitled to sixteen members, and the smallest church, the North, is entitled to four members), and the balance of the 150 (or eighty members) is divided *pro rata* between the different churches, according to their resident membership. A vote was passed at this meeting that it is desirable that ladies attend the regular meetings as guests of the members.

Another adjourned meeting was held November 3d, and the organization completed by the choice of officers. At the annual meeting, the following January, the same officers were re-elected for the year 1887, viz.: President, Hon. James F. C. Hyde; vice-presidents, Rev. Henry J. Patrick, Dea. William F. Slocum; secretary, William B. Wood; treasurer, Daniel E. Snow.

The succeeding presidents have been: Granville B. Putnam, in 1888; Albert L. Harwood, in 1889; and Winfield S. Slocum, Esq., who is now serving for the year 1890.

The club started with an "original membership" of forty-six; its present membership is 112.

In the selection of topics for discussion, the aim has been to confine them to such as have a special relation to the interests of the Newton churches, and the club has been addressed very largely by individuals selected from its own membership; although it has listened to others from abroad also, including Rev. Francis E. Clark, of the Christian Endeavor Societies; Rev. Reuben Thomas, D.D., of Brookline; Chas. W. Hill, Esq., of Roxbury; Rev. E. B. Webb, D.D., of Wellesley; Rev. David Gregg, D.D., and Rev. E. K. Alden, D.D., of Boston; Rev. Alexander McKenzie, D.D., of Cambridge; Prof. J. M. English, D.D., of Newton Centre; Rev. A. E. Winship, of Somerville; Rev. A. E. Dunning, D.D., of Boston; Rev. Arthur Little, D.D., of Dorchester; Rev. A. G. Lawson, D.D., of Boston.

The meetings have been held in the parlors and chapel of the Second Church, West Newton, which is well adapted, both by location and arrangement, for the purpose. Assembling at five o'clock, a social

time in the parlors is enjoyed until supper is announced at six o'clock. This is spread in the chapel, after which, the tables having been cleared, the meeting is called to order about seven o'clock and the exercises for the evening taken up.

The meetings have been most enjoyable and profitable, a pleasant feature being the presence of a goodly number of guests to participate with the members in the privileges of the club.

THE NEWTON BOAT CLUB.—The Newton Boat Club was organized September 1, 1875. Its first boat-house was a cheap structure on the shore of Charles River, near the foot of Islington Street, Auburndale. The location was not favorable, especially for members living in other villages, but the club remained there, with varying fortune, holding several regattas, until it entered into new and much better quarters and a broader scale of existence, on the completion of its new club-house at Riverside in the summer of 1886. Here is a handsome and commodious building, with ample space for boats, bowling alleys, dancing hall, pool table, etc., inside, and tennis courts in the spacious grounds outside, all within two minutes' walk of the Riverside Station on the Boston and Albany Railroad, from which frequent trains run over both sides of the "Circuit" through the Newton villages to Boston. And so far as the opportunity for the pastime of boating is concerned, there is nothing better in the country. From this point to Waltham, two miles below, and to Newton Lower Falls, one mile above, the Charles winds through a succession of charming sylvan views, here and there varied by glimpses of cultivation and ornamental architecture. The large dam at Waltham makes the current very light, and the limpid waters are alive in the boating season with every variety of light craft, canoes, propelled by paddles, being the special favorites of the last two or three years. There are several hundred light and graceful boats owned and in constant use on this lovely stretch of water, and a good portion of those who propel them are young ladies.

Newton Boat-Club house and grounds, quite a valuable property, is owned by a separate corporation, the stockholders of which are friends and generally members of the club. The club leases the property, pays a rent equal to the interest of the money in the plant, and will gradually invest its surplus income in the stock until it shall acquire the whole. The club has an active membership of about 200. The annual assessment is \$15. During the winter months the club-house is a favorite resort for bowling. The officers of the club for 1890 are: President, William S. Eaton, Jr.; Vice-President, Sydney Harwood; Treasurer, Charles W. Loring; Secretary, Horatio Page; Captain, William A. Hall.

THE WESLEYAN HOME.—The Wesleyan Home was incorporated in 1883 and organized in December of that year. Its first money was the savings of a little girl in Taunton, Mass., who, in her fatal illness, expressed

a desire to give all her money to a home for orphans. This contribution amounted to about twenty dollars. It has had larger gifts since, including a spacious and comfortable house on Wesley Street, Newton, from Hon. Alden Speare, and an endowment fund of \$20,000 from Hon. Jacob Sleeper. The house furnishing was also provided by generous friends—Mrs. Charles W. Pierce, the family of Hon. Jacob Sleeper, and others. The institution was originally intended for orphan and destitute children. Later its scope was enlarged to embrace the care of children of Methodist missionaries working in foreign fields. The building affords accommodations for about twenty children. It is presided over by a matron, aided and advised by a board of managers, composed of twelve ladies who reside in the neighboring villages. Children are taken at the age of four years or over. They have home training and care, and attend the public schools. Those who can afford it pay from \$100 to \$150 a year. Others are taken free. Officers: President, Hon. Alden Speare; Vice-Presidents, Bishop R. S. Foster, Rev. J. B. Gould; Secretary, J. R. Prescott; Treasurer, E. W. Gay; Matron, Miss A. Thompson.

THE NEWTON FANCIERS' CLUB.—In view of the fact that Newton had a large number of breeders of thoroughbred poultry, and quite an interest had been developed throughout the city in regard to the same, some of the most prominent breeders deemed it advisable to form an association of those interested, and a meeting of fanciers was called, which resulted in the formation of the Newton Fanciers' Club, December 22, 1888. The object of the club is to aid and encourage the breeding of thoroughbred poultry by holding exhibitions and furnishing such information as may be deemed expedient. The first exhibition given by the club was held in Armory Hall, Ward One, February 5, 6 and 7, 1889, and was one of the largest held in the East outside of Boston. Birds were shown from several of the New England States and from New York. Artificial incubation was carried on in the hall during the exhibition. The attendance was excellent, among the visitors being some of Newton's most prominent citizens. The following are the officers of the club elected at the time of organization: President, W. R. Atherton; Vice-presidents, John Lowell, Jr., F. A. Hondlette, E. T. Rice, C. B. Coffin; Secretary, Geo. Linder, Jr.; Treasurer, W. W. Harrington.

QUINOBEQUIN ASSOCIATION.—This association has a location at Newton Upper Falls. It was organized in 1868 and incorporated in 1872. It is a literary association, meeting once a month from October to May, inclusive. It has seventy-five members and a library of a miscellaneous character, numbering about 500 volumes. Its officers at the present time (1890) are as follows: President, Frank Fanning; Vice-president, H. A. Smith; Secretary, W. F. Bird; Treasurer, John A. Gould, Jr.

GRAND ARMY OF THE REPUBLIC.—*Charles Ward Post, No. 62.*—This post of the Grand Army was or-

ganized July 21, 1868. The ten charter members were Wm. B. Fowle, A. B. Underwood, Thos. P. Haviland, J. Cushing Edmonds, Fred. S. Benson, Allston W. Whitney, Hosea Hyde, George S. Boyd, I. F. Kingsbury and Albert Plummer. Captain Wm. B. Fowle was the first commander. The post has been quite active since its formation. The total number of members borne on its rolls has been 334, and those now enrolled are about 150.

The post was named for Sergeant-major Charles Ward, of the Thirty-second Regiment Massachusetts Volunteers, who was wounded at Gettysburg, Pa., July 2, 1863, and died there July 9th, being only twenty-one years of age at the time of his death. His remains were brought home and deposited in the Newton Cemetery.

The amount expended for charity since the organization of the post has been \$9,592.22. Amount expended from the post fund, \$12,310.39. Total, \$21,902.61.

A handsome lot in the beautiful Newton Cemetery has been provided by the city and consecrated as a "soldiers' lot."

The present officers of the post are: Commander, Samuel S. Whitney; Senior Vice-commander, Charles W. Sweetland; Junior Vice-commander, Seth A. Ranlett; Quartermaster, E. E. Stiles; O. D., Samuel A. Langley; Chaplain, S. E. Morse; Surgeon, J. L. Sears; O. G., Chas. A. Twitchell; Adjutant, E. Gott; S. M., Benj. Hopkins; Q. M. S., Joseph Owens; Sentinel, Wm. J. Holmes.

NEWTON CENTRE IMPROVEMENT ASSOCIATION.—The people resident in Newton Centre have for many years shown an active interest in the subject of village improvement, for as far back as 1852 there was formed the Newton Centre Tree Club, having for its object, as quoted from its constitution: "The ornamenting of roads, lanes and public places, by planting trees and shrubs, and preserving those already in existence, and the encouraging of land-holders to lay out their roads in manner according with the general convenience and taste." The main efforts of this society seemed to have been directed to planting trees, and in this work much good was accomplished; but its life was short, covering only a period of about two and a half years.

Again in 1869 an executive committee of twenty-four was appointed in a mass-meeting, who should have "special charge of the local interests of the village, particularly in regard to sewerage, gas, water, police, railroad facilities and the development of the natural advantages of the village." The records of this committee's work have been lost and we are not able to give in detail their labors, but one most important object was attained at about this time, and presumably largely through their influence and with money raised by their efforts. When the Mason School was built the town owned scarcely any land on the east side, and the lower half of what is

now known as the school-house lot was owned by private parties and covered with a tenement-house, blacksmith and wheelwright-shop. By private contribution this land was purchased for the town and is to-day one of the finest school-house lots in Massachusetts.

In the fall of 1879, mainly through the efforts of Mr. Edwin F. Waters, a public meeting was called looking towards the organization of a society which should take in hand those matters which are everybody's business and therefore nobody's business. The first meeting was held September 10, 1879, though the final organization was not effected and constitution adopted till March 22, 1880. The first officers were: President, Hon. John Lowell; Vice-Presidents, Edwin F. Waters, Wm. C. Strong; Secretary, Lewis E. Coffin; Treasurer, Dwight Chester; Executive Committee, including the above officers, E. M. Fowle, Samuel M. Jackson, Rev. E. P. Gould, Hon. James F. C. Hyde, E. B. Bowen, Rev. A. E. Lawrence, D. B. Clafin. Hon. John Lowell held the office of president for two years, and in 1882 Rev. Amos E. Lawrence was elected to the office and re-elected the following year. In the years 1884, 1885, 1886 and 1887, Mr. William B. Young most efficiently guided the Association as its leader, and for the two years 1888 and 1889, Mr. Dwight Chester held the highest official position. At the annual meeting in April, 1890, Mr. J. R. Leeson was elected president for the ensuing year.

The work of the Association has been much varied. It has worked in harmony with the city officials, often leading in an improvement which would not be begun by the city, and always aiding in every public improvement.

Trees have been planted every year, and in variety, so that there is hardly a street in the village which has not its one or both sidewalks lined with trees, all vacant places having been filled by the Association.

The common, extending from the junction of Cypress and Centre Streets, north to Lyman Street, covering three large pieces of ground, has been graded, grassed and planted with trees and shrubs, and ornamented with flower-beds. All triangular pieces of ground at the junctions of streets have been reclaimed and are now kept as lawns. In one or two instances land has even been purchased and improved at street junctions, and the entire bank of the Sudbury River Conduit from Centre to Summer Street has been made a beautiful grassy slope from a rough and unsightly bank of earth. The Association was instrumental in securing and contributed towards the improvement on the lake front at Lake Avenue.

A feature of its labors has been provision for the public entertainment during the winter, and it has been a rallying centre around which all citizens have gathered without distinction of clique or sect, thus assisting largely towards that fraternity of spirit characteristic of the village.

The celebration of the 4th of July has for a number of years been undertaken through a special committee, funds being raised by subscription for the purpose. It is not an incorporated body and for its funds has been dependent on the annual membership fee of \$1 per member and such profits as have been derived from entertainments under its care. It has never been in debt; it has raised and expended over \$4400 and through its efforts the city has expended about the same amount in this ward on public improvements, besides much money that has been contributed and spent through its efforts, not passing through its hands.

The village long needed a public hall, and through discussion at the annual meeting in 1886 steps were taken by many of the citizens which resulted in the purchase of the old Baptist meeting-house by a corporation called the Newton Centre Associates, who removed the building to land which they had purchased, refitted it for its present use and established in the vestry a free public reading-room which is supported in part by the Associates and by the city.

At the annual meeting in 1881 a committee was appointed to see what could be done towards furnishing the boys with a play-ground, for the play-ground which had been on the Common for years could no longer be used for that purpose. From time to time various reports and suggestions were made and temporary grounds provided, and at the annual meeting in 1888 the following gentlemen were appointed a committee to provide a permanent play-ground:—Messrs. Hon. Robert R. Bishop, Alden Speare, Melien Bray, Edward H. Mason, Daniel B. Clafin, Arthur C. Walworth, J. R. Leeson.

The committee have carried their labors over two years, devoting, for a good portion of the time, one evening each week to the purpose, and contributing of their energy, business foresight, tact and money. The result is the purchase of a tract of land from Centre to Pleasant Streets, extending also north to Homer Street, containing about twenty acres, bought from seven individuals, costing over \$25,000. The city of Newton gave \$10,000, and the balance, over \$15,000, was contributed by the residents of Newton Centre. The Improvement Association gave \$1400 from its funds. It is the plan to lay out this land with ample play-ground facilities for boys and girls, and the remainder for ornamental park purposes, Hon. J. F. C. Hyde and Mr. J. R. Leeson having offered to contribute an extensive herbarium.

The re-location of Union Street, just accomplished, and a new station on the Boston and Albany Railroad are results of the efforts of a special committee appointed by the Association for the purpose.

All these things show what has been and may be attained as the result of co-operation, and as year by year passes, the power of the Newton Centre Improvement Association for all that tends to the public welfare increases, and the fact that it endorses any

plan gives immediate and powerful impetus to the movement.

NEWTON PROHIBITION LEAGUE.—The League has had an informal existence since the summer of 1887, but on the evening of February 11, 1888, at a meeting held in the Police Court-room, West Newton, a constitution and by-laws was adopted, and the following-named persons were chosen officers for the ensuing year:—President, Myron L. Henry; Secretary, G. Lyman Snow; Treasurer, David B. Fitts; Executive Committee, Edwin F. Kimball, Henry A. Inman and the officers of the League. The mottoes of the League, adopted at that meeting, were: "Educate, agitate, legislate." Terms to the Liquor Traffic:—"Unconditional surrender: we propose to move immediately upon your works."

The following have been some of the most prominent and active members of the League: Hon. Robert C. Pitman and William H. Partridge, of Newton; Prof. Edwin F. Kimball, Dr. Levy Parker, Henry A. Inman and N. C. Pike, of West Newton; James M. Gordon, Rev. W. R. Newhall, Myron L. Henry, Frank F. Davidson, of Auburndale; Rev. W. H. Cobb, James Cutler and Ruel W. Waters, of West Newton Centre.

The League has been instrumental in largely increasing the interest in prohibition in Newton by holding numerous public meetings, bringing into the city such speakers as the Hon. John P. St. John, Mrs. Mary Livermore, Volney B. Cushing, Rev. Thomas Dixon, Jr., Hon. W. H. Earl, Rev. Dr. Gordon, Rev. O. P. Gifford and Rev. Dr. Miner. Judge Pitman, of Newton, has been among the most logical and convincing of the speakers. The increased interest has been shown in the enlarged vote from 52, the largest vote previously recorded for a Presidential candidate, to 212 votes cast for Gen. Clinton B. Fiske at the last election.

THE EVERY SATURDAY CLUB.—The Every Saturday Club, of Newtonville, was organized in 1870. Its officers are a president, vice-president, secretary and treasurer, and an executive committee. For entertainments a special committee is appointed. Its membership is strictly limited to forty ladies and gentlemen. Among the members are clergymen, lawyers, private and public school teachers, the secretary of the State Board of Education, publishers and business men. The meetings have been held of late years every other Saturday night, in private parlors, from October to May. Its main object has been literary work, and every member, both ladies and gentlemen, is expected to contribute a paper each season. These papers are read or talked by the writers, and afterwards discussed. English literature, from Chaucer down, has been considered; also, in connection with the special author, the history of the times. Shakespeare has been studied for several years. One year Hawthorne and Art alternated. "Representative Americans" occupied one season;

"Fireside Travel" another. Last season thirteen representative novels were reviewed and discussed. Next year "Mediaeval History," "Greek Literature" and "Topics of the Day" will form the programme. A large stereopticon is owned by the club, and has added much to the interest of many meetings.

The social features have been varied and successful. Club suppers, dinners, Dickens parties, a district school, costume parties, the Peak Sisters, and other social entertainments have been given. To these many friends of the club have been invited. Harmony has always prevailed in this organization, and one might travel far to find a club which has sustained for twenty years as well its work, membership and individual character.

MASONIC.—*Dalhousie Lodge.*—Chartered June 24, 1861. Its regular meetings are on the second Wednesday of each month, at Masonic Hall, Newtonville. Annual meeting in June. Officers for 1890: John W. Fisher, Master; George P. Whitmore, Senior Warden; Robert Bennett, Junior Warden; Edwin W. Gay, Treasurer; E. E. Morgan, Secretary; G. W. Blodgett, Chaplain; Elliott J. Hyde, Marshal; George A. Gleason, Senior Deacon; C. W. Brown, Junior Deacon; C. A. Kellogg, Senior Steward; A. F. Winslow, Junior Steward; H. E. Boothby, Inside Sentinel; George H. Brown, Organist; Alex. Chisholm, Tyler.

Newton Royal Arch Chapter.—Chartered June 17, 1870. Regular meetings second Monday of each month, at Masonic Hall, Newtonville. Officers for 1890: Dr. Wm. O. Hunt, E. H. P.; H. A. Thorndike, E. King; George Breeden, E. Scribe; G. D. Gilman, Chaplain; D. E. Binney, Treasurer; S. F. Chase, Secretary; A. L. Harvard, P. S.; G. A. Gleason, R. A. C.; Jas. Pickens, M. of 3rd V.; C. F. Mason, M. of 2nd V.; John Glover, M. of 1st V.; G. H. Brown, Organist; Alex. Chisholm, Tyler.

Gethsemane Commandery, K. T.—Chartered May 20, 1872. Regular meetings third Tuesday in each month, in Masonic Hall, Newtonville. Officers for 1890: Geo. T. Coppins, E. C.; R. G. Brown, Gen.; C. A. Peck, Capt.-Gen.; J. W. Fisher, Prelate; George Breeden, S. W.; A. Nott, J. W.; F. K. Porter, Stand Bearer; J. P. Browning, Sword Bearer; K. W. Hobart, Warden; Alex. Chisholm, Armorer; Geo. E. Bridges, Sentinel; G. H. Brown, Organist.

Union Masonic Relief Association of Massachusetts.—This association is located at Newtonville. It has paid out in benefits since its organization \$85,848. Its membership now numbers about 500. Officers for 1890: President, Luther E. Leland, Newton Lower Falls; Vice-President, Jesse H. Walker, Newtonville; Clerk, Joseph W. Grigg, Newtonville; Treasurer, Robert L. Davis, Watertown.

INDEPENDENT ORDER OF ODD FELLOWS.—*Wabun Lodge, No. 156.*—Instituted April 19, 1871. Meets every Thursday at Cole's Hall, Newton. Officers for 1890: N. G., Geo. A. Fewker; V. G., M. C. Rich; R. Sec'y, R. A. Oldreive; P. Sec'y, Geo. H. Manley;

Treasurer, Geo. P. Rice; W., W. S. Ring; Con., L. Ashley; I. G., J. H. Robblee; O. G., E. Bown; R. S. to N. G., A. Nutting; L. S. to N. G., J. R. Robblee; R. S. to V. G., F. Tainter; L. S. to V. G., R. Chapman; R. S. S. —; L. S. S. —; Chap., —; P. G., W. Howes.

Home Lodge, No. 162.—Instituted April 3, 1873. Meets Thursday evenings at Odd Fellows' Hall, Newton Highlands. Officers for 1890: N. G., G. N. B. Sherman; V. G., R. Blair; Sec'y, F. A. Watson; Treasurer, J. Wilds; W., J. Temperley; Con., B. Stronic; I. G., P. McKenzie; O. G., A. R. Roath; R. S. to N. G., W. Bemis; L. S. to N. G., J. S. Richardson; R. S. to V. G., C. Gould; L. S. to V. G., W. Hockridge; R. S. S., W. Estelle; L. S. S., W. Skidmore; Chap., G. Loomer; P. G., A. Muldoon.

Newton Lodge, No. 92.—Instituted June 15, 1887. Meets every Thursday at Knights of Honor Hall, West Newton. Officers for 1890: N. G., Wm. E. Brown; V. G., Wm. B. Collagan; Sec'y, Wm. E. Glover; Treasurer, Geo. H. Baker; W., R. L. Williams; Con., F. F. Patterson; I. G., W. P. Scamman; O. G., J. L. Christie; R. S. to N. G., J. Anderson; L. S. to N. G., E. W. Bailey; R. S. to V. G., H. E. Johnson; L. S. to V. G., W. B. Davis; R. S. S., J. D. Cooper; L. S. S., C. M. Potter; Chap., C. W. Carter; P. G., O. S. W. Bailey; Organist, Geo. E. Trowbridge.

Garden City Encampment, No. 62.—Instituted in 1886. Meets first and third Mondays of each month, at Cole's Hall, Newton. Officers for 1890: C. P., C. E. A. Ross; H. P., Geo. A. Fewker; S. W., M. C. Rich; J. W., E. A. Dexter; R. S., M. Bunker; F. S., J. L. Curtis; Treasurer, Geo. O. Brock; G., F. H. Hobart; 1st W., B. F. Barlow; 2d W., E. A. Kennedy; 3d W., W. A. Prescott; 4th W., Geo. W. Bush; I. S., C. O. Davis; O. S., G. S. Noden.

ROYAL ARCANUM—*Channing Council, No. 76.*—Instituted April, 1878. Meets first and third Tuesdays of each month at Arcanum Hall, Newton.

Triton Council, No. 547.—Instituted August, 1883. Meets second and fourth Mondays of each month at Knights of Honor Hall, West Newton.

Echo Bridge Council, No. 843.—Instituted June, 1884. Meetings first and third Wednesdays in each month at Quinobequin Hall, Newton Upper Falls.

UNITED ORDER OF THE GOLDEN CROSS.—*Crescent Commandery, No. 86.*—Instituted January, 1880. Meets first and third Mondays of each month at Knights of Honor Hall, West Newton.

ORDER OF THE IRON HALL—*Branch No. 392.*—Organized September 28, 1886. Meets first and third Tuesdays in each month at Cole's Hall, Newton.

Branch No. 395.—Meets first and third Tuesdays of each month at Knights of Honor Hall, West Newton.

Sisterhood Branch.—Meets in West Newton.

ROYAL SOCIETY OF GOOD FELLOWS—*Newton Assembly, No. 39.*—Organized October 27, 1886. Meetings held first Wednesday evening of each month in Knights of Honor Hall, West Newton.

Auburn Assembly, No. 142.—Meetings held in Auburn Hall, Auburndale.

KNIGHTS OF HONOR—*Eliot Lodge, No. 638.*—Instituted June 1, 1877. Meets first and third Mondays of each month, at Masonic Hall, Newtonville.

Garden City Lodge, No. 1901.—Instituted in 1879. Meets first and third Tuesdays in each month, at Knights of Honor Hall, West Newton.

Crystal Lake Lodge, No. 2235.—Instituted 1880. Meets first and third Mondays in each month, in hall corner Lincoln and Walnut Streets, Newton Highlands.

INDEPENDENT ORDER GOOD TEMPLARS—*Loyalty Lodge, No. 154.*—Instituted 1888. Meets every Wednesday evening in Good Templars' Hall.

AMERICAN LEGION OF HONOR.—*Newton Council, No. 859,* was instituted in 1882. It meets on the second and fourth Tuesday evenings of each month, at Knights of Honor Hall, West Newton.

ANCIENT ORDER UNITED WORKMEN.—*Newton Lodge, No. 21,* was organized May 9, 1884. It meets on the second and fourth Wednesdays of each month at Cole's Hall, Newton.

MASSACHUSETTS CATHOLIC ORDER OF FORESTERS.—*St. Bernard Court, No. 44,* was instituted in 1882. It meets on the first and third Mondays of each month, at Foresters' Hall, West Newton. Annual meeting in December.

UNITED ORDER OF PILGRIM FATHERS—*Nonantum Colony, No. 77.*—Instituted December 15, 1886. Meetings second and fourth Mondays of each month, at Cole's Hall, Newton.

WOMEN'S CHRISTIAN TEMPERANCE UNION.—Organized in September, 1878. Meetings held last Saturday of each month, in the Congregational chapel, Auburndale. President, Miss E. P. Gordon; secretary, Miss E. M. Strong.

IMPROVED ORDER OF RED MEN—*Norumbega Tribe, No. 76.*—Meets in Cole's Hall, Newton. first and third Tuesdays of each moon. Sachem, W. S. Slocum.

CHAPTER IX.

NEWTON—(Continued).

MILITARY HISTORY OF NEWTON.

(Subsequent to 1860).

BY ARTHUR C. WALWORTH,

THE military history of a Massachusetts town subsequent to 1860 necessarily has two parts, one relating to the action of the authorities and people at home, the other to the experiences and exploits of the volunteers in the field. In the case of Newton we will first relate the events that took place in the town—for it was not then a city—at the beginning of the war and during its prosecution.

At the time in question there was no militia company in Newton, nor had there been any for many years, owing, perhaps, to the isolation of the separate villages and the absence of a centre of more dense population; but the citizens were no more lacking in military spirit than those of the cities and towns around them. Many of them were members of military companies in Boston, such as the "Cadets," the "Lancers," and the "Fusiliers," and it was the training received in this way that enabled Gen. Edmands and Gen. Underwood to render such effective service and obtain such rapid promotion.

The firing on Fort Sumter produced the same explosion of patriotism here as everywhere throughout New England, and party ties were forgotten in the common indignation against the South Carolina rebellion and the attack upon our flag.

Moved by the spirit of patriotism, the selectmen issued their warrant for a town-meeting for the 29th of April, 1861, to see, as the warrant read, if the town would appropriate money and make other provision for the relief of families of volunteers, and if money should be expended for the purchase of uniforms and equipments for such companies as might be formed in the town.

James F. C. Hyde, afterwards first mayor of the city, was moderator of this meeting, and patriotic speeches were made by Hon. David H. Mason, ex-Congressman J. Wiley Edmands, Andrew H. Ward, Jr., and others, the last-named being a very prominent Democrat, whose remarks were significant of the loyalty of all parties to the old flag. Appropriate resolutions were passed, ending with the sentiment "The cause of this Union is our cause, and to its support, with a firm reliance on the protection of Divine Providence, we pledge our lives, our fortunes and our sacred honor."

And they not only made pledges, but they appropriated \$20,000 and appointed a committee to obtain arms, uniforms and underclothes for such company or companies as should be formed. A paper was read, which had been received from representative ladies of the several villages, in which the women of the town volunteered to make up all the undergarments necessary for the outfit of a military company. The selectmen were also given authority to pay, if advisable, \$20 per month extra to volunteers in addition to the government pay.

A company was soon enrolled, organized and drilled, but the Government, accepting Mr. Seward's view of the short time necessary to crush the Rebellion, would not accept any more troops, although repeated efforts were made to have the company mustered in, and on June 11, 1861 the selectmen reported to that effect, and that they had expended about \$12,000, and asked for instructions. The time and money, however, that was expended on this company was not misspent, for in it many young men learned their first lesson in military duty, and afterwards enlisted

in other companies, where they were able to take a higher rank and be of more service than would have been the case otherwise. The fact that has been stated, that no military company was maintained in Newton before the war, placed the young men under a disadvantage in respect to military training that was partially remedied by this drill company. Others of the young men joined Colonel Salinae's battalion or the Massachusetts Rifle Club, of Boston, in which good military instruction could be obtained.

In the record of every town-meeting we find the patriotism of the citizens exercised in a watchful care over the volunteers in the field and their families at home. In 1862 the Government began to make calls for more troops, and the town fathers were prompt and active in filling the quotas asked for. Thus on November 4, 1862, \$40,000 was appropriated to pay bounties and expenses of holding meetings for recruiting, \$2000 for burying soldiers who died in the service, \$3000 for relieving the extraordinary necessities of residents of the town serving in the army, \$2000 for the relief of discharged and returned soldiers, \$2000 for the recovery and burial of deceased soldiers, and \$1000 for the support of the families of men serving in the navy.

In 1862 Newton first realized the horrors of the war in the death of William R. Benson, of Company I, First Regiment Massachusetts Volunteers, who was killed at Williamsburg, Va., on May 5th, of that year. His body was brought from the field of battle and buried with all the military honors in the Newton Cemetery. A military escort, headed by a band playing dirges, marched from Newton Corner to the cemetery, bearing its sad burden through crowds of sympathizing people, who, by this object-lesson, began to learn that patriotism meant something more than orations and enthusiasm.

During the summer of 1862 two companies were raised in Newton, one for three years' service—which became Company K, Thirty-second Regiment—and one for nine months, Company B, Forty-fourth Regiment. The recruiting of these companies was chiefly in charge of James F. C. Hyde, Thomas Rice, David H. Mason and J. Wiley Edmands, they being, perhaps, the four leading citizens of the town.

Rallies were held in each village, with music and speeches, and one hundred and one names were soon placed on the rolls of Company K, which was recruited especially by E. S. Farnsworth, of Newtonville, afterwards captain and brevet-major, but then taking the position of orderly sergeant.

Partly in consideration of the services of his father, J. Cushing Edmands was chosen captain, he afterwards rising to the command of the regiment, and Ambrose Bancroft and John F. Boyd, lieutenants. Major Farnsworth's name was the first on the roll, Boyd's second, John Doherty third, and the fourth recruit was a Universalist minister, Rev. W. L. Gilman, who was made a corporal and received his death-wound at

Gettysburg. The recruits reported at the Lynnfield camp, and went to the front August 20, 1862, where those who were not disabled served through the war in the Fifth Corps of the Army of the Potomac, Griffin's Brigade.

On August 4, 1862, President Lincoln issued a call for 300,000 men to serve nine months, 19,000 of whom were to be furnished by Massachusetts, with authority to raise them by draft; but Governor Andrew was confident that they could be raised by voluntary enlistment, and the event proved that he was right.

On the morning of August 5th a number of young men decided that the time had arrived for them to enter the military service of their county. Among them were John M. Griswold and John A. Kenrick, who were among the first to enroll their names and to undertake the recruiting of the company. The first meeting was held at the town-hall, West Newton, the second at the hall at Newton Corner, which was the old church altered over, standing where Eliot Hall now stands. The full number of men was soon raised and the recruits began their army life at Readville, as Company B, Forty-fourth Regiment, under John M. Griswold, captain, and Frank H. Forbes and John A. Kenrick, lieutenants. The regiment left for the front October 23, 1862, or about two months after the three-years' company of the Thirty-second.

The next important event in the home history of the war was the erection and dedication of the soldiers' monument. The movement for the construction of this memorial, the first raised in New England, was initiated soon after the return of Company B, of the Forty-fourth, and on August 7, 1863, a committee of nine prominent citizens was chosen at a public meeting and empowered to erect a suitable monument. This took the shape of an obelisk of Quincy granite, resting on a die and plinth of the same material, with an entablature at the base of the mound surmounted by a cannon and bearing the names of fifty-nine heroes of Newton who laid down their lives on the altar of their country. The monument was dedicated on July 23, 1864, with appropriate and solemn ceremonies in the open air, in the presence of a large audience; the addresses and poems delivered on this occasion were preserved in a pamphlet printed by the town.

On these tablets will be preserved the names of those who gave their lives for their country, but records can never show nor history relate the efforts and sufferings and bereavement of those at home as well as those in the army; the sacrifices and anxiety of the mothers and the young wives, who scanned the list of the killed and wounded after every battle, thinking that they might read there the name of him who was dearest of all on earth to them. One day, not long after the battle of Gettysburg, in one of the churches four biers were placed side by side, bearing the remains of four young soldiers of Newton,

whose shattered forms had been sought out and tenderly brought home to be buried by the side of their kinsfolk. Loving words of eulogy and of consolation were spoken by their pastors, fervent prayers were uttered and the solemn services impressed the great audience in a manner that will never be forgotten. One of these young men was Charles Ward. At a public meeting at Newton Centre, called to promote the recruiting of the first Newton three-years' company, he had come forward and pledged himself to fight and to die, if such should be his lot, for his beloved country. The names of five of his family were upon the rolls of the Revolutionary army, and two of the name are found in the list of those killed in battle during the Rebellion. The picture in the Grand Army quarters, at Newtonville, shows a handsome, slender young soldier, with a delicate but bright and intelligent face, for he was just out of school and fitted for college.

At that meeting he arose in the assemblage and spoke of his prospects and the hope he had of becoming a minister of the Gospel of peace. "But," said he, "if my country needs my services, I am willing, for her sake, to make the sacrifice." In the battle of Gettysburg, Ward, then risen to the position of sergeant-major of the Thirty-second Regiment, was shot through the lungs. Colonel Stephenson, of the Thirty-second, gives the following account of his last hours: "Just at night the attendants brought to the place where I was lying a young soldier of my regiment, and laid him beside me. It was Charles Ward, of Newton. I remembered him well as one of the youngest of the regiment, one whose purity of character and attention to duty had won the esteem and love of all who knew him. The attendants placed him in the tent, furnished us with canteens of water, and left us for the night, for, alas! there were thousands of wounded men to be cared for, and but little time could be spared for any one. My young companion had been wounded by a ball passing through his lungs, and it was with difficulty he could breathe while lying down. To relieve him I laid flat on my back, putting up my knees, against which he leaned in a sitting posture. All night long we remained in this position, and a painful, weary night it was. At intervals we would catch a few moments of sleep; then, waking, wet our wounds with water from the canteens, try to converse, and then again to sleep. So we wore away the night, longing for the light to come.

"No one came near us; we heard far away the dropping fire of musketry on the picket lines, the occasional booming of the cannon and the groans wrung from the lips of hundreds of wounded men around us. My young friend knew that he must die; never again to hear the familiar voices of home, never to feel a mother's kiss, away from brothers, sisters and friends; yet, as we talked, he told me that he did not regret for a moment the course he had taken in

enlisting in the War of the Union, but that he was ready, willing to die, contented in the thought that his life was given in the performance of his duty to his country.

In 1868 a post of the Grand Army of the Republic was organized in Newton, and adopted the name of Charles Ward as that of a most distinguished and heroic soldier of the town. This post has flourished greatly, and now numbers 150 members, including many well-known merchants and professional men.

The town was liberal from first to last in the treatment of soldiers and their families. At various times \$113,000 was appropriated for this purpose in town-meetings and aid was sent to many non-resident families of soldiers who had been enlisted in Newton's quota in Washington and elsewhere. But besides this, the citizens contributed thousands of dollars through the Sanitary and Christian Commissions, besides the barrels and boxes containing clothing, hospital supplies and loving gifts sent by those who remained at home to the boys in the field. On one summer Sabbath day news was brought of the great battle fought by Hooker in the Wilderness, and the urgent need of hospital supplies. Services in the churches were suspended, people went home to tear up their old sheets for bandages and to pull lint, so that by nightfall the supply train starting out from Boston took on at each station in Newton a great pile of boxes and barrels filled with the desired supplies, which were hurried to the field hospitals at the front as fast as steam could carry them.

The whole number of men that Newton was called upon to furnish under all the calls made by the State in response to the demands from Washington was 1067, but the town actually furnished 1129, a surplus of sixty-two, and these were all raised by volunteering except a few who at one time were drafted unnecessarily, as it afterwards proved, but who cheerfully accepted their lot and served faithfully in the Union Army. Three hundred and twenty-three of the number above were mustered in for "three years or the war." The town also furnished forty-three commissioned officers, including one brevet brigadier-general and one brevet major-general.

The latter was Adin B. Underwood, colonel of the Thirty-third Massachusetts Regiment, who distinguished himself especially at Lookout Mountains, where, at night, with only seven companies, he charged up an almost inaccessible hill, through woods and underbrush, and carried the rebel intrenchments after two assaults with fixed bayonets, and drove a brigade of Longstreet's men from the hill. In this charge Col. Underwood was desperately wounded in the hip, so that his life was despaired of and one leg crippled for life. Gen. Hooker, in his official report, recommended him for immediate promotion to the command of a brigade, and his advice was followed.

The following table shows the distribution of Newton

men in the several regiments and batteries, and it will be seen that there was hardly a regiment in the State in which the old town was not represented. It will be seen that Newton had a full company in the Thirty-second Regiment, one in the Forty-fourth and nearly enough men for a company in the Fifth Cavalry, although in that case they were distributed through the several companies.

THREE YEARS' TROOPS.

First Regiment, 15 men; 2d, 2 men; 7th, 2 men; 9th, 5 men; 11th, 9 men; 12th, 4 men; 13th, 5 men; 15th, 2 men; 16th, 17 men; 17th, 1 man; 18th, 2 men; 20th, 5 men; 21st, 1 man; 22d, 3 men; 24th, 15 men; 25th, 1 man; 26th, 2 men; 30th, 1 man; 31st, 3 men; 32d, 8 officers; 27 non-commissioned officers and 78 men; 33d, 2 men; 35th, 2 men; 38th, 2 men; 54th, 1 man; 55th, 1 man; 57th, 2 men; 59th, 1 man; 61st, 12 men; 62d, 1 man.

Cavalry—First Regiment, 26 men; 2d, 6 men; 3d, 9 men; 4th, 7 men; 5th, 62 men.

Artillery—First Battery, 1 man; 9th, 1 man; 13th, 3 men; 15th, 1 man; 16th, 1 man.

First Heavy Artillery, 3 men; 2d, 7 men; 3d, 3 men.

NINE MONTHS' TROOPS.

5th Regiment, 1 man; 6th, 1 man; 43d, 1 man; 45d, 2 men; 44th, 6 officers and 101 men; 46th, 28 men; 47th, 3 men; 48th, 1 man.

ONE HUNDRED DAYS' TROOPS.

5th Regiment, 3 men; 6th, 4 men; 8th, 1 man; 43d, 9 men; 60th, 2 men; 22d Unattached Company, 2 men.

THREE MONTHS' VOLUNTEERS.

5th Regiment, 2 men; Reg. Army, 40 men; Navy, 41 men.

ROSTER OF NEWTON OFFICERS IN MASSACHUSETTS REGIMENTS.

Thomas B. Hitchcock, ass't-surgeon, 42d Infantry.
Col. F. L. Lee, Capt. John M. Griswold, 1st Lieut. F. H. Forbes, 1st Lieut. John A. Kenrick, all of 44th Infantry.
F. A. Dewson, quartermaster, Harrison Gardner, 1st lieutenant, and I. H. Robinson, 2d lieutenant, of 46th Infantry.
Edward W. Clark, chaplain, 47th Infantry.
1st Lieut. Chas. B. Slack, 13th Battery.
Major Andrew Washburn, 1st Heavy Artillery.
Major Henry T. Lawson, 2d Heavy Artillery.
Major George H. Teague, 1st Cavalry.
2d Lieut. Jeremiah Dyson, 3d Cavalry.
2d Lieut. George F. Scott, 5th Cavalry.
1st Lieut. Wm. B. Morrill, 11th Infantry.
Lieut.-Col. T. M. Bryan, Jr., Asst.-Surgeon A. A. Kendall and 1st Lieut. T. P. Haviland, all of 12th Infantry.
1st Lieut. Henry S. Benson, 20th Infantry.
1st Lieuts. H. A. Royce and F. S. Benson, 22d Infantry.
Asst.-Surgeon Cyrus S. Mann, 31st Infantry.
32d Regiment Infantry as follows: Col. and Brevet Brig.-Gen. J. Cushing Edmunds, Capt. A. Bancroft, Capt. E. S. Farnsworth, Cap. Geo. A. Hall, Capt. I. F. Kingsbury, 2d Lieut. J. F. Boyd, Wm. F. Tuffs, Chas. E. Madden—to which should be added the lamented Chas. Ward, sergeant-major.

Brig.-Gen. A. B. Underwood and Capt. Geo. M. Walker, 33d Infantry.
Capt. Jos. E. Cousins, 54th Infantry.
Surgeon Burt G. Wilder, 55th Infantry.
Capt. A. B. Ely, Asst. Adj. Gen. U. S. Volunteers.

IN THE UNITED STATES NAVY.

Acting Masters F. F. Baury, W. H. Garfield, Alfred Washburn, Acting Ensign Lowell M. Breck, Lieut.-Com. Jos. B. Breck, Asst.-Surgeon I. H. Hazelton, Paymaster H. B. Wetherell, Jr.

In the event of another war, Newton will not be without a company or without many young men of military training, for about two years after the war an excellent militia company was organized under the command of Captain I. F. Kingsbury, who had been adjutant of the Thirty-second Massachusetts, and

numbering in its ranks other young men who had been in the service. The company was named the Clafin Guards, in honor of the then Governor of the State, and became Company C of the First Regiment M. V. M. At the time of the reorganization of the militia it passed successfully the ordeal that threw out so many companies, and became Company C of the Fifth Infantry M. V. M., where it is keeping up in good shape its own reputation and that of the city, which has generously provided it with a handsome armory, made by remodeling the old Unitarian Church on Washington Street, near Newton Station.

THE NEWTON MEN IN THE FIELD.—Up to the summer of 1862, Newton men had enlisted in many of the organizations that had been sent to the front, but there was no distinctive Newton company. The drill-club that had been formed by the citizens had tried in vain to get accepted by the Government, but no more troops were wanted. It served its purpose, however, in educating in military tactics many young men who afterwards enlisted, or were commissioned in other commands. In the spring of 1862 the disasters of the Shenandoah Valley, and the desperate resistance of the rebels aroused the Government to the seriousness of the situation, and on May 25th news was received that General Banks had been defeated, that Stonewall Jackson menaced the Capital, and that affairs at the front were getting desperate. With this news came a frantic appeal from the War Department to Governor Andrew for aid, giving him ample powers to raise troops, provide transportation and cut red tape generally. There was at this time doing garrison duty at Fort Warren, Boston Harbor, an organization known as the First Battalion of Massachusetts Infantry, commanded by Major Francis J. Parker, a Newton man. These troops had been on duty there for six months, and had become well drilled and thoroughly disciplined under the watchful eye of Colonel T. E. Dimmock, an old army officer, who was the commandant of the post.

No better troops could have been available for the emergency, and the Governor, without a moment's delay, sent for Major Parker, commissioned him lieutenant-colonel and constituted his six companies the Thirty-second Massachusetts Regiment—a corps that was to obtain later a fighting record second to none in the army, and that was not mustered out until it had been "in at the death" at Lee's surrender. It was to this regiment that the Newton company that fought through the war was attached, and the history of the company and the regiment is one. The bad news and the call for succor came on Sunday, and on Monday, May 25, 1862, the regiment, then consisting of six companies, marched through Boston, stacked their smooth-bore muskets, received their rifles and left for the front six hundred strong, the Governor promising to raise four more companies to fill up the regiment to the regulation number. The Newton

company was the last of these and was not with the regiment in its Peninsular campaign with McClellan, during which the battalion of six companies obtained an excellent record for both discipline and courage.

At this time a company had been enlisted in Newton, especially through the efforts of the authorities and of Hon. J. Wiley Edmands, whose son, J. Cushing Edmands, was elected captain, afterwards rising to the command of the regiment. Ambrose Bancroft was commissioned as first lieutenant, and John F. Boyd, second lieutenant, all on July 30, 1862. Both the lieutenants rose to the rank of captain in 1864 and 1865. Ezra S. Farnsworth, who raised the company, went out as orderly sergeant, and George A. Hall as sergeant, the former coming home a brevet-major and the latter a captain. Promotion was somewhat rapid in this regiment because so many officers were killed in action. Isaac F. Kingsbury was commissioned second lieutenant December 15, 1862, and rose to be captain of the company. William F. Tuft and Charles E. Madden were also second lieutenants in 1865. It was noticeable that very many of the families who first settled the town and had members in the Revolutionary Army were also represented in this company, for we find on the rolls the names of Ward, Kingsbury, Hyde, Fuller, Jackson and Trowbridge, some of them having three representatives. This company, being the last recruited for the regiment, was the letter "K." Companies H I and K were assembled at the Lynnfield camp and were sent out to join the regiment on August 20, 1862, under Captain Moulton, proceeding to New York by the Stonington line and reaching Washington on the 22d.

At this time the movement to effect a junction between the armies of McClellan and Pope was in progress. The Thirty-second was with Pope, and the battalion set out to find the regiment, marching first to Alexandria; but as not even the commander-in-chief knew where Pope was, it was no easy matter to find the regiment. At length Porter's corps was located, and the battalion joined the other seven companies of the regiment on September 3d. Then Lieut.-Col. Parker was promoted to be colonel, Capt. G. L. Prescott to be lieutenant-colonel—he afterwards was in command and was killed in action at Petersburg June 16, 1864—and Capt. L. Stephenson was raised to the rank of Major. The Newton company was soon in active service, for on September 12th, the regiment took up its march with McClellan's army for the Antietam campaign. In that battle the regiment, contrary to its usual fortune, was not in the thick of the fight, but at Fredericksburg, not long after, Company K received its baptism of fire, on December 13, 1862. The Thirty-second was in Griffin's division, which was sent to the support of Sumner across the new bridge of boats, through the town and halted in a hollow, piled knapsacks and blankets and stripped to fighting trim. Col. Parker describes the actual fighting as follows :

clerks and students, one company being made up in part of Harvard College men. The average age of the regiment was only twenty-two years, seven months, while the Newton Company, B, was the oldest, having an average age of twenty-four years, seven months. This company also had in its ranks a greater variety of trades and professions than any other company, and could detail an expert for almost any special duty. This preliminary encampment, says the surgeon of the regiment, was for a time a sort of picnic, at which daily drill was relieved by moonlight promenades to the strains of the Boston Brass Band. The severity of commissary diet was tempered by an abundant overflow from home tables. Nothing was too good for the "flower of the youth of Boston," and they fared sumptuously every day. Contractors' shoddy was rejected for custom-made uniforms, and boots made to order took the place of army shoes.

On October 22, 1862, Company B, with the rest of the regiment, packed its knapsacks for the last time in that camp, and "fell in" to march to the station, where they were honored with a salute by the "Cadet Regiment," the Forty-fifth, drawn up to receive them. In Boston they had a reception on the Common, then marched to the wharf, where they embarked on the steamers "Mississippi" and "Merrimac" for North Carolina. The voyage was a compound of the average amount of fun and misery usually found on a transport ship, and on October 26th they landed at Beaufort Harbor, N. C., whence they were transported to New Berne, forty miles away, on platform-cars in a pouring rain. Here the regiment went into barracks and was placed in General Thomas G. Stevenson's brigade, Wessells' division, Eighteenth Army Corps, Major-General J. G. Foster commanding. Foster and Wessells were West Pointers, while Stevenson was a former commander of the Fourth Battalion, Massachusetts Militia.

Only three days after their arrival the regiment was put in actual service and embarked on steamers for Little Washington, N. C., where they remained until November 2d, when the brigade marched for Tarboro'. When within a few miles of Williamstown the advance was fired into and the troops were formed for action, Companies H and C being sent forward as skirmishers; as these were fording a creek known as Little Creek, they were fired into by a large force of the enemy concealed in the woods only a few yards away, killing one man and wounding seven. The rest of the brigade was brought up, the woods shelled and the enemy driven back to Rawle's Mill, about a mile beyond, where they made another stand. Here the Forty-fourth lost several more men, but the enemy finally fell back, burning the bridge as they went. So this regiment, that left camp at Readville only on October 22d, was in action in North Carolina on November 2d, eleven days afterwards. The forced march was continued nearly as far as Tarboro', which was found to be strongly reinforced; the men were

fatigued, footsore and broken by the continuous marching, lack of rest and sufficient food. All that day, Thursday, after a lively skirmish in the morning the boys marched through mud, rain and snow back to Hamilton, many falling out through exhaustion; on Friday they marched through an inch of snow to Williamstown. On Sunday they marched twenty-two miles down the river to Plymouth. Here they embarked on November 11th, and in two days more were back in their old quarters at New Berne.

This two weeks' campaign was a rough initiation for the Newton boys, accustomed to fine roads and soft beds, but they suffered less proportionately than some of the other regiments, the youth of the men proving more elastic in recovery from the effects of hardship and privations, and the long marches at Readville, which at the time seemed so unnecessary, had done much to toughen and prepare them for campaigning in the field.

Thus was accomplished the first expedition of actual service, whose object was to destroy the Rebel ram "Albatross," then constructing at Tarboro', to save Plymouth from capture, and if possible to circumvent the force gathered for that purpose; and if it was not entirely successful it was useful in inuring the men to hardship and accustoming them to the presence and fire of the enemy. The regiments who were with the Forty-fourth on this march were the Fifth Rhode Island, Tenth Connecticut and Twenty-fourth Massachusetts.

After this the regiment was besieged at Little Washington by overwhelming numbers of the enemy, but held the post bravely until reinforced by an adequate force; but as the Newton company was at that time detailed on picket, the story of the siege does not properly come within the scope of this narrative.

The following description of the picket duty of the Newton company at Batchelder's Creek was written for the regimental history by Charles C. Soule, the lieutenant of the company, and gives the pleasant side of a soldier's life:

"On Monday, March 2, 1863, Companies B and F, under the command of Captain Storow, were taken three miles up the railroad and relieved two companies of the Fifty-first Massachusetts on picket. On the Sixth the battalion marched three miles farther out and went into camp in the pine woods near Batchelder's Creek. Former occupants of the post had nearly finished eight log huts in the thick woods. These were not utilized as quarters for the battalion, but around them as a centre smaller huts were constructed, roofed in by shelter trees, littered with straw, warmed by brick fire-places, and rendered homelike by conveniences and ornaments. These occupied three sides while the wall tents of the officers filled the fourth side. In the centre of the camp was erected a double-masted flag-pole topped with a weather-vane and bearing on its cross-trees the legend 'Camp Lee, March 6, 1863.'

"The two companies remained in this camp for two months, enjoying the brightest and pleasantest part of a soldier's life. There was a good deal of night work, but not enough to wear the men out. The open-air life in the pine woods was so invigorating that there was very little sickness in the detachment. There was enough of excitement, a sufficient consciousness of the proximity of the enemy to give a zest to the routine of duty. The season of the year was a delightful one. As the spring advanced, violets, anemones, honeysuckle and the fragrant jessamine blossomed thickly among the lanes and roads. The woods were full of rabbits, 'pos-ums and 'coons (which the men were successful in trapping), with traces now and then of a prowling fox. The creek was full of fish,—herring, horn-pout, and robin or red-fin (bream),—for which we angled with hooks baited with worms or soaked hard-tack. With this plenitude of game came a disagreeable accompaniment in the profusion of snakes,—black snakes, four or five feet long; moccasins as large as a child's arm, and 'copperheads, even more venomous than their namesakes in the North.' The chief duty to be performed was the picketing of the line of Batchelder's Creek. The details were quite as much as two companies could perform, and brought each man on duty about every other day.

"Another and favorite duty was the scouting by land and water. When the companies first occupied the picket posts there were no boats of any kind to be found. A vigorous search was instituted along the banks of the creek, and several canoes and flat-boats were found concealed in the dense cane-brakes. These were brought to the Washington Road and repaired, and every few days a scouting company was sent down the creek and up the river on a reconnoissance. The 'Rebs' were rarely seen; and the principal result of these expeditions was the collection of a number of useful articles of camp equipage from the deserted huts and houses along the creek." At the last of April Company F took part in the "Green Swamp Expedition," but the Newton company was not in it, and missed a lot of terribly hard marching and skirmishing in reeking swamps deluged with pouring rains. On May 2d the two companies were relieved by two of the Forty-sixth Massachusetts, and were marched back to the barracks at New Berne. During May and June the Newton men, with the rest of the regiment, were engaged in doing provost duty in that city.

As the regiment had arrived in a rain-storm, it left in another, on June 5th, Co. B being the left wing, under Capt. Storrow, on the steamboat "George Peabody." On June 9th the steamer ran along the eastern shore of Cape Cod and just before sunset dropped anchor in Boston Harbor. How glad the Newton boys must have been to see the dome of the State-House once more—that dome that they could see from their own homes. That night the steamer anchored near Fort Independence, waiting for the

other wing of the regiment. The next day the boys on landing were met by several companies of reserves and home guards, with Gilmore's Band, and escorted to the Common. Then the regiment was furloughed until the final mustering out at Reedville. The Newton company was the only distinctively local one in the regiment, and shortly after the muster out the citizens of the town gave them a rousing reception at Newton Corner. The stores were closed, schools dismissed and the whole town put on a holiday aspect. Mr. Otis Edmands was chief marshal and Hon. J. Wiley Edmands (whose son, Thomas S., was a member of the company) presided. Appropriate speeches of welcome were made and festivities were concluded with a banquet in the old Eliot Hall.

This forty-fourth Regiment was not called a "fighting regiment," as fate had not ordered that it should be plunged into the desperate battles of the Army of the Potomac; but it must be remembered that it was often compelled to endure hardships equal to any inflicted on any of the army, and that it lost in killed and by disease twenty-six men in nine months, thirty-two wounded, sixty-five disabled and twenty-five on the invalid guard, besides three men taken prisoners. It must also be remembered that 173 men went back into the army, seventy-nine of them as commissioned officers, twenty-nine of the number giving their lives to their country.

In compiling the above record the facts and figures have been drawn in part from Dr. S. F. Smith's "History of Newton," in which the muster-rolls are given in full; from Col. Francis J. Parker's "Story of the 32d," and from the "Record of the 44th," by the Regimental Association.

CHAPTER X.

NEWTON (Continued).

MEDICAL HISTORY.

BY JESSE F. FRISFIE, M.D.

ARRANGEMENTS were originally made for the preparation of this article with Dr. Henry M. Field. Failing health finally compelled him to abandon the task, and the writer accepted the responsibility of preparing this chapter when only a few weeks were left before the manuscript must be in the hands of the printer. Consequently it must of necessity be fragmentary and imperfect.

Six months would have been none too much time for a thorough search and investigation among old records and of the "oldest inhabitants." Of the nearly 100 written letters and lists of questions sent out, there has been no reply to many. Doubtless investigations are being prosecuted and replies will

come containing much valuable historical material, but too late for insertion in this work.

Appended is a list of the names of physicians who, at some time, have lived in Newton, but of whom there is no tangible record, as want of time and opportunity preclude the necessary investigation into their past history. What few facts could be obtained in the limited time are given.

EEENEZER STARR, M.D., son of Dr. Josiah Starr, of Weston, Mass., was born in Weston, August 24, 1768, and died in Newton Lower Falls August 24, 1830.

He was educated at Harvard College; studied medicine with Dr. Spring, of Watertown, and graduated from Harvard Medical College in 1789.

He settled in Newton Lower Falls in the year 1790. He was a prominent man there and had an extensive practice. He was honored with a seat in the House of Representatives for three years—1815–16–17. He served on a committee to prepare rules and regulations for the schools of Newton. September 19, 1808, Dr. Starr, with others, was appointed on a committee, in town meeting called for the purpose, to draw up a remonstrance against the embargo placed on our commerce and proclaimed in the December preceding.

He was a member of the Masonic fraternity and was Master of his lodge.

Prior to 1824 Dr. Starr was the principal physician at the Upper Falls. Like many men, the doctor had his peculiarities, and would be very apt to make some remark in the sick-room that would have a tendency to divert the minds of his patients from themselves and give them greater hopes of speedy recovery. Upon one occasion, when called to see a sick woman, who was very tall in stature—some six feet two or more inches—he found her standing, and proceeded with his usual methods for a diagnosis of the case, until he desired to see her tongue. Then he remarked, "If I had a ladder I would go up and see it."

This remark turned the scale of the patient's slight illness at once into recovery, and a second visit was unnecessary.

Dr. Starr married Miss Lydia Ware, daughter of John H. Ware, January 22, 1794.

At his decease he left three sons and two daughters.

SAMUEL CLARKE, M.D., son of Samuel Clarke, was born in Boston, 1779. He was in the Latin School, Boston, in 1790, and afterwards in a store with an importer of British goods. Subsequently he became a partner in the firm.

In 1810 he went to Hanover, New Hampshire, and studied medicine with Professor Nathan Smith, of Dartmouth College; and there his son, Rev. James Freeman Clarke, D.D., was born. In 1811 he returned to Newton to practice medicine. In 1816 he went to Boston and continued to practice there, and conducted a drug-store at the corner of School and

Washington Streets till the year 1829. Then he returned to Newton and built a chemical factory. He died of fever in Newton November 30, 1830. He married Rebecca Parker Hull, daughter of General William Hull, of Newton. He left at his decease a widow, five sons and one daughter. His widow died in Boston May 25, 1865.

DR. JOHN KING was a self-taught physician and successor of Dr. John Cotton. His parentage is not known. He died March 20, 1807. He married Miss Sarah Wiswall, daughter of Captain Noah Wiswall. After her death he married Miss Elizabeth Cookson, April, 1799. He was a modest and unassuming man, but able, energetic and one that could be depended upon. "For many years he was moderator of town-meetings; selectman; one of the Committee of Correspondence in 1774, and to prepare instructions for their Representatives; on various committees during the war and after; was a delegate to the convention (1779) to form a Constitution for Mass.; was at the battle of Lexington, and one of the soldiers from Newton to guard Burgoyne's army, in the fall of 1778. He was Representative in 1792, etc."

He was evidently a valuable man for the times, and was freely called upon by his towns-people to do service in their behalf. However much his professional services were appreciated, his public duties must have occupied a large share of his time.

DR. BOWEN PARKER was born in the town of Pembroke, now South Hanson, Mass., in the year 1800, and came to Newton to practice medicine in 1824 or '25, and remained here about two years, and then removed to South Hanson, where he continued to practice until he died, Nov. 22, 1874. He was a promising young man when in Newton, and interested himself in the progressive work of this vicinity. He was a member of Newton's first temperance society.

SIMEON BURT CARPENTER, M.D., son of Dr. William Bullock Carpenter, was born June 5, 1801, in Freetown, Bristol County, Mass. He died July 24, 1843, in Dedham, Mass., leaving a wife and three daughters.

He was fitted for college by the Rev. Mr. Andros, of Berkeley, the author of "The Old Jersey Captive." He graduated from Brown University, Providence, R. I., September, 1827. "He was old in college because his father opposed his going till he was old enough to act for himself." He took the degrees of A.B. and M.D. at Harvard University in 1830. Soon after the death of Dr. Starr, of Newton Lower Falls, he was called to fill his place. He settled there in the year 1830. He married Angeline Louisa, youngest daughter of Artemas Murdock, of Newton, on May 17, 1835.

He removed to Dedham and settled there, making it his home till his death.

Dr. Carpenter was a busy and useful man, highly respected and beloved in Newton and Dedham. He was a public-spirited man and interested himself in

the important questions of the day. He was one of the first to form a temperance society in Newton, which did a good work. He was an anti-slavery man from the time Garrison was mobbed. He lectured in Newton and Dedham on medical and other subjects. So able a man was he considered, he was invited to edit an anti-slavery paper; but that he felt obliged to decline, as he could not spare the time from his professional work, and Mr. Edmund Quinsy was selected in his place.

He was interested in education, and served on the School Committee in Newton for some time. He was one of the directors of the Savings Bank in Dedham, and held other offices. He died at the age of forty-two, as his widow writes, "just as he began to reap." He was a member of the Massachusetts Medical Society.

STEPHEN HODGMAN SPALDING, son of Joseph Spalding, was born in Chelmsford, Mass., August 4, 1787. He died in South Natick, July, 1866. He commenced his medical studies under the tuition of a Dr. Wyman, at that time a practicing physician in Chelmsford. He attended two courses of lectures in Boston, and graduated after studying three years at the Harvard Medical School.

He commenced practice in Littleton, Mass., remained a few years, then removed to Dublin, New Hampshire, where he secured an excellent and lucrative practice. After a few years he found that the severity of the winters, and the almost impassable state of the roads—being obliged to travel with snowshoes without any regard to boundary lines or fences—was telling upon his health, and this decided him to accept an invitation to settle in South Natick, Mass., where again he succeeded in building up an extensive practice.

In about 1841 he removed to Newton Upper Falls, and associated himself with his son-in-law, Dr. Samuel S. Whitney, who had married his only child, Sarah W. Spalding, in general practice. In 1843 his house and stable were burned. He then settled in Reading, Mass., and continued in practice there for several years. Later in life, after an active practice of thirty years, he retired, and removing back to South Natick, made that his home till he died. In his last years he was a great sufferer from disease. He was a member of the Unitarian Church and Parish of South Natick, and the large number at his funeral attested the respect and esteem of his towns-people.

SAMUEL STILLMAN WHITNEY, M.D., son of George Whitney, was born at Natick, Mass., January 6, 1815. He died June 30, 1855, leaving a wife and several children, one of whom, Stillman Spalding Whitney, born August 11, 1849, became a physician and died at Allston, Mass., November 7, 1886.

Dr. Whitney fitted for college at Leicester, Mass., and entered Harvard College at the age of fourteen. After remaining a year at Cambridge, he removed to Amherst, Mass., to complete his collegiate course in

Amherst College. Toward the close of it, however, a long sickness having intervened to prevent his graduating with his class, he decided not to take a degree.

Soon after he entered the office of Dr. S. H. Spalding, then practicing in Natick, Mass. The next year he entered the office of Dr. John D. Fisher, of Boston, and continued his medical studies there. The last six months of his studentship he passed in the City Institutions at South Boston. He graduated at Harvard Medical College in 1838. Immediately after the death of Dr. Alfred Hosmer, at Newton Upper Falls, he settled in that place, and, from his energy and superior ability, rapidly won the esteem and confidence of the community, and a large and widely-extended practice. Within a year of his settlement there, he married Miss Sarah W. Spalding, only child of his first teacher in the study of medicine.

Dr. Whitney remained at Newton Upper Falls six years, and then removed to Dedham, Mass., in 1844, having been invited to go there by the citizens of the town. He was an early and enthusiastic follower of Laennec, and in the early years of his practice he wrote a paper on "Auscultation and Percussion," which was printed in the *American Journal of the Medical Sciences*. It was considered of so much value, it was reprinted in the *British Medical Journal*.

He was one of the first operators in this country for strabismus. He successfully attempted staphylorraphy. He performed this operation successfully many times; once on a gentleman from Canada, who had been operated upon unsuccessfully by the celebrated Diffenback. He performed a series of operations for the surgical relief of epilepsy.

Before permanently locating in Dedham he went to Europe and spent a year in travel and study at the leading medical centres, especially following Laennec, Velpeau, Andral and Piorry. On leaving Paris, Piorry presented him with his own long-used plessimetre as a parting gift, of which he was always very proud, although in general practice he much preferred his own phalangeal bones. His delicacy, quickness and acuteness of ear rendered him very expert in his favorite field of auscultation and percussion.

He was a skillful surgeon, successful in all the larger operations and especially in arts of modern surgery for the cure of congenital or accidental deformities.

In the autumn of 1848 he was attacked with diarrhoea—a sub-acute enteritis—from which and its effects he never fully recovered. He was sometimes relieved by a sea voyage or a short residence in a warmer climate. In 1853 he began to feel a numbness in his lower limbs, which increased till paralysis ensued. A few months later, with a medical attendant, he sailed for Havana. There, while standing on the capstan of the vessel, he was seized with paraplegia. He returned to New York, was placed on the

Full River boat in a helpless condition, and, in the care of a son of Secretary William Seward, was conveyed to his home and died, peacefully and resigned at the age of forty years.

Many interesting anecdotes are related of Dr. Whitney, illustrating the precocity and wonderful mental powers that he possessed. It is related that before he was fifteen years old he taught school, and in the morning reading in the Bible he would follow the pupils in Hebrew and correct them when in error.

SAMUEL WARREN, M.D., son of Nathan Warren, was born in Weston, Mass., April 23, 1802. His early education was obtained in Framingham, Mass., and at Phillips Academy, Andover, Mass., 1819-22. He entered Yale College in 1822 and remained there for two years, then went to the Harvard Medical School and graduated in 1827. He was a deacon in the West Newton Congregational Church. He was a biblical student and some of his writings were published in the *Bibliotheca Sacra*.

Dr. Warren was interested in horticulture, and his botanical studies took a wide range. At one time he was at the head of an academy in West Newton. For several years he practiced medicine in West Newton, where he held valuable real estate.

Dr. Warren was a modest man with a retiring disposition, without worldly ambition, but was greatly respected and beloved by his neighbors and townspeople. The estimation in which he was held was shown at his funeral, when the entire church was filled by those who wished by their presence to testify their appreciation of him.

He married Miss Ann Catherine Reed, of Charlestown, Massachusetts, August 25, 1829. He died October 25, 1867, leaving a widow and one son, Professor S. E. Warren.

ALFRED HOSMER, M.D., son of Jonas Hosmer, was born in Walpole, New Hampshire, November 7, 1802. He died at Newton Upper Falls, November 27, 1837, very suddenly, of disease of the heart, the result of rheumatism in early life. He was a brother of Hiram Hosmer, the well-known physician of Watertown. He married Miss Mary Ann Grahame, in December, 1831. At his decease he left a wife, two sons and one daughter, who died early in life. One of his sons, Dr. Alfred Hosmer, a prominent physician, is living in Watertown, Massachusetts.

His early education was obtained in Alstead, New Hampshire. He graduated at the Harvard Medical College in 1828. He located first in Marlboro', Massachusetts. In the autumn of 1829 he went to Newton Upper Falls, where he practiced till his death.

Dr. Hosmer seldom rode in a carriage, almost invariably on horseback. His horse was saddled and at the door when he dropped dead. He was a skillful physician and highly esteemed, not only by the citizens of the town, but throughout a wide region.

EDWARD WARREN, M.D., son of Professor John Warren, M.D., was born in Boston, December, 1804,

and died in Boston, 1878. He was a brother of the celebrated Dr. John C. Warren, of Boston.

He graduated at Harvard College in 1829. He was a member of Massachusetts Medical Society—at one time a councilor; Boston Society of Natural History, &c. Twice he visited Europe, and traveled quite extensively there.

He wrote the life of Dr. John Collins Warren, which was published in 1859; and the life of Dr. John Warren, which was published in 1874. He commenced practice in Boston after his graduation, but soon removed to Newton, where he resided from 1840 to 1857.

He was eminent as a general practitioner and a skillful surgeon. As a diagnostician he was not excelled. The most obscure case seemed to open clearly before his acute investigation. His rapidity in arriving at a correct diagnosis sometimes seemed like intuition, when, in fact, it was the result of clear insight and rapid generalizations. He suffered from an impediment of speech, which was aggravated by over-fatigue from his practice.

He was an excellent physician, and called widely in consultation. He was greatly interested in horticulture and floriculture. He was also a devoted churchman, liberal in his gifts to the Episcopal Church at Newton's Lower Falls.

In 1835 he married Caroline Rebecca Ware, daughter of Professor Henry Ware, of Cambridge, Massachusetts.

DAVID H. GREGG, M.D., was a prominent physician in Newton, between 1820 and 1840. He took an active part in the temperance work of his day. He delivered an address upon the "Evils of Intemperance," before the Newton Temperance Society, July 4, 1828, in which he said, "To promote virtue and to prevent vice—to augment human happiness and to dry up the sources of human wretchedness and want and woe—are the ultimate ends for which this society now assembled has been instituted."

JOEL BROWN, M.D., son of John Brown, was born in Bradford, N. H., October 22, 1812. He died in West Newton, Mass., March 19, 1865, leaving a widow, who still survives him. His youth was spent on a farm. He was educated at the academy in Hopkinton, the Kimball Union Academy, located at Meriden, N. H.; and entered Dartmouth College, Hanover, N. H., from which he graduated in 1841. He taught school successfully in several towns and also in Boston previous to and after his graduation.

President Lord, of Dartmouth College, in a recommendation of him, said: "He is a man of unblemished character."

While in college he decided to make the practice of medicine his profession. He entered the Harvard Medical School and afterwards graduated from Dartmouth Medical College.

While attending lectures at the Harvard Medical School he ascertained there was another Joel Brown,

and, to save annoyance to either, he interpolated a middle-name—Henry—which he ever afterward used. He was a member of the Massachusetts Medical Society. He first settled in Weymouth, Mass., but removed to West Newton in January, 1848, where he resided till his death.

In February, 1849, he married Miss Sarah R. P. Richmond, of Boston, Mass. One daughter was born to them, who died in her eighth year.

Dr. Brown was a broad and liberal-spirited man—and a reformer. He was an abolitionist of the Garrison stamp, save that he believed in voting. He was an earnest peace man on principle, and when, at college, it was attempted to force him to do military duty, he refused, saying they could fine him or put him in prison, but he would not act the soldier in preparations for war. He was full of humor and witty; exceedingly dry in his jokes and witticisms, genial, pleasant and loving; true as steel to his friends, and just to all. In religious matters he was a liberal Congregationalist, and highly esteemed in the West Newton Congregational Church, as, in fact, he was by all who knew him. He was one of the founders of "The West Newton Athenæum" in 1849. Truly, to hundreds of families he was "the beloved physician."

In the *Congregationalist*, March 24, 1865, the Rev. Dr. Tarbox pays the following tribute to his memory: "Dr. Brown was a most noble example of a Christian physician; eminently skillful in his profession; most winning in his manners; always welcome in his visits to the sick-room; able and willing to give religious instruction and consolation. We speak the mind of the great body of the people in Newton and in the neighboring towns when we say that hardly a man in the town could have been called away whose death would have brought such a sense of personal loss and bereavement to so many individuals."

In the Newton Cemetery has been erected a monument to his memory by loving friends.

DR. HENRY BIGELOW, the son of Lewis Bigelow, was born in Worcester, Massachusetts, May 20, 1817. He was educated in his native town, was fitted in the public schools for Harvard College, which he entered at the age of fifteen years, graduating in the class of '36. Though his own inclination at that time was to become a civil engineer, he yielded to the desire of his father, that he should enter the medical profession, for which after-events showed him to be so well fitted. He entered the Harvard Medical School, graduating from there in 1839. He attended a course of lectures in Philadelphia also, the medical school there standing very high at that time; he also studied with Dr. John Greene, of Worcester. He first settled as a practicing physician in Buxton, Maine, in 1840. In the same year, August 25th, he married Matilda A. Poole, of Boston, Mass., and one child, a daughter, was born during their stay in Buxton. He remained there four years, but he desired a larger field, with

more means of advance, so with his family he moved to Boston in 1844, but remained there less than two years, then moved to Newton early in 1846, where he passed the remainder of his life. He died January 21, 1866, at the early age of forty-eight years, leaving a widow, two daughters and one son. In that comparatively short life much had been accomplished, not only in his profession, in which he held a high position, as the records of the medical society would show (of which he was a member), as well as the testimony of all to whom he ministered, in whose hearts he held so high a place as friend as well as physician. To him Newton owes much of its early prosperity. A small town when he settled there, its growth was rapid and vigorous. He had shown his interest in education by taking a position on the School Board in Buxton, and in Newton he soon received a similar position, and held it during his life, being chairman of the School Committee for many years. In religion he was a strong and earnest Unitarian, one of the founders of the Channing Unitarian Society of Newton, one of the ten whose generosity and devotion enabled the society to build their first church. He remained on the Standing Committee of that church till his death, and was also for many years superintendent of the Sunday-school. He never entered the arena of political life in an active way, but his interest was quick and strong in all matters of public importance,—his hand, his purse and his time ever ready to aid any just cause. In him the poor had a wise and helpful friend. Not only were his professional services often gratuitous, but sympathy and aid were ever generously bestowed. Many were the knotty questions and matters of disagreement which were brought to him for arbitration by those who had perfect confidence in his wisdom and just discrimination. He was influential in securing and laying out one of Newton's most attractive spots, her beautiful cemetery, of which he was one of the trustees, and where nineteen years after his death was raised a most beautiful tribute to his influence—a memorial chapel, testifying the grateful and lasting recollection of one who knew and honored him so truly.

He held many minor offices of trust and responsibility, from time to time, as he always had the power to fill them satisfactorily, though the constantly increasing calls of his profession during the later years of his life left him less and less time for other duties.

FRIEND D. LORD, M.D., son of James Lord, was born in Limington, Me., March 3, 1822. He died in Newton Lower Falls, December 8, 1883. His early education was obtained in Limington Academy, Me., and Wilbraham Academy, Mass. He was a teacher before and after his graduation.

He graduated from Bowdoin Medical College, and then studied in the hospitals of New York and Philadelphia. He settled in Casco, Me., West Dedham, Sterling and Newton Lower Falls, Mass. January 29, 1856, he married Harriet H. Hill.

LEVI FARR WARNER, M.D., was born October 25, 1822, at Norwich, Chenango County, N. Y. He died in Boston, October 12, 1889. "He received his early education at the academy at Mexico, N. Y. He studied for his profession during 1842-43 at Geneva Medical College, and subsequently graduated, in 1862, at Lind University, Chicago. He commenced practice at Vienna, Oneida County, N. Y., and removed thence to St. Louis, where, during the war, he was assistant medical examiner for the First District of Missouri. He then removed to Boston, Mass., and was admitted a Fellow of the Massachusetts Medical Society.

"He was one of the founders of the Gynecological Society of Boston, and soon became recognized as of special skill in diagnosis and treatment of diseases of women.

"He conducted successfully a large practice until his death, which was from cerebral hemorrhagic effusion, the result of an accident." He was a member of many scientific societies in which he was an able and active man, and at one time held the office of vice-president of the American Medical Association. He was too busy a man to write much for publication, but one of his articles, a paper, "On the Connection of the Hepatic Functions with Uterine Hyperæmias, Fluxions, Congestions and Inflammations," in the Transactions of the American Medical Association for 1878, vol. xxix., exerted a distinct influence towards obtaining in New England a wider respect by general practitioners for the specialty of gynecology, then still upon its trial, and at the same time served to curb the somewhat inordinate zeal of a portion of its younger enthusiasts.

He was, for many years, associated with Dr. Horatio R. Storer in his practice at Hotel Pelham, Boston. As a physician he was able, skillful and untiring in his efforts to relieve and cure his patients, readily obtaining and continuing to hold their confidence, respect and friendship. When patients did not progress as satisfactorily as he desired or expected, he was not easily discouraged, so wonderful were his resources. In fact, he never seemed at fault.

His father, the Rev. H. Warner, was of Scotch descent, and the doctor was well grounded in the Presbyterian doctrines and thoroughly conversant with the Scriptures. As a friend he was true as steel; honorable, upright in his dealings with all and ever the friend of the poor, whom he preferred for his patients, for there he found the most gratitude.

A little volume "In memoriam" was published after his death, containing the funeral services; a memorial tribute to him, read by Dr. H. M. Field, of Newton, Mass., before the Gynecological Society of Boston, followed by loyal and loving words from other members of the society; and letters from many persons, including prominent medical men in various parts of the country, testifying to his worth, his skill, his noble Christian manhood and his charities—so freely given to the poor.

Rarely has a physician been called from his life-work to cross the river to the "Home Beyond the Tide," leaving so many sorrowing and living friends to mourn their loss.

THADEUS PULASKI ROBINSON, M.D., son of Noah Robinson, was born in Laconia, N. H., Sept. 5, 1825, and died January 5, 1874, in Newton Centre, Mass., leaving a wife and daughter.

He fitted for college at the Lowell (Mass.) High School and New Hampton (N. H.) Academy, and entered Dartmouth College with the class which was graduated in 1848. He left college before graduation and entered the employment of the Essex Manufacturing Company, in Lawrence, Mass., as a civil engineer. In 1849 he went to California. While there he was commissioned engineer-in-chief to establish the boundary of the northern part of the State. He returned to Massachusetts in 1857, and began the study of medicine at the Harvard Medical School, and graduated in 1860.

He settled at Newton Centre, Mass., April, 1860. He was admitted a member of the Massachusetts Medical Society in 1862. He was a Mason, and a member of Dalhousie Lodge, Newtonville. June 6, 1860, he married Fanny Rebecca Smith.

DR. ALLSTON WALDO WHITNEY, son of Simon and Mary (Walker) Whitney, was born at Framingham, Mass., January 12, 1828. He attended the Framingham and Leicester Academies until July 1, 1846, when he entered the United States Military Academy, West Point. On the 1st of July, 1848, he resigned and began the study of medicine with his father, a much-beloved and respected physician, with whom he continued until he entered the Harvard Medical School, where he graduated in 1852. Upon receiving his degree, he settled at South Framingham, and remained there until the breaking out of the Rebellion. It was while at this place that he first manifested those abilities as a physician and surgeon which afterwards made him so well known.

In July, 1861, he joined the Thirteenth Regiment Massachusetts Volunteers, at Fort Independence, Boston Harbor, and was mustered into service as its surgeon July 16, 1861, continuing as such until his muster out with the regiment, August 1, 1864. During his service he was at one time assigned to duty as medical director of the Second Division, First Army Corps, and as brigade surgeon. He was brevetted lieutenant-colonel for gallant conduct and great humanity to the wounded.

August 24, 1864, he was married to Miss Sarah Ellen Bishop, of Boston, and settled in that city at the corner of Washington and Dedham Streets. In March, 1865, he removed to West Newton, and there resided until his death. He was the father of four children, two of whom, Charles Simon and Mary Ellen, are now living.

The disease which resulted in his death first showed itself during the winter of 1880-81, and on the 2d of

February he went to the Massachusetts General Hospital for treatment, remained two or three weeks and then returned to his home. After several weeks of rest and good nursing he resumed his professional duties, apparently in much better health than for some months previous. On the evening of November 8th, while preparing a description of the wound which caused the death of President Garfield, which he was to read and illustrate to the school children of West Newton, he reached for some object needed, and, upon resuming his seat, complained of violent pain in his side. He grew worse rapidly, and at three o'clock Friday morning, the 11th of November, he died of angina pectoris.

He was a member of the Massachusetts Medical Society, the Masonic Fraternity, the Royal Arcanum, the Knights of Honor, Military Order of the Loyal Legion, Post 62, G. A. R., Boston Light Infantry Association, and the Threottyn Club.

On the 30th of April, 1863, Dr. Whitney was put in charge of the hospital at the Fitz Hugh House, on the Rappahanock River, and on the 10th of May the army moved northward, the wounded being sent to Washington as fast as they could be removed with safety. On the 15th of June the hospital was captured by the rebels, and about forty men, all badly wounded or very sick, and the nurses and guard, numbering about twenty, were made prisoners. Dr. Whitney had remained with the wounded men, and protested against their capture and removal in such strong terms that he was also made prisoner. All were taken in freight cars and army wagons to Libby Prison. During the trip he was unceasing in his efforts to alleviate the sufferings of the wounded men, and at Libby Prison he was active in their welfare. He made the acquaintance of the officers, and so gained their good-will by that charm of manner which was almost irresistible, that he was allowed to visit his men, and his efforts hastened their exchange by many months; for, until he represented the truth, the authorities of the prison insisted upon it that they were Union officers in disguise. He was kept a prisoner for about six months, before the expiration of which time almost all, his men had been exchanged.

In appearance Dr. Whitney was a noticeable man, about five feet six inches in height, quite corpulent, and very dignified in his bearing. He had dark hair, very heavy eyebrows, clear and keen blue eyes, and wore a gray moustache somewhat extended on either cheek. His life was one of rare usefulness. His kind and sympathetic nature made him beloved by rich and poor, and his skill in the practice of medicine and surgery was of the highest order and received recognition as such by the best men in his profession. In battle he was calm, undisturbed by the excitement and dangers about him, saw clearly his duties, and steadily pursued them with a coolness, fearlessness and persistency that commanded the admiration of all.

"JOSEPH HUCKINS WARREN, M. D., son of Joseph and Caroline E. (Huckins) Warren, was born in Effingham, Carroll County, N. H., October 2, 1831. His father was the seventh son of James Warren, of Scarboro', Me., and grandson of John Warren, of French and Indian war notoriety. This is the historic war family of Revolutionary fame. His maternal ancestors were in the line of descent from the Duchess of Marlboro'. His maternal grandfather, Joseph Huckins, was a very prominent man; he was high sheriff of New Hampshire and grand master of F. and A. M. in New England, holding the jewels and archives of the Order when the Morgan excitement against Masonry was so bitter."

At sixteen years of age he entered West Lebanon Academy, Me. He commenced the study of medicine at the medical school, Castleton, Vt., in 1849, and afterwards attended lectures at the Harvard Medical School. He graduated from the Medical School, Bowdoin College, Me., in 1853. He went to New York and took a special course of study with Dr. Valentine Mott, then returned to Massachusetts, joined the Massachusetts Medical Society, and began the practice of medicine in Newton, Mass. Here he practiced three years, during which time he was a member of the School Board and held other offices of trust and honor. From overwork his health broke down, and he removed to Dorchester, Mass.

At the breaking out of the Rebellion, Dr. Warren was among the first to volunteer, and was in Baltimore with the Massachusetts troops when the first volunteers were mobbed in the streets of that city. He was particularly recommended to President Lincoln, by Hon. Henry Wilson, as a most loyal and trustworthy person and skillful surgeon. He was commissioned, by President Lincoln, medical director and brigade surgeon in General Casey's division. He labored zealously to alleviate the sufferings of the soldiers and partly through his influence barrack hospitals were erected for the sick and wounded. He saw active service before Yorktown, and being disabled while bearing special dispatches to Washington, was obliged to resign.

Dr. Warren has traveled abroad quite extensively for health and pleasure; and officially as delegate from the American Medical Association. He has read papers before the British Medical Association at Cambridge, and the Academy of Medicine at Paris. He published in London "A Practical Treatise on Hernia." This work was republished in America in 1882. He operated in Guy's Hospital, London, and elsewhere, to demonstrate his method.

He published "A Plea for the Cure of Rupture," and has written many monographs and medical papers, as well as articles relating to general literature. He was among the first, if not the first, to aspirate the pericardium (April, 1855), and to perform the operation of paracentesis thoracis.

While traveling in Florida for his health, he pub-

lished "Technics" and established the *Southern Sun*, a newspaper of independent character. "Technics" and "Modern Life" are now published in Boston under "Notes Current."

Dr. Warren is a member of the British Medical Association; permanent member of the American Medical Association, and vice-president of the latter for 1889-90; Fellow of the Massachusetts Medical Society; honorary member Vermont State Medical Society; Otsego Medical Society of New York; past resident member of Putnam County Medical Society, and State Medical Society, Florida; and is a member of numerous other literary, historical, scientific and social societies. He is trustee of the Boston Penny Savings Bank, &c., &c.

Dr. Warren was, with others, one of the founders and incorporators of the Massachusetts Home for Intemperate Women, and has been on the Board of Managers since its incorporation, March 30, 1881. He was chairman of the building committee and also attending physician.

Dr. Warren was married, September 24, 1854, to Caroline Elizabeth Everett, of Newton. Two children were born to them—a daughter, deceased, and a son, Charles Everett Warren, M.D., who is associated with him as attending physician at the Massachusetts Home for Intemperate Women.

During his residence in Washington he had special opportunities of seeing President Lincoln. He was, for that period, the medical attendant of that remarkable man. Perhaps the most important of his confidential interviews, for its influence on the President, and, through him, on the country at large, was one in which he introduced the eminent author, Nathaniel Hawthorne, to Mr. Lincoln. Mr. Hawthorne was a Friend in his aversion to force, and in his visit to Washington with Messrs. Ticknor and Field, his sensitive and peace-loving spirit was overcome by the horrors of war, and he fell into a state of great distress. Dr. Warren, in the hope that an interview with Mr. Lincoln would tend to restore Mr. Hawthorne's confidence in the future of his country, took him to the White House on one of his professional evening calls. It seemed at first an unfortunate moment. Mr. Lincoln was greatly agitated by the discovery of treachery in an unexpected quarter, and told his visitors that he was overcome by difficulties, not knowing who were friends and who were traitors, his burden in public life, failing strength and domestic sorrows being beyond his strength.

To this Mr. Hawthorne replied by a few words of sympathy and encouragement, and, finding these of little avail, knelt and offered a prayer which might be called inspired—full of confidence, utterly casting all care on the Infinite Power—invoking strength in this crisis, and ending in an ascription of adoration that seemed to lift his hearers to the visible presence of the Almighty.

As they rose, Mr. Lincoln said to him, with strong

emotion: "Mr. Hawthorne, God sent you here in my darkest hour. Now *I am strong*. He placed me here and I know that He will sustain me to the end." From that time all undue anxiety seemed to disappear, and Mr. Lincoln, by his decision, firmness and undoubting belief in his position as the servant of the Lord, inspired strength and courage in all who approached him.

HENRY BRADSHAW BRADLEY, M.D., was born in Cheshire, England, October 15, 1848, and died in Bollin Grove, Butley, England, August 31, 1881. He was graduated at the College of Physicians and Surgeons, London, England, and was professionally associated with his uncle, Professor Bradshaw, at Manchester, England. Later he practiced a short time in Trageda, Wales, and left there to accept a position as ship-surgeon on the Cunard Line of steamships. In 1877 he settled on California Street, Newton, Mass., where he practiced medicine until his health failed, a few months before his death, when he returned to England and died.

JAMES HENRY McDONNELL, M.D., was born in Ireland; studied medicine at St. Mary's College, Virginia, and graduated from Harvard Medical College in 1871. He settled in Waltham, removed to Newton, then to Watertown, and died in Waltham in 1886 or 1887.

He married Miss Kate Donahue, of Waltham.

He was a bright, active man, a loyal friend and a skillful physician.

WILLARD EVERETT SMITH, M.D., son of F. L. Smith, of Newton, was born in Newtonville, November 11, 1856; was educated in Newton Grammar and High Schools, and entered Harvard University in 1875, and graduated in his class in 1879. He entered Harvard Medical School in 1879, and graduated in 1882.

After a little preliminary practice he went to Boston and settled there, and immediately attained a reputation as a successful practitioner in diseases of the throat and lungs. He was employed by the Massachusetts Medical Society, of which he was a member, to prepare and report on the climatology of Massachusetts. And for two years he prepared and read papers on this subject in a most acceptable manner.

He was a brilliant young man, with prospects of rising to an eminent position in the medical profession.

He was taken ill and died suddenly, July 13, 1890.

September 15, 1886, he was married to Miss Alice L. Newell, of Framingham, Mass. He left a widow and one daughter.

JOHN P. MAYNARD, M.D., son of Elias Maynard, of Boston, was born in Boston, Mass., in 1816. He was educated at the Boston Latin School and Phillips Academy, Andover, Mass. He graduated from the Medical School, Harvard University, in 1848. He settled in Newton Lower Falls in 1848, where he

practiced medicine till 1852. He then removed to Dedham, Mass., where he now resides and continues to practice his profession. He is a prominent man and widely known as a skillful physician. He was president of the Norfolk Medical Society in 1876, '77, '78, '79.

In 1850 Dr. Maynard married Miss Caroline E. Fales, of Boston, Mass.

ALFRED C. SMITH, M.D., son of James Smith, was born in Bathurst, New Brunswick. He graduated at Harvard Medical College. For several years after his graduation he had charge, under the Dominion Government, of the Lazaretto, at Tracadie, N. B., for the care of the leprous community.

He afterwards moved to Newton and settled at Nantum, where he remained in practice for a few years. He afterwards moved to New Castle, New Brunswick, where he now resides.

OTIS EUGENE HUNT, M.D., son of Joseph G. and Lucy H. Hunt, was born in Sudbury, Mass., July 7, 1822. His early life was spent on a farm and his elementary education was acquired in the district schools of the town. He fitted for college in the Wayland Academy and in the academy at Wilbraham, Mass., and entered the Wesleyan University at Middletown, Connecticut, in the class of 1844. After nine months he left the university in consequence of ill-health.

Read medicine for a time with Levi Goodnough, M.D., of Sudbury, Mass. Later was a pupil in the Boylston Medical School in Boston, under the tutorage, chiefly, of Dr. E. C. Buckingham and Dr. Edward H. Clark. During his studies here he was present at the Massachusetts General Hospital when ether was administered for the first time. And he was the first to administer it in the towns of Sudbury, Wayland and Weston.

He attended medical lectures at Woodstock, Vt. and at Pittsfield, Mass., and graduated in medicine at the Berkshire Medical College in 1848, and was admitted to the Massachusetts Medical Society the same year. During his course of study he taught school in Sudbury four consecutive winters.

He settled in Weston, Mass., in 1848, and continued to practice medicine there till the autumn of 1864, when he removed to Waltham, Mass., where he continued active in professional work till 1870. He discontinued general practice at that time in consequence of failing health, selling his business and good will to Dr. E. R. Cutler.

Three years later, after extensive travel in this country, including a visit to California and the Pacific slope, and becoming improved in health, he moved to Newtonville, Mass., where he now resides, and recommenced the practice of his profession. In 1883 he retired from practice to a large extent. He is frequently called in consultation by younger and less experienced men. His son, William O. Hunt, M.D., succeeded in his practice.

While residing in Weston he served four years as

secretary of the Middlesex South District Medical Society, once as its anniversary orator. He was a member of the School Committee for ten consecutive years, and three years of this time served as chairman. He also was a member of the School Committee in Waltham for two years.

He has been president of the medical board connected with the Newton Cottage Hospital and consulting physician since it was founded.

He was married Oct. 8, 1849, to Aroline E. Thompson, of Sudbury, Mass. He has two children—Mrs. Nina M. Fenno and William O. Hunt, M.D.

DANIEL DENISON SLADE, M.D., son of J. Tilton Slade, was born in Boston, Mass., May 10, 1823. Graduated from the Boston Latin School, then entered Harvard College, from which he graduated in 1844. He studied medicine in the Tremont Medical School, and received his medical degree at Harvard in 1848. Passed one year as house surgeon in the Massachusetts General Hospital, and three years in the hospitals of Great Britain and on the Continent. Commenced practice in Boston in 1852, being visiting surgeon of the Boston Dispensary for several years; was admitted a member of the Massachusetts Medical Society in 1848, and became a member of the Boston Medical Improvement Society and Boston Society of Observation in 1855. In 1856 he married Miss M. Louise Hensier.

During his professional career in Boston he delivered courses of lectures to students on surgical subjects and received four prizes on medical subjects—two from the Massachusetts Medical Society: one on Bronchitis and its consequences, the other on Spermatorrhœa; and two from the Rhode Island Medical Society, being "The Fisk Fund Prizes."

He also has contributed many papers to the various medical journals. In 1863 he was appointed one of the inspectors of hospitals in Baltimore, Annapolis and Philadelphia. He was the author of the report on the subject of amputations, printed by the committee of the associate medical members of Sanitary Commission.

He settled at Chestnut Hill, Newton, in 1863. In 1871 he was appointed Professor of Agriculture and Zoology in the Bussey Institute, Harvard University, which chair he held until a severe sickness, in 1882, compelled him to resign.

In 1884 he was chosen one of the assistants in the Museum of Comparative Zoology, Cambridge, and appointed lecturer on comparative osteology, which position he still holds.

He has always been interested in horticulture and agriculture, and has contributed various papers on these subjects, and received two prizes for essays from the Massachusetts Horticultural Society;—one on the "Construction of Country Roads," the other on the "Treatment of Small Suburban Places." He also received the prize offered by a gentleman of Newton, on "How to Improve and Beautify Newton." At the

present time he is president of the Newton Horticultural Society, and has retired from practice.

TAPPAN EUSTIS FRANCIS, M.D., son of Nathaniel Francis, was born in Boston, Mass., August 28, 1823. He was educated at the Boston Latin School and then entered Harvard University, from which he graduated in the year 1844. He at once entered the Harvard Medical School and graduated in 1847. He settled in Roxbury, Mass., and during part of the years 1846 to 1847 he was city physician. In 1848 he removed to Newton Lower Falls and practiced medicine there for about three years. Then he settled in Brookline, Mass., where he now resides and continues the practice of his profession. He served for several years on the School Board and as trustee of the Public Library. For one year he was chairman of the Board of Health. He is a member of the Massachusetts Medical Society and honorary member of the Roxbury Medical Improvement Society.

JULIUS BLODGET, M.D., son of Alden Blodget, was born in Stafford, Conn., September 22, 1825. He received his early education at Monson and Wilbraham, Mass., alternating his school-days by work on a farm. He studied medicine at and graduated from the University of New York. He practiced medicine in Stafford Springs from 1853 to 1857, and in West Brookfield from 1857 to 1876, and in Newtonville, Mass., since 1876. He has been a member of the Connecticut State Medical Society and United States Medical Society.

In 1854 he was married to Miss Sarah L. Arnold, of Warren, Mass., and after her death was married, in 1861, to Mrs. Eliza F. Dunnells, of West Brookfield, Mass.

JOHN DUDLEY LOVERING, M.D., son of Gilman Lovering, was born in Raymond, N. H., March 8, 1827. He was educated at Dartmouth College. Before he entered college he was a teacher, and during his course of studies there he taught a part of the time. In 1861 he settled in Essex, Mass., and continued to practice medicine there nearly twenty years.

He graduated at the Albany Medical College, N. Y. He is a member of the Massachusetts Medical Society. He married Miss Sarah H. B. Cogswell, of Essex, Mass.

CHARLES F. CREHORE, M.D., son of Lemuel Crehore, was born June 18, 1828, in Newton Lower Falls. After studying at the academy in Milton, he graduated at the Rensselaer Polytechnic Institute, in Troy, N. Y., in 1848. He afterwards entered the Harvard Medical School, and graduated in 1859.

Before studying medicine he was employed, as a civil engineer, in building United States roads in Minnesota during the year 1854. In 1867 he retired from medical practice, and since that time has devoted himself to the manufacture of paper.

He went to Europe in May, 1852, and remained traveling abroad till September, 1853. He settled in Boston in 1859, and made that his home until 1866. He now resides in Newton Lower Falls.

Dr. Crehore has an excellent and distinguished war record, extending from the beginning to the end of the conflict. May, 1861, he was appointed surgeon on the armed transport "Cambridge." In December, 1861, he was appointed acting assistant-surgeon to the Twentieth Regiment Massachusetts Volunteer Infantry. He was promoted and appointed surgeon of the Thirty-seventh Regiment Massachusetts Volunteer Infantry, and served with that regiment from August, 1862, till December, 1864. During this time—from April, 1863, to April, 1864,—he served as medical inspector, Sixth Army Corps, and surgeon-in-chief First Division, Sixth Army Corps. At the battle of Winchester, Va., in September, 1864, he had charge of the wounded of the Sixth Corps.

Dr. Crehore is a member of many medical and other scientific societies, including the Massachusetts Medical Society, Boston Society for Medical Observation, Natural History Society, etc., etc.

He has written articles for medical and other journals, on professional and other topics. He has been an active member of the Newton Water Board. He was married, September 29, 1857, to Mary W. Loring, daughter of Henry Loring, of Boston.

D. WAYLAND JONES, M.D., son of Daniel Jones, was born in Ashburnham, Massachusetts, January 14, 1829. His early education was obtained in Westminster and Winchendon, Massachusetts. He graduated from the University of New York in 1852. He practiced in Medfield, Massachusetts, from 1854 to 1866, when he removed to Newtonville, Massachusetts, where he continued in general practice till 1878, and then settled in Boston. Since that time he has made diseases of the rectum a specialty and has given up general practice. In his specialty he has been very successful and is obtaining a wide reputation.

In 1871-72 he went abroad and traveled extensively through a large part of Europe, visiting and studying in the leading hospitals of the principal cities.

He is a member of the Massachusetts Medical Society, which he joined in 1852. In this society he has been censor and councilor. He became a member of the American Medical Association in 1874.

Dr. Jones married Miss Minerva P. Tyler in 1853. She died in 1858.

In 1860 he married Josephine D. Bullard. She died in 1871. In 1877 he married Miss E. N. Stuart.

HENRY MARTYN FIELD, M.D., son of Deacon John Field, was born in Brighton, Massachusetts, October 3, 1837, in what is known as the "Old Worcester House," which was built about the year 1685.

His mother was Miss Sarah Elliott Worcester, a lineal descendant from Noah Worcester, LL.D., the great lexicographer. She died about two years after Henry was born, leaving an infant brother, John Worcester Field.

In early childhood he was a nervous, puny, delicate child, and even when he reached mature manhood was never strong and robust, although he has

accomplished a vast amount of professional work. His early education was obtained in Chauncy Hall School, Boston, and Phillips Academy in Andover, Massachusetts.

He entered Harvard College in 1855, and graduated with honor in 1859, having the part of orator at commencement. During his years of study in college he had a strong predilection for the medical profession.

After his graduation he went to New York, and made his home with the eminent and celebrated Dr. E. R. Peaslee, and commenced the study of medicine. Dr. Peaslee was at that time Professor of Diseases of Women in Dartmouth Medical College, Hanover, N. H. Dr. Field accompanied him to Dartmouth that autumn, and on his return took a full course of lectures at the College of Physicians and Surgeons, in New York City. During his course of study he held a position of considerable importance in the Dewitt Dispensary.

He was valedictorian of his class when he graduated from the College of Physicians and Surgeons in the spring of 1862.

He immediately opened an office at No. 77 Lexington Avenue, in New York City, and entered into practice. Soon after he was mustered into the United States Army as assistant surgeon, and was sent to Hilton Head. There he contracted malaria and was transferred to the hospital at Beaufort, S. C. He has never entirely recovered, and at times still suffers severely. Soon after he returned home, and remained several months till somewhat improved, then went to Washington, D. C., and was stationed at Carver General Hospital, on Fifteenth Street, for about one year. In October, 1863, he resigned and came to his father's home in West Cambridge (now Arlington), Mass.

October 20, 1863, he married Miss Lydia Morgie Peck, daughter of Abel G. Peck, Esq., of West Cambridge, and sister of the wife of Gov. J. Q. A. Brackett. Soon after his marriage he removed to New York, and entered into practice with his friend, Dr. Peaslee.

In the spring of 1867 he left New York, and settled in Newton, Mass. Here he had a large and remunerative practice till his health, which was never strong, became so much impaired he was compelled to abandon it for a time, and seek the climate of Southern California for the winter of 1887-88. On his return, the following summer, he was given an enthusiastic public reception by his numerous friends. The following year and a half he remained at home, and attended to a part of his practice, but again breaking down, he was compelled to return to California for the winter of 1889-90. He owns a small ranch at Passadena, where he made his home during his stay. He returned to New England the following summer, still very much broken in health.

In 1869 he was offered and accepted the chair of

Materia Medica and Therapeutics in Dartmouth Medical College, which professorship he still holds.

Dr. Field published, in 1887, a work on "Cathartics and Emetics," which was well received by the medical profession. Beside that, he has published numerous addresses and monographs on various subjects, the most noted of which were those on sulphonal, which have attracted much favorable notice in the medical journals.

He was admitted a member of the Massachusetts Medical Society in 1867. For several years he was one of the censors in that society. He is a member of the Gynecological Society of Boston,—was one of the original founders—for six years was secretary, and afterwards was president for one year. On account of ill health he was obliged to decline a second term. He is one of the Medical Board connected with the Newton Cottage Hospital, and also holds the office of consulting physician in diseases of women. He was one of the original members of the Newton Natural History Society, and has delivered before it many able and interesting papers on scientific subjects.

Dr. Field has always been a profound student and he is one of the most scholarly men in the medical profession in New England.

In practice he was noted for his skill and assiduous care of his patients, easily winning and holding their confidence and esteem to a remarkable degree.

JESSE F. FRISBIE, M.D., son of Captain Jesse Frisbie, of Kittery, Me., was born in Rochester, N. H., July 12, 1838. For a time he was a student at Phillips Exeter Academy, N. H. He taught Grammar and High Schools in Maine and New Hampshire for several years, and then commenced his medical studies with his uncle, Dr. J. H. York, a prominent and successful physician of Boston, Mass., in 1858, and graduated from the Harvard Medical College in 1861.

A little more than one year he practiced medicine in Framingham Centre, Mass., and entered the United States Navy in December, 1862. He served in the Potomac Flotilla and afterwards in the East Gulf Blockading Squadron. While in service on the Potomac he contracted malaria, and in the Gulf of Mexico he was prostrated with bilious remittent fever and placed in the hospital at Key West, Fla. He left the navy in January, 1864, on account of ill health.

May, 1864, he entered the United States Army and served in Fairfax Seminary Hospital, near Alexandria, Va.; Carver General Hospital, Washington, D. C., and for nearly a year was in charge of Wisewell Barracks Hospital, in Washington, D. C.

He practiced medicine in Woburn and Boston and settled in Newton, Mass., in October, 1872, where he now resides.

Dr. Frisbie was a member of the Newton City government in 1883, and a member of the Newton Board

of Health from 1886 to 1890, when he resigned. He has served on the staff of the Newton College Hospital from its opening every year.

He early became interested in Natural Science, and while in the United States service made large collections, especially of Tertiary Fossils, for the Smithsonian Institution at Washington. In 1863 he was placed in charge of a scientific expedition for the investigation of the Tertiary formation in parts of Virginia and Maryland. In 1865 he was urged to go to New Mexico for two years for the purpose of studying the Zuni Indians and other tribes, and the Cliff-dwellings and other evidences of pre-historic races and habitations, in the interest of the Smithsonian Institution. Owing to ill health he was obliged to decline what to him was a most attractive field of investigation. It was the work afterwards accomplished by Lieutenant Cushing. Through his influence the Newton Natural History Society was formed and he was president of it for the first seven years. He is a lecturer on Geology and Archaeology and has published many papers and monographs on these subjects.

He was admitted a member of the Massachusetts Medical Society in 1865, American Medical Association in 1880, Gynecological Society of Boston in 1880. He is a member of the American Association for the Advancement of Science, and other medical and scientific societies in the State and elsewhere.

Dr. Frisbie was married, in November, 1866, to Harriet M. Dunlap, daughter of General Richard T. Dunlap, of Brunswick, Maine.

He is a member of Charles Ward Post, No. 62, G. A. R.

EDWARD A. WHISTON, M.D., son of Francis C. Whiston, was born at Roxbury (now Boston Highlands), Massachusetts, October 19, 1838. His early education was obtained at the Brimmer School, Boston, and Framingham High School. He graduated from the Harvard Medical College in 1861. Dr. Whiston has a brilliant war record extending over a period of three years. He was appointed assistant surgeon of the Sixteenth Massachusetts Volunteer Infantry, August 1, 1861, and was connected with that regiment till March 5, 1863, when he was promoted to surgeon and transferred to the First Massachusetts Volunteer Infantry. He left the service May 28, 1864. After the expiration of this term of service in the army he was appointed acting surgeon of Board of Enrollment at Greenfield, Massachusetts, and United States inspector of camps of Veteran Reserve Corps.

For two years, during 1865-66, he was resident physician to the Boston City Institutions on Deer Island, Boston Harbor, and also port physician.

He has been a member of the Board of Trustees of the Newton Cottage Hospital since its organization, January 4, 1881, and secretary of the corporation since January 16, 1882.

For many years he was a member of the Massachusetts Medical Society. He gave up practice of medicine in 1868 and went into mercantile life. Has been for the past ten years business manager of the Massachusetts New Church Union, Boston; is treasurer of the New Church Theological School at Cambridge, and of the New Church Board of Missions.

He was married, October 13, 1870, to Miss Emily Payson Call.

HENRY B. STODDARD, M.D., son of William H. Stoddard, was born in Northampton, Massachusetts, September 28, 1840.

He was educated in private schools, in Northampton, Brookfield and Longmeadow, and then entered Williams College, Williamstown, Massachusetts, from which he graduated in 1862.

In 1863 he served as volunteer medical cadet at the military hospital, Newark, New Jersey.

From October, 1866, to May, 1868, he served as interne in Bellevue Hospital, New York. He graduated from Bellevue Medical College in 1865.

After graduation he settled in Northampton, Massachusetts, and practiced there from May, 1868, to November 1, 1878, when he removed to Newtonville, Massachusetts, where he has since resided.

He became a member of the Massachusetts Medical Society in 1868, and is also a member of the Gynecological Society of Boston. He has served on the staff of Newton Cottage Hospital.

June 30, 1880, he married Miss Jeannie A. Oakes, of Newtonville, Massachusetts.

JAMES H. BODGE, M.D., son of Noah Bodge, was born in Boston, Massachusetts, in 1840. He was educated in the Boston Latin School, Dartmouth and Harvard Colleges. He graduated from Harvard Medical College in 1867. He settled in Newton Centre, Massachusetts, in 1874. He was appointed on the staff of the Newton Cottage Hospital in 1888. He also had an appointment as coroner for Middlesex County. He joined the Massachusetts Medical Society in 1867.

In 1875 he married Miss Florence Brown.

WILLIAM HARTWELL HILDRETH, M.D., son of John C. Hildreth, was born in New Ipswich, N. H., April 19, 1843. He was educated at the New Ipswich Appleton Academy. In 1864 enlisted in the Fourth Regiment Massachusetts Heavy Artillery, and remained with the regiment till the close of the war in 1865.

He graduated at the Dartmouth Medical College, Hanover, N. H., in 1869, and then located in Fitchburg, Mass., in 1870. Removed to Newton Upper Falls in 1874. He served five years in the Massachusetts State Militia as assistant surgeon, and surgeon of the Tenth Regiment of Infantry. He went abroad in 1888, traveling in England, France, Germany, Switzerland and Italy. He was married to Miss Helen Josephine Flagg, of New Ipswich, N. H., in 1869. He became a member of the Massachusetts Medical Society in 1870.

FRANCIS E. PORTER, M.D., son of Edward F. Porter, was born in Scituate, Mass., August 28, 1844. He was educated at Wesleyan University, and studied medicine in the Harvard Medical School. He graduated from the Harvard Medical College, and then went abroad for a time, traveling through England, Germany and Italy. On his return he settled at Auburndale, Mass., in October, 1875, where he now resides and practices medicine.

From time to time, articles from his pen have been published in the *Medical Record of New York*, and the *Boston Medical and Surgical Journal*.

He was admitted a member of the Massachusetts Medical Society in 1877. He is on the medical and surgical staff of the Newton Cottage Hospital. In 1875 he was married to Miss Christian W. Taylor.

HERMAN F. TITUS, M.D., son of Moses Titus, was born in Pepperell, Mass., in 1852. He was educated at Lawrence Academy and Colgate University. He first studied theology and was settled as Baptist minister in Ithaca, N. Y., and Newton, Mass. He graduated from Harvard Medical College in 1890, and now practices in Newton. He has fine scientific attainments, and is an expert botanist.

WILLIAM OTIS HUNT, M.D., son of Otis E. Hunt, M.D., and C. E. Hunt, was born in Weston, Mass., May 28, 1854.

He was educated in the public schools of Weston and Waltham, one year at Phillips Academy, Andover, one year special course at Harvard University and three years at Harvard Medical School. He also studied medicine one year in Vienna and eight months in London; a part of the time he was house-surgeon in London Hospital.

He graduated from Harvard Medical College in 1878. He practiced medicine one year (1878 to 1879) in Waltham, Mass., and then went to Europe for two years, for the purpose of study. In May, 1881, he settled in Newtonville, where he still is in practice.

He is visiting physician on the staff, and consulting surgeon at the Newton Cottage Hospital. He became a member of the Massachusetts Medical Society in 1878. He is a member of the Gynecological Society of Boston. January 29, 1879, he married Miss Mary F. M. Gibbs, of Waltham, Mass. His wife died August 15, 1887, leaving two children, Harold O. and Richard F. Hunt.

EDWARD BIGELOW HITCHCOCK, M.D., D.M.D., son of David R. Hitchcock, M.D., was born in Newton, Mass., February 5, 1854.

After studying in the Newton High School, he went to Phillips Academy, Andover, Mass., and there graduated in 1873. He graduated from the Harvard Dental School in 1877, and the Dartmouth Medical College in 1878.

He settled in Boston in 1877 and removed to Newton in 1882. He has never practiced medicine, but is widely known as a skillful dentist.

He has been president of the Harvard Odontologi-

cal Society, president of the Massachusetts Dental Society, corresponding secretary of the American Academy of Dental Science. He has written several valuable papers which have been published in different magazines. He was married in 1885 to Miss Lillie B. Comstock.

CHARLES HENRY BURR, M.D., son of Henry W. Burr, was born in Colchester, Conn., July 19, 1855.

He was educated in Boston Public Schools, Lawrence Scientific School, Harvard University and Harvard Medical School. He received the degree of S.B. in 1879, and M.D. from Harvard Medical College in 1882. He was house officer of the Carney Hospital, South Boston, in 1882-83. He practiced a short time in South Framingham and then in Roxbury till 1887. Since that time he has attended exclusively to medical examinations for various insurance associations. He was elected supreme medical examiner of the New England Order of Protection, November 12, 1887, and still holds that position.

He has served two years as assistant surgeon of the First Battalion Light Artillery, M. V. M.

He was admitted a member of the Massachusetts Medical Society in 1883.

While a student in the Lawrence Scientific School he published "Plans of the Doric Temple." In 1887 he married Miss Eva Stevens, of South Framingham. He resides at Newton Highlands.

ROBERT P. LORING, M.D., son of Joshua Loring, was born in Chelsea, Mass., February 18, 1852. He was educated at Chauncy Hall School, Boston, Mass.; Brookline High School, Institute Technology, Boston. He graduated at Harvard Medical College in 1875, and joined the Massachusetts Medical Society in 1876. He settled in Newton Centre, Mass., in 1876. After practicing medicine there for awhile he went West and spent three years. While there he received the appointment of assistant surgeon Chicago, Rock Island and Pacific Railroad Company, at Kansas City, Mo., and Professor of Physiology in Kansas City Medical College. On his return East he again settled in Newton Centre, where he continues to reside and practice medicine. He is a member of the medical board, a member of the medical staff and one of the consulting surgeons at the Newton Cottage Hospital. Dr. Loring married Miss Adelaide L. Nason, of Kennebunk, Me.

DAVID E. BAKER, M.D., son of Erastus E. Baker, was born in Franklin, Norfolk County, Mass., March 30, 1857. Educated in the Grammar and High Schools of Franklin, and in 1878 received the degree of B.S. from the Boston University. In his boyhood he was a farmer; after his graduation he was a teacher for a time.

He entered Harvard Medical School in 1879; Boston City Hospital as house surgeon in 1882-83. Received his degree of M.D. from Harvard University in 1883.

He settled in Newton Lower Falls in December,

1883, succeeding Dr. F. D. Lord. He remained there in practice till the summer of 1890, when he removed to Newtonville.

In 1886-88 he served on the staff of the Newton Cottage Hospital.

He was elected a member of the School Board for the years of 1887, '88, '89 and '90, and was elected chairman of the board in September, 1890; a director of Newton Associated Charities, 1889-90; member of the Newton Board of Health, 1890. He is a member of the Newton Natural History Society, Newton Civil Service Reform Club, Boston City Hospital Club, Massachusetts Association of Boards of Health, etc. He was admitted a member of the Massachusetts Medical Society in 1883.

He went to Europe in 1888, and spent a year in travel and study in Berlin and Vienna. Some of his papers have been published in the medical journals.

Oct. 21, 1885, he married Miss Harriet E. Lord, daughter of Dr. F. D. Lord, of Newton Lower Falls.

PHILIP VINCENT, M.D., son of Philip Vincent, M.D., was born at Camborne, County of Cornwall, England, on Feb. 7, 1858. He is a descendant of a line of doctors. In early life he spent six years at the Royal Medical College, Epsom, County Surrey, England. After continuing his studies in the Royal Medical College and Royal College of Surgeons, London, he spent four years in the London University College and Hospitals, and there took his degree M. R.C.S. (Membership of the Royal College of Surgeons, England). The next year, at Edinburgh, Scotland, he received the degrees, L.R.C.P. and L.M. (Licentiate of the Royal College of Physicians and Licentiate of Midwifery).

He entered into practice in England for a time, then was appointed surgeon on several steamships of the Great Western and Cunard Companies' lines.

Retiring from service, on the vessels he came to America and settled in Boston in 1884. In 1886 he removed to Newton, where he continued to practice medicine till July, 1890, when he moved to Waltham.

Dr. Vincent has held the position of ophthalmic house surgeon at University College Hospital under the celebrated Wharton Jones. He is a member of the London University College Medical Society. He has published articles on sea-sickness in the British medical journals.

WILLIAM HENRY MCOWEN, M.D., son of Timothy McOwen, was born in Lowell, Mass., March 5, 1860. His early education was obtained at the Grammar and High Schools. He graduated from Harvard Medical College and settled in Lowell in July, 1883. He removed to Newton Upper Falls in July, 1885, where he now resides and practices medicine. He has been city physician of Lowell and also on the staff of Lowell City Free Dispensary. He is medical examiner for various life insurance companies in the State and elsewhere.

On June 30, 1888, he was married to Miss Ellen

Theresa Daly, of Newton, Mass. He is a member of the Massachusetts Medical Society.

FRANCIS M. O'DONNELL, M.D., son of James O'Donnell, was born in Marlboro', Mass., April 9, 1863. His early education was obtained in the Grammar and High Schools. He afterwards entered Boston College, from which, in 1882, he received the degree of A.B. and in 1887 the degree of A.M.

In 1882 he entered the Harvard Medical School, and from Harvard Medical College received his degree of M.D. He settled in Newton in 1885; became a member of the Massachusetts Medical Society in 1887. He married Miss Rose A. Harkins, of Newton, July 2, 1888.

D. WALDO STEARNS, M.D., son of Daniel Stearns, was born in Newton, Mass., November 12, 1864. He was educated in the Newton Grammar and High Schools, and then entered Harvard College. He entered the Harvard Medical School in 1883 and graduated from Harvard Medical College in 1887. The following year he was resident physician at the Lynn (Mass.) City Hospital. Then he went to Europe. He spent some time studying at Guy's Hospital, London, and continued his medical studies in the schools and hospitals of Paris. He returned to the United States and settled on Watertown Street, Newton, in 1889, in what has been the family homestead for five generations. He was elected a member of the Massachusetts Medical Society in 1889. He is a member of the Newton Natural History Society.

THOMAS FRANCIS CARROLL, M.D., son of Owen Carroll, was born in Lowell, Mass., July 9, 1864. He was educated in the public schools in Lowell and Boston College, Boston, Mass. He graduated at Harvard Medical College and settled in Roxbury, Mass. He removed to Newton, Mass., in 1889, where he continues to practice medicine. He is a member of the Massachusetts Medical Society.

MYRON J. DAVIS, M.D., settled in Newton in 1886. Afterwards removed to New York; served in the United States Army during the War of the Rebellion; was appointed on the staff of the Newton Cottage Hospital as specialist in diseases of the eye.

LINCOLN R. STONE, M.D., graduated at Harvard Medical College in 1854. He joined the Massachusetts Medical Society in 1854. He has been president of the Middlesex South District Medical Society. He served in the United States Army in the late War of the Rebellion. He is now in practice in Newton, Mass. He served on the Newton School Board for many years.

FRANCIS G. CURTISS, M.D.—He joined the Massachusetts Medical Society in 1887. Is now in practice in Newton Centre, Mass.

JAMES R. DEANE, M.D., graduated at Bowdoin (Me.) Medical College in 1860. He joined the Massachusetts Medical Society in 1874; is now in practice in Newton Highlands, Mass.

ALBERT NOTT, M.D., graduated at the University

of Vermont Medical Department in 1869. He joined the Massachusetts Medical Society in 1875. He is dean of the College of Physicians and Surgeons, Boston, Mass. Is now in practice in West Newton, Mass.

FREDERICK L. THAYER, M.D., graduated at Harvard Medical College in 1871. He joined the Massachusetts Medical Society in 1872. Is in practice in West Newton, Mass. He is a member of the Medical Board and on the medical staff of the Newton Cottage Hospital.

FREDERICK W. WEBBER, M.D., son of A. C. Webber, M.D., of Cambridge, graduated at the Harvard Medical College in 1879. He joined the Massachusetts Medical Society in 1880. Is in practice in Newton, Mass.

DR. SAMUEL WHEAT, son of Moses Wheat, of Concord, Mass., came from Boston to Newton about 1713. He was born in 1703. He died in 1770. At one time he was selectman. Among his sons was

DR. SAMUEL WHEAT, JR., who had a numerous family, sixteen in number. One of his daughters married Dr. Lazarus Beale.

DR. JOHN COTTON, son of Rev. John Cotton. He was born in 1729 and died in 1758. He married Mary Clark, July 8, 1750. He graduated at Harvard College in 1747.

DR. JOHN STAPLES CRAFT, son of Moses Craft, married Elizabeth Park, May, 1758.

DR. JOHN DRUCE, supposed to be the son of John Druce, 3d. Graduated at Harvard College in 1738. Married Margaret Trowbridge, daughter of Deacon William Trowbridge, in April, 1749.

DR. HENRY PRATT died in 1745. Married Ruth Learned, Dec., 1709.

DR. SAMUEL WHITEWELL, West Newton, born 1754; died 1791. Afterwards settled in Boston as head of the firm Whitewell, Bond & Co., auctioneers.

DR. JOHN ALLEN, son of John Allen, died 1758. Married Jerusha Cook, of Windham, Ct., in 1745. He left at his decease one son (?) and five daughters, one of whom, Jerusha, married Dr. Samuel Wheat, Jr., in 1766.

DR. LAZARUS BEALE, son of Lazarus Beale, of Hingham, Mass. Married Lydia Wheat in 1749. She was probably a daughter of Dr. Samuel Wheat, Jr.

DR. EDWARD DURANT, son of Edward Durant, Jr., married Mary Park, daughter of Edward Park, Nov., 1762. He went privateering during the Revolutionary War and was never heard of afterwards.

DR. ABRAHAM D. DEARBORN was born in Exeter, N. H. (?) Bought the practice of Dr. Samuel S. Whitney and settled at Newton Upper Falls in 1844. He left Newton in 1854 or 1855. He was well educated in his profession, particularly courteous in manner and greatly respected.

DR. JAMES H. GRANT was the immediate successor of Dr. Abraham D. Dearborn at Newton Upper Falls in 1854 or 1855. He left Newton after a few years

and went to New Hampshire. He was succeeded by Dr. William H. Hildreth.

DR. J. F. HIGGINS settled in Newton Upper Falls in 1854 or 1855. He practiced medicine five or six years and died there.

DR. WILLIAM READ settled in Newton Upper Falls in 1836. He practiced medicine there about one year and then removed to Boston, where he practiced as a specialist in diseases of the rectum. He died in Boston in 1889.

ALBERT KENDALL, M.D., was born in 1828 and died in 1862. He was admitted a member of the Massachusetts Medical Society in 1855.

LUTHER CLARK, M.D.—Graduated at Harvard Medical College in 1836 and settled in Newton.

HENRY G. DAVIS, M.D.—Graduated at Yale College Medical Department in 1839; settled in Newton.

W. SARGENT, M.D.—Graduated at Department of Medicine of the University of Pennsylvania in 1847; settled in Newton, Mass.

THOMAS D. SMITH, M.D.—Graduated at Bowdoin Medical College, Brunswick, Me., in 1867; settled in Newton, Mass.

JOHN F. BOOTHBY, M.D.—Graduated at Dartmouth Medical College, Hanover, N. H., in 1879. Settled in Newton Centre, Mass.; afterwards removed to Chelsea, Mass.

DR. EZRA NICHOLS settled in Newton Lower Falls.

DR. JONES, no record, except name.

DR. NORMAN STEVENS joined the Massachusetts Medical Society in 1851. Died in West Newton, Mass., in 1871.

DR. CYRUS SWEETSER MANN joined the Massachusetts Medical Society in 1843. Lived in Newton, Mass.

DR. ENOS SUMNER, recorded as a land-owner in Newton in 1778.

CHAPTER XI.

NEWTON—(Continued).

HOMŒOPATHY.

BY HOWARD P. BELLOW, M.D.

THE history of homœopathy in Newton begins in the year 1849, when Dr. Joseph Birnstill, a native of Germany, removed from Boston to Newton Corner, as it was then called, and introduced the new system of practice. For twelve years he remained not only the pioneer, but the sole representative of this school in Newton. At the end of that time, in the year 1861, Dr. Frederick Niles Palmer, a graduate of the Homœopathic Medical College of Pennsylvania of the year 1853, removed from Gardiner, Me., and settled first in West Newton, and two years later, in 1863, in Newton, where Dr. Birnstill was still practicing. In

this same year and month—April, 1863—a third representative of this school, Dr. Edward P. Scales, a graduate of Dartmouth '55 and of the Cleveland Homœopathic Hospital College, of the year 1859, came to Newton and joined his colleagues in building up homœopathy in this city. Dr. Scales had first practiced for two years following his graduation in Norwood, Mass. (now South Dedham), and during the next two years in Winchester, Mass.,—removing from thence to Newton, where he still remains in the full practice of his profession with unabated vigor, being not only the senior representative of the homœopathic school, but also the longest resident physician of any kind in Newton. As such he took a leading part in the establishment of the Newton Cottage Hospital, which will be spoken of later as the most interesting and important event connected with the history of homœopathy in Newton.

Of Dr. Scales' two earliest colleagues Dr. Birnstill died suddenly, of hemorrhage of the lungs, February 16, 1867, aged fifty-six years, having practiced in Newton for eighteen years. Dr. Palmer continued to practice in Newton until the autumn of 1869, eight years in all, when he removed to Boston, introducing as his successor in Newton Dr. T. S. Keith. After seventeen years' residence and practice in Boston Dr. Palmer died, May 10, 1886, aged seventy-two years; a faithful and skilful physician, punctilious in every courtesy, and of such kindly spirit that his genial presence is still missed at every gathering of his colleagues.

Three years after the coming of Drs. Palmer and Scales, in the year 1866, Dr. W. H. Sanders, a brother of Dr. O. S. Sanders, of Boston, also settled in Newton. After two years of practice here he removed to Wisconsin in 1868, leaving as his successor Dr. J. H. Osborne, from New York, who remained, however, but six months. About this same time Dr. Charles W. Taylor, a graduate of the Homœopathic Medical College of Cleveland in 1853, settled in Newtonville. Dr. Taylor first practiced in Westfield, Mass., then in Malden, Mass., whence he removed to Newtonville. Never a strong man, the fatigue and exposure of practice induced bronchial consumption, and in hopes of arresting this disease Dr. Taylor, in the fall of 1873, sold his practice to Dr. Morgan J. Rhees, and removed to South Carolina. Receiving no benefit from the change, he returned North and resided in Wilbraham, Mass., until January 13, 1875, when he died, in his fifty-fifth year.

It was shortly after the settlement of Dr. Taylor in Newtonville that Dr. Theodore S. Keith came to Newton in 1869, and assumed the practice of Dr. Palmer. Dr. Keith began his professional life during the war, being appointed medical cadet in the United States Army May 12, 1862. He served in the hospitals in Alexandria and Washington until Jan. 16, 1863, when he entered the naval service as acting assistant surgeon, and April 6, 1866, was promoted to acting

past-assistant surgeon. He was first ordered to the U. S. steamer "E. B. Hall," doing duty in the South Atlantic Squadron. In 1864 he was ordered to the U. S. steamer "Peterhoff" at New York, and afterwards to the U. S. steamer "Cimarron" for further duty in the South Atlantic Squadron. Later he was ordered to the U. S. steamer "Passaic" and returned to Philadelphia, and then to the U. S. steamer "Monocacy" at Baltimore. He was finally relieved at Washington, D. C., and ordered to duty at the Bureau of Medicine and Surgery, Navy Department, where he remained until he received his honorable discharge, July 2nd, 1868. In the same year, 1868, he graduated from the Harvard Medical School. His practice in Newton extended over a period of nearly nineteen years, from October 18, 1869, to Sept. 13, 1888, when death removed him from the large circle of patients and friends which he had formed around him.

In the year 1873 Dr. Morgan J. Rhees purchased the practice of Dr. Taylor and settled in Newtonville. Dr. Rhees was a graduate of the Jefferson Medical College of Philadelphia, of the year 1841, and came to Newtonville from Hollidaysburg, Pennsylvania. In 1878 he sold his practice to Dr. George S. Woodman and removed to Wheeling, West Virginia, where he still resides and practices. About the time of Dr. Rhees' settlement in Newtonville, Dr. Levi Pierce came to Newton Centre, but remained little longer than one year, when he removed to Everett, Mass.

Up to this time additions to the number of practitioners of the new school were made very slowly, but at the end of this period the success and popularity of the new treatment seems to have created a demand for more physicians, for in the next few years we find their number increasing steadily and their practices increasing in the same ratio. First in this group came Dr. F. E. Crockett, a graduate of the Philadelphia University of Medicine and Surgery of the year 1867. Dr. Crockett began the practice of his profession in Norway, Maine, where he remained until the year 1874, when he came to this city and settled himself at West Newton, where he is still engaged in practice. In the following year Dr. S. A. Sylvester, a graduate of the Boston University School of Medicine, of the year 1875, settled himself in Newton Centre and there still remains in practice. The next year, 1876, Newton itself received an accession in the coming of Dr. James Utley, from Taunton, Massachusetts. Dr. Utley received medical degrees from Bowdoin, in 1874, and from the Hahnemann Medical College of Philadelphia in 1875. He practiced in Taunton two years before his settlement in Newton, but has no reason to desire any further change of residence or field of practice. He is at present assisted by his son, Dr. E. R. Utley, a graduate of Amherst and of the Harvard Medical School. During the term of 1888-89 Dr. James Utley was Lecturer on Minor Surgery in the Boston University School of Medicine.

The next village in Newton to receive a physician was the Upper Falls, where Dr. Eben Thompson, a graduate of the Pulte Medical College, of Cincinnati, began a practice which he still continues. Newtonville was selected by the next comer, Dr. George S. Woodman, who left a practice in Lynn, Massachusetts, in 1878, to purchase that of Dr. M. J. Rbees. Dr. Woodman received degrees from Amherst College in 1846 and 1849, and from Harvard University Medical School in 1849. At the beginning of the war, in 1861, he was appointed by Abraham Lincoln surgeon of the Board of Enrollment for the Second District of the State of New York, which office he held until the end of the war. Since 1878 he has continued to reside in Newtonville and is still in active practice. Towards the close of the same year, 1878, Dr. Howard P. Bellows settled in Auburndale, having previously practiced in Boston. Dr. Bellows received degrees from Cornell University in 1875 and 1879, and from the Boston University School of Medicine in 1877. With the exception of one year he has been connected with the faculty of the Boston University School of Medicine since his graduation, first as Lecturer on Physiology, and, after further preparation abroad, as professor in the same chair; and later, after another course of special study abroad, as Lecturer on Otology, afterwards Professor of Otology, which chair he still occupies. In the spring of 1890, after eleven and a half years of practice in Auburndale, during the last five of which he was also engaged in special practice in Boston, Dr. Bellows sold his entire general practice to Dr. Mortimer H. Clarke, confining his own practice exclusively to his specialty, diseases of the ear, and changed his residence from Auburndale to West Newton. After Dr. Bellows the next physician of this school to choose a location in Newton was Dr. E. N. Kingsbury, a graduate of the Hahnemann Medical College of Philadelphia, of the year 1880, who came from Spenser, Massachusetts, to Newton Centre in 1884, but removed two years later to Woonsocket, Rhode Island. The following year Dr. W. E. Richards, of Boston, removed his residence to Newtonville while continuing his office in Boston, practicing in both places. After about three years he discontinued this arrangement and returned to Boston to reside there as formerly.

Coming to more recent arrivals, we find, within about three years past, eight new physicians of this school settling in the various villages of Newton, several of whom still remain. Dr. Virginia F. Bryant, a graduate of the Boston University School of Medicine of the year 1884, settled at Newton Highlands in 1887—having practiced for three years previously in Boston. In the latter part of 1889 she removed to Jamaica Plain. In the summer of the same year, 1887, Dr. Clara D. Reed, a graduate of the Boston University School of Medicine of the year 1878, removed from Bellows Falls, Vt., where she had practiced for nine years, and settled at Newton. In the

following year, 1888, Dr. George H. Talbot, a graduate of the Boston University School of Medicine of the year 1882, also removed from Bellows Falls, Vt., after five years of practice there, and settled in Newtonville. The same year, 1888, Dr. F. L. McIntosh, a graduate of the Hahnemann Medical College of Philadelphia of the year 1881, settled in Newton. From 1881 to 1886 Dr. McIntosh practiced in Claremont, N. H., and thence removed to Melrose, Mass., where he practiced for two years before coming to Newton. He came to assume the practice of Dr. T. S. Keith upon his decease. The third physician to settle in Newton in the year 1888 was Dr. Mortimer H. Clarke, son of the late Dr. Henry B. Clarke, of New Bedford, Mass., who came from the service of the Brooklyn Homeopathic Hospital to associate himself in practice with Dr. Bellows and became his successor eighteen months later. Dr. Clarke received degrees from Harvard University '83 and from the Boston University School of Medicine in the year 1888. In 1889 Dr. C. H. Fessenden, a graduate of the Boston University School of Medicine of the year 1886, removed from Manchester, N. H., where he had practiced for three years, to Newton Centre. In the same year Dr. Samuel Lewis Eaton settled at the Newton Highlands. He is a graduate of Yale College '77 and of the Hahnemann Medical College of Chicago of the year 1882. For the first year after receiving his medical degree he practiced in the office of Dr. C. W. Butler, in Montclair, New Jersey, thence removing to Orange, N. J., where he practiced a little over five years before coming to Newton. The last physician of the new school who has settled in Newton is Dr. Henry P. Perkins, who came in April, 1890, to take up his residence and begin practice in West Newton. Dr. Perkins graduated from the Harvard Medical School in 1881 and practiced first in Lowell, later in Canandaigua, N. Y., from whence he removed here.

Besides the foregoing physicians several others have made Newton their place of residence, or field of practice, for longer or shorter periods and then gone elsewhere. In Newton Dr. Harriet A. Loring, a graduate of the Boston University School of Medicine of the year 1876, practiced for a year or two and then removed to Boston. In West Newton Dr. Samuel Ayer Kimball, of the Boston University School of Medicine, class of '83, practiced about six months and thence removed to Melrose, Mass., and later to Boston. At Auburndale, during the absences of Dr. Bellows, his practice was conducted by Dr. George R. Southwick, of Boston, upon two occasions, once for a full year, and upon another occasion by Dr. S. H. Spaulding, now of Hingham, Mass. Also at Auburndale, at the Lasell Seminary, there have been settled two resident physicians—first, Dr. Maude Kent, a graduate of the Boston University School of Medicine, of the year 1886, and at the present time Dr. Martha C. Champlin, who graduated from the same medical school in the year 1889.

Aside from the evidence of the growth and spread of homœopathy in Newton as furnished by the increasing number of physicians who settle here and the size and quality of their practices the chief interest attaching to the development of the new school in this city, and of the public sentiment with which it is regarded, centres about the Newton Cottage Hospital. This institution, which is now in the full exercise of its usefulness, was first projected in 1880. The first meeting was held in January of that year at the house of the Rev. Dr. Shinn, and was attended by the friends of both systems of medical practice. It was then determined to enter upon the work for the good of the community at large, and afford to all who came for treatment the same facility for choosing a physician of either school that they enjoyed at their own homes. Upon these lines the work went forward. Money was subscribed by all who felt interest in the hospital as a hospital, irrespective of the school of treatment which its inmates might prefer to employ. When, in the further development of the plan, it became necessary to provide a staff of physicians and surgeons, and a supply of medical and surgical appliances, as well as a building and a matron and nurses, the executive committee and trustees created a Medical Board consisting of eight physicians, four from each school of practice, who received a standing appointment with power to nominate annually the members of the medical and surgical staff of the hospital and regulate their terms of service; to recommend purchases and renewals of medical and surgical supplies; to recommend any measures or changes which may increase the usefulness of the hospital so far as relates to the medical and surgical service; and, in short, to act between the executive committee and trustees on the one hand and the medical and surgical staff on the other in whatever manner seems wisest for the best usefulness and success of the hospital.

Upon the first meeting of this Medical Board, April 9, 1886, the most perfect harmony was found to exist between its several members, and it became evident at once that each member present felt that the interests of the hospital itself came before every other interest, and that all questions of school would be administered with perfect fairness and forbearance to secure the common end in view. The president of the board was chosen from one school and the secretary from the other, and all committees were chosen in the most equitable manner possible. Questions relating to one school alone were referred to a committee from that school only, and all questions interesting both alike were treated without the slightest suggestion of any difference in school. Rules and regulations for the working service of the hospital were arranged and passed to the Executive Committee for adoption, and these secured the perfect equality of the two schools—providing that two complete medical and surgical staffs should always be in attendance at the same time, one consisting wholly of members of

the Massachusetts Medical Society and the other of members of the Massachusetts Homœopathic Medical Society; that the patients of the two staffs should be assigned to opposite sides of the wards, when practicable, or be otherwise kept distinct; that each patient upon entrance should choose the school by which he wished to be treated, and that when no choice was expressed the matron should assign them in regular alternate order to each school. The result of this provision has been perfect harmony from the beginning. In the board there has not from the very first been a single jar or discordant element, and upon the staffs no trouble has ever arisen between the schools in a single instance. This working harmony in the same hospital, and in the same wards, which has heretofore been deemed an impossibility as a matter of theory, has in our Newton Cottage Hospital been shown to be entirely possible as a matter of practical demonstration.

The Medical Board of the hospital, as it has stood unaltered from the first, is as follows:

Otis E. Hunt, M.D., president (R.); H. P. Bellows, M.D., secretary (H); Henry M. Field, M.D. (R); Edw. P. Scales, M.D. (H); F. L. Thayer, M.D. (R); F. E. Crockett, M.D. (H); R. P. Loring, M.D. (R); S. A. Sylvester, M.D. (H).

The staff upon the homœopathic side, as originally appointed in 1886, and as it served the first year, was as follows:

Physicians—Edw. P. Scales, M.D.; T. S. Keith, M.D.; S. A. Sylvester, M.D.; G. S. Woodman, M.D.; F. E. Crockett, M.D.; W. E. Richards, M.D.

Consulting Physicians—Edw. P. Scales, M.D.; F. E. Crockett, M.D.

Surgeon—James Utley, M.D.

Specialist, Diseases of the Ear—H. P. Bellows, M.D.

For the present year of service there are no changes save that Dr. McIntosh takes the place of Dr. Keith, deceased; Dr. Talbot takes the place of Dr. Richards, removed from the city; and Dr. Clarke has received appointment as surgeon.

CHAPTER XII.

NEWTON—(Continued.)

GEOLOGY OF NEWTON.

BY J. F. FRISBIE, M.D.

NEWTON is bounded on the north, west and south by the valley of the Charles River, and on the east by another depressed area. Between the north and south boundaries rises a range of hills with the axis running east and west. The outcropping ledges are slate, slate-breccia, conglomerate (pudding-stone) and amygdaloids.

The northern side of the city is underlain—in

places overlaid—by slate and slate-breccia, containing specimens finely ripple-marked. On Jewett Street is an outcrop of slate-breccia of unusual interest. This breccia is formed of angular fragments of an older slate imbedded in a newer. The ledge was upfolded, and in after-time that huge planing-machine, the glacier, slow-moving but ponderous and irresistible, plowed its way across, smoothing its irregularities, leaving long striæ to mark where some sharp, angular fragment of quartz or other hard, firm rock chiseled a line as it moved along. In places these parallel lines have been traced sixty to seventy-five feet. On Homer Street another outcropping ledge shows the glacial striæ running in the same direction—from north to south.

At Newton Centre and southeastward the conglomerate (pudding-stone) crops out in hills and bold escarpments, very fine and picturesque, as seen near Hammond's Pond.

When the upfolding took place—when this region arose from its watery bed—huge fissures and grading, down to the minutest seams, were formed as the crust folded and wrinkled, and into these was forced and ejected the semi-plastic and melted material from deep down below, and dykes and traps cut these older rocks in every direction, of varying width and extent; and some of these narrow cracks were filled, in after-time, by a deposit of mineral held in solution by the hot, boiling water bubbling up from the depth of miles below.

A large part of the city is covered with glaciated materials, either spread out broadly or heaped up in characteristic forms—sharp ridges of sand, gravel and water-worn boulders, like those seen at Auburn-dale and Newtonville, or gently-rounded elevations—lenticular hills, known among geologists as ground moraines, composed of fine clayey material, with angular fragments of rock interspersed, like Mt. Ida and Institution Hill. The first were formed on top of the glacier—the latter beneath it.

River terraces can be traced on both sides of Charles River, clearly showing the former level of the river-bed, and the down-cutting that has resulted from erosion during the long ages that have elapsed since the ice-sheet disappeared from our midst and our land was with "verdure clad," and bright flowers dotted the hills and the valleys.

Dendrites are found abundantly in the slates; some are very beautiful. An outcrop of slate at the drive-way entrance to the estate of Hon. R. R. Bishop, Newton Centre, is well worth an examination. The folding and wrinkling is beautifully shown; the laminations can easily be recognized in the face of the cliff, where it dips sharply to the north, and the dendrites are readily found. This is an interesting locality from the fact that the slate rests on the conglomerate, and is overlaid by the conglomerate. Points of contact between different rock-strata are eagerly sought for by geologists as

this knowledge aids largely in giving the formation to which they belong. On the western side of Hammond's Pond is a bold escarpment of conglomerate, the result of a fracture in the crust ages ago, producing a *fault*. A little farther away a huge fragment of the cliff has been thrown off, through the action of water and frost, leaving the rock-bordered amphitheatre, where the Newton Natural History Society often hold their exercises on their "Field-Day" excursions.

GLACIAL MORAINES.—Every change of level in a country produces a change of climate. Ascend to the height of 350 feet and you have reached the same temperature you would have found by going one degree, sixty miles, towards the north. Therefore we see that an elevation of any part of a country is a practical northward journey in temperature, and consequently in the Fauna and Flora.

Preceding the glaciers, there had been a long period of progressive elevation, till so large a part of North America had been raised above the line of perpetual snow, that it was covered with snow and ice piled up 4000 or 5000 feet, almost a mile in thickness; and then this mass, slowly, almost imperceptibly, but resistlessly, moved on southward to a warmer clime. As it journeys onward, the mountain crags and towering peaks, through the weight of accumulated snow and the action of cold winds and frosts, come down in crashing avalanches, forming deck-loads of crumbled stones and boulders to be carried and deposited in the valleys far away.

As these glaciers pressed south, southeast and southwestward, their eroding and grinding power was incalculable, and the tops of the hills and lower mountains, and sides of the higher, were ground away by these mighty planing-machines, leaving behind traces of their movements on the solid rock, in long striated scratches and groovings.

In one place a sharp, projecting angle of stone cuts its line in the solid ledge; in another, a loose rolling stone crushed the ledge as it rolled along, leaving slight horizontal crackings; and again the solid ledge was gouged to a foot or more in depth as a hard boulder, securely fixed beneath, and in the enormous mass of ice, plowed across the naked rock. Gravel, sand and earth imbedded in side or bottom of the glacier, smoothed and polished the ledge over which it passed.

Following this period of high elevation, accompanied with Arctic cold, came a subsidence, and these glaciers slowly melted away as the warmer climate followed; and rock, boulder, gravel and sand, constituting the drift, was left behind. Where the glaciers had *pushed* immense quantities of this material, torn and worn away from the hills and mountains, we now find the terminal moraines; beneath, where it had been carried along on top, we find the medial moraines; and on either side of these moving rivers of snow and ice, the lateral moraines are left to tell the story of their breadth.

Again a part of the land was covered by the ocean, and the St. Lawrence and Lake Champlain were arms of the sea. The ocean waves re-arranged and leveled much of this *débris*, spreading it out over the shallow ocean bed.

Time passes on and the everlasting forces acting below, again change the ever-changing surface, and a slow upheaval takes place; and the waters begin to drain off, and our part of the planet assumes more nearly its present limit and form. As the waters drain off, the river channels are formed and the river systems are developed, and down through the drift the waters readily cut their way. "The falling rain-drops gather on the land and a little rill forms; as this moves along it cuts down a little furrow; several of these rills combining form a rivulet which enlarges the furrow into a gully as it goes down the river-bank;" and these again combining pour down in torrents, cutting wider and deeper, as with gathering force the waters sweep down the declivities, excavating deep ravines and gorges, leaving behind the higher summits as ridges, cliffs and banks.

We find the Drift in every direction in Newton and the adjoining towns, in rounded hills, ridges, spurs and elevated plateaux composed of sand and gravel with boulders. Standing on the belt and ridge of land south of Cabot Street, you find a peculiar arrangement of hill and valley spread out on every side. Cabot Street cuts through an arm of this ridge, which stretches northward. There, and on the path through the woods, is exposed a fine picture of the unmodified Drift, sand, gravel and boulders, water-worn throughout. This entire ridge is Drift, and walking southward through Newton Centre the same formation is seen on every hand. Beyond there the country slopes to the south, leaving Newton Centre, Newton Highlands, and onward to Auburndale and Lower Falls, an elevated plateau and ridge of this Drift material, constituting a divide or water-shed.

The drift is very distinctly seen where it crops out on the Watertown shore of Charles River, nearly opposite the home of Mr. Henry Claflin.

At Auburndale and Riverside is a high bluff of Drift on the south side of the railroad, showing beautifully the enormous accumulations of this material; and as we cross to the north side we find another ridge of the same Drift which has been separated from the other by the water cutting a channel between; and then across the Charles River in Weston, rising to an equal height, the belt of Drift can be traced for many miles. Among the boulders lying scattered on the hills and occasionally in the plains, we find granite, gneiss, slates, green-stones and conglomerates. With the exceptions of the latter, all these boulders, sand and gravel, have been torn away from other rocks and transported to their present position through the agency of ice and water.

Then come back to the point of observation I have referred to on the ridge, and at once the conclusion is reached that this level plateau has, at some distant time, extended across the valley where Newtonville stands, to the plain on which Waltham is built, to a corresponding height in Watertown, and that the valley of the Charles is the result of the action of water since the depositions of the Drift, although this higher plain and ridge have been worn away much below its former height.

Now, descending and advancing towards the river, we find Newtonville is built on another level plateau, the same on which stands the lower part of the villages of Newton, West Newton and Auburndale, composed of the same materials as that we have left, and as we near Charles River another descent is made. These latter constitute the river terraces, and differ in many respects from the first.

Again we will retrace our steps to the ridge south of Cabot Street, near Newtonville, and endeavor to read the history of this problem spread out before us. First the ridge on which we stand is the old unmodified, unstratified Drift, proved by the materials composing it. These were brought and deposited here by the glaciers when the subsidence of this part of our continent caused a warmer climate, and the glaciers melting, disappeared. Now, as this immense quantity of water was drained off, accelerated by the gradual upheaval, wonderful changes took place; the river valleys were washed out, terraces formed, and with the exceptions of a slight deepening of the river channels and the present flood plains, the dry land was left nearly in its present condition, only now covered with grass, flowers, shrubs and forests.

Where glaciers have swept over the country, the northern slope is long and gentle, and the southern shorter and often abrupt; the glaciers ground, smoothed, polished, as they gradually ascended to the hill or mountain-top, then passing over they crumbled, falling down the other side, leaving no striæ or grooves to mark their tremendous power. As the irresistible force behind pushed them over, it exerted no influence on the falling mass farther than to continue piling more and more on top of that which had already fallen; and consequently its grooving, planing power was lost till it again had consolidated and gained a steady headway. Therefore on the north slope and top of ledges and mountains we find evidences of glacial action, while on the south we look in vain for them. The side of the *advance* was the side of wear and greatest erosion.

Some of the rounded hills standing isolated in the valleys, and nearly all the ridges in this vicinity, have, as a centre or backbone, an internal foundation structure, composed of granite, conglomerate or slates, all worn from pre-existing or primary rocks and constituting what is termed the secondary or stratified rocks.

Where these ledges crop out we often find they

have been rounded, polished, grooved and scratched by the ponderous, southward-moving glacier. On Jewett, just beyond Pearl Street, the ledge bears ample evidence of glacial action. Before it had been much cut away, I traced grooves more than fifty feet, rounding up over the ledge to its summit as far as it was uncovered. Although this stone had been subject to the well-known agencies following exposure, still the tracings are at once apparent.

We have spread out before us to-day one of the problems science unraveled and made clear only after the Glacial Theory had been accepted.

From base to top of this mass of snow and ice slowly moving southward, the materials composing the Drift were carried from the north to warmer climates. From jagged hill-tops and mountain-crags the rocks were gathered, which, after rolling and wearing, were finally deposited as clay, fine sand and gravel, or coarser stones and boulders over Canada, New England, and westward beyond the Mississippi. These boulders seldom exceeded a cubic foot in size, although sometimes they are found containing 20,000, 30,000, and even 40,000 cubic feet.

The Drift, while covering the lower lands and valleys, is found high up the mountains—2000 feet on the Green Mountains, 3000 on Monadnock, and 6000 on Mt. Washington. On the very summit of Mt. Washington drift boulders have been found.

Large and small boulders are found on the summits of most hills and smaller mountains in New England.

The loose, unstratified gravel and boulders over New England, New York, and the States west over the same latitude are called *Drift*. In some exceptional cases it is in layers; then it is called *Modified Drift*.

This is the result of a working over of the *Drift* material by the streams of water beneath the glacier or in subsequent time by the rivers or ocean.

The Drift is derived from the rocks to the north of where it lies, mostly between northeast and northwest. The material is coarsest towards the north, grading down to finer gravel and sand without stones towards the southern limit. With the exception of pieces of wood the Drift is nearly bare of fossils, and nothing to suggest marine origin.

Glaciers will move on slopes of one or two degrees, and at the present time the requisite slope is found to exist in New England and Eastern New York. When the winters come and the mantle of snow covers our country from the sea-coast to the far, frigid North, we have a stationary glacier; but the depth is only a few feet, instead of 4000 to 5000, and is light, porous snow, differing from the old-time glacier, which was mostly ice, with, perhaps, a few hundred feet of snow on the top.

The glacier in this part of North America would of necessity move southward, for, if for no other reason, the enormous accumulation of ice and snow to the

northward would effectually present a barrier to its movement in that direction, while to the South there would be a limit resulting from the warmer climate. In the farther North the ice-mantle may have been many miles in thickness. Therefore the glaciers would push southward, rounding and polishing off the hills and lower mountains, scoring the sides and tops with regular marked striæ, produced by the rocks, boulders and sand rubbing over them as with gigantic power the glacier moved along.

The Glacial Epoch and the Drift Epoch were the same. It was a period of intense cold, following and accompanying a wide-spread elevation in the cold latitudes in both the Northern and Southern hemispheres. In the warmer regions there are no traces of Glacier nor Drift material.

Below the perpetual frost-line a stream of water always flows, which works over that part of the glacial *debris* of angular and rounded stones and earth within its reach, transporting it to the valley, where it is deposited on the banks in a more or less stratified form.

The glacier has its sides and bottom set with stones of large or small size, and sand and gravel, and is a "tool of vast power," scratching, plowing and planing the rocks over or against which it moves; it even widens and deepens valleys.

Prof. Hitchcock says, "The Mountain Tarns, known as 'Lakes of the Clouds,' just below the summit of Mt. Washington, resulted from the excavating power of the glacier."

Sometimes the accumulated Drift material formed immense barriers and dammed up streams and shut in valleys, giving us to-day beautiful ponds and lakes.

I have referred to the avalanches falling upon the glaciers and forming deck-loads of debris. This detritus which was precipitated upon the top of the glacier was only a small part of the material gathered into this snow and ice-mass. From the tops of the mountains over which it passed; from the sides against which it crushed its way, and even from the valleys, it gathered material which became incorporated into, and distributed throughout the vast sheet of ice; and these materials eroded, broken, crushed and taken from one place, were the implements that ground, pulverized, polished and produced the striæ on other and perhaps far distant rocks. This *debris*, taken from different rock-formations, comprised fragments of all the rocks exposed, from the granites down to the more recent formations, and to-day we find it scattered broad-cast over our hills and valleys.

To produce the Drift there must be the glacier. To form the glacier there must be elevation above the line of perpetual frost, and an abundance of moisture in the atmosphere. Were the thermometer never to rise above freezing point our earth would be a rainless, snowless sphere. For, to produce rain and snow, there must be moisture, and this is only the result of a temperature of above 32° Fahrenheit.

Thus far in speaking of the Drift, I have referred only to that form of it over which we passed. But there are two other conditions in which the glacial *debris* is presented for our examination and study, differing in material and position from that we have observed to-day.

In Newton we have a few of those beautiful shaped hills, characteristic of the Glacial Period, found so frequently in the eastern parts of Maine, New Hampshire and Massachusetts.

These hills are supposed to have been formed *beneath* the ice-sheet by the gradual accumulation of the material torn and worn away from the rocks and valleys over which it moved. They are composed of clay, sand, boulders and fragments of rock indiscriminately heaped up, without stratification; very hard and compact.

The name given them appears to be very characteristic and appropriate—*ground moraines*—and if the theory is correct that they were formed by the constant addition of new material as the glacier moved onward, their composition and compactness can readily be understood. They have been named by Prof. Hitchcock, "*Lenticular hills*." They are elliptical in shape, the long diameter corresponding very nearly with the stria and glacial groovings found in the immediate vicinity. Mt. Ida is a typical specimen of a lenticular hill—elliptical in shape, steep sides, gently rounded top and always a beautiful picture in the landscape.

Beside Mt. Ida; Brighton Hill, partly in Newton and Brighton; Nonantum Hill; Prospect Hill, near the Newton reservoir; Institute Hill at Newton Centre; Moffit's Hill, lying between Fuller and Beacon Streets, and Oak Hill, near Newton Highlands, are all composed of the same materials and present the same shape.

The other form remaining to be described is that of a cover, or sheet of material, consisting partly of that just described, mingled with sand, gravel and detritus generally, dropped loosely upon the hills and valleys when the ice melted beneath it. This form of the Drift covers nearly all New England to a depth varying from one to ten, or even twenty feet; and in connection with this are found the large boulders so abundant in some localities.

The distinction between these three glacial deposits is readily apparent.

The first is composed of sand, gravel, pebbles and boulders (not striated) all, water-worn and rounded; more frequently unstratified. This is generally found in the valleys; but sometimes it occurs on elevated plateaux. It often overlies the other two forms of deposit.

The second overlies the "lenticular hills," and nearly the whole of the glacier-swept region, forming a thin cover of only a few feet in thickness, composed of the materials found in the lower and upper deposits.

The lenticular hills, built up of clay, sand, pebble and angular fragments of rock, hard and compact, comprise the third or lower division of the Drift. These two latter are also known by the name of *upper* and *lower Till*.

In Hiawatha, Longfellow assigns other cause than glaciers for the boulders found scattered far and wide over the elevated plateaux of the distant Northwest. You will remember the terrible conflict between Hiawatha and his father, Mud-je-kee-wis, when Hiawatha,

" With threatening look and gesture
Laid his hand upon the black rock,
Upon the fatal Warbeek laid it,
With his mittens, Min-jek-ah-wun,
Rent the jutting crag asunder,
Smote and crushed it into fragments,
Hurled them madly at his father,
* * * * *
But the ruler of the West-Wind
Blew the fragments backward from him,
With the breathings of his nostrils,
With the tempest of his anger;
Blew them back at his assailant;
* * * * *
Still the hunter sees its traces
Scattered far o'er hill and valley;
* * * * *
Sees the masses of the Warbeek
Lying still in every valley."

Scattered throughout Newton, in every direction, especially on the ridges and hills, are found the boulders left by the ice. On the hill-tops and slopes they are or have been very abundant, in full view, the finer material having been washed away, leaving them exposed. The walls built by farmers are composed entirely of these rocks, various in form and material, but showing unmistakable evidences of water action. On the top of the ridge I have referred to, lying between Newtonville and Bullough's Pond, I found the fragments of a large boulder, a well-worn traveler from some distant crag or mountain-top, stranded, like many another castaway, on a gravelly beach. Also on the southwest slope I found fine specimens of asbestos where another boulder had landed and was slowly and surely crumbling back to dust.

This ridge shut off the pond from the plain on which Newtonville stands, and dammed back its waters when the pond occupied a much greater area than now; but, following the elevation of the land, the water burst through the barrier at the northwest corner, and the greater part escaped where the "Old Mill" now stands. Beyond are beautiful forest-crowned ridges, water-worn hollows and romantic dells, rimmed with shrub and tree, dotted with the trailing vine, the purpling bloom and the flowers nodding in the gentle breeze; dark and sombre in the shadows; lovely places to wander on a summer's day to study the great problems of life and the changes and growth of this, our terrestrial home.

J. H. Mason

BIOGRAPHICAL.

HON. DAVID H. MASON.

Hon. David Haven Mason, son of John and Mary (Haven) Mason, was born in Sullivan, N. H., on March 17, 1818. His career offers a shining example of the success of a self-made man, in the deepest significance of that familiar phrase. By his own unaided exertion, by rigid economy, without the assistance of wealthy or influential friends, he procured the means for his professional education, graduating at Dartmouth College in 1841, and entered upon the chosen field of his labors in Boston, Mass., an entire stranger to the city and its institutions. After securing a location at 20 Court Street (now the site of Young's Hotel), and by the purchase of the necessary office furniture with a few elementary law-books, his last dollar was spent. Thus he entered upon his business career without a solitary friend in the city from whom he could claim the privilege of the smallest loan; but by his untiring energy, industry, sturdy devotion to his profession and fidelity to his clients he soon commanded a respectable and lucrative practice, while by his many honorable and genial traits of character he was rapidly gathering about him a large circle of ardent and appreciative friends.

After several years of tireless devotion to the law he entered the arena of public life and by his administration of the various official positions entrusted to him, whose functions he discharged with admirable judgment, zeal and success, he made his influence felt as a noble public benefactor in Newton, where he resided, in the neighboring city of Boston and throughout the whole Commonwealth. Many of the most useful and important public improvements of the period in which he was so conspicuous in active official service owe their origin and their successful achievement, with all their untold utility, to his wisdom in preparation and his remarkable skill in execution.

Mr. Mason was a resident of Newton for twenty-five years, and during this entire period he was an honored and cherished leader in the educational and social improvement of the community, exercising to a remarkable degree his peculiar faculty of bringing out the good qualities of those with whom he came in contact and greatly enriching his townsmen by this contribution. The precise value of his services to the town of Newton during the long period that he was its counsel and the zealous promoter of its interests can never be estimated and therefore will never receive a just and proper appreciation.

He early won the confidence of his fellow-citizens, and was a very active and influential member of the House of Representatives during the years 1863, '66 and '67. The patriotic Governor John A. Andrew admitted him to his personal intimacy, and often expressed himself by word and letter as leaning with implicit confidence upon the sagacious counsels of his friend in many important and difficult emergencies.

In the struggles of the country during the War of 1861-65 he evinced the most devoted and ardent patriotism, and his tongue and pen were never deficient in the exigencies of any occasion. He was a friend to the poor and a helper to the distressed. Mindful of his own early struggles, he sympathized with young men and was ever ready with his advice and influence to encourage and stimulate them in the preparation for spheres of usefulness and honor. He declined the honor of the Republican nomination for the Senatorship and the higher position of National Representative, each of which he was strongly urged to accept, giving as his reason the claims of his profession. He also repeatedly declined elevation to the Bench on the ground that no emolument or judicial distinction could induce him to surrender the delights or avoid the tender responsibilities of his home and family, a sentiment of which the practical interpretation formed a legacy now most deeply cherished in the hearts of his children.

The most influential journals of his time contained many sterling articles from his pen, advocating public improvements and adapted to guide public opinion upon points involving the financial or educational interests of his town, of the city of Boston, and the Commonwealth.

In 1857 Mr. Mason was invited to deliver the oration at New London, Conn., at the celebration of the eighty-first anniversary of American Independence. The papers of that city, without distinction of party, spoke of the oration "as a sound, able and patriotic production, beautifully written and very effectively delivered." On a similar occasion in Boston he was invited to read the Declaration of Independence and he performed the service according to the journals of the day "in a forcible and truthful manner, and the audience warmly evinced their approbation."

In 1859 he was the orator of the day, at the celebration of the eighty-third anniversary of independence at Newton Centre, and his oration gave great satisfaction to his hearers. It was a refreshing example of originality, bold in expression as well as conception, and naturally suggested by the time-hallowed history of the scenes and struggles which gave birth to the anniversary. "It was marked by careful research and sound judgment, and replete with noble sentiments and lofty eloquence." On the 14th of July, 1864, Mr. Mason delivered the address at the centennial anniversary of the town of Lancaster, N. H., a very interesting production now in print.

While he was a member of the House of Representatives Mr. Mason attended to the business of the Commonwealth with great fidelity, and won for himself the reputation of being one of the best debaters of that honorable body. He watched carefully every measure that came before the Legislature, bringing the entire weight of his powerful influence in favor of any worthy project, and by his scrupulous adhesion to the right he made himself a power among his asso-

ciates. His speeches before the Legislature and committees thereof upon the consolidation of the Western and the Boston & Worcester Railroad corporations, on equalizing the bounties of the soldiers, on the adoption of the Fourteenth Amendment to the National Constitution, on making the mill-dam free of toll, and his immense contribution to the business facilities and prosperity of Boston by the leveling of Fort Hill, are specimens of the noble efforts by which he proved himself pre-eminently a public benefactor. In the course of an extended comment upon the last of these undertakings, one of the daily journals of Boston remarked: "The credit of engineering the matter (the Fort Hill improvement) through the Legislature, and reducing the details to a practical working level, is due to D. H. Mason, Esq., whose efforts in bringing to an adjustment the long contested Brighton Bridge case, and the prominent part he has taken as counsel for railroad corporations before the Legislature, has caused him to be regarded as one of the most eminent and successful counsel that appears in that body. This enterprise was entrusted to him and the many difficulties that stood in the way were, by his untiring energy, all removed, and Boston will soon reap the advantage of having wide and well-graded streets in place of narrow lanes leading to crowded tenement-houses."

Of the action of the municipal and State authorities in removing the toll gates from the mill-dam road and making the great thoroughfare free to the public, the same journal says: "It is but just that it should be known that the credit of this is due principally to the persistent efforts of David H. Mason, Esq., of Newton, who for several years has given attention to this matter, presenting its importance before successive Legislatures until at last the public enjoy the great privilege secured."

In 1860 Mr. Mason was appointed to a position upon the Massachusetts Board of Education, of which he was for several years a very efficient member, and discharged the duties of that office with exemplary faithfulness. No demands of his business were permitted to interfere with his obligations to the State in this department of service. It was to him a labor of love and he loved even the labor itself. Recognition of his efforts in behalf of the State Normal School at Framingham were showered upon him in a thousand different ways and added to the pleasures of success in this undertaking.

Mr. Mason was also deeply interested in sustaining the high character of the schools in the town of Newton. In an account of the dedicatory exercises of the High School building at Newtonville, it was written: "It would not be invidious to the other friends of the enterprise to say that to Mr. Mason, perhaps more than to any one else, is the town indebted for the consummation of this enterprise. For three years he has devoted to it his time and energies. Through his eloquent appeals and forcible arguments he has over-

come a persistent opposition, and in its darkest hours when its firmest friends were almost tempted to despair, his voice was lifted in tones of startling eloquence, till success crowned his efforts. And the enthusiasm with which his name and speech were received showed that this was not the hour of his pride alone but the pride of his friends for him." The "Mason School" at Newton Centre was named for him as an honorary testimonial by his townsmen of his noble interest in the cause of education.

Allusion has been made to Mr. Mason's patriotic spirit. At the outbreak of the Civil War, Governor Andrew chose him from the ranks of the Democrat party and placed him upon the Military Commission—the only civilian in that important selection. He was an ardent War Democrat, threw the full current of his powerful influence in favor of the re-election of Abraham Lincoln, and during the war he was unwearied in his zeal to preserve the country and its free institutions unharmed, and to stimulate his fellow-citizens to all right and noble efforts. A notable instance of this occurred in an emergency in the war, when a large and enthusiastic meeting of citizens was held in the town of Newton. The design of the meeting was to take measures for equipping one or more companies of volunteer militia, and to take further measures for the support and comfort of the families of such as should be called into service. Mr. Mason offered a series of resolutions which he supported with eloquent and patriotic remarks. He alluded to a previous meeting where the patriotic men of the town expressed themselves as willing to sacrifice everything for the cause of their country; but the present meeting was one where prudence and calm judgment should rule the hour. The minds of men should not, in their enthusiasm, be carried beyond the proper line of duty; while they are willing to give of their substance, judgment and discretion should so guide their actions, that, while everything needed should be given unsparingly, nothing should be wasted. "Millions of gold and rivers of blood will not compare with the influence of this question; for, on its solution hang the hopes of civil liberty and civilization throughout the world for ages to come. Let it not be said that we, of this generation, have been unfaithful to the high and holy trust." The preamble and resolutions, which were unanimously adopted, were as follows:

"WHEREAS, for the first time in the history of our government, the Republic is placed in great peril by an armed rebellion of several of the United States, threatening the destruction of our National Archives and our National Capitol, and a sudden resort to an armed resistance has become necessary for the preservation of our lives and liberties, and

"WHEREAS, by solemn proclamation the President of the United States has called upon the good Commonwealth of Massachusetts for the means of effectual resistance—

"Now, therefore, we, the inhabitants of the Town of Newton in town-meeting assembled, loyal to the constitution and the laws of the land, do hereby instruct and direct the selectmen of our said town to take and appropriate from any moneys at any time in the treasury of said town, during the current year, a sufficient sum, not exceeding \$20,000, to fully arm and equip in the most approved manner one company or

J. H. May Jr.

more of volunteer militia who have enlisted or may hereafter enlist from said town, in the service of the State or General Government, and if any such persons are called into actual service, leaving their families unprotected, the selectmen are also directed to take especial care to provide for them all the needed and necessary comforts of life, in sickness and in health, during the continuance of said service, and as long as the exigency of the case requires. And if any should perish in said service the town will tenderly care for their remains, and furnish them a suitable burial.

"Resolved, That the people of this town have the most perfect confidence and trust in our present form of Government, that we have faith in the wisdom and patriotism of its founders, and that without distinction of party or recognition of party lines, in our heart of hearts we revere and love their virtues and their memories. The cause of this Union is our cause, and to its support, in firm reliance on the protection of Divine Providence, we pledge our lives and our sacred honor."

These resolutions, passed unanimously amid great enthusiasm, are honorable alike to the lofty intellect from which they sprang, to the pen that drew them and to the loyal citizens of the town who found in them the eloquent expression of their sentiments.

When the elevated and lucrative office of United States Attorney for the District of Massachusetts became vacant by the resignation of Hon. George S. Hillard, a large number of the most famous members of the Suffolk Bar volunteered their influence in support of the appointment of Mr. Mason to that honorable position. He was nominated by President Grant, confirmed by the Senate, and appointed upon December 22, 1870, his elevation being regarded as a strong one for the Government and highly acceptable to the people and the bar of Massachusetts. He was at this time a leading member of the Republican Party, having joined its ranks at the close of the Civil War.

Mr. Mason's administration of this, his last public office, evinced to the highest degree the attorney's legal knowledge and acumen, and was a fitting close of an active and noble professional career. He was counsel for the Government in some very important and celebrated cases during his term of office, securing two of the largest verdicts ever obtained by the Government in this district. His methods were marked with dignity and principle, without exception, and won for him the highest public and private commendation.

Mr. Mason, in his domestic and social relations, displayed even more decisively the charming dignity and purity of his character. On June 16, 1845, he had married Sarah Wilson (daughter of John Hazen and Roxanna) White, of Rutland, Mass., and he loved to ascribe a greater part of his prosperity and success to the unwavering sympathy and love of his faithful wife. In a letter by Gov. Emory Washburn to Mrs. Mason after her husband's death he says: "I have again and again heard him, almost reverently, express how strongly he was sensible of having what, to a generous-minded man, is the highest element of encouragement and success—the counsel and sympathy of one whose lot was inseparably cast with his."

Mr. Mason died in Newton on the 29th of May, 1873, after a lingering illness of several months. His

widow, a daughter (Mabel White) and three sons survive him; his sons (Edward Haven, Harry White and Frank Atlee) following the profession of their father.

The lofty moral and intellectual culture that illumined every element of his sterling character eminently fitted him for intimate association with the distinguished men of his time, and through it he enjoyed the sincere friendship and personal intimacy of such men as Henry Wilson, Charles Sumner and Governors Andrew and Washburn.

The eloquent messages of condolence that poured in after his death, the resolutions passed by the courts and by the various associations of which he had been a member, the many distinguished persons high in the Church and State who paid him the last sad honor at his burial, and the thousands of every rank of life that thronged to his final resting-place, bore silent and touching testimony how widely he was mourned and how deeply he had been beloved.¹

JOHN WILEY EDMANDS.²

John Wiley Edmands, son of Thomas Edmands, Esq., and Roxa (Sprague) Edmands, daughter of William Sprague, of Leicester, Mass., was born in Boston, Mass., on the 1st of March, 1809. The record of his life is from first to last a chronicle of great activity and grand achievements; while in enterprises, more particularly connected with the manufacturing industry of New England, in which the broad scope of his intellect was most successfully concentrated, he displayed a comprehensive mastery of the economical and administrative principles of business rarely met with.

In his boyhood he was educated in the Boston Grammar School, and upon his graduation therefrom he entered the English High School of Boston when it was founded, in 1821, graduating from this institution in 1823, having been favored with the honor of a Franklin medal.

His tender recollections and rich appreciation of the educational advantages afforded him by this now famous school were touchingly embodied in an address delivered at its semi-centennial in 1871 before the assembled graduates and scholars. It was a glowing tribute of his love for the institution and for the cause of educational culture, and proved one of the most cherished efforts of his life.

Upon his graduation at the High School he began his business career in the famous house of Amos & Abbott Lawrence. In 1830, during his absence in Europe, he was made a partner in the concern and soon afterward became its acting manager, conducting its involved and multifarious business with remarkable application and success. He retired from the firm in 1843, having acquired at this early age a

¹ Re-written from Dr. S. F. Smith's "History of Newton," by Frank A. Mason, Esq.

² By Frank A. Mason.

wide-spread reputation of being a most intelligent, able and zealous business manager. As such his services were eagerly sought by many of the leading railroad and manufacturing corporations throughout New England, but these flattering offers he was for the present compelled to decline that he might fortify his already overtasked strength in preparation for the greater labors to come. During this period he was interested in one of his most profitable enterprises, the Maverick Woolen-Mills, in Dedham, Mass., and carefully acquired a familiarity with the cloth manufacture.

Mr. Edmands' rare intelligence upon economical questions enabled him to exert a powerful influence upon national financial legislation, and upon his election to the National House of Representatives in the fall of 1852 he was at once delegated a distinguished position upon the financial committees. His term of service in Congress was brief, for at the next election in his district he resolutely declined a renomination for good and sufficient private reasons, and though afterwards repeatedly urged to accept the nomination, he could not be persuaded to separate himself from his more pressing responsibilities. But he maintained a searching interest in national and political questions to the very close of his busy life and the wisdom of his consultation was eagerly sought by the legislators from his district and the New England Republican members of Congress. He was chosen Presidential elector from his district in 1868 by the Republican party and was president of the first great convention, that at Boston, which nominated General Grant for the Presidency. Without his request or knowledge he was honored with the enthusiastic endorsement and support of influential business men for his appointment to high official position at Washington, including that of Secretary of the Treasury, under the administrations of Presidents Lincoln and Grant, and subsequently by leading men of the West for the position of Minister to England.

In 1855 he took one of the most significant business steps of his life, that of assuming the treasurership of the Pacific Mills, at Lawrence, a position that he retained to the very end of his business career. He undertook this tremendous responsibility at the earnest solicitation of Mr. Abbott Lawrence; and the firm of A. & A. Lawrence, by their support and sacrifices, followed the varied vicissitudes of his administration with implicit and unwavering confidence in its success.

Through the financial and manufacturing ability of Mr. Edmands, this most colossal of the manufacturing establishments of New England was resuscitated almost at the very point of death, and raised from a state of almost hopeless bankruptcy to one of unparalleled success and prosperity. He successfully engineered his company through the financial crisis of 1857. With his acute insight into the demands and requisitions of the future, he penetrated the cloud-

bank of threatened disaster and calmly put into practical operation his theory of making the Pacific Mills one of the greatest individual manufacturing establishments of the world.

As the organization of the National Association of Wool Manufacturers, Mr. Edmands at once took an active and conspicuous part in its affairs, reluctantly becoming its president in 1871.

At a meeting of this association in the city of New York on the 7th of March, 1877, certain resolutions, of which the following is an extract, were introduced by Mr. Bigelow, of Boston, and were unanimously adopted:

"Resolved, That the National Association of Wool Manufacturers suffers, in the dispensation of Providence which has removed from its earthly labors its respected and beloved associate and President, Hon. J. Wiley Edmands,—a loss which profoundly affects its interests, and comes home to its members as a private calamity.

"Resolved, That this Association recognizes the unremitting devotion of our departed associate during the whole period of our organization, his efficiency as President of our body, both in counsel and action, his wise and temperate views of political economy, his great personal influence with public men, and the weight of character which gave dignity and power to the body over which he presided."

In the presence of this eloquent testimony, his zeal in the interests of this association needs no further commentary.

At a meeting of the National Wool-Growers' and Sheep-Breeders' Association, held in Columbus, Ohio, on February 15, 1877, the following resolution was unanimously passed:

"Resolved, That in the death of Hon. J. Wiley Edmands, late President of the National Association of Wool Manufacturers, we acknowledge the loss of a most intelligent, able and zealous advocate for the advancement and protection of the woolen interests of America."

Mr. Edmands took up his residence at Newton in 1847, and remained one of its foremost citizens for thirty years. He at once identified himself with the charitable and educational interests of the town of his adoption, offering freely of his means and generous in support of every worthy project with what was to him and them still more valuable—his wise counsel and precious time. Of the Newton Free Library he was the principal benefactor, favoring the institution with pecuniary gifts to the amount of nearly \$20,000, and bestowing upon it an untold wealth of valuable counsel and advice. When chairman of a committee for the consideration of a petition from the West Newton Athenæum for a town appropriation towards increasing its usefulness, Mr. Edmands made the sage suggestion that the town lend its assistance to this and similar institutions by appropriating each year a sum equal to that secured by private subscription for the same objects, thereby making private appreciation a test for public liberality. Upon the establishment of a humble orphan school in his village, organized with the holy purpose of guarding the helpless orphans from the early encroachments of temptation and vice, Mr. Edmands at once gave his enthusiastic support to the charitable project, and became one of the most liberal contributors toward the establish-

ment and maintenance of the famous "Newton Home." One of the most tender of his charities was in the direction of his devotion to the Eye and Ear Infirmary in the city of Boston, of which from its foundation he was the treasurer and business manager. Under his generous and skillful administration, assisted by the unpaid services of its surgeons, this institution became one of the most admirable of public charities, relieving as many as 7000 patients in a year.

At the outbreak of the Civil War, in 1861, Mr. Edmands promptly declared himself for the defence of his country's institutions and the perpetuity of the Union. He was a constant attendant, and often presided, at the local meetings called in Newton for the enlistment of volunteers. With his worldly goods he strengthened the credit of the Board of Selectmen in their generous promises to care for the sick and wounded and to provide for the necessities of the families of such as might perish in the impending struggle. In confident anticipation of a vote of the town sanctioning such expenditure, he advanced a large sum of money at a critical moment to meet certain necessary liabilities. Two of his sons—Joseph Cushing Edmands and Thomas Sprague Edmands—entered the army and performed honorable service in the Union cause.

At the close of the war, when it was determined to erect a permanent monument to the memory of those who fell in the service of their country, Mr. Edmands advanced a large sum for this purpose; at the same time suggesting that a popular subscription be encouraged, and amounts, however small, be received and credited, that young and old might be given an opportunity, according to their means, to contribute towards this praiseworthy testimonial. Contributions of one dime each from more than 1100 pupils of the public schools, and of one dollar each from nearly 1200 inhabitants of the town assured the success of the undertaking and resulted in the erection of the monument.

Mr. Edmands, besides being treasurer and director of the Pacific Mills, was vice-president of the Provident Institution for Savings, treasurer of the Eye and Ear Infirmary, president and trustee of the Newton Free Library, a director of the Ogdensburgh Railroad, of the Suffolk Bank, of the Massachusetts Hospital Life Insurance Company, and president of the National Association of Wool Manufacturers. He was also a director of the Arkwright Mutual Fire Insurance Company, and for a time treasurer of the Ogdensburgh Railroad.

Mr. Edmands died on the 31st of January, 1877, at the age of sixty-seven years and eleven months. His last days were spent at his beautiful country-seat at Newton, where he had found such rest and domestic happiness as his busy life permitted.

Thus closed the natural existence of one of the leading characters of this period, a man possessed of

the highest qualifications in our power to achieve, those of personal, intellectual and moral culture; who quitted the responsibilities of this life with an unspotted name and highly honored reputation, an example of devotion to business, to public trusts, and to the most refined of private moral obligations. Throughout his life he possessed the greatest distaste for ostentation, and it was his often-expressed desire, that after he had passed away, his memory might be spared all manner of extravagant panegyric. Time has proved his most glowing eulogy to lie in the eloquent testimony from the mourning hearts of all who knew him, of all who had felt his noble influences.

At a meeting of the Newton City Council shortly after his death, Mayor Alden Speare thus referred to him:—"Should I say that Newton has lost the man who stood highest in the esteem of all her citizens, I am sure that I should but echo the sentiments of all; but a life and mind like that of our late honored fellow-citizen is not confined in its influence and benefits to any single community.

"Should I say that Boston, the metropolis of New England, has lost one of its largest-minded and most honored merchants; that the largest manufacturing establishment, not only in Massachusetts, but of the world, had lost its controlling mind, and our nation had lost one whose counsels for many years have been sought after in shaping its legislation, the influence of which made them national, I should then come short of the measure of the influence of the life and labors of the Hon. J. Wiley Edmands."

GARDNER COLBY.¹

Gardner Colby, son of Josiah C. and Sarah (Davidson) Colby, was born September 3, 1810, in Bowdoinham, Maine. Previous to the War of 1812 his father had been for several years a successful ship-builder, but in that war all his property was swept away by the capture of vessels at sea or by the depreciation of shipping kept in port by the embargo. From the discouragement produced by this failure in business he never rallied, and the support of the family thenceforth depended on the mother. But her resolution and capacity were great, and it has been said that "she seems to have early impressed upon Gardner the habits of concentration, energy, courage and hope, which characterized herself, and which were so conspicuous in his later life." The subject of this sketch was the second of four children, and, owing to the straitened circumstances of the family, was engaged in the service of business firms from the age of fourteen to twenty-one, with the exception of six months of eager study in a boarding-school. He was, therefore, what is commonly meant by a self-educated man. But the action of his mind was always quick

¹ By Rev. Alvah Hovey, D.D.

and clear, and the language which he used was direct, concise and well-chosen.

Upon reaching his majority, Mr. Colby rented a store on the corner of Washington and Bromfield Streets, Boston, making laces, gloves and hosiery a specialty. Starting with about \$200 capital, he conducted his business with such skill and economy as to make \$4000 the first year and a larger sum the second. After five years he had acquired sufficient means to warrant his undertaking a larger enterprise. He therefore became an importer of dry goods, on Kilby Street, a business which he continued during a period of ten years, when he was able to retire from it with a handsome competency.

This was in 1847. But in 1850 he went into regular business again, purchasing one-half of the Maverick Mills, of Dedham, Mass., and thus becoming associated with his neighbor, the Hon. J. Wiley Edmands, in the manufacture of woollen goods. He was himself the selling agent of these goods in Boston, first on Milk Street, and later on Franklin Street. In the war a large amount of soldiers' clothing was sold by this firm. But in 1863 Mr. Colby disposed of his interest in the mills and once more retired from business with increased wealth. He was now fifty-three years of age, and might have enjoyed an honorable and useful leisure the rest of his life.

But he was not content to do this. Fond of large enterprises, he became interested after about six years, in the construction of the Wisconsin Central Railroad. After careful examination, he took hold of it with vigor and resolved to make it the great work of his life. For a year everything went on prosperously. But in 1872 a change came. The "Alabama" claims excitement in England drove all American securities from that market; the fire in Chicago, the fire in Boston, the money panic in England and on the Continent, and the great panic in New York in 1873, supplemented by hostile legislation in the West, and business prostration everywhere, sadly crippled the Wisconsin Central Railroad. All these things taxed the strength of Mr. Colby unduly, and it is not surprising that he was not long able to bear the pressure of anxiety and care that came upon him. Yet he always had confidence in the ultimate success of the road. "He bought a large amount of bonds and stock of this company, and never sold any of either. He received no compensation for the years of service and labor which he rendered; and, although he at different times indorsed the company's paper for large amounts, he never charged anything for the use of his name and credit." But if his health was broken, and his purpose to make the road an immediate financial success was defeated, he had the satisfaction of seeing it completed, and in full operation before his retirement from the presidency in 1876. In the autumn of that year he passed through a long and dangerous illness, which terminated his business career, though he recovered his

strength so far as to enjoy friendship and travel during nearly three years, losing, indeed, no part of his interest in human welfare as affected by religion and education.

For Mr. Colby was no less remarkable for the use which he made of his property than for his energy in acquiring it. At the age of twenty he made a public profession of his faith in Christ, and was always from that time a generous supporter of Christian institutions. He began to give when he began to gain; and in his later years he sometimes expressed a belief that, if he had refused to give in early life, he would probably have continued to do so to the end. His beneficence was rarely misdirected. It rested upon principle, and was applied to the support of enterprises which commended themselves to his judgment as well as to his heart. His courage and assistance did much to save the Newton Theological Institution and Waterville College in dark hours; his benefactions were liberal to Brown University, from which two of his sons were graduated; and his gifts flowed in a perennial stream to the great missionary societies of his denomination, especially to the Missionary Union, as well as to the churches with which he was successively connected in Boston and Newton Centre. It has been truly said that "the most noticeable thing about his service to the cause of Christ was the fact that he was far broader and wiser than his early training would lead us to expect. He had but small school advantages in his youth; yet he gave his money and his influence, and not a little hard work, to schools of higher learning." More than half a million dollars must have been contributed by him to the promotion of learning and religion.

And when to this is added the time which he gave to the churches, schools and missionary organizations which he loved, it will be seen that a considerable part of his life was consecrated to the well-being of mankind. He was an active member of the Executive Committee of the American Baptist Missionary Union several years, and during the last third or more of his life was a trustee of Brown University and of Waterville College (now Colby University, in honor of his name). From the age of thirty-two to the age of fifty-six—twenty-four years—he was the wise, courageous, indefatigable and unpaid treasurer of the Newton Theological Institution. Upon his resignation of this office he was elected president of the Board of Trustees, a position which he held with eminent ability ten years. By these and other less conspicuous, but no less laborious and useful services, Mr. Colby was a benefactor to thousands. His strenuous and useful life came to an end on the 2d day of April, 1879.

LEMUEL CREHORE.

Born in Dorchester, Mass., March 2, 1791; died in Boston, August 18, 1868.

Samuel Croxon
" " "

E. J. Collins

The record of the early life and family history of Mr. Crehore has, properly, no place in a history of Middlesex County. During a century and a half preceding his birth five generations of his ancestors resided in Milton and Dorchester, adjoining towns in Norfolk county. In the former of these he passed his childhood and early youth. His first entrance into the business world was as a clerk to Mr. Robbins, who had a general store in Roxbury.

Some years later he crossed the Allegheny Mountains—making the journey on horseback in the company of Mr. E. V. Sumner, of Milton (late major-general United States Army), and settled in Cincinnati, Ohio, where he remained some years.

In 1825 he returned to New England, and there first became a resident of Newton as a co-partner with William Hurd, Esq., who had been for some time engaged in the business of paper-making at the Lower Falls.

The firm of Hurd & Crehore dissolved by mutual consent in 1834—Mr. Crehore purchasing a portion of the plant from Mr. Hurd. He associated with himself in the business Mr. Benjamin Neal, then engaged as a mill-wright in the village. The firm of Crehore & Neal ceased by limitation in 1845. From this date the business has been exclusively in the hands of Mr. Crehore and his descendants. In 1846 he purchased the remainder of Mr. Hurd's interest in the property and the whole was then consolidated into a single mill.

From 1854 to 1867 Mr. Crehore's youngest son, George C., was a co-partner with him. In 1867 the elder son, Charles Frederic, took his brother's place, and since Mr. Crehore's death, in 1868, has carried on the business, in which latterly his son has had an interest.

Mr. Crehore was adverse to holding office, and, with the exception of one term in the State Legislature and one or two years as selectman, he rendered no official public service.

He, however, always took an active interest in public affairs and contributed freely of his means to aid any movement for public or social advantage. His advice was frequently sought by those having responsible charge in such matters.

In his private capacity as a neighbor and friend his native kindness of disposition won for him general regard. None hesitated to go to him in their trouble, none were ever repulsed. Of the strictest moral integrity, his reputation as a citizen, a business man and a neighbor was unblemished.

He married, August 1, 1827, Mrs. Mary Ann Dodge, widow, daughter of Thomas and Lydia (Farmer) Clark, of Burslem, Staffordshire, England, where she was born March 12, 1795. She survived her husband and died at the homestead, then occupied by her elder son, January 1, 1875. During a large portion of their married life they resided in Newton, but a few years previous to Mr. Crehore's death they removed to Bos-

ton, where he died August 18, 1868. Of their two children, the younger, George Clarendon, born August 24, 1832, lived the greater portion of his life in Newton, being connected with his father in the paper business from 1854-67. He married, November, 1855, Lucy Catherine, daughter of Otis and Mary Ann (Grout) Daniell, of Boston. Five children were born to them, all of whom, with the mother, are now living, resident in Boston. In 1867 the family removed to Boston, where Mr. Crehore died December 23, 1870.

The elder son, Charles Frederic Crehore, born June 18, 1828, after being engaged in the practice of medicine in Boston and serving as military surgeon during the Civil War, returned to Newton in 1867 and went into business with his father, as above stated. He married, September 29, 1857, Mary Wyer, daughter of Henry and Elizabeth Farris (Tracy) Loring, of Boston. The only public office held by him to date is that of member of the Newton Water Board from 1885-88 inclusive. He has two children, a son and daughter, both residents of Newton.

The former, Frederic Morton Crehore, born July 16, 1858, as already stated, is a co-partner in the paper manufactory of C. F. Crehore & Son. At the date of writing (1890) he is a member of the Common Council of the city of Newton.

EDWARD JACKSON COLLINS.¹

The Collins family are of English origin and descent; the progenitors of this particular branch settling in Marblehead, Mass., where Matthias Collins, Sr., held the office of high sheriff.

Matthias Collins (2d) married the daughter of Ebenezer Davis, of Brookline, and moved to Newton in 1778, where he purchased one hundred acres of land of Joseph Craft, on the Sherburne Road, adjoining John Woodward. Here he settled and lived until his death, in 1785. He left an only son and heir, Matthias Collins (3d), and a widow, who survived him thirty-four years, having reached the ripe old age of eighty-five.

Matthias Collins (3d) married Hannah, daughter of Edward Jackson, in 1798.

The family of Hannah Jackson were identified with Newton from its earliest history. Her father, Edward, was the son of Col. Ephraim Jackson, a lieutenant in the old French War during 1755 and 1756. Twenty years later he was one of the Newton alarm list, and when Paul Revere called

"For the country folk to be up and to arm,"

Lieut. Jackson joined the Revolutionary Army and was promoted to lieutenant-colonel under Marshall. He participated in the several battles that preceded the capture of Burgoyne, and died in camp at Valley Forge.

¹ By Edward L. Collins.

Col. Jackson was the grandson of Sebas Jackson, who, as tradition has it, was born on the passage from England to this country; and great-grandson of Edward Jackson, Sr., a very conspicuous figure in the early colonial history of this county, a companion of John Eliot and one of the pioneer settlers of Newton.

Matthias (3d) increased his inheritance in many ways. In his native town he held positions of trust and honor. He was assessor, selectman, town treasurer and representative to the General Court.

To Matthias and his wife there were born eight children—Mira, Davis, Amasa, Charles, Abigail, Edward J. (the subject of this sketch), Ann M., and Frederick A.

Mira married Rufus Mills, of Needham. Davis moved to Brandon, Vt., and married the daughter of Deacon Palmeter. Amasa joined his brother and likewise married a Brandon lady, the daughter of Deacon Blackmer. For many years the firm of "D. & A. Collins" was engaged in the most extensive, lucrative and well-known grocery and wool business in that section of the country. Charles, the fourth child, died at the age of twenty-one. Abigail married John Mills, of Needham. Ann M. married Amos Lyon, of New York. Frederick A., the youngest of the children, and the only survivor of the entire family, has, like his brother Edward, made Newton his life-long home.

After completing his education at Deacon Woodward's private school, Frederick spent one winter with his brothers in Vermont. Returning to Newton the next spring, he began the manufacture of glue, which he successfully continued for a number of years.

In 1847 he married Amelia M., the daughter of George Revere, of Boston, a lineal descendant of him who stood

*"Ready to ride and spread the alarm
Through every Middlesex village and farm"*

Previous to 1861, Frederick served a number of years on the Board of Assessors, an office he resigned to fill the position of selectman, a service he rendered acceptably to the town during the entire war.

After the battle of Gettysburg, together with Thomas Rice, Jr., Frederick was commissioned to visit that bloody battle-field and search out and bring home Newton's dead.

The sad errand was fulfilled, and the bodies of Hawkes and Cutter were returned to their native town and sorrowing friends.

Public services were held over the remains and the day was one of mourning throughout the town.

Frederick was a member of the first board of aldermen after Newton became a city, and since his retirement from business has resided on the old estate.

Edward Jackson Collins, the third youngest child of Hannah and Matthias, was born in Newton, on the old homestead, April 24, 1811.

Like other country boys of that date, his time was divided between the farm and the district school. In

the matter of education, however, he enjoyed several terms under the late venerable Seth Davis, whose wise precepts and sound principles laid the cornerstone of that vast practical knowledge developed by Mr. Collins in later years.

At the age of twenty-one, together with his friend, Mat. Mills, of Needham, Edward started on a journey through the neighboring States, but spent most of his time in Maine, with a view of entering the glue business. Returning home, he put into active operation his long-cherished idea. He purchased five acres of land from his father, erected suitable buildings, and began in earnest, but in a small way, an industry which proved very profitable. At this time there were but few glue-makers in the country. Fish and bone glues were unknown; and where to-day there are a hundred extensive manufacturers, there was then but one—Peter Cooper, of New York.

From a small beginning Mr. Collins constantly increased his business until about 1870, when his public offices made so many demands on his time that he discontinued.

At the age of thirty-eight Mr. Collins was elected to his first important political office, of town assessor. This position he filled until 1856, when he declined to serve, although elected for that year. In 1851 he was also chosen one of the selectmen and served until 1855, the last year as chairman of that body.

At a meeting of the Newton National Bank, held October 17, 1850, Mr. Collins was elected a director of that institution, only two years after its foundation. Some of his early associates on the Board of Directors were William Jackson, John H. Richardson, Joseph N. Bacon, Levi Thaxter, Otis Pettee, Allen C. Curtis, Edward Walcott, Marshall S. Rice, H. B. Williams and P. E. Kingman.

As treasurer of the Newton Savings Bank, he succeeded Deacon Paul, when the project was only in its infancy. The duties of both these offices Mr. Collins continued to discharge until his death.

On the 3d of August, 1854, Mr. Collins was married, at Bradford, Mass., to the beautiful daughter of Capt. Nathan S. Lunt, of Newburyport. Although Miss Lunt had only just graduated from Bradford Academy, and was still quite young, notwithstanding the fact that Mr. Collins was a number of years her senior, she shrank from no responsibility, but became the trusted adviser and able coadjutor of her husband. In after years Mr. Collins' successes, political and financial, can be traced to the noble, guiding, sustaining influence of his wife. Coming to Newton early in life, her associations were centred here, and her friends were Newton people. She was imbued with a loyal devotion to Newton and its welfare, which characterized her to the last.

Eight years after their marriage a son and only child was born.

In 1855 Mr. Collins was elected town treasurer, and five years later the duties and responsibilities of col-

"ELMWOOD."

RESIDENCE OF THE LATE EDWARD JACKSON COLLINS,
WABAN, MASSACHUSETTS.

Yours truly,
William Kellogg

[Faint, illegible text, possibly a signature or title, located below the portrait.]

lector of taxes were added. Both of these offices he held continuously until his death, and was best known, perhaps, in that capacity.

In 1858 and the year following, Mr. Collins was elected to the General Court, and was present when John A. Andrew made his famous reply to Cushing.

During the war Mr. Collins' devoted attachment to his native town displayed itself more conspicuously than at any other time; for when so much money was needed for the credit of cities and towns, he came forward to aid Newton, and with his own personal endorsement on the notes of the town established its credit, so that money could be raised without trouble or delay, and consequently her quota was always ready.

He also went through the lines to Fortress Monroe, in order that those men who enlisted from Newton in the navy might be properly accredited to her quota.

After the war Mr. Collins was chosen one of the county commissioners, a position he filled with marked ability for twelve years. At the expiration of that time, the duties of treasurer and collector of taxes had so multiplied and become so complex, that his whole time was taken up in the administration of these offices. With watchful and jealous care he guarded the financial interests of Newton until the last. He died in office, at his beautiful Newton home, July 25, 1879.

After Mr. Collins' death, the settlement and managing of a large estate fell upon his wife. That ability and zeal that had so often aided her husband, became her distinguishing peculiarity. In the handling of the estate and the education of her son she displayed a business ability and foresight possessed by few women. Her time and money were given freely to forward any public enterprise. She was one of the original trustees of the Newton Cottage Hospital, a work in which she took the deepest interest. The unfortunate about her were not forgotten, and with open purse or with word of counsel or encouragement, she assisted many, and many who came to her with their trouble. She died at her Newton residence, January 22, 1890—fifty four years of age. The entire estate was inherited by her son, Edward L.

Edward Jackson Collins was a man of large stature and a broad mind. Above the petty carplings of the world, he dealt with great questions or trivial matters in the same broad way.

Although not a member, he was a regular attendant at Dr. Daniel L. Furbur's Church, Newton Centre, where for years the Collins family had worshipped, and between the two there existed an unostentatious but strong attachment.

Personally, Mr. Collins was rather stern and austere, but back of it all there was the warmest of hearts. He was a loving husband, a devoted father. How many were his acts of kindness to others will only be known to the hundreds the "old Squire" befriended.

With him the sense of duty was uppermost. The

question was, "Is it right?" and so strong was his will that, when once determined, nothing could shake him from his purpose.

For twenty-five years and more Mr. Collins held continually important positions of honor, trust and responsibility, and in them all showed himself efficient, wise and faithful. His integrity was never questioned—his word never doubted. Whatever position he held, he seemed to inspire the perfect confidence of all. There seemed to be a combination of qualities in the man's character that commanded profound admiration and respect,—a man of strict integrity, a man of great capacity. The personal interest he took in the men who went from Newton to the front from 1861 to 1865, and in their families, is the key-note of a quality that won him hosts of friends.

His temperament was kind, his manners courteous, and his ability and probity were characteristics so marked as to place him above the plane of question or criticism.

Mr. Collins, as we have seen, was a representative of the good old stock which has made Newton noted for the honesty, enterprise, morality and sobriety of its people. He possessed little of that brilliancy that exhausts itself in a few fitful flashes, but his light was a steady flame that proceeds from the warmth of devotion to duty. His principles were surely founded, and the adverse storms of fate might beat upon it at will—the rock grew more rounded, but its base was never shaken.

HON. WILLIAM CLAFIN.¹

William, son of Hon. Lee Clafin and Sarah (Adams) Clafin, was born in Milford, Mass., March 6, 1818, in an old-fashioned story-and-a-half house situated about two miles north of the centre of the town. In brief outline the record of his early years is that of the typical New England bred boy. His childhood was passed amid rural scenes where pure bracing air and plain nourishing food supplemented the affectionate parental influences of this country home. About a mile from his home was located the district school where he received his first instructions and where he remained for five or six years, making such good progress in that time as to be admitted to the Milford Academy, where he was prepared for college, and in 1833 entered Brown University. During his freshman year he sustained a great loss in the death of his mother, a very estimable woman who was very anxious that her son should receive a liberal education, and who through his early school-days secured such books as would be helpful to him in the prosecution of his studies.

Being of slight frame and lacking the ruggedness of physique so necessary to withstand close application to study, his health failed and he left college to enter

¹ Contributed.

the boot, shoe and leather manufactory of his father in Milford, Mass., where he remained for three years, when, on the advice of the family physician, he sought by change of scene and travel to regain his health, in which he was successful. Mr. Claflin associated with him Messrs. Howe and Allen at St. Louis in 1841, in the wholesale boot, shoe and leather business, which concern continued up to 1884. Leaving St. Louis as a place of residence, he came East, and in 1847 established himself in Hopkinton, Mass., where he lived until 1855, when he removed to his present lovely home in Newtonville, with its beautiful and extensive grounds and its historic associations.

For more than a quarter of a century Mr. Claflin has been the senior partner of the Boston firm of William Claflin, Coburn & Co., doing a large and successful business. The members of this firm besides, Mr. Claflin, are N. P. Coburn, of Newton; James A. Woolson, of Cambridge, and William F. Gregory and Oliver B. Root, of Framingham.

Mr. Claflin has always taken a great interest in educational matters, and has contributed liberally towards the maintenance of the public schools as well as of the higher institutions of learning. From the organization of Wellesley College he has been a member of its Board of Trustees, and has interested himself in many ways for its advancement. Upon the completion of the organization of the Boston University, Mr. Claflin was chosen a member of its Board of Trustees, and for several years has been the president of the Board. While not seeking public office, Mr. Claflin has held many positions of trust and honor and has shown himself to be possessed of administrative ability of a high order. In 1848 he was chosen to represent the town of Hopkinton in the Legislature, and as a Free-Soiler took an important part in the conduct of affairs and was re-elected successively in 1849, 1850 and 1851, and during these years was appointed on many of the more important committees of the House. He was elected to the State Senate in 1859, and in 1861 was chosen president of that body. In 1860 he was chosen a delegate to the Chicago Convention, assisting in the nomination of Abraham Lincoln for the Presidency of the United States. He was again chosen a delegate to the National Convention in 1864, 1868 and 1872. In 1868 he was made chairman of the National Committee, and took an active part in the first campaign for the election of General Grant to the Presidency. In 1866, '67 and '68 he was Lieutenant-Governor of Massachusetts. In 1869 he was elected to the highest office in the gift of the people of the Commonwealth, and as Governor of the State his administration was marked by a dignified and sagacious discharge of the duties incident to this high office. In 1869 Governor Claflin received the honorary degree of Doctor of Laws from Harvard University, having also some time previously received the same degree from Wesleyan University.

Governor Claflin early took advanced ground on the temperance question, and also was widely known as an anti-slavery man all through that period of agitation when loyal adhesion to, and earnest work for, the emancipation of the black man was likely to make him unpopular; nevertheless he was always true to his convictions, and saw the fruition of his hopes in the enactment of the Emancipation Act by Congress. In 1876 Governor Claflin was elected Representative to Congress, and re-elected in 1878, at the close of which public service he retired to private life, universally respected, and is now giving his attention to his extensive business interests, as well as meeting the many social demands naturally incident upon such prominence.

Governor Claflin has for many years been connected with various financial institutions. He has been a director of the National Hide and Leather Bank since its organization, and for several years its president. He has been a director of the New England Trust Company; also director in the International Trust Company, the Boston Five Cent Savings Bank and other financial institutions.

Governor Claflin is an influential and consistent member of the Methodist Church, a genial gentleman, easily approached by any one, and ever ready to extend a helping hand to his fellow-man.

HON. THOMAS RICE.

We may contemplate with great advantage the personal history of those men who, by their talents, their high standard of honor and their unwearied industry, have contributed to the material prosperity of our country in their own time and have demonstrated to those who came after them that the true path to success lies in an undeviating adherence to the purest and noblest principles of action. Among the many distinguished sons of New England whose record is that of a self-educated and self-made man, who rose to distinction by the practice of those virtues which in all time must secure the respect and confidence of all good citizens, was the subject of this biographical notice.

He was the third son of Thomas and Lydia (Smith) Rice, and was born in that part of Needham which is now known as Wellesley Hills, December 20, 1810. When two months old his father (who was a paper-maker) moved his family to Newton Lower Falls and established them in what has since come to be known as the "Rice Homestead." Here Thomas, Jr., passed his childhood days, and in due time attended the district school, where, for the most part, his school education was acquired. At the age of twelve years he left the public schools and attended, for some time, a private school in West Newton, kept by "Master Joseph Jackson."

After leaving this school he went to work in his father's paper-mill, where he mastered the art of

Thomas Lee L.

George Hyde,

paper-making, and where, from 1834 up to the time of his death, he was engaged in the paper business and became widely and favorably known as an eminent paper manufacturer, having large dealings with numerous customers, executing large contracts, extending over long periods, in a business-like and satisfactory manner for more than forty years. *The Boston Daily Transcript* was printed on paper made in the establishment of Mr. Rice, and for nearly the whole of this period he was the directing and controlling head. While organizing and carrying on this great business enterprise he found time to answer to the call of the citizens of the town for him to take part in public affairs, and he brought to this work rare skill and good judgment. For eighteen years he was a member of the Board of Selectmen, having been first elected in 1830. Here he labored diligently and faithfully for the best interests of the town and was for ten years chairman of the board. In 1857 he was elected a member of the General Court, serving in the House for three years and in the Senate for two years (1863 and 1864). In 1865-66 he was chosen a member of the Governor's Council.

During the Civil War he was especially active in filling the quotas of the town, often working day and night to accomplish this important work. He was found almost everywhere in the discharge of these duties,—now at home arranging to fill up the depleted ranks of the soldiers, now repeatedly at the front, looking after the necessities of the soldiers, ministering to their needs, comforting them in hardship and defeat, looking after the dead and tenderly conveying their remains to their friends at home, giving the sorrowing families tender sympathy and material aid. He was indeed a true patriot and a lover of his country. His younger brother was Hon. Alexander H. Rice, who was Governor of the Commonwealth in 1876-78. Thomas was thrice married,—first, to Violet Hibbard in 1833; second, to Jerusha (a sister of his first wife), in 1842; the third, to Rebecca R., a niece of Hon. Joseph Breck, of Brighton, September 24, 1845. She still survives him, and her children are Edward Thomas, born October 9, 1847, and Frederick William, born January 30, 1850, who died February 17, 1885. The children by the first wife were Jane Isabella and Edward Everett, by the second, Mary L. W. Mr. Rice died January 11, 1873, and was buried in the village cemetery at Newton Lower Falls. Various associations and public bodies attended his funeral and passed resolutions testifying to his worth and their sorrow. In one of the newspapers of Newton there appeared shortly after his death the following notice, which attests his worth in the public estimation:

"There were some traits of character in Mr. Rice which were sufficiently remarkable to justify calling special attention to them.

"No other man of his years, perhaps, has ever been honored by the town, by important offices during so many years.

"He had been Chairman of the Board of Selectmen for many consecutive years; and so well did he fill his office that it is doubtful

whether, even in Newton, where there are so many able men, his place can be made good.

"It has sometimes been said that he was fond of office; but it was evident it was not altogether for the sake of office. He had great pride in having the business of the town done in the best possible manner, and was always ready to give time and strength to secure this. Nothing was neglected in any department with which he had to do. Whether it was an office of greater or lesser honor, all its drudgery, even, was done with a fidelity worthy of the noblest cause.

"His familiarity with the business of the town was such, that whenever any man sat down to converse with him, he would feel at once that he was talking with one who knew his business thoroughly. This was often apparent when some one would come before the Selectmen who felt that he had been wronged. The patient, clear and unimpassioned way in which he would present the case, would almost invariably convince the aggrieved that he not only had not been wronged, but in many instances, that he had got even more than he deserved.

"Let the young men who may follow him remember that this is the road to success and honor that is fadeless.—EDITOR."

GEORGE HYDE.

George Hyde is one of the solid men of Newton. His ancestor, Samuel Hyde, who came from England in 1639, was the second settler of Newton. This Samuel Hyde bought 250 acres of land in Newton in 1652 for £50, and the subject of our sketch, in the seventh generation, still occupies a portion of the ancestral estate.

His father, Samuel Hyde, married Lucy Hall, she, as well as her husband, being born in Newton. They had six children—Samuel, Fanny, Parthenia P., Edward, Mary K. and George, who was born April, 1810, and has consequently passed his eightieth year. He married Rebecca D. Child, in 1839. She was born in Newton, January 18, 1812, and is still living. They have three children—Fannie A., Charlotte W. and Samuel. Mr. Samuel Hyde, the father of George, was a farmer and nurseryman, being among the first to engage in the latter business. When advancing age suggested relaxation from the more active duties of business, the two sons, Samuel and George, took the farm and nursery, and carried on a successful business for many years. The survivor, George Hyde, continued it several years after the death of his elder brother Samuel.

Land in that part of the town had been increasing in value year by year, so that at his decease Samuel, father of George, left a valuable property to be divided among his children, and George moved into the house formerly occupied by his father, beside which stands one of the largest elms to be found in Middlesex County. He enjoyed the successful business in which he was engaged, and, during the many years that he followed it, contributed much to make his native town, as well as many other places, more beautiful by the trees, shrubs and plants that were sent out from his reliable establishment.

He never sought office, but his townsmen, knowing his character for uprightness and honesty, sought him, and he served for several years as selectman and assessor, and that too at a time when it was more of an honor to occupy such official positions than it seems to be at the present day. He was one of the

original projectors of what is now the Newton National Bank, first organized as a State Bank, and has been a director in the same almost from the start to the present time, and his services have contributed very much to its success. In 1858 he was elected president of Newton Savings Bank, of which he had been a trustee for several years previously.

Under his administration, assisted by faithful associates, this bank has prospered far beyond the expectations of its original corporators, and has on deposit at the present time nearly \$2,000,000.

Though advanced in years, he gives daily attention to this institution, which has become his pet and pride. Always careful and conservative, and yet not narrow-minded, the public have come to have great confidence in him, and he is universally respected by all who know him. He has not been a great traveler, but has preferred the quiet of a happy home and the constant and faithful care of his own business, as well as all matters entrusted to him. He is one of the old school of gentlemen, of which so few remain. Nearing the end, he may with pardonable pride look back upon a well-rounded life, feeling that he has served his generation faithfully and well. He will be greatly missed and sincerely mourned when the time of his departure shall come.

HON. JAMES F. C. HYDE.¹

James F. C. Hyde was born in Newton July 26, 1825. His ancestor was Jonathan Hyde, who came from England and settled in what is now Newton in 1647, being the fourth settler, while his brother Samuel was the second. They purchased 240 acres of land, which they owned in common till 1661. Jonathan, by subsequent additional purchases, became the owner of several hundred acres. He lived on what is now Homer Street, about sixty rods north of the old First Church. He had two wives and "twenty-three children, all of whom, with one exception, bore Scripture names."

He gave a large part of the present Common at Newton Centre for a training-field. He died at the age of eighty-five years. His son John married and had six children, and died aged eighty-two.

Timothy, the son of John, married and had several children, among whom was Elisha. Elisha's oldest child was Thaddeus, who married Elizabeth Grimes. Thaddeus died aged seventy, and Elizabeth lived to be ninety-eight. They had four children, the oldest being James, the father of James F. C. Hyde, who, therefore, is of the seventh generation from the fourth settler of Newton.

James Hyde, the father, married Clarice Clarke, daughter of Norman Clarke (1818), and they had nine children. She died at the age of sixty-seven, and he lived to be eighty-nine years old.

John Clarke, the ancestor of Clarice Clarke, was in Newton as early as 1681, removing from Watertown.

Norman Clarke, the father of Clarice, and grandfather of James F. C., was selectman for three years, and held other offices, and was a large land-owner, leaving to his heirs about 400 acres that had been in the family from before 1700. The subject of this sketch lives on a part of this land, and only across the street from where he was born. He may well be classed as a native of Newton. He descended from good stock on both sides, his ancestors being prominent men in their day.

In 1854 Mr. Hyde married Sophia Stone, daughter of Jonathan Stone, who descended from one of the early settlers of Newton. She died in 1860, leaving two children,—Clarice S. Hyde, who married James M. Estes, and died leaving one child (Frederick J. Estes), and Elliott J. Hyde, who lives near his father and is in business with him.

In 1861 Mr. Hyde married Emily Ward, who was a descendant, in the seventh generation, of John Ward, who settled in Newton (then New Cambridge) in the year 1650. She was a graduate of the Normal School in West Newton, and was a teacher for several years in Manchester, N. H., and Boston. Four children have been born to them, two of whom survive, Mary E. and Frank C., who are now living at home.

Mr. Hyde's father was a farmer and a nurseryman, being among the first in the State to engage in the latter business. He brought up his children on the farm, and when his son, James F. C., was seventeen years of age, took him in as a partner in the business. This son did not intend to be a farmer or nurseryman, but to study law, if he could see his way clear to get an education, for up to this time he had attended only the district school, with the exception of one year at the academy of the late Marshall S. Rice; but one day, as he was about to leave home, his father said to him: "Francis, your mother and I think it is your duty to stay at home and take care of us." Without a minute's hesitation he decided to do so, saying: "All I am I owe to you, and I cannot do too much for you." It was a great satisfaction to him to be able to care for them as long as they lived, though it changed all the plans of his life. Starting in business for himself at an early age, with limited means, and perhaps still more limited education, he worked days and studied nights, often working fourteen hours out of the twenty-four, and studying three or four, giving himself but few hours for sleep. This he followed for many years, and was able to acquire a large amount of general information.

When asked by a friend how he had been able to obtain such an amount of general knowledge, he replied, "By keeping my eyes and ears open to see and hear, and often opening my mouth to ask questions."

He has in later years been often introduced to audiences as the "walking encyclopædia."

At the early age of fifteen, in 1840, he took a very

¹ Contributed.

James A. Hyde

active interest in politics, and from that time on attended caucuses and political meetings, and was generally at the polls distributing ballots, even before he was a voter.

His father was a Whig and he quite naturally followed his example. Subsequently, when the old party was dissolved, he became a member of the great Republican party.

Smith, in his "History of Newton," says, in speaking of Mr. Hyde: "His energy of character and administrative talent brought him early to the notice of the public." At the age of twenty-nine he was elected moderator of the town-meeting, and for nineteen successive years he was elected to the same position with only four exceptions, and those when he could not serve.

He was elected selectman also at the age of twenty-nine—one of the youngest ever called to that office—and remained on the board for sixteen consecutive years. During the War of the Rebellion he was very active in recruiting to fill the large quota of Newton, and all the State aid for many years was disbursed by him. He knew the larger part of the men who went from Newton, and their families. He visited them at the front to look after their comfort. At thirty-one years of age he was elected representative to the Massachusetts General Court and subsequently re-elected. He was for some years a member of the School Committee, had charge of a large portion of the highways and constructed new roads for the town while selectman.

He has been balloted for by the town and city of Newton for various positions more than fifty times, and never was defeated when a candidate.

He served two terms, of three years each, on the State Board of Agriculture, being appointed by the Governor as one of the "delegates-at-large," the other general delegates being Prof. Agassiz and Col. M. P. Wilder.

For four years he was president of the Massachusetts Horticultural Society, and for several years, at two different times, president of the Newton Horticultural Society, which held its first meeting at his house, and which he was active in organizing.

He has been a director in two national banks and is now a director in the John Hancock Life Insurance Company and one of the Building Committee appointed to erect their large building on Devonshire Street, Boston.

For many years he has been a director in the Quincy Mutual Fire Insurance Company, trustee and one of the Investment Committee of Newton Savings Bank, whose deposits have increased since he became associated with it, from twenty-seven thousand to nearly two million dollars.

He was chiefly instrumental in organizing a Congregational Church at Newton Highlands in 1872, which began with twenty-nine members and has now nearly two hundred.

In six weeks he procured pledges—including his own subscription—of over thirteen thousand dollars with which to erect a church, and was chairman of the committee to build the same. Since the start he has been deacon in the church and for many years was on the Parish Committee looking after the finances.

He has a large class of men in the Sabbath-school, and has scarcely ever been absent from his place.

For many years he has been agricultural editor of *The Congregationalist*, and has written a great deal for other papers.

He is the oldest member of the Board of Trustees of the Newton Cemetery Corporation, a position he has ably filled for many years. He has also been on the Finance Committee for several years.

He was the foremost in making Newton a city, and received all but thirteen of the votes cast for the first mayor and was re-elected by almost as unanimous a vote. He declined to serve longer, though strongly pressed to do so.

Smith, in his "History of Newton" says: "As the first mayor of the city of Newton, he (Mr. Hyde) administered the important trust with wisdom and prudence, counseling economy, integrity and faithfulness, and illustrating these qualities in his official conduct."

When twenty-six years of age he was appointed auctioneer by the selectmen unsolicited, and accepted the appointment, and has continued that business until the present time. About the same time he was appointed justice of the peace, and later served as trial justice for six years. He also received, unsolicited, several appointments as insurance agent, and is now actively engaged as such for sixteen different companies.

Frequently he was called upon to settle estates, appraise property, act as commissioner to divide real estate, to testify as expert and in many similar matters, until it became necessary to decide whether he would continue his farming and nursery business, or practically give it up, and devote himself to other affairs. He chose the latter, and since, for many years, has carried on a large business in real estate at private sale and at auction, as well as placing insurance and mortgages, conveyancing and attending to all matters connected with the sale and management of real estate.

In all these years he has kept up an active interest in agriculture, horticulture and floriculture. It is said that on the old homestead where he was born he cultivates about a thousand named plants and trees.

He has devoted special attention to native plants, and spends much of his vacation time in tramping over the country with trowel and basket in hand. He probably has a larger collection of wild flowers than can be found outside of a botanical garden. It is said that everything grows for him. His excellent

taste for arranging flowers has been shown in the beautiful bouquets which he has generously furnished for many years for the church which he attends. He was president of the Congregational Club of Boston one year,—as long as the constitution allows any person to fill that office.

He suggested, through the press, the formation of a similar club for the seven Congregational Churches of Newton, and took steps to organize the same, and was its first president.

When the town commemorated the centennial of an important event in its history, Mr. Hyde was selected to prepare and deliver the address, and again, at the two hundredth anniversary of the incorporation of the town, he was appointed to render a similar service. Probably no one is more conversant with the history of Newton, or has a more ardent love for his native town than Mr. Hyde.

In his inaugural address the second year that he was mayor, he advised making the Newton Library, which had been established and supported by private subscription up to that time, a free city library, which recommendation was adopted, and the following year carried into effect.

He saw the necessity of increased railroad accommodations—though there were already two railroads running through the city, one on the north side and one on the south—and realized the importance of connecting the two, thus securing a circuit road uniting the many villages of Newton by iron bands. Almost alone, he labored for five years with no expectation of compensation, to accomplish this desirable object, and though no one but himself believed he would succeed, and he was often ridiculed for his folly in attempting such a thing, he accomplished his object, and the Circuit Railroad was opened for travel in 1886, thus giving Newton three new stations, making twelve in all.

It was remarked by one of Newton's distinguished men, that "no three things that could be done for Newton would be of so great benefit as the Circuit Railroad."

Though a very busy man, as this sketch implies, he has found time to give many public addresses in different parts of the State on a variety of subjects, but especially on those relating to the cultivation of the soil and kindred matters.

He has been diligent in business since his earliest manhood; but it has never been his chief aim in life to "get rich," in the modern acceptance of that term, but he has been content with acquiring a moderate competence. He takes delight in hard work and plenty of business, his chief recreation being found in his garden, where he seeks to spend a little time daily during the open season.

No man seems to enjoy nature more than he, and he does what he can to lead others to follow his excellent example.

He has had remarkable health, not having been

confined to his bed one day by sickness since he can remember, and he has a remarkable memory.

It often surprises his friends, as well as strangers, to hear him give the scientific name of almost every plant that grows in this part of the country. Though sixty-five years old, he is as diligent as ever before in his life, carrying on his mind a great amount of the details of business.

Mr. Hyde is a very decided man, always having an opinion of his own, and generally earnest to have others see things as he sees them.

He frequently says, with some degree of pride, that he never uses tobacco in any form or spirituous or intoxicating liquors, never goes to the theatre or drives fast horses or indulges in any other of the modern vices or follies. He has no time for such things.

It might be well for young men to keep such an example in view. He is prompt and exact in keeping his word, and is always very much disturbed if others do not.

Mr. Hyde enjoys the respect of his fellow-townsmen to a remarkable degree. He is a self-made man, if there ever was one. Starting without money, education or influential friends, by hard work and force of character he has placed himself among the most influential citizens of his native city. Such an example is surely worthy of imitation. The world is certainly better for such a life, and may it be continued as long as it can be useful.

NATHANIEL TOPLIFF ALLEN.

Nathaniel Topliff Allen, son of Ellis and Lucy (Lane) Allen, was born in Medfield, Norfolk County, Massachusetts, September 29, 1823. His native homestead farm, purchased from the Indians, has been owned and tilled by seven generations of Allens, noted for longevity, sterling common sense and rugged worth; and there, during his minority, the subject of this sketch, followed the pursuits of his ancestors, and laid the foundation of a remarkably vigorous constitution. Portions of three years of his minority were spent in a Waltham cotton-mill, where was acquired a knowledge of textile manufacture; he received a good common-school education in the public schools, in a family school of Rev. Joseph Allen, at Northboro', and at Northfield Academy. After three successful seasons in charge of schools, and having chosen to become a teacher, he continued his professional studies in the Bridgewater Normal School, under Nicholas Tillinghast, and in the Rensselaer Polytechnic Institute, at Troy, N. Y. After teaching in the common district and singing-schools at Mansfield, Northboro', Northfield and Shrewsbury, Mass., until the spring of 1848, he was appointed by Horace Mann, of the State Board of Education, to the charge of the model department of the Normal School at West Newton. This position he filled with marked ability for nearly six years, when, in connec-

Nathl. T. Allen

Edmund D. Haskell

tion with Cyrus Pierce, father of American normal schools, he established the institution of which associated with his brother James T. Allen, he is the principal,—“The West Newton English and Classical School.” Mr. Allen has been one of the most progressive and successful educators of the last half-century, always advocating the liberal and thorough co-education of the sexes, and ready to introduce into his own school whatever proved to be sound in theory and useful in practice. This school, with its industrial department, at the homestead in Medfield, which is under the care of his brother, Joseph A. Allen, draws students from a wide region,—the last enrollment, 1890, showing boys and girls from seventeen of the United States, from Canada, Cuba, Montevideo (South America), Sweden, Spain and Italy. The remarkable success attending Mr. Allen's career has not been achieved through any hap-hazard influences. The make-up of his character was well provided for by a sturdy ancestry.

On the paternal side he traces his lineage through seven generations to the Puritans of 1640, and on the maternal side to the Pilgrims of Plymouth.

James Allen, an emigrant from England (1640), settled in Dedham, where his cousin, John Allen, was the first minister and a co-laborer with John Eliot among the Indians.

In 1649 James made one of seven families who settled Medfield. He purchased land of the Indians and built his house on the spot where the present homestead stands, now owned by the Allen Brothers, Nathaniel and Joseph, the latter and his children, of the eighth generation, are its present occupants.

The longevity of this family is remarkable. Developed through generations of sturdy adherence to the laws of health, being neither by wealth tempted to idleness and dissipation, or by poverty debarred from healthful social enjoyments, they were accustomed to plain living and high thinking.

In the sixth generation, to which Mr. Allen's father belonged, and in the family of six sons and two daughters, death did not invade the circle for seventy-eight years, when the Rev. Joseph Allen, D.D., of Northboro', died; four of the sons died at eighty-three; one, Rev. Wm. W. Allen, became the oldest living graduate of Harvard, dying at ninety-three years, while the youngest is living at eighty-three; the daughters died—one in infancy, and one at ninety years.

Mr. Allen's mother died from an accident at ninety-six years, wanting twenty-five days, in full possession of her faculties, and leaving seventy-eight descendants.

The seventh generation, of which Mr. Allen is a member, consisting of five sons and three daughters, was exempt from death's visitation for fifty-seven years.

The late Dio Lewis, M.D., pronounced Nathaniel one of the strongest and most enduring men he had ever known.

A fine physique, cheery, mirth-enjoying and mirth-producing spirit, financial independence, high moral, progressive and reformatory ideas have distinguished Mr. Allen.

He is distinguished by the above characteristics and has ever been prominent in moral reforms—theological—peace, anti-slavery, temperance, woman suffrage, civil service and tariff.

The same spirit actuates him which caused his ancestors, Puritan and Pilgrim, to contend for an improved condition. It would be difficult, if not impossible, to find another person of Mr. Allen's age with so many warm personal friends. In every city throughout the country, from Maine to California and from Canada to Texas, these are found,

During a busy life in the class-room, he has held many other positions of responsibility; [he has been president of the board of directors of the Pomroy Newton Home for Orphan and Destitute Girls since it was founded, sixteen years ago; is also the president of the Newton Woman's Suffrage Association and a director in the American Peace Society. He was trustee of the Boston College of Physicians and Surgeons, and a member of the committee of examination in natural science at Harvard.

Mr. Allen was a Garrisonian abolitionist and an officer of the society when in those days it cost something to be identified with men of their belief. He was many times mobbed when in their company, and naturally became an early member of the Free-Soil party.

In 1869, having been appointed an agent of the Commissioner of Public Education by Hon. Henry Barnard, Mr. Allen went abroad and spent two years in studying the school systems of England, Scotland, Ireland, France, Italy, Austria, and in particular of what is now included in the German Empire.

The results of his observations of the secondary schools, Gymnasias, Real- and Volks-Schulen of Prussia, Saxony and Nassau are preserved in a valuable report published and distributed by order of the Secretary of the Interior.

Mr. Allen was married, March 30, 1853, to Caroline Swift, daughter of James Nye and Rebecca (Freeman) Bassett, of Nantucket, and of their children, Fanny Bassett, Sarah Caroline and Lucy Ellis are living; Nathaniel Topliff, their son, died in 1865.

EDWIN BRADBURY HASKELL.

Edwin Bradbury Haskell was born in Livermore (then Oxford, afterwards Kennebec and now Androscoggin County), Me., August 24, 1837. His father was Moses Greenleaf Haskell, who was for the most of his life a country merchant in that town. His paternal grandfather, William Haskell, was born in Gloucester, Mass., and emigrated when a young man to the District of Maine, about the time that the General Court of Massachusetts gave to the people of Glou-

cester a township in the then almost wild "district," which afterwards became New Gloucester, Me., as a reward for their great services in the Revolutionary War. Mr. Haskell's mother was Rosilla Haines, daughter of Captain Peter Haines, who emigrated from Gilmanton, N. H., to Maine about 1790, bought a square mile of land on the Androscoggin River, in what is now East Livermore, where he brought up a large family of children, most of whom settled about him, and left a handsome estate and a highly respected name. On both sides this was sturdy New England stock of the earlier English immigrations—1630 to 1640—and from the enterprising young people of that stock who conquered the virgin Maine wilderness came a yeomanry of sound minds in sound bodies which has since made its mark throughout the country. Mr. Haskell was educated in the district school and at Kent's Hill Seminary, where he was fitted for college at the age of sixteen, having shown a special aptitude for mathematics. Not having the promise of pecuniary assistance for a college course, he was easily induced by his cousin, Zenas T. Haines, afterwards well known in the journalism of Boston, to enter the office of the *Portland Advertiser* and learn to be a printer. At the end of a year, having learned what he could of the printer's art in a daily newspaper office, he went, with a single companion, to New Orleans, where printers were much better paid in those days, and worked as a journeyman in that city and in Baton Rouge from the autumn of 1855 until the following summer. In August, 1856, he came to Boston and took a situation as a compositor on the *Saturday Evening Gazette*, which was at that time a most respectable paper published by William W. Clapp. In the spring of 1857 he was employed by the *Boston Journal* as printer and reporter, and after the first year wholly as a reporter. In the spring of 1860 he received an advantageous offer to become a reporter on the *Boston Herald*, then owned by Edwin C. Bailey, and in the following year was made one of the editorial writers, and practically the head of that department. In 1861 Mr. Haskell, with his associate, George M. Tileston, helped to raise the Eleventh Regiment, Massachusetts Volunteers, and intended to go to the field with it, but resigned his commission to another who had had military training. In 1865 Mr. Bailey proposed to sell the *Herald*, on account of failing health, and Mr. Haskell made up what would have been called at a later period a "syndicate" to purchase it. Some changes were made in the persons, Mr. Bailey wishing to put in his brother, who was foreman in the composing-room, and his cashier, the late Royal M. Pulsifer, and with these modifications the trade was promptly carried through, for one-third interest in the paper; the other two-thirds were purchased four years later. Mr. Haskell's associates were Royal M. Pulsifer, Justin Andrews, Charles H. Andrews and George G. Bailey. Mr. Bailey and Justin Andrews sold out their interests a few years after, re-

tiring with competencies, and the other three partners continued together until 1887.

Mr. Haskell's chief work in life was editor of the *Boston Herald* from 1865 to 1887. With a mind naturally inclined to see the arguments on both sides of a question, and with strong convictions of the right, he made the *Herald* entirely independent of parties, but always a consistent advocate of certain well-defined principles in relation to public affairs. Among these were universal suffrage, local self-government, honest currency, civil service reform and low tariff, with free trade as the ultimate goal to be reached. The *Herald* was, at the same time, one of the most enterprising newspapers in the country, and soon became the leading journal in New England, with a circulation and influence scarcely second to that of any other paper in the country.

As an editorial writer Mr. Haskell was, in the words of one who knew him well, "terse and direct, going to the core of the theme under discussion, and his keen sense of humor was a no less noticeable trait of his professional outfit." He was especially well informed, clear and incisive on economic questions. Mr. Haskell sold out his interest in the *Herald* in the autumn of 1887, owing to the unfortunate financial complications of his partner, Mr. Pulsifer, but resumed his proprietorship the following spring, when the Boston Herald Company was incorporated, and became a director in the company. His retirement from the editorship was permanent, and he was succeeded by his friend and associate for years, Mr. John H. Holmes.

Mr. Haskell has made investments in other successful newspapers, and is a large owner in the *Minneapolis Journal* and *St. Joseph News*. He was at one time the largest stockholder in the *Minneapolis Tribune*, of which his son, William E. Haskell, was editor.

Mr. Haskell's fortunate business and professional career has been happily matched by his social and domestic life at his elegant and beautiful home, "Vista Hill," overlooking the Charles River valley, in Auburndale, Newton.

In 1877 and 1878, accompanied by his family and a small retinue of friends, he made a tour of Europe, lasting some thirteen months. Hence the unique descriptive serial sketches published in the *Herald* of the "Adventures of the Scribbler Family Abroad."

In 1882 he declined a nomination to Congress, which would have been equivalent to an election, preferring his editorial position to what he held to be a more limited field of usefulness and honor.

Mr. Haskell was married, in August, 1861, to Celia, daughter of Jonas and Joanna (Hubbard) Hill, of Fayette, Maine. Of this union there were seven children, of whom four are living (in 1890). The eldest, William Edwin, graduated at Harvard in 1884, and settled in Minneapolis. He was for a time editor of the *Minneapolis Tribune*, and is one of the owners

Mr. A. C. White

of the *Minneapolis Journal*. The second, Harry Hill, is a graduate of Harvard, '90, and is destined for the medical profession. The youngest children are Margaret, born 1874, and Clarence Greenleaf, born in 1880.

Mr. Haskell has made some railroad investments by virtue of which he is vice-president of the South Florida Railroad Company and a director of the Plant Investment Company. In local affairs he is president of the Newton Cemetery Corporation, president of the Newton Jersey Stock Club, and President of the Board of Trustees of the Newton Free Library.

HON. LEVI C. WADE.¹

Hon. Levi C. Wade, of Newton, who was Speaker of the Massachusetts House of Representatives in 1879, and has since become even more widely known as president of the Mexican Central Railway, was born January 16, 1843, in Allegheny City, Pennsylvania, but is a member of an old Middlesex County family. His father, Levi Wade, whose ancestors were among the early inhabitants and largest land-owners of Medford, was born in 1812 in Woburn, to which his immediate ancestors had removed in the latter half of the eighteenth century. He is still living in Allegheny City, having retired from business thirty years ago, after a highly successful career as a merchant and manufacturer in the neighboring city of Pittsburgh. His uncle, Colonel John Wade, who was born in 1780 and died in 1858, was one of the wealthiest and most prominent residents of Woburn. To those who were familiar with this well-known gentleman, who was for fourteen years one of the Woburn selectmen, twelve years town treasurer, seventeen years representative to the General Court, two years in the State Senate, and seventeen years postmaster, his relationship with the subject of our sketch will be a matter of some interest, and they will not fail to detect points of resemblance between the two men. Hon. Levi C. Wade, however, is a staunch Republican, while Colonel John Wade was a Democrat. He was a tall and well-made gentleman, very neat in his dress and habits, and so crisp in speech at times that some of his sayings are still matters of tradition in Woburn. By shrewd investments in real estate Colonel John became one of the wealthiest men in his part of the country.

The mother of Hon. Levi C. Wade was A. Annie (Rogers) Wade, well known in Pittsburgh for her musical and literary attainments and her activity in benevolent enterprises. She was born in 1819, married to Levi Wade in 1838 and is still living with the husband of her youth. One of her ancestors was Rev. John Rogers, of Ipswich, who became president of Harvard College, and whose ancestry is traced by some to John Rogers, the martyr of Smithfield.

Levi C. Wade was educated in the public schools and was fitted for college by private tutors, entering Yale in 1862 and graduating with the degree of A.B. in 1866. While in college he took prizes in English composition, debate and declamation; was one of the editors of the *Yale Literary Magazine*, and was active and prominent in athletic sports.

It is interesting to note the different stages of development in the early career of a man like Mr. Wade, who is at one and the same time a student and an unusually successful man of affairs. He first came to Newton in October, 1866, for the purpose of studying at the Theological Seminary, under a promise that he would devote at least two years to theological study. He studied Greek and Hebrew exegesis the first year under Dr. H. B. Hackett, and studied theology the second year under Dr. Alvah Hovey. But as soon as the two years agreed upon were completed he devoted his attention to the law and was admitted to practice in the Supreme Judicial Court of Massachusetts in September, 1873. While studying law, Mr. Wade taught school in Newton, being principal of the Grammar School at Newton Upper Falls for five years. In 1877 he formed a partnership with Hon. J. Q. A. Brackett, now Governor of Massachusetts, and the legal firm of Wade & Brackett continued until 1880, when Mr. Wade retired from general practice and has since devoted his attention to railway law and active railway management.

Mr. Wade was representative to the General Court from Newton for the four successive years, 1876, 1877, 1878 and 1879. He was Speaker of the House in 1879 and declined a re-election to accept the position of attorney for various railroad companies. During his service in the Legislature there was no work in which he took a greater degree of pride than his successful effort with others to effect a change of the statute whereby an unfortunate, but honest debtor, could be arrested upon mere belief that he had property which might be used for the payment of the debt. This law existed upon the Massachusetts statute-books as late as 1878, and Mr. Wade secured its repeal in the House of Representatives in the face of powerful opposition. The same public-spirited traits are conspicuous in Mr. Wade to-day, and while president of the Mexican Central Railway, a director of the Atchison, Topeka and Santa Fé, Atlantic and Pacific Railways and other great enterprises, he is also one of the water commissioners of the city of Newton, a director in that excellent institution, the General Theological Library in Boston, and he is, and has been from its beginning, one of the vice-presidents of the Newton Club, the leading social organization in the city where he resides. He was also one of the building committee who erected the Young Women's Christian Association building in Boston on Berkeley and Appleton Streets.

Mr. Wade was married, November 16, 1869, to Margaret R., daughter of Hon. Wm. and Lydia H.

¹ Contributed.

(Elliot) Rogers, of Bath, Me. Mrs. Wade's mother was a descendant of John Elliot, the famous missionary to the Indians in New England and translator of the Indian Bible. The children of Hon. Levi C. Wade are Arthur C. Wade, born May 4, 1875; William R. Wade, born September 6, 1881; Levi C. Wade, Jr., born July 22, 1885; and Robert N. Wade, born October 22, 1887. Two daughters, the oldest of whom was born in 1870, died in infancy.

Mr. Wade's name is nearly as well known in Mexico as in the United States, he being president of what is our sister republic's largest institution except the government itself. He was one of the four original projectors and owners of what is now the Mexican Central Railway Company, and has been the president and general counsel of that company since August, 1884. When he was placed at the head of its affairs the first mortgage bonds of the corporation were in default and there was a floating debt of more than two millions of dollars. Since that time the company's financial affairs have been thoroughly re-organized, branch lines have been built, the value of the property has increased over thirty million of dollars and its bonds have become a popular interest-paying investment. In December, 1886, Mr. Wade went to London and interested prominent foreign bankers and financiers in the property, so that the Mexican Central securities are now as well known in London as in Boston and New York, and are listed at the stock exchanges of all three cities. More recently Mr. Wade has obtained from the Mexican government for the Mexican Central Company a concession to deepen the entrance of Tampico harbor, on the Gulf of Mexico. The Tampico Harbor Company has been organized for the purpose, and jetties are now being constructed there, similar to those which were so successfully employed by Capt. Edes at the South Pass of the Mississippi.

All of this great pecuniary success and honorable distinction in the financial world which Mr. Wade has achieved since he retired from the general practice of law and from politics in 1880 covers a period of but ten years, and even during that time he has never lost sight of his duties as a citizen or of his interest in public affairs. After his marriage in 1869 he built a small house at Newton Upper Falls and resided there until 1881, when he began acquiring the nucleus of his present beautiful estate (Homewood) at Oak Hill. This property comprises 225 acres, about a mile and a half from the Newton

Centre station. There are over 100 acres of forest, and the mansion, which is a rambling country house, commands beautiful views of the neighboring cities and towns. With the exception of a brief residence in Dedham and Brookline while building at Homewood, Mr. Wade has resided in Newton since September, 1866.

REV. S. F. SMITH, D.D.

Rev. S. F. Smith was born in Boston October 21, 1808, fitted for college at the Public Latin School and graduated at Harvard University in 1829, and Andover Theological Seminary in 1832. After a year spent in Boston in editorial labors he was ordained pastor of the First Baptist Church, Waterville, Maine, at the beginning of the year 1834, at the same time entering upon the duties of Professor of Modern Languages in Waterville College (now Colby University), and during the year 1841 taught all the Greek in the college. In 1842 he became pastor of the First Baptist Church in Newton Centre, and at the same time editor of the *Christian Review*. The pastoral relation continued for over twelve years, and was followed by a service of fifteen years of editorial labor in connection with the periodicals of the Baptist Missionary Union. Dr. Smith has been a profuse contributor to the periodicals and other literature of his time, and has continued without intermission, except during one year (1875-76) spent in Europe in the service of the pulpit. In 1831 he was in connection with the late Lowell Mason, engaged in the preparation of the "Juvenile Lyre," the first publication in this country devoted to music for children, most of the songs in which were his translation from German songs or imitations adapted to the German music of Nägeli and others. Many hymns from his pen are found in the various church collections. The well-known composition, "My country, 'tis of thee," was written by him in 1832, and first used at a children's celebration of American independence in Park Street Church, Boston, in the same year. The publications of Dr. Smith are "Life of Rev. Joseph Grafton," "Lyric Gems," "Rock of Ages," "Missionary Sketches" and numerous periodicals and sermons; also in 1880, the "History of Newton." Dr. Smith has also contributed valuable chapters to the present "History of Middlesex County."¹

¹ From "History of Newton," by permission.

CHAPTER XIII.

ARLINGTON.

BY JAMES P. PARMENTER, A.M.

ARLINGTON is, in extent of territory, one of the smaller towns of Middlesex County. It lies in the southeastern part of the county; is bounded by Winchester and Medford on the north, by Medford, Somerville and Cambridge on the east, by Belmont on the south and by Lexington on the west. It is about three miles in length and two miles in width. The western part of the town is hilly, Arlington Heights and Turkey Hill being the most prominent elevations, while the eastern end is level. There are two ponds of considerable size—Mystic Pond, along the northern boundary, and Spy Pond, in the southern part of the town. Mystic River forms a part of the northeastern boundary, and its tributary, Alewife Brook, separates Arlington from Cambridge and Somerville. Vine Brook runs through the town from west to east for about two miles, and then turning to the north flows into Mystic Pond.

The history of Arlington from the time when white men first set foot upon its soil naturally divides itself into four periods. First comes what may be called the period of settlement, lasting about a century, when Arlington was merely an outlying part of Cambridge, having a distinctive name—Menotomy—but no independent organization. The second period begins in 1732, when Menotomy became a separate parish of the old town. Then in 1807 the parish was incorporated as the town of West Cambridge and bore that name for sixty years. Finally in 1867 the present name was adopted, no change, however, being made in the organization of the town. It will be convenient to follow these natural divisions and speak of each period separately.

The boundaries of the town were early defined and remained without substantial change until nearly the middle of the present century. Soon after the settlement of Cambridge the inhabitants wished to extend the limits of their new town. They had land enough already, if its extent alone is considered, but much of it was forest and swamp. Land good for pasture and farming was not so plenty, and there was some competition among the different settlements to obtain grants of such land from the General Court. Cambridge thus obtained—not to speak of the country south of the Charles—the territory now comprised in Arlington, Lexington and Burlington. The Legislature established the line of division between Cambridge and its neighbors on either hand, by extending the existing boundary lines eight miles back into the country. Accordingly the line between Cambridge and Charlestown, which formed the northern boundary of Menotomy, fell near the present course of Warren and Mystic Streets. The southern limit, the

boundary between Cambridge and Watertown, ran from Fresh Pond through what is now Belmont at about the line of the Concord turnpike. The eastern boundary was a natural one—the Menotomy River, which we know as Alewife Brook. The western limit was not fixed until Lexington was set off from the mother town in 1712.

The territory thus marked out formed the district and parish of Menotomy and afterwards the town of West Cambridge. In 1842 it was increased by the annexation of the strip of Charlestown which lay between Mystic Pond and the ancient northern boundary. In 1850 West Cambridge contributed a comparatively small portion of land along its northern boundary to help form the new town of Winchester. In 1859 it suffered a serious loss of territory on its southern side, when Belmont was incorporated. The town was then reduced to its present limits.

Menotomy, the early name of the place, is an Indian name, the meaning of which is not certainly known. Probably it describes one of the natural features of the locality. The first settlers, doubtless adopting the Indian designation, called the stream that now bounds the town on the east, and was even then regarded as the dividing line between Menotomy and the village of Cambridge, the Menotomy River. During the eighteenth century Spy Pond was sometimes called Menotomy Pond. "Menotomy" went out of use when the town was incorporated as West Cambridge—a name that needs no explanation. Arlington is a name that has no historical meaning as applied to the place.

I. THE PERIOD OF SETTLEMENT, 1635-1732.

When the settlers in Cambridge began to push out to the westward they found the country thinly inhabited by the Massachusetts tribe of Indians. Over these reigned the widow of a former chief. She was known to our ancestors as the Squaw-Sachem, or as the "Queen of the Massachusetts" when they chose to dignify her with a finer title. This potentate had taken as a second husband, one Webcowits, the prime minister or principal medicine man of the late king, but he, apparently, was never regarded as anything more than a kind of prince consort. The Squaw-Sachem held no very permanent court, but her chief dwelling-place seems to have been within the limits of Arlington, on those pleasant slopes that stretch down to the western edge of Mystic Pond. She early came into friendly relations with the Colonial government, and sold to the settlers—probably in the year 1638—all the lands that she held within the bounds of their towns, reserving only her homestead by the pond. This purchase cost the town of Cambridge ten pounds in cash "and also Cambridge is to give Squa Sachem a coate every winter while shee liveth." Apparently the town was slow to fulfill the second part of the agreement, for, in 1641, we find the General Court enjoining Cambridge to give the Squaw-Sachem

"so much corn as to make up thirty-five bushels and four coats for last year and this." In March, 1644, in company with four other chiefs, she formally submitted to the jurisdiction of the Colony. As a part of this transaction the five chiefs, in answer to questions, made a statement of their religious views, and one cannot help thinking that the condition of mind revealed by some of their responses must have proved rather puzzling to the Puritan theologians. For example, one answer runs: "We do desire to reverence ye God of ye English, and to speak well of him, because we see he doth better to the English than other gods do to others;" and when questioned as to their willingness to refrain from labor on the Sabbath, they reply with a charming simplicity: "It is easy to them; they have not much to do on any day and they can well take their ease on that day." The treaty was ratified with an exchange of presents, the Indians giving twenty-six fathoms of wampum and receiving five coats—two yards in a coat—of red cloth, together with a potful of wine. The Squaw-Sachem lived for many years after, the Cambridge people making various agreements to fence her land and to provide her with corn. She died not long before 1662, and with her royalty disappears from our local annals.

The proprietors of Cambridge began to grant farms in what is now Arlington as early as 1635. A highway was made from the little settlement in old Cambridge to the other little settlement in Concord—the street that we now know as Arlington Avenue. And in 1636 or 1637 the history of the town fairly begins, with the establishing of Captain George Cooke's Mill on Vine Brook. This Captain Cooke made a considerable figure in the colony. He came from England in 1635, at the age of twenty-five, soon became captain of the Cambridge Company in the militia, was selected man several years, served in the General Court more than once, and held other positions, civil and military, during the ten years he remained in this country. Returning to England, he became a colonel in Cromwell's army and lost his life in Ireland in 1652. It was he who varied the activities of an adventurous life by setting up the first mill in Cambridge, and in fact in the neighborhood, if we except a wind-mill in Old Cambridge, which would not grind unless the wind was from the west. Captain Cooke's mill was situated a short distance above the present mills of Samuel A. Fowle. The remains of its dam may still be seen, and Water Street bore the name of "Captain Cooke's Mill-lane" down to a time within living memory.

The establishment of this mill was a great boon to the settlers in the neighboring towns, and the early roads were laid out with reference to it. Thus in 1638 a road was laid out from Watertown, and a little later roads from Woburn and Medford, all ending at the mill. They are substantially the same for the greater part of their course as our Pleasant, Mystic and Medford Streets. After Captain Cooke had abandoned the miller's trade in New England for the more stir-

ring profession of arms in Europe, his mill seems to have fallen into decay. At any rate nothing but a few ruins remained when John Rolfe bought the estate of the captain's heirs in 1670, built a new mill, house and barn, and revived the business. After his death, in 1681, the property and business passed to his son-in-law, William Cutter, in whose family it has ever since remained.

With the exception of the roads and the mill, Arlington presented few traces of civilization for many years. Along the banks of the Menotomy River stretched the Great Swamp. The labor and intelligence of more than one generation have since turned much of it into fruitful soil, but enough yet remains in its primitive condition to give us an idea of what the whole eastern end of the town was in the seventeenth century. Much of the land about Spy Pond also was swampy. The land was well wooded, but the town found it necessary, in 1647, to check reckless waste by forbidding persons owning land in Menotomy from cutting or taking away directly or indirectly any wood or timber on the easterly side of the road from the mill to Watertown.

Slowly, one after another, spots of cultivated land began to appear in the midst of the wilderness of woods and swamps. In 1646 Henry Dunster, the first president of Harvard College, obtained some land by Menotomy River, lying within the limits of Charlestown. John Adams lived near the present centre of Arlington and owned extensive tracts of land in the eastern end of the town. Other familiar names are found on the records—Dickson, Russell, Winship, Cutter—of men who settled here long before 1700. In 1688 twenty persons were taxed for person and estate as residents of Menotomy.

For a livelihood the people were mainly dependent on farming. Indian-corn was the principal crop, and the corn-fields were fertilized with the countless fish that swarmed in the Menotomy River and have given it its modern name. The alewives were caught by means of a weir which the General Court, in 1634, authorized the town of Cambridge to build, and were regarded as a most valuable kind of property. When, in 1676, two enterprising persons obstructed the passage of the fish to the weirs, the town brought suit and had the validity of its privilege judicially determined. There was also good fishing in Spy Pond, and people journeyed from Boston and Charlestown to fish there. One summer day no less a person than the Reverend Cotton Mather came out to try his luck, and, like many amateur fishermen of later times, fell into the pond, "the boat being ticklish." History records that he received no hurt from his misadventure.

The Menotomy settlers took their part in the war that broke upon New England in 1675 and furnished nearly a dozen men—a large proportion of their whole number—to the little army that went out to fight King Philip. Five years later Indian warfare

seems to have come nearer home, for we read in Judge Sewall's diary, under date of July 8, 1680: "Two Indians killed and several carried away by the Mohawks from Spy Pond at Cambridge: it was done about one in the morn." With these exceptions they lived undisturbed by the savages.

Little more can be said as to our early settlers. In whatever public events they engaged they took part as citizens of Cambridge, and their acts are a part of the history of Cambridge rather than of Arlington. They were doing the same monotonous hard work that was going on in so many New England communities of that time—gradually turning a savage wilderness into a place fit for the habitation of civilized men.

II. THE SECOND PRECINCT OF CAMBRIDGE, 1732-1807.

It was in 1732 that the second period of our history began with the setting apart of Menotomy as a separate precinct or parish. The feeling had for some time been growing among the people that they should have a meeting-house of their own and a minister dwelling among them. In 1728 some of them had petitioned the town of Cambridge to consent to a division, but they failed to obtain their request,—the town taking the reasonable ground that it did not appear that half of the inhabitants of Menotomy desired the change. With the persistence characteristic of those who have set their hearts on dividing a town, they tried again in 1728; petitioned the General Court in June, 1732; had their petition rejected in November; renewed it the next month and succeeded at last in obtaining favorable action. On December 27, 1732, the northwest part of Cambridge was set off as a distinct precinct, and its inhabitants vested with "all the powers, privileges and immunities that other precincts within the Province do, or by law ought to enjoy."

In order to understand the importance of this action, we must call to mind exactly what a precinct was. It was the same thing as a parish,—the words are used interchangeably,—but a parish then was not a collection of persons voluntarily uniting to support public worship. It was a territorial division—a certain extent of land—like a county, a town, a school district or a ward. It might be co-extensive with a town, it might comprise part of a town or it might be made up of parts of two or more towns. It had the duty of maintaining a meeting-house and supporting a minister, and every man living within it was just as much subject to be taxed for these purposes as he was for the support of highways and bridges. However cordially he might dislike the institutions of religion, he could no more escape paying his share towards their maintenance than he could avoid doing his part towards keeping the roads in order. On the other hand, he had an equal voice with his fellow-parishioners in the management of the parish affairs. Hence an an-

cient parish, in its structure, closely resembled a town, and when, as happened in Arlington, a parish was incorporated as a town, the transition was an easy one. The inhabitants of the new town were merely obliged to apply to a somewhat wider range of subjects the system to which they were already accustomed.

The inhabitants of the new precinct met together in their school-house, January 29, 1733, and John Cutler then began his long service of thirty-two years as parish clerk. They soon completed their organization by electing three assessors, a collector, a treasurer and a prudential committee of five. They invited their neighbors in that narrow strip of Charlestown which lay between the new parish and Mystic Pond to join them in settling a minister. As it was obviously much more convenient for these Charlestown people to attend public worship in Menotomy than in the distant meeting-house of their own town, an arrangement was made, and confirmed by the General Court, whereby they became united with the new parish, although continuing, in other respects, citizens of Charlestown.

And now our ancestors set about building their meeting-house. The site was not far to seek. Out of the common land that lay near the junction of the Watertown and Concord roads a portion had been reserved as a burial-place, although probably it had not yet been used for that purpose, and here it was decided to build the meeting-house. The building was to be forty-six feet long, thirty-six feet wide and twenty-four feet between the joists, and was to have a belfry; and the sum of three hundred pounds was appropriated to pay for it. Meanwhile the people met for public worship in their school-house, various ministers of the neighborhood conducting the services. Rev. John Hancock, of Lexington, baptized Thomas Osborn here April 1, 1734, "the first child baptized in the congregation at the school-house in Menotomy."

The meeting-house was raised in the spring of 1734, and we may suppose there was a certain amount of festivity on the occasion, since the precinct appropriated the sum of twenty-three pounds "to defray the charges of provisions;" but it was not until February 1, 1735, that it was opened and consecrated. The building stood nearly on the spot now occupied by its successor, but faced southeast. The pulpit stood against the northwest wall and the main entrance was directly opposite, at the other end of the broad aisle. In each of the other sides was a door. A portion of the floor was divided into eighteen pew lots, all of which were sold, except that to the right of the pulpit, which was reserved for the minister's pew. The prices of these pew lots varied from £14½ down to £5½; the two nearest the main door and the one to the left of the pulpit being apparently deemed most desirable. On these lots were built the high square pews, wherein sat the owners with their families—the leading and prosperous

people of the place. The more humble worshippers sat on benches placed upon that part of the floor not taken up with pews, or in the gallery which extended around three sides of the meeting-house. The men sat on one side of the broad aisle and the women on the other, and a like division was made in the galleries. A committee appointed by the parish assigned the seats, and they were instructed to take into account "persons' pay and age."

Such were the main arrangements in regard to meeting-house and congregation. But as yet there was no church organization and no minister. The latter deficiency our ancestors earnestly set about supplying, but it was more than four years before they succeeded in their effort. They called in the neighboring ministers more than once for counsel and assistance. On two occasions they set apart days of fasting and prayer when solemn public exercises were held. But whenever they had chosen a minister whom they judged of suitable character and qualities, their hopes were destined to disappointment. At last, after four persons had successively declined their invitation, they chose Samuel Cooke to be their minister. Mr. Cooke was chosen May 21, 1739. He considered the invitation with care and accepted it in a letter dated June 30th—a letter exhibiting that combination of practical forethought and of religious feeling characteristic of the man. He tells his people that he shall expect them to make allowance for the continued depreciation of paper currency; that he depends upon the kindness commonly shown to ministers, particularly as to building and fire-wood; and accepts their summons, "relying upon the Divine Grace for support and assistance, and recommending you and all your affairs to the Divine conduct."

The church was established on the 9th of the following September, the men signing the covenant and the women giving their consent by standing up as their names were called. In all there were eighty-three church-members. Many of the names affixed to that roll have a sound not at all unfamiliar to our ears,—Russell, Swan, Cutter, Adams, Winship, Fillebrown, Locke, Hall, Frost, Prentice and the rest—the founders of the families that have played so large a part in the life of the community. John Cutter and John Winship were made deacons. The First Church in Cambridge gave £25 towards furnishing the communion table—a gift especially gratifying to the new church.

Samuel Cooke was thirty years old when he came to his work in Menotomy—a work he was to lay down only with his life forty-five years later. The son of a Hadley farmer, he spent his boyhood on the farm and went to college at a much later period in life than was common in those days. He was graduated at Harvard College in 1735, kept school for a while, went back to Cambridge, where he was employed in the college buttry for more than a year, then instructed Colonel Royall's son at Medford, and

finally, after another stay at college, began his ministerial career—preaching for six months each in Marlborough, Roxbury and Menotomy. The new minister's "settlement" was fixed at £260 in bills of the old tenor or an equivalent amount in bills of the new tenor—neither of which kinds of currency was worth nearly its face value. His salary was to be £190 a year with such additions as might come from contributions not destined for other purposes. During his long pastorate his salary varied from time to time—noticeably during the War of the Revolution—but as the reckoning was sometimes made in paper and sometimes in coin, the variation was more apparent than real. In 1751 the amount was fixed at £60 in lawful money; a few years later it became £70; then in 1775 it was raised to £75 and it seems never to have been much more. Even this scanty sum was raised with difficulty. The collectors apparently found it hard to get in all the dues. Special contributions had to be taken up from time to time for the minister's support, and when he died the parish was indebted to him in a considerable sum. We ought not to attribute these facts to any lack of generosity on the part of our ancestors; they were evidently a result of their poverty.

In 1740 Mr. Cooke bought of Jason Russell an acre of land situated on the Watertown Road, next to the burial-ground, and here he built his house, his people furnishing much of the material and doing a good deal of the work. It was a substantial, comfortable dwelling, placed well back from the road, and was still standing twenty years ago.

The parish was now fairly started and for many years little of importance appears upon its records. The population was evidently increasing, for we find that it was necessary to put more seats into the meeting-house. In 1747 an effort was made to replace some of the seats on the floor with pews, but this attempt was stoutly resisted and it was not until 1755 that new pews were added. At the same time it was voted that there should be new seats over the gallery-stairs for the negroes to sit in. A committee was appointed in 1747 "to inspect the behavior of young persons in our meeting-house on Sabbath days," and any persistent mischief-maker was to be marched into the main aisle and made to stand there throughout the service. As we hear nothing more of the committee after a year, we may, perhaps, assume that the terrors of so public a penance produced a speedy reformation.

While the manners of youth on the Sabbath were thus looked after, their week-day education was not neglected. There was a school-house in Menotomy when the precinct was first set off, but it seems not to have been suitable for its purpose, for the parish voted, in 1743, to keep the public school near the meeting-house after a convenient house was erected, and three years later the town made an appropriation to help defray the charge of building a new school-

house. This school was of a grade considerably below that of a grammar school of the present day, and was kept for a few weeks in winter. It was supported by the town, but the appropriation was usually placed in the hands of the parish. In 1768 it was voted that a grammar school or "man's school" should be kept for fourteen weeks in the winter, and that there should also be four "women's schools." The system thus established lasted some years.

The care of the church and the school formed substantially all of the public business of the parish. But the people were not satisfied with this, and desired an entire separation from Cambridge. Accordingly they petitioned the General Court, in 1762, that they and certain of their neighbors in the adjacent towns might be incorporated as a town or district. The Legislature voted to incorporate the petitioners from Menotomy and Charlestown as a separate district, but annexed certain conditions to the grant. The Menotomy people made some unsuccessful efforts to induce the Legislature to alter the terms, but, nevertheless, voted to accept the act of incorporation as it stood.

A district had all the powers of a town except in one respect. Every town had a right to send a representative to the General Court, but a district did not have that right. The Governors much disliked to give their assent to the formation of new towns, for a new town implied a new legislator who was only too likely to set himself in opposition to the representatives of the King. The same objection did not apply to a district, and hence the device of forming a district instead of a town was not uncommon at that period. Menotomy, therefore, became a separate municipality in 1762. Upon their failure, however, to obtain any alteration in the terms of incorporation, the people apparently concluded that, on the whole, it was not worth while to take any advantage of the act, and so continued to act as before as a parish of Cambridge.

The foregoing are the principal public acts of the parish. Of the every-day life of the people few memorials remain. We know that they were for the most part farmers, and their farms were usually of considerable size. There were several taverns in the place—a circumstance which we ought not to regard as reflecting at all on the industry or sobriety of our ancestors, since these houses of entertainment were required by the farmers from the inland towns, who used to drive their teams laden with produce down through Menotomy and Old Cambridge on their roundabout way to Boston. Along the brook where their successors stand to-day, were situated several mills—grist-mills and saw-mills—belonging to members of the Cutter family, whose lands comprised much on the northwestern part of the parish. Many of the families of the place were connected by marriage; they were of the same race and the same religion; there was no great wealth among them and no great poverty. They lived a hard-working life, somewhat isolated, a good deal dependent upon one another for

society, with few amusements. Outside matters affected them little. A few of them served in the French and Indian War under Capt. Thomas Adams, a Menotomy man. These took part in the Louisbourg expedition of 1758, and all came back safely except one, who died of sickness. Parson Cooke did not fail to preach a sermon on the occasion of their return. He often took notice in that way of important current events—a common custom among the clergy of that age. For the most part the years seem to have gone by monotonously enough until at last the day came when History passed through our streets, and the quiet country people took their place among those who were first to face death in defence of the liberties of a nation.

They were not without warning of the coming storm. Again and again during the dark years that preceded the outbreak of war did their minister speak to them words glowing with the spirit of resistance to oppression. He found in Scripture many analogies to the events that were passing before his eyes. To him the Roman tyranny in Jerusalem was as the British rule in Boston, and the publicans that served Cæsar were the prototypes of the instruments of George the Third. His people were not deaf to his appeal. The younger men were organized into an "alarm-list company" enlisted as "soldiers in the Massachusetts service, for the preservation of the liberties of America," ready to act when the order came. Benjamin Locke was their captain, and his list of the members of the company, about fifty in number, is still extant.

On the 17th day of April, 1775, the Committees of Safety and of Supplies adjourned from Concord to meet at Wetherby's Tavern in Menotomy. This inn, also known as the Black Horse Tavern, stood on the northern side of the main road about half a mile below the meeting-house. The two committees, to whose hands was intrusted the direction of the patriot cause in the Province, met here on the 18th. Three of them, Elbridge Gerry and Colonels Orne and Lee, remained, intending to stay overnight. They were warned that there was an unusual number of British officers about in Cambridge, and Gerry was so impressed with the idea that trouble was brewing that he sent a messenger to John Hancock, then at Lexington, to put him on his guard. At about two o'clock the next morning the three members were aroused from their sleep to find the road filled with British regulars marching by towards Lexington. As the centre of the column was passing, they saw by the bright moonlight an officer and a file of men coming towards the house. They escaped, half-dressed, from the back of the building into an adjoining corn-field. Flinging themselves on the ground and protected from view only by the corn-stalks left standing from the previous season, they fortunately escaped the observation of the soldiers. These searched the house, but had to go on without making the coveted capture of three of the rebel leaders.

The troops whose sudden appearance gave Gerry and his friends so rude an awakening were about eight hundred in number, made up of light infantry, marines and grenadiers. Lieutenant-Colonel Smith commanded them. Embarking at the foot of Boston Common in boats which carried them to what is now East Cambridge, they had there landed, and after floundering across the marshes struck into the old Charlestown road. They entered the Concord road in North Cambridge, and from that point their way lay straight before them through Menotomy and Lexington to their destination—the stores of supplies collected by the patriots at Concord. The destruction of these was the object of the expedition. To effect that object, secrecy and despatch were absolutely essential, and the column moved rapidly and noiselessly on.

Notwithstanding their caution, the movement of so considerable a body of men could not escape notice. An hour or two earlier Paul Revere had galloped across from Medford and given the alarm in the upper part of the precinct as he rode towards Lexington. Some of the Menotomy people were aroused by the stir in the street as the soldiers marched by. Solomon Bowman, the lieutenant of Captain Locke's company, upon going to his door, was asked by one of the British soldiers for a drink of water. He refused, asking in turn, "What are you out at this time of night for?" He spent the rest of the night in warning his company.

When the troops reached the centre of Menotomy, their commander was convinced that a sudden and secret attack could no longer be hoped for. The night was already astir with the sound of distant guns and bells that told him the country was rising. He sent back a messenger to General Gage, at Boston, asking for reinforcements, and sent forward Major Pitcairn with six companies of light infantry to secure the bridges at Concord, while he followed more leisurely with the rest of the detachment.

The column marched on through the parish unmolested and unmolested. At one place their approach broke up a very untimely game of cards. At another they opened a stable, but, fortunately for the owner, the horse had been lent. At another house, where a light was burning, a soldier who inquired the reason was given the satisfactory explanation that the wife was making some herb tea for her sick husband. In fact, the dose was of a far different kind; for pewter-plates were there being melted into bullets.

The soldiers disappeared up the Lexington road, but they left behind them in Menotomy a community that was fully aroused and ready for its work. At daybreak Captain Locke's company met on the green beside the meeting-house and straightway marched to Lexington. The women and children were sent to places at a distance from the Concord road. Many persons concealed their silver and pewter.

The morning wore away quietly enough. Towards noon the road was again glittering with British bayonets. Smith's appeal for aid had been answered: Lord Percy was sent at the head of three regiments of infantry and two divisions of marines—in all about twelve hundred men—to reinforce the first detachment. Marching out through Roxbury, he was delayed for a little while at Brighton Bridge until the planks, which had been taken up, could be replaced. Then he kept on without further hindrance through Cambridge and Menotomy. But the injury to the bridge gave more serious trouble to a convoy of supplies and provisions that followed his column. Before the wagons could be brought over, the soldiers were far ahead. The convoy was further delayed by a mistake as to the road, so that by the time it reached Menotomy, Lord Percy was a considerable distance in advance. News of its approach preceded it. A few of the Menotomy men met in Coper's Tavern and resolved that these supplies should be captured. There were about a dozen men in all—exempts, as they were called, too old to be included among the minute-men, although, so far as appears, by no means of very advanced years. The two Belknaps were there—Jason and Joseph—James Budge, Israel Mead, Ammi Cutter and David Lamson. The latter, our traditions say, commanded the party. Others have it that Rev. Phillips Payson, of Chelsea, was the leader. It seems not improbable that in such a band, collected at a moment's notice, no man was captain more than another. They hastened to take their position behind a bank wall of earth and stones just opposite the meeting-house. When the convoy arrived opposite, escorted by a guard of soldiers, our men ordered them to surrender. The drivers whipped up their horses. The exempts fired, killing several horses and one or two of the men and wounding others. The drivers and surviving soldiers scattered and ran across the fields to Spy Pond, and local tradition delights to tell how six of them surrendered to one Mother Batherick, whom they encountered near Spring Valley. The party at the road took possession of the abandoned wagons. They had done a greater thing than they thought; for they had made the first capture of the War of the Revolution. But as they looked at the matter, they had been engaged in shooting down the King's soldiers upon his highway, and they felt a not unreasonable dread of what might happen if any signs of the conflict should be left when the British came back. Accordingly they dragged the wagons into the hollow behind Capt. William Adams' house. The living horses were driven to Medford and the dead ones carried to a field near Spring Valley.

The adventures of the exempts were by no means over. As some of them were going home they met and captured, near Mill Street, Lieut. Edward Thornton Gould, of the "King's Own" regiment, who had received a wound in the ankle at Concord Bridge,

and was riding back alone. And not long after, the approaching sounds of battle announced that the British were again entering Menotomy.

It is the duty of others to tell what happened that day in Lexington and Concord. Captain Locke's men were there, with their comrades from the other towns, taking their part in the hard fighting that made the retreat of the regulars through Lexington so full of peril. Lord Percy's reinforcement met Smith's exhausted men at about two o'clock, and, after half an hour's respite, the march was resumed, and the borders of Menotomy were soon reached.

Any one who looks down upon the town from Arlington Heights or Turkey Hill can understand how the fight was fought. From the Lexington line to the Foot of the Rocks the land rises to a considerable height on each side of the road. Farther down, until nearly to the centre of the town, the hills on the right rise more gently, while to the left the land falls away to Vine Brook. Below the centre is level land—Menotomy Plains they then called it—stretching to the eastern boundary.

All through the first part of the afternoon's fighting our people were generally on ground higher than the road, and came into hand-to-hand conflict only with the British flanking-parties. Later they did not have this advantage of position, and the fighting that took place below the centre of the town seems generally to have been sharper and at closer quarters than that above.

It could not have been long after three o'clock when the British re-entered Menotomy. The fire to which they had been exposed slackened a good deal as they marched through the wooded country above the Foot of the Rocks. But as they reached the comparatively open ground at that point the battle was resumed. Other enemies than those who had followed them so persistently were at hand. All that morning had men been hurrying in from every side toward the scene of the conflict. Not merely from Woburn and Medford, from Old Cambridge and Charlestown, but from Roxbury and Dorchester, Danvers, Salem, Beverly and Lynn and other distant places had they come; and from behind houses and barns, stone-walls and fences they poured in their fire upon the column that was hastening down the highway.

Percy showed himself a worthy descendant of the race of soldiers from whom he came. He was now in command of the whole British force. He had placed at the head of the column the grenadiers and light infantry,—the remnant of Smith's detachment. Next came his wounded, carried in wagons, and finally, in the rear, his own fresh troops. From the latter, also, were made up strong flanking-parties, that marched to right and left of the road, parallel with the main body, and protected it by threatening the flank of the parties of Provincials that skirted the highway.

The plundering and setting on fire of houses had

begun in Lexington and was continued through Menotomy. Worn out with many miles of marching and fighting, exposed to a murderous fire which they could not return with effect, with the number of their enemies increasing and safety still far distant, it is not surprising that the soldiers forgot discipline and indiscriminately plundered and destroyed. They entered the Great Tavern, as it was then called, belonging to William Cutler,—a part of the present Russell's Tavern,—took what they could carry, broke furniture, let the contents of the casks of spirits and molasses run to waste, and ended by setting the house on fire. They burst into the house of Deacon Joseph Adams, where they found his wife lying in bed with her youngest child beside her,—an infant not much more than two weeks old. One of the soldiers threatened to kill her, but was restrained by a more merciful comrade. They allowed her to crawl to a neighboring corn barn, while they proceeded to plunder the house. It was here that they found the communion service of the church, one of the pieces of which, a silver tankard, was recovered after the evacuation of Boston, and still forms a precious possession of the First Parish. This house also they set on fire, but, as happened in the case of all the other buildings in Menotomy which they attempted to burn, their haste prevented them from making thorough work of it, and the flames were soon extinguished.

About opposite Mill Street stood, and still stands, the house then occupied by Jason Russell. He was one of the principal citizens of the precinct. His land extended from the property of Deacon Joseph Adams to the Common by the meeting-house, and stretched along the Watertown road beyond Parson Cooke's house, as far as to what we know as the Gray estate. Being a man of fifty-eight years of age and lame, he at first intended to accompany his family to the house of George Prentiss, which was at a distance from the road, and served as a place of refuge for many non-combatants. But, after starting with them, he made up his mind to stand his ground at his own home. He fortified his gate with bundles of shingles, thinking that these would make a good breastwork. Ammi Cutler, who had been taking part in the affair of the supply-wagons, and to whose house Lieutenant Gould was first taken, found time to cross the brook and urge his neighbor to go to a safer place. Russell's blood was up. He replied: "An Englishman's house is his castle," and refused to abandon his post. Meanwhile, a body of Americans—mostly Danvers men—had taken up their position in the rear of Russell's house, some in a walled enclosure, which they strengthened with bundles of shingles, others behind trees on the hillside. Apparently Russell joined them there. They did not have long to wait. As Cutler was returning home he was fired upon by the British flankers on the north side of the road. As he ran he tripped and rolled among the logs of the mill and wisely lay quiet while the bullets whizzed over

him and scattered the bark upon him. Across the highway, bloody work was going on. As the British columns came sweeping down the road, the strong guard on their right flank came suddenly upon the rear of our ambuscade, and, after a moment of savage fighting, drove the men in the enclosure down towards the road—now filled with the main body of the enemy. Closely pursued, they hurried into Russell's house. Russell himself was shot down at his own door, and was stabbed again and again with the bayonets of the pursuers as they rushed in, killing every man they could find. Eight Americans escaped to the cellar. One soldier was shot on the cellars, and his comrades dared venture no further; they plundered the house and went on. In the south room of the blood-stained dwelling were soon laid the bodies of twelve of the dead, among them the corpse of the owner, bearing the marks of two bullet-wounds and eleven bayonet-stabs.

The fighting at Russell's house seems to have been the fiercest of the day in Menotomy; nowhere else did so many men get to close quarters. But it was by no means the end. As the British came down through the centre, they plundered houses, entered the store of Thomas Russell, now occupied by his descendant, where they followed their customary plan of theft and destruction, and treated the meeting-house, the old Adams house and the dwelling of the minister to a fusillade. They next burst into Cooper's tavern at the corner of the Medford road, where, unluckily, they found other than lifeless objects for their wrath. Cooper and his wife, warned by the storm of bullets that came beating against the house, as the enemy drew near, succeeded in reaching the cellar and escaped, but Jabez Wyman and Jason Winship, the only other occupants, were not as fortunate. They were unarmed, and the soldiers at once despatched them with blows and bayonet-thrusts.

At about the same time Samuel Whittemore met with an experience unique among the events of the day. He was then not far from eighty years of age. He had known of the British expedition very early, for he lived near the eastern edge of the town and had seen the soldiers as they marched by in the moonlight. Eager to have a hand in the fray, he had put his weapons in order, and, armed with musket and horse-pistol, lay in wait behind a stone-wall as the British retreated through the centre. After firing a few times he was surprised by the flank-guard. He shot two of them and, as he was firing a third time, received a ball in the face which stretched him senseless. The soldiers beat him with their muskets, stabbed him six or eight times with their bayonets and passed on, leaving him for dead. To the astonishment of his neighbors he not only recovered, but lived for eighteen years afterwards.

From the centre to the eastern limit of the town the fighting was continuous. The advantage of higher ground was no longer with the Americans, but their

numbers were continually growing. It was in this part of the field that Dr. Joseph Warren came so near his death—a bullet striking the pin from the hair of his ear-lock. Some of the Danvers men, who had managed to escape when their comrades were swept into Russell's house, had here taken up a new position and did fatal work. Leaving behind them many dead and wounded men, the enemy crossed the brook and continued their retreat through Cambridge and Charlestown until at last the darkness came on and the fight was ended.

Such are some of the incidents that happened in Menotomy on Wednesday, the 19th day of April, 1775. From them we can form an idea of the many like occurrences of the day that have faded out of memory. Enough remains to assure us that our fathers bore themselves like men, and were not unworthy to have been among the first to fight and to die for the freedom and independence of their country.

Our scattered people came back to their dismantled houses. Not less than twenty-two Americans, and probably fully twice as many of the enemy, had been killed in Menotomy that April afternoon. Many of the dead were carried back to their own towns, but twelve of them, including the three Menotomy men, were buried here. With war actually begun, the ordinary decent observances were omitted. One grave was dug in the burying-ground and the dead hastily committed to it, without coffins and in the clothes they had worn when they fell. Above them was afterwards placed a slate grave-stone, still standing beside the monument, which the piety of a later generation has raised, and on it we read:

"MR. JASON RUSSELL WIFE
barbarously murdered in his own
House by GAGE's bloody Troops
on ye 19th of April, 1775. Etat 50.
His body is quietly resting
in this grave with Eleven
of our friends, who in like
manner, with many others, were
cruelly slain on that fatal day.
Blessed are ye dead who die in ye Lord!"

Jason Russell, Jabez Wyman and Jason Winship were three of the occupants of that bloody grave. Who the nine others were cannot now be told. Seventy-three years later some of the public-spirited citizens of West Cambridge, together with Hon. Peter C. Brooks, of Medford, joined to erect the granite shaft that now marks the place. When the workmen opened the grave to lay the foundations of the monument they found the bones still in a good state of preservation, and mingled with them remnants of clothing, rusty buttons, an old shot-pouch, two flints and other remains of like nature. The British dead were buried, some in the burial-ground, near the brook, other in various parts of the town where they had fallen. On the day after the fight a company of militia was detailed from the American force already under arms in Cambridge, to go over the

ground of the previous day's fighting and inter such of the dead as might be still unburied.

There were no actual hostilities in Menotomy after April 19th, but the parish by no means escaped the burdens of the war. Its young men, under Captain Locke, formed part of the army that besieged Boston. Probably the company was in the battle of Bunker Hill; certainly its captain was, and his descendants preserve the musket that he carried on that day, and tell the story how he fired it till it grew too hot to hold, and then wound his handkerchief around it, and kept on firing. Two days after that battle an order was made that as many houses in Menotomy as should be needed, should be turned into hospitals for the sick and wounded of the American army. The taking of the house of Rev. Mr. Cooke for this purpose was especially authorized.

With the evacuation of Boston the scene of hostilities was shifted from Massachusetts, and thenceforward Menotomy had to bear only its share of the sacrifices that the conflict entailed. All through the war their minister never failed to hold his people to their duty. It was only with difficulty that his son had forced him out of danger on the 19th of April; for the old man longed to have a hand in the fight, and to prove that his hatred of oppression was as great when oppression was to be met in arms in the streets as when it was to be denounced from the pulpit. His sermons certainly show no softening of feeling or relaxation of purpose as the gloomy years of the Revolution pass by. His faith never wavers, that the cause of America is the cause of God, and that in His Providence it must succeed at last. The British figure as "tyrants," "unfeeling monsters," "our worse than savage enemies," "our implacable foes." The Scriptures are ransacked for comparisons, and any particularly odious oppressor of the olden time is pretty certain to be found to bear a striking resemblance to Lord North. Unfair and unjust much of it no doubt seems to us who look back over the space of a century, but there is no question as to the earnestness and passion of the preacher. In him the old Puritan spirit is alive again, and it is perhaps fortunate for our country that so many of the clergy of that day, like him, believed that the war between England and America was a war between the powers of darkness and of light.

Few entries relating to the war appear on the records of the parish. In 1778 it was voted that the inhabitants be divided into fifteen messes, in proportion to their valuation—the design evidently being that the "messes" should be equal in property. Each mess had to furnish or support a soldier, and the expense was shared among the members according to their means. Various committees were chosen to carry out the scheme. Some light is thrown on the enormous depreciation of the currency by the amounts appropriated for the minister's salary. During the early years of the war it remains at £75. In 1778-79

£300 is voted. The next year it is £1200; and finally at the close of 1780 it is placed at £3000. After the surrender of Lord Cornwallis it falls back to £120, and then to £100.

Mr. Cooke did not live long after the war. He died June 4, 1783, and was laid to rest in the old burial-place between his meeting-house and his home. He had played a great part in the community for more than forty years; nor was his fame confined to his own parish. He was in close relations with the other divines in and about Boston, and was often called upon to take a prominent part when a minister was to be ordained or any special solemnity observed. Rigid and unyielding where what he deemed the interests of truth were concerned, he labored to sustain the faith delivered to the churches in New England. False doctrine, heresy or schism found no countenance from him. As far back as 1745, as one of an association of ministers, he declared that he would not ask into his pulpit the Rev. George Whitefield, who was then making such a stir among clergy and laity alike. In the latter part of his life he was much troubled by the spread of new opinions that were undermining the old unity of faith among his people, and by the increasing laxity in morals and discipline. Naturally Universalism received no favor from him, or, as the obituary notice in the newspaper puts it, "As he ever opposed the introduction of errors, he was particularly concerned to bear a faithful and even dying testimony against the doctrines of 'Salvation for all Men' as 'totally subversive of the Christian religion.'" But worse than all was the actual establishment of a Baptist church in his own parish two years before his death. It was a sign that the old order of things was coming to an end in Menotomy; that his church could no longer exist as the sole centre of religious instruction; that his teachings must cease to command universal assent and reverence; and it is perhaps well that he did not live to a time when the disintegrating process had gone on still farther.

I make no apology for having devoted what may seem undue space to the first minister of the parish; for the history of the parish centres about him, and the better we know him the better we can understand the character of the people among whom he labored.

For several years after Mr. Cooke's death the parish was in difficulty. The people shared in the general poverty that accompanied and followed the war. They owed a considerable amount of arrears of salary to the heirs of their late minister, which they did not succeed in paying off until 1786. They had trouble with the new Baptist society. Twice they unsuccessfully attempted to settle a minister. At last, at a meeting held July 16, 1787, they chose for their minister Rev. Thaddeus Fiske, who had already been preaching for them several months. This time their effort did not fail, and Mr. Fiske began his long pas-

torate of forty years. He was twenty-five years old when he came to Menotomy, and had graduated at Harvard College two years before.

There had probably been some persons in the parish inclined to Baptist views for a long period before the Revolution, but the first notice we find of them in the records as a distinct class is in March, 1775. Apparently some of them felt a not unreasonable dislike to being taxed for the support of a church with which they differed, and desired that the injustice might be remedied, but they found the majority of their neighbors uncompromising, for the record of a meeting held March 22, 1775, reads that it was voted "not to excuse the people called antipedobaptists from paying ministerial taxes for the year 1773-74." Then came the war and for a time theological disputes were in abeyance. In 1780 the Baptist people got together and began to take steps to organize a society.

In the following year the society and church were regularly formed and received the fellowship of the denomination. Thomas Green was the first pastor. Originally appointed to preach in Menotomy by the Association of which the newly-formed church was a member, his ministrations proved so acceptable to his people that he was ordained as minister in November, 1783. His pastorate continued for ten years. In 1790 a church was built—still standing—at the corner of Brattle Street, and showing, notwithstanding the alterations made to convert it into a dwelling-house, evident traces of its original purpose. At about this time an agreement was made whereby persons of the Baptist faith living in Woburn were enabled to unite with the church in Menotomy, the minister preaching half the time in each place. This turned out to be an unfortunate arrangement for the original society, for the Woburn branch increased much more rapidly than did the society in Menotomy, and became the principal organization. The people here were no longer able to support regular preaching, but they held services from time to time, as they found opportunity, and prevented the enterprise in which they believed from coming to an end.

During the remaining years of the eighteenth century little out of the ordinary course happened in the precinct. There was a growing feeling that Menotomy was now able to cut loose from Cambridge and become a separate town. In 1784 a committee was appointed to petition the General Court to set off the Northwest Precinct of Cambridge and Charlestown as a township. Two years later an effort was made to induce Cambridge to take some action in the matter. These propositions came to no immediate result, but they show that the separation from Cambridge was not brought about by any sudden impulse.

Political differences no doubt had also a share in increasing the desire for separation. When parties began to be formed after the adoption of the Constitution, Old Cambridge took the Federalist side,

while Menotomy strongly favored the opposition. People who had seen their houses pillaged and their neighbors murdered by the King's soldiers could hardly be expected to look with much favor on the cause of England, with which the Federalists were popularly identified. With France they had a warm sympathy. When the French Republic was established there were various celebrations of the event among the Republicans in and about Boston. In Menotomy, instead of the usual civic feast, the women held a celebration of their own. About fifty of them met one Thursday afternoon in February, 1793, at the house of Mrs. "Wellington"—probably Mrs. Jeduthun Willington—who had ornamented her rooms with various kinds of evergreens, to congratulate one another upon the great events in France. With their caps adorned with the French national cockade of liberty, they sat down to a banquet consisting of coffee, wine and civic cake, and further celebrated with music, vocal and instrumental; until, as the reporter gallantly expresses it, "the joyful scene concluded with that harmony, civility and politeness which exalt their sex so far above the other." Civic cake, which was used at the festivals of the French sympathizers, differed from other cake in having the words "Liberty and Equality" stamped upon it. That such a celebration should have taken place at all in a parish like Menotomy, among such a sober and practical people as lived here, shows with peculiar vividness the intensity of popular feeling. Very soon after this astonishing performance the news arrived of the execution of Louis XVI. and the beginning of that series of events that culminated in the Reign of Terror, and we hear nothing more of civic cake and cockades of liberty.

In 1799 a new industry was begun in the parish, which had a good deal of fame in its day. This was the card manufactory of Amos Whittemore and his brothers. Amos was a grandson of Samuel Whittemore, whose experience in the battle of April 19, 1775, has been above narrated. He early exhibited an unusual taste for mechanics, and during his apprenticeship to a gunsmith, showed much ingenuity and a strong inventive talent. After a time he became engaged in Boston in the manufacture of cotton and wool cards.

The manufacture of cotton and woolen goods was beginning to be important, and the demand for cards—used in separating the fibre—was increasing. But this manufacture was a slow and expensive process. One machine punched a piece of leather full of holes; another machine cut wire and bent it into staples, and then the staples had to be placed in the holes, one by one, by hand, to make the card. Whittemore set himself the task of contriving a machine that should perform the whole operation. The story is that of so many inventions. At the sacrifice of health, with neglect of food and sleep, he devoted himself to his work. Gradually overcoming one difficulty after

another, he brought his machine nearer and nearer perfection. One final obstacle remained which seemed insurmountable. Despairing oftentimes, but coming back with tenacious perseverance to the effort, at last the solution of the problem flashed upon him and the task was done. He obtained a patent in the United States in 1797 and afterwards one in England; and, with his brother William and Robert Williams, began business in Menotomy under the firm of William Whittemore & Co. Their factory stood near the meeting-house. Two years after the business was started it employed forty people and turned out two hundred dozen cards a week. In so small a community as Menotomy then was—comprising but 85 dwelling-houses—this was a very important industry, and its removal to New York in 1812 was felt as a serious loss. Its fortunes in New York were various. Sharing in the sudden and perhaps unhealthy activity of manufacturing pursuits during the war of 1812, it felt severely the equally sudden reverses that followed. After the expiration of the patent in 1825, two of the inventor's sons again began business in West Cambridge in 1827 in a different place and in a smaller way, and carried it on until their factory was burned in 1862.

The principal work undertaken by the parish during the last years of its existence as the Second Parish of Cambridge was the building of a new meeting-house. Notwithstanding additions of seats and pews, the old one was too small to accommodate the increased number of worshippers. The building had undergone repairs from time to time. As far back as 1778 Rev. Mr. Cooke appears to have felt doubtful about the stability of the belfry, for we find his thrifty parishioners appointing a committee to see if they "could make him easy" not to take it down. The committee brought back the resigned answer that he would leave it to the people, and trust in the providence of God. The new belfry appeared in 1783, when many alterations and repairs were made. Finally it was decided that a larger building must be had. At a meeting held January 9, 1804, it was voted to build a wooden house seventy feet long, fifty-six feet wide, and thirty feet posts. The old meeting-house was sold at auction, and after several changes reached the place where it now stands. It was turned into a dwelling-house, and is now occupied by Mr. Charles O. Gage.

The new house was raised without accident in July, 1804, and dedicated March 20, 1805. It had the same general appearance as many meeting-houses of that day—an oblong building painted white, having in front a porch with four pillars, and on top a short, square tower surmounted by a belfry, the dome-shaped roof of which supported a little spire with a vane—still a familiar type of church architecture in New England villages. It contained ninety-two pews on the floor and fourteen in the galleries.

The prospect of a new building seems to have ex-

cited the zeal of the musical members of the parish to improve the singing on Sundays. There had been a choir for a considerable time—at any rate, since 1775, when William Cutter was chosen by the parish to lead in singing, and two seats in the front gallery were set apart for the singers. In 1796 instrumental music was added in the shape of a bass-viol, to the accompaniment of which the choir sang the hymns in Tate and Brady's Collection. In 1804 it became desirable to establish the Northwest Parish of Cambridge Singing Society, for, as was said in the preamble to the constitution, the spirit of music in public devotion "is become something languid, and its genius seems about to withdraw." Accordingly the society was formed for the laudable purpose of reviving the spirit and improving the members in the art of music. "Justice our principle, Reason our guide, and Honor our law." It was provided that every member should sit in the singing seats on Sundays when he was at meeting. This society lasted three years, and was immediately succeeded by the West Cambridge Musical Society, which continued until 1817. The "Village Harmony," the "Middlesex Collection," and Belknap's hymn-book furnished them with material; they met in the winter months for practice, and we may hope were enabled to bring back the retiring genius of music.

The building of the new meeting-house was soon followed by the incorporation of a new town. A petition was presented to the General Court, and on February 27, 1807, an act was passed to incorporate the Second Parish of Cambridge as the town of West Cambridge. The act went into effect June 1, 1807. From that time the history of the parish continues simply as that of a religious society—no longer as that of a community. In its place come the more varied activities of a self-governing New England town.

III. THE TOWN OF WEST CAMBRIDGE, 1807-67.

When the town of West Cambridge was incorporated it contained not far from nine hundred inhabitants. The increase in population had been gradual and had not affected the character of the place. It was still essentially the farming community that it had been for more than a century and a half. The roads that traversed the town were the old roads to Cambridge, Medford, Woburn, Charlestown and Wattertown, and the paths that led from the highway to the mills on the brook. Of these mills there were several. Lowest on the brook was Ephraim Cutter's grist-mill, which he had recently built at his new dam just below the ancient site of Col. Cooke's mill, and of its successors, where for several generations his own ancestors had labored. Next above came the mill of Stephen Cutter, on the present Mill Street. At the place where the saw factory was so long carried on, Abner Stearns had just erected a wool-factory, which he sold in 1808 to John Tufts, who kept the

neighboring tavern. Stearns established himself a little farther up the stream and soon built a fulling-mill and set about spinning yarn. Near the Foot of the Rocks stood the mill where Gershom Cutter had, for some years, carried on the business of turning and grinding edge-tools; and a short distance above came the grist-mill of Ichabod Fessenden, which he sold in 1809 to John Perry and Stephen Locke.

Besides the business that was carried on along the brook, the only manufactory seems to have been the Whittemore card-factory; but that was the most important of all, for the business was growing each year. In 1809 the twenty-three machines with which the business began had increased to fifty-five, capable of sticking eighty dozen pairs of cards in a day. From nine to ten thousand dollars was paid in wages yearly to the forty or fifty employees—a very large amount in the eyes of the people of the town. There were a number of stores—that of Col. Thomas Russell being the most important, and several taverns. These occupations, however, employed a comparatively small portion of the citizens. The greater number carried on farming, as their predecessors had done. That was the distinctive business of the place.

On the 11th day of June, 1807, the people of West Cambridge met in their first town-meeting and chose their first board of town officers. Together with the officers who are still annually elected—the selectmen, overseers of the poor, town treasurer, constables—others were chosen whose names are not so familiar nowadays—fire-wards, hog-reeves, pound-keeper and tythingman. In the Massachusetts fashion, the citizens next set about providing for the education of their children. The old system of the four women's schools and the one man's school with the term of fourteen weeks was improved upon. The town was divided into four school districts—the South, Western, Middle and Eastern—and it was provided that there should be four and a half months' schooling in each.

In the following spring West Cambridge first took part as a separate community in a State election, and the political bias of the people appears very clearly in the result of the vote for Governor, for while the Republican Governor, Sullivan, received 147 votes, the Federalist candidate, Christopher Gore, had to content himself with thirty-three. Party spirit ran high in those days, for the embargo had been proclaimed in the previous December and the effects of that measure were beginning to be felt in New England. The West Cambridge people had little to do directly with foreign commerce, and did not experience that personal suffering that brought about such bitter opposition in many places to Mr. Jefferson's policy, while their patriotic feelings impelled them to take the side of the Administration. When the Fourth of July arrived they celebrated it with a procession, an oration and a banquet. The orator was William Nichols, Jr., then the master of the school at the centre of the town, and he spoke in the new meeting-

house. The banquet took place out of doors near Tufts' Tavern, and was followed by a formidable list of toasts, proposed by the toast-master and responded to by persons selected beforehand. The general enthusiasm was heightened by the playing of the band and the firing of the cannon, as the toasts were given. Beside the regular eighteen toasts there were five "volunteers." Some of these sentiments are worth quoting:

"The President:—a firm, undeviating and inflexible patriot and statesman; he lives in the respect and veneration of the friends of liberty."

"The memory of Warren, and all those who fell in defence of our rights:—may their spirits haunt the wretches who servilely court the favor of their destroyers."

"The Embargo:—wisely calculated to preserve our peace and privileges; may those who seek to destroy its efficacy feel its first effects."

"The people of the United States:—may they be fully sensible of their power and sovereignty, and never suffer a nobility to trample on their rights or be duped by Federal imposture and hypocrisy."

"May the kidnappers of man, of every nation, be equally detested by the sons and daughters of Columbia."

We may safely assume that the few Federalists in West Cambridge took no great part in this interesting celebration. At a town-meeting held in March, 1809, the majority expressed their feelings "on the alarming crisis of our public affairs" in a series of resolutions that revel in figurative language. They begin with a long preamble reciting the seriousness of a moment "when Great Britain, like the leviathan of the deep, has sharpened her teeth against the commerce of all nations; when, by her piracies and her illegal orders, she has swept from the ocean the commerce of all nations; when, like the Ishmaelite of old, her hand is against every man and every man's hand against her." After particularizing some of the acts of the Ishmaelite and the leviathan the preamble goes on to denounce the opposition party at home, especially for their proceedings in the State Legislature and various towns, "when the very men who charge the National Government with partiality to France, have justified or palliated the conduct of Great Britain, and openly advised to unfurl the Republican banner against the Imperial standard;" and concludes by saying that it is time for citizens to come forward and express their sentiments. Then follow the sentiments which citizens ought to express, in the form of resolutions of which a small part relates to the bad conduct of England and France and a great deal to the worse conduct of the Federalists. They approve the Embargo, express respect for the liberty of the press, with a dark allusion to that portion of it that is endeavoring to weaken the Administration, charge upon the leaders of the opposition that they are moved by "a thirst for power and place which they have uniformly been seeking the last eight years," and that they, "notwithstanding the risk of all the evils necessarily resulting from a dissolution of the Union, are determined to hunt down and lay prostrate the present Administration and to elevate themselves and families on its ruins." The whole closes with a commendation of Thomas Jefferson, whose Presi-

dential term had just come to an end. One may fancy the disgust of the Federalist minority that this very unambiguous set of resolutions should go out as the voice of the town. However, they could muster but eight dissenting votes, and it was further voted that the resolutions should be published in the party newspapers, where no doubt they brought joy to the hearts of all good Republicans.

For the next two or three years the country was drifting towards war, and a strong military spirit was aroused. The West Cambridge Light Infantry was organized in 1811 and took part in a volunteer muster that occurred in the town that year. A fort was built, garrisoned by a company which represented British troops, was attacked by the American forces, and captured after a desperate struggle. In another year came the second war with Great Britain. The town voted to pay ten dollars per month and five dollars bounty to each non-commissioned officer and soldier from West Cambridge in the service. Later in the war the allowance was increased, and then the increase was cut off. The war had little direct effect upon the town, except in 1814, when there was a scare as to a threatened British attack on Boston, and a large number of volunteers went into training to resist the invaders, who never came.

In 1816 measures were taken to protect the town against loss by fire. The selectmen were authorized to get fire-ladders and hooks, fire-ward staffs and such other fire implements as they deemed necessary. These were kept in different parts of the town, some of them in the cellar of the meeting-house. There was already a little hand fire-engine—the "Friendship" belonging to individuals and kept in a house near the centre—but apparently of no very great service, since we find the town voting in 1820 to buy an engine on condition that the engine company would transfer their house and fire implements to the town. This burst of energy in relation to protection from fire seems not to have been without cause, for in 1817 the town found it necessary to offer a reward of \$500—a large sum for a town the yearly expenses of which were only about \$3000—for information as to persons setting fire to buildings or to combustible matter which might endanger buildings. The special committee that advised this action made at the same time certain other recommendations aimed at the vices of gambling and drunkenness. The committee advised and the town voted that the selectmen should see that the laws against gambling were rigidly executed and that they should make a list of all persons who were in the habit of excessive drinking or wasting time and property thereby, should place the list in the hands of all licensed persons and forbid them to sell intoxicating liquor to anybody on the list. The plan was certainly ingenious, although one is hardly disposed to envy the task of the selectmen in deciding who of their fellow-townsmen should go on the list of topers.

While making such laudable efforts to suppress crime and excess, the towns-people were not forgetful of those institutions that make for intelligence and morality. In each of the four districts into which the town was divided a school was kept, taught by a man in winter and by a woman in summer. The little children especially attended the summer school, while the older ones came to the master's school at a season when out-door work on the farms had largely to cease. The requirement for admission into the "man's school" was not very severe—an applicant need only be able "to read in words of two syllables by spelling the same." The oversight of the schools was first placed on a settled basis in 1827, when a general School Committee of three members was chosen, with a Prudential Committee of four—one from each district—to act with them. Before this time the custom had varied. Sometimes the selectmen had formed part of the School Committee—at other times a separate board was appointed. Teachers' salaries were not exorbitant. Usually about \$600 were appropriated for salaries, which gave to each district \$150, more or less, of which the master was apt to get the lion's share.

The older people found a means of improvement in the books of the West Cambridge Social Library. This institution was founded in 1807, a very few months after the incorporation of the town. It was a proprietors' library—one of a class not uncommon at that time, when circulating libraries were rare, and free public libraries practically unknown, but not often to be met with now in Massachusetts—the most conspicuous surviving example being the Boston Athenaeum.

The library was a corporation wherein each member held a share, for which he paid five dollars, and upon which he paid an annual assessment of one dollar. With the money thus obtained, the library was founded and kept up. It was not in any sense a public institution; the books were for the members and their families alone, and a heavy fine was imposed if a proprietor should lend a book to any one outside his own household. Many of the most respectable and intelligent citizens took shares. Each proprietor was at first allowed to take one book at a time, but this number was afterwards increased, as the library became larger. The length of time for which a book could be retained varied, but a consideration was shown to slow readers, which they do not often get at the hands of the managers of modern libraries. For example, a member might have twenty-five days to read "Gay's Fables" and thirty-five days for "Paradise Lost." He might reflect upon "Pilgrim's Progress" for forty days if he saw fit, and was allowed seventy days to struggle with "Ferguson's Astronomy." Notwithstanding this liberality in the matter of time, the records of fines show that the Social Library had its full proportion of laggard book-borrowers. And it is not surprising that hard-working men took some time to

go through the solid pages of fine print that made up most of the volumes. The books were well selected,—probably by Rev. Mr. Fiske, who was the clerk of the corporation—but there was not much light reading in them. A few histories, Rollin, Gibbon, Hume, Robertson—biographies of Washington, Franklin, Putnam—books of travel, as “Capt. Cook’s Voyages” or Bruce’s “Travels in Abyssinia.”—these will give an idea of the quality of the greater part of the collection. A few essayists were represented in the library, several poets, hardly a novelist. The scarcity of American writers is noticeable; at that time there were few of them. But with all its unlikeness to a modern catalogue, one cannot examine the lists of the books of the West Cambridge Social Library without an added respect for the people who turned to such serious and wholesome reading as the employment of their leisure hours. The library continued to exist until after the establishment of the Juvenile Library described below.

Some other events of this period may be more briefly dismissed. An almshouse was built in 1817. Before that time the poor were boarded out, or were aided by the town at their own homes. About \$700 was spent for the support of paupers in the year 1810–11, and nearly \$800 in 1815–16. The almshouse stood on land bought of Josiah Whittemore, near the site of the Black Horse Tavern. It was used until the present almshouse was built, in 1853, was then sold at auction and continues to be occupied as a dwelling-house. In 1812 the town obtained the exclusive right of disposing of the privilege of taking the shad and alewives in the ponds and streams within its limits,—a grant which was revoked by the Legislature in 1823. In 1821 West Cambridge was placed under the operation of an act, passed in 1789, which provided for the regulation of the shad and alewife fishery in Mystic River and its tributary ponds and streams; and thereafter preservers of fish were regularly chosen.

In 1823 we find the town taking measures against the danger of an epidemic of small-pox, by authorizing the selectmen and overseers of the poor to contract with some person to inoculate all inhabitants who wished with the cow-pox—the expense to be not over twenty-five cents for each patient.

West Cambridge was honored in the following year with the presence of Lafayette, who passed through on his way to Lexington, September 2d. No formal exercises were held here. Two arches, with appropriate inscriptions, were thrown across the road, and the whole population—men, women and children—asssembled by the meeting-house to cheer the veteran as he went by.

In 1835 the town received a legacy of \$100 from Dr. Ebenezer Learned, of Hopkinton, New Hampshire, to establish a juvenile library. Dr. Learned was by birth a Medford man, a graduate of Harvard College in the class of 1787, and afterwards a practicing phy-

sician at Leominster, Massachusetts, and Hopkinton, New Hampshire. Himself a man of learning, he was devoted throughout his life to the advancement of education, and took an active part, without any self-seeking, in the promotion of many good causes. Holding a high rank in his profession, he found time for outside pursuits, which he believed would bring benefit to the community. Thus he was active in the formation of the New Hampshire Agricultural Society, and was one of the founders of Hopkinton Academy. He had taught school in Menotomy when he was a student in college, and had doubtless often thought how few were the books to which children had access; and when he came to consider to what use the savings of many industrious years were to be applied, he resolved that among his other benefactions he would do something for the benefit of the school-children of West Cambridge. He states his purpose in his will: “In consequence of a grateful remembrance of hospitality and friendship, as well as an uncommon share of patronage afforded me by the inhabitants of West Cambridge, in the Commonwealth of Massachusetts, in the early part of my life, when patronage was most useful to me, I give to the said town of West Cambridge \$100 for the purpose of establishing a juvenile library in said town. The Selectmen, Ministers of the Gospel and Physicians of West Cambridge, for the time being, shall receive this sum, select and purchase the books for the library, which shall be such books as in their opinion will best promote useful knowledge and the Christian virtues among the inhabitants of said town who are scholars, or by usage have a right to attend as scholars in their primary schools. Other persons may be admitted to the privileges of said library under the direction of said town, paying a sum for membership, and an annual tax for the increase of the same.”

Dr. Learned’s intention is entirely clear. He had no thought of founding a library which should not belong to the town, or the management of which in years to come should be in any way restricted or taken out of the hands of the town. He wanted to be sure that the books bought with his bequest should be well selected, and hence he appointed those who, from their position in the community, might be assumed to be trustworthy men. After his legacy had been expended, the duties of his nominees would end, the library would belong to the town, and he evidently believed that the town would cheerfully bear the small expense of managing it, as he left nothing for that purpose. For its increase he relied upon the fees that adults might pay under the town’s direction, as his will provides.

The selectmen, ministers and physicians met November 30, 1835, and voted that the books selected for the library should be such as were directed by the will of the donor,—“the same not being of a sectarian character”—and then proceeded to spend more than four-fifths of the legacy for books. When

this was done, however, instead of handing over the collection of volumes to the town, that it might take whatever action it saw fit in regard to the future management of the library, the selectmen, ministers and physicians continued to control it, and, in fact, remained in charge of it till 1878. This came about naturally enough, as the library was small for many years and could be as well managed in this way as in any other. So, without any formal act on the part of the town, this arrangement was acquiesced in by common consent. Although the managers styled themselves "Trustees of the West Cambridge Juvenile Library," yet they recognized in their accounts and in their frequent reports to the town that they were simply agents of the town and not an independent body—a fact also recognized by the town, which, at one time, added the School Committee to their number.

In 1836 the West Cambridge Sewing Circle gave the sum of sixty dollars to the library, and in return were granted the privilege of taking books for a nominal yearly fee. A more important thing happened in 1837, when the town voted at the March meeting that thirty dollars be appropriated annually for the increase of the Juvenile Library. The trustees passed a vote at their next meeting "that, in consideration of thirty dollars annually appropriated by the town for the increase of the Library, that each family in the town shall have the right to take books from the library while the appropriation is continued." In 1837, then, the library became a free town library—owned and managed by the town, and open without charge to all its people. I have stated these facts in some detail, as it is no small honor to a town to have founded the first free public library in Massachusetts.

The library for some time increased but slowly. Its only regular resource was the town appropriation of thirty dollars. Once or twice this was omitted at the proper time, but the arrears were made up by the payment of two or three years' appropriations at once. From time to time there were gifts of money or books. Most of the books of the old Social Library came finally into the collection. In 1854 a bequest of \$100 was received from the estate of Dr. Timothy Wellington, for half a century an honored and beloved physician of the town. He had been clerk of the trustees from the beginning and was a warm and devoted supporter of the library. His gift was invested and its income is used each year in buying books. In 1860 the town appropriation was increased to \$100 and a few years later to \$200. The library was at first kept in the house of Mr. Jonathan Dexter. After a time it was placed in the basement of the First Parish Church and later in the Town House.

In 1824 William Cutter died, leaving his property after the death of his wife to the town for the benefit of the public schools. His widow, Mary, died in 1836 and the gift then became available. Mary Cutter,

with the same public spirit that her husband had shown, bequeathed to the town \$200 for the benefit of the poor widows of the place. The "William Cutter School Fund" amounted when received to \$5019. It was somewhat increased in the settlement of accounts between Charlestown and West Cambridge in 1842, and is now \$5354. The donor wisely placed no narrow restrictions upon his gift—its income was to be appropriated "for the maintenance and support of schools." The "Poor Widows' Fund" has also been added to from time to time, and now amounts to \$613.11, held for the benefit of the poor widows of the town. The town, appreciating these gifts of a childless couple, whose only motive could have been the hope of doing good, instructed the selectmen to contribute to the erection of the monument that marks their graves in the old cemetery.

In 1838 a new division of school districts was made. The larger part of the Centre and East Districts became the Union District; the Northwest District was somewhat enlarged and the Southwest District remained unchanged. In the Union and Northwest Districts the old school-houses were sold and new ones built—each two stories in height and containing two school-rooms. The expense was in part defrayed from a windfall that had come to the town during the preceding year. It was then that the surplus revenue of the United States was distributed among the States. Massachusetts divided its share among its towns. At first West Cambridge thriftily voted to lend the fund thus acquired on the security of real estate mortgages, giving a preference to its own citizens as borrowers; but when the school-houses had to be built the temptation was strong to use this money rather than to raise the necessary sum by taxation, and the treasurer was accordingly authorized to call it in again. In 1842 a new school-house was built in the South District. With new buildings a rough grading of the schools became practicable, and the system then established lasted for some years with little variation. In each district was a grammar school taught by a man and a primary school taught by a woman. Besides these, there was a little primary school in what was called the Wyman District. This district was in the old limits of Charlestown and most of it was included in Winchester in 1850, the part left within the borders of West Cambridge being then joined to the Union District. Then for a few years the Gardner School existed, which came to an end when Somerville was separated from Charlestown. Both of these schools were within the boundaries of Charlestown and were never large. In 1850 a school-house was erected in the East District—a part of the Union District—and a primary school established.

There were two terms in the school year, known as the summer and winter terms. The summer term began about the middle of April and lasted till Thanksgiving, with a break of three weeks in August. After the Thanksgiving vacation of a week, the winter term

began and continued till about the end of March, when two weeks of vacation brought round the summer term again. At the end of each term came an examination by the School Committee, and frequently public exercises were held. Of the teachers of these schools, the late Daniel C. Brown, for many years master of the Centre School is perhaps now the best remembered.

In 1861 the Russell School—a four-room wooden building—was erected on the piece of land where its successor now stands, and was named after one of the oldest and most prominent families in town. Two years later a similar school-house was built in the Northwest District and received the name of the Cutter School, after another well-known family, with perhaps a special reference to the donor of the William Cutter School Fund. This building stood but three years before it was burned. Another building, still standing, was erected in its place in 1867. With this increase in schools, consequent upon the growth of the town, an improved system of grading became practicable.

In 1864 a High School was established. Six years earlier, William Cotting, an old resident of the town, who owned a large piece of land, through which Academy Street now runs, gave to four trustees a lot of land to be held by them for the use and maintenance of a high school or academy. The plan of establishing such an academy had been for some time in contemplation among several leading citizens, who desired that their children might be educated at home, and Mr. Cotting's gift enabled them to proceed at once to carry out their intention. A school-house was built and the Cotting Academy opened. In order to secure the maintenance of a school of high character, Mr. Cotting made it a condition of his gift that no school kept on the premises should be of lower grade than a high school, "to the end that any pupil thereof, so desiring, shall at all times have opportunity of being thoroughly educated in such school in any and all the branches of learning required for admission into Harvard University at Cambridge and other American colleges." As the academy went successfully on, a desire naturally arose among many of the people of the town that it should become a public high school, so that its advantages might be more widely enjoyed. This was no new notion. As far back as 1838 the proposition had been made in town-meeting to establish such a school, and although the movement would have been premature then and for some time thereafter, many were looking forward to the time when such a step could wisely be taken. The population of the town was far below the number required by law to make the establishment of a high school compulsory, but nevertheless it was decided in 1864 that the Cotting Academy should be transferred to the town and become the Cotting High School. Mr. Cotting had foreseen that this change was likely to come to pass, and provided for it in his original

deed of gift. The High School was opened in December, 1864.

Its first principal was the late Charles O. Thompson, who remained three years at its head. His remarkable gifts as a teacher and organizer, exhibited afterwards on larger fields of duty, gave to the school a character that has lasted. His later career as principal of the Worcester Free Institute and of the Rose Polytechnic School, at Terre Haute, Ind., is well known. That it should have been cut short by death, while he was yet in his prime, is a matter of enduring regret, not only to the many who saw in it merely a serious loss to the cause of scientific education in the United States, but especially to those who knew him as teacher or as friend.

In order to put the account of the library and the schools in a more intelligible way, I have departed, somewhat, from the chronological order of events. Returning to the decade between 1830 and 1840, we find a considerable increase in the means of protection against fire. Beside the "Friendship," which was then kept in an engine-house situated by the brook in the burying-ground, near the road, the town possessed the "Good Intent," bought before 1832, and kept in the northwest part of the town. To these were soon added two more engines—the "Olive Branch," in 1835, and the "Enterprise," in 1836. The "Olive Branch" belonged in the upper end of the town, and the "Enterprise" in the southern part. Each machine was manned by a company appointed by the selectmen. The companies of the two older engines usually comprised about twenty men, while the newer ones had over thirty. The cost of the engines was paid in part by the town and in part by individuals. To these four succeeded the "Eureka" and the "Howard," in 1851. The "Howard" was kept in what is now Belmont, and became the property of the new town.

Sidewalks were coming into fashion in 1834, in which year the town authorized abutters to build sidewalks at their own expense, and to protect them by posts and ornamental trees. In 1835 an appropriation was made to pay for ringing of the church bell, half an hour before sunrise, at noon and at nine in the evening. A factious person, acting apparently on the principle that there could not be too much of a good thing, managed to get a vote through the meeting that the bell should be rung also at midnight, an improvement that proved fatal to the original plan, as all the votes were reconsidered. Two years later the proposition reappeared in a form less alarming to late risers, and the custom that still exists was established of having the bell rung at noon and at nine o'clock at night. In 1839 a vote was passed, authorizing the people to dig wells in the highways where they would not impede travel.

On February 25, 1842, the town received a considerable accession of territory from the addition of all that part of Charlestown that lay northwest of

Alewife Brook. The people of this tract were joined by many ties to their West Cambridge neighbors, and it is only surprising that so obviously desirable a union did not take place long before. This annexation gave the town the largest area it ever had. A few years later, in 1850, it lost, much against its will, a portion of its extreme northern corner when the town of Winchester was formed.

In 1843 land was bought on the Medford Road for a new cemetery, which soon after received the name of Mt. Pleasant. Since its establishment comparatively few interments have been made in the old burial-ground.

In 1846 an event took place which was to have a profound effect upon the fortunes of the town—the opening of the railroad. Hitherto the public means of conveyance to Boston had been by stage-coach. For many years, on three days of the week, the stage which carried the New Hampshire mail afforded a means of reaching Boston. It passed through West Cambridge late in the afternoon and did not come back until the next morning, when it again rolled heavily through the streets of the town on its long return journey. More frequent trips were made by the Concord coach, which was established at a later date. This conveyance ran daily to the city. Whoever desired to go in it left his name beforehand at the tavern at the corner of the Medford road, and the coach called at his door. The journey was too expensive to be often indulged in, for the fare was fifty cents; and the few persons whose business called them frequently to Boston traveled in their own chaises. A later and formidable rival to the Concord stage-coach was the omnibus, which ran no farther than West Cambridge. This conveyance gave the public great accommodation, for it went to Boston and returned twice every week-day, and passengers had to pay but twenty-five cents a trip. But omnibuses and stage-coach alike were destined to disappear before the locomotive engine.

It was in 1844 that the first serious movement to introduce a railroad into West Cambridge had its beginning. The plan then was to construct a branch track from the Fitchburg or Fresh Pond Road in Cambridge to a point near the centre of West Cambridge. A public meeting was held, committees were appointed and surveys were made. Before any definite action was taken, however, people in Lexington began to move to bring about the building of a road to their town. The citizens of both places united finally in a compromise, according to which one road was to be built, to run through West Cambridge to Lexington. This arrangement was sanctioned by the Legislature, and the Lexington and West Cambridge Branch Railroad became incorporated March 24, 1845. It was opened for public travel in August, 1846.

The accommodation afforded by the new railroad would hardly in these days excite more than a moderate amount of gratitude. However, it was a great ad-

vance on anything that had existed before, towards making the town accessible from the neighboring city. From that time West Cambridge began noticeably to take on the character of a place of residence for those whose daily work lay outside its borders.

In 1846 a committee was appointed to name the various streets, which had, up to that time, gone by the old names that had been given them by popular usage. The committee showed excellent taste and judgment in the performance of that work and the names thus given them—as Medford and Mystic, Warren and Pleasant—still designate most of our older streets.

At about this time some indications appear that there was the same difficulty in the enforcement of laws against the illegal sale of liquor that has been found elsewhere and at other times. We find a special committee appointed in 1843 to enforce the laws as to the sale of liquors, and three years later the selectmen are authorized to prosecute those who might illegally sell ardent spirits and other intoxicating liquors.

Dogs come into the foreground in 1849 as objects of public disapproval. At a meeting held January 1st it was voted to petition the Legislature to protect the inhabitants of the Commonwealth "from the annoyance and danger now experienced by the great and alarming increase of dogs," and by way of aiding in the cause an ordinance was passed providing for the licensing and muzzling of these animals.

1851 was the year of the tornado,—an event which deserves to be described in some detail. It occurred on Friday, the 22d day of August. Its track was from southwest to northeast, curving gradually to eastward. It began its course in Wayland, and then passed over Weston, Waltham, West Cambridge, Medford, Malden, Saugus, Swampscott and Lynn, and thence to the sea. In all these places some damage was done, but Medford and West Cambridge bore the brunt of the storm. Those who saw it described it as a dark cloud sweeping over the surface of the country with frightful speed; its base now touching the earth and now bounding up for a little, to return again farther on. Its shape was variously compared to a spreading elm, to an upright column, to an hour-glass, and to an inverted cone—discrepancies probably to be attributed to the different positions of the observers, to the excitement of the moment and perhaps to actual changes of shape. One eye-witness vividly compared it to an elephant's trunk, waving a little from side to side and sucking up everything that came in its way. Its path was straight for the most part, with curious eddies and turns here and there. It left behind it in West Cambridge a devastated swath which was, in most places, from thirty to fifty rods wide, although the track was at some points wider and at some narrower than this.

The storm occurred at about half-past five o'clock on a hot, sultry summer afternoon. There had been during the day a light southwest wind, but for an

hour before the tornado there was an almost perfect calm. Without any warning the storm struck West Cambridge at the premises of Mr. James Brown, on the Waltham line, and swept across the town, tearing its way through woods, orchards and corn-fields. It crossed Pleasant Street near what is now the Belmont boundary, and went straight on across the land of Captain Hopkins, of Dr. Wellington, and of the other residents on the eastern side of the street, then over the northwest corner of Spy Pond, demolishing the ice-houses at the water's edge, then across the highway at a point near the present line of Franklin Street, wreaking destruction on store, school-house and dwellings, and so on till it crossed Mystic River, about fifty rods below the Medford Street bridge. The tornado lasted a very few moments, but in that time it did damage in West Cambridge to the extent of nearly twenty-five thousand dollars. Happily no lives were lost and no serious personal injuries inflicted.

This storm had several noticeable features much commented on at the time. As it crossed the pond it took up a good deal of water; and this, mingled with the sand and gravel of the railway embankment and the dust of the highway, splashed everything with a liberal coating of gravelly mud. When there was any vertical motion it was a lifting motion—things were taken up into the air, not beaten down to the earth. Trees generally resisted the disintegrating force of the wind, but buildings were racked or shattered. In Medford, where very careful observations were made, few traces of rotary motion were found, but in one place in West Cambridge, where a cornfield was flattened before the blast, the corn lay with the tops pointed in and to windward, on both sides of the central line of the track, as if two enormous wheels with vertical axes, turning in opposite directions and playing into each other like cog-wheels, had passed through the field. The people gathered in a public meeting three days afterward and raised a substantial sum to help the sufferers from the storm.

In 1852 a Town House was built, the first and only one that the town has possessed. Before 1840 town-meetings were usually held in the meeting-house of the First Parish. In that year a new meeting-house was built, the vestry of which was known as Parish Hall and here the town held its meetings for a dozen years. In 1849 there was a movement for the erection of a Town House, but no results immediately followed. The proposition met with a more favorable reception in 1852, when a committee of leading citizens was chosen to select a site and erect a building. The Town House was completed in time for the March meeting in 1853. Outside it presented substantially the same appearance that it does now, except that its brick walls were covered with a stucco which, until it began to wear away with time, moderately resembled stone. A broad flight of stairs ran directly up from the front door to the entrance of the hall, the ante-

rooms of which served to accommodate the town officers and the Juvenile Library. The lower floor was leased for business purposes.

The Belmont controversy began in 1854, and was by far the most important business that the town had to deal with for the next five years. The details of the movement that resulted in the formation of a new town from portions of three old ones belongs properly to the history of Belmont. To West Cambridge the plan meant the loss of about one-third of its territory, one-fifth of its population and a quarter of its taxable property, and it naturally met with a vigorous resistance. Committees were chosen each year to oppose the scheme before the General Court. The case is famous among Massachusetts town divisions. Legislation after Legislature rejected the bill, and year after year the Belmont petitioners appeared at the State House, to be met by the remonstrants from West Cambridge, Watertown and Waltham. At last, on March 18, 1859, the bill incorporating the town of Belmont became a law, and West Cambridge had to submit to dismemberment with as good a grace as it might. The lapse of thirty years has made the bitterness of the controversy only a memory, but it is difficult not to feel a certain regret that those fertile farms are not still a part of our town.

Gas was introduced into the town at this time—the West Cambridge Gas-Light Company being incorporated and allowed to lay its pipes in the streets in 1854, although the town did not assume the expense of street-lighting until 1859. In 1857 the town voted to petition the Legislature for the establishment of a horse railroad. In consequence of this desire the West Cambridge Horse Railroad Company was incorporated May 28th of the same year, and its cars soon began their hourly trips to Boston. Electricity was introduced as a motive-power on this railway in the summer of 1889.

In 1856 a clock was placed in the tower of the new meeting-house of the First Parish. April 5, 1860, the West Cambridge Savings Bank was incorporated.

When the war broke out West Cambridge was not untrue to its past. A great popular meeting was held on Sunday, April 21, 1861, at which the citizens pledged themselves to support the Government—a pledge that their behavior in the succeeding years did not belie. A company was organized under command of Capt. Albert S. Ingalls. Unfortunately no place could be found for it in a Massachusetts regiment, and, unwilling to wait, many of the men enlisted in the Fortieth New York—the Mozart regiment. This was the only considerable body of West Cambridge men who served together. The other soldiers who went from the town during the war were scattered through many organizations. It is difficult to give the exact number of men who went into the war from West Cambridge. Under the loose system that prevailed, some recruits, who were in reality residents here, were credited to other towns, and, in

like manner, citizens of other places were set down as coming from West Cambridge. Again, it is hard to distinguish between residents and non-residents in the lists of men furnished by the town to the service, and different enumerators might easily disagree. Every quota called for was filled, and more than filled. Counting the soldiers supplied by the town in all ways, to the service, the number certainly considerably exceeds three hundred. To mention names among the living would be invidious—the list of the thirty-three dead inscribed on the column that keeps alive their memory is enough to show that West Cambridge paid her part of the price of the redemption of the United States of America.

Whatever the people at home could do was done. The town was liberal in bounties to enlisted men and in aid to their families. The generosity of individual citizens seconded the efforts of the community. The Ladies' Soldiers' Aid Society did much throughout the war to send help and comfort to the men in the hospitals and at the front. It was found, in 1865, that more than \$75,000 had been contributed directly to the Union cause from these various sources. Beside this amount that is certainly known, much that cannot now be traced was given through private channels.

The town in 1866 received, under the will of Hon. James Russell, a large tract of land to be held for the purposes of a public park. It is now known as Russell Park.

The town ceased to bear the name of West Cambridge in 1867. The principal public measures and events during the sixty years that had elapsed since its incorporation have been mentioned. Before proceeding to an account of the town under its new name some other matters remain to be spoken of.

We turn first to the history of the several churches—always an important part of the annals of a New England town. As has been above stated, Rev. Thaddeus Fiske was pastor of the Second Parish in Cambridge when it became the First Parish in West Cambridge, and he remained in that office for twenty years more. If he makes less of a figure in the community than his predecessor the reason is to be found not so much in the character of the man as in the changed circumstances of the time. His long pastorate of forty years covered a period when the old New England church system was powerfully affected by influences from within as well as from without. While the rise of other forms of faith and worship was interfering with the legal and social pre-eminence of the Congregational body, changes of thought and belief were taking place in its own ranks. Such influences were felt in West Cambridge as everywhere else, and in vain Dr. Fiske set himself against the current of events. He was a true successor of the older race of New England divines and looked with little favor upon any departure from the ancient ways. The ideas that afterwards became known as Unitarian

spread among the people, although they received no countenance from the pastor. Steadily the breach widened until at last Dr. Fiske was so far out of touch with many of his prominent parishioners that it became clear that the only course was to sever his relation with his people. He accordingly resigned his office May 8, 1828. The language of the church records shows with what strong feelings of respect and affection the parish regarded the minister whom duty impelled to lay down a trust that he could no longer properly hold. Dr. Fiske continued to live for many years thereafter in the house that he had built in the early days of his ministry very near the present Fiske Place.

To Dr. Fiske succeeded Rev. Dr. Frederick Henry Hedge, then a young man recently out of college. His pastorate extended from 1829 to 1835. He was the first distinctively Unitarian minister of the First Parish. Then came Rev. David Damon, D.D., who took an active part in the management of the Juvenile Library and of the public schools as well as in matters more strictly appertaining to his own parish. He died suddenly June 25, 1843, and, as the inscription on his monument states, was the first to be buried in the new cemetery, consecrated by him but a few days before his death. Rev. William Ware was the next minister; holding the position for a short time—from December, 1843, to August, 1845. Rev. James F. Brown was minister from 1848 until his early death in 1853. Rev. Samuel Abbot Smith was ordained in 1854 and was minister throughout the important years just before and during the war. At the call of duty he went to Virginia at the close of the conflict to preach the gospel. Stricken with fever, he came home to die. His death occurred May 20, 1865, and was much deplored by the whole community, to whom he was endeared by many acts of kindness and goodwill. In 1866 Rev. Charles C. Salter was ordained, and continued in charge of the parish until his resignation, January 31, 1869.

The meeting-house in which Dr. Fiske preached has been described. In 1840 it was taken down and a larger building erected on the same site. This stood until January 1, 1856, when it was destroyed by an accidental fire. In the same year the present meeting-house was built and was dedicated January 1, 1857.

The early history of the Baptist society has been above given. It was passing through a period of depression when West Cambridge became a separate town. Still, those whose hearts were in the cause held together, maintained their organization, held public services when practicable, and trusted that better days would come. In 1816 the society was incorporated and in the following year a church was established according to the usages of the Baptist denomination. Generous gifts were received from Stephen Cutter, a leading citizen of the town, and, after his death, from his wife, Mary Cutter. It was on land

given by her that the growing society built its church in 1828. This building became, as time went on, unsuitable, and the present church was built on the same site in 1853.

From 1794 to 1818 there appears to have been no settled pastor. Rev. Benjamin C. Grafton was minister of the society from 1818 'until 1823; Rev. John Ormsbee from 1824 to 1827; Rev. Ebenezer Nelson from 1828 to 1834. From 1834 to 1838 Rev. Appleton Morse, and after him Rev. Charles Miller, had charge of the parish. Rev. Timothy G. Tingley was minister for the next seven years and was succeeded by Rev. George J. Carlton, who continued in the position until 1851. Rev. Joseph Barnard, known as an historical writer as well as in more strictly professional fields of labor, came next, remaining for two years. Rev. Samuel B. Swain, D.D., a man of especial influence in the community, was pastor from 1854 to 1862. Rev. John Duncan followed him in 1863-64, and Rev. Amos Harris became the minister in 1865.

The two parishes already spoken of were for some years the only religious organizations in the town of West Cambridge. The Universalist Society was the next to be established there. If we may judge by the above-quoted obituary notice of Rev. Mr. Cooke, there would seem to have been in his day persons holding tenets similar to those of that denomination. Certain it is, that in the decade preceding 1840, such views were becoming so prevalent as to give serious anxiety to those of the First Parish who held to a different opinion, as to the probability of that ancient society becoming a Universalist church. However, after an informal organization for several years, the First Universalist Society was regularly established in 1840, and proceeded at once to build its meeting-house, which was dedicated January 20, 1841.

Rev. J. C. Waldo was its first pastor, and remained till 1847. After a short term of service by Rev. Willard Spaulding, Rev. George Hill became the minister, and continued to fill that position from 1850 to 1860. Mr. Hill was prominent in town affairs and served in 1854 as representative in the Legislature. For the six succeeding years Rev. William E. Gibbs was minister, and was followed by the Rev. J. W. Keyes.

The establishment of the Universalist Church was soon followed by that of what is now known as the Pleasant Street Congregational Society. The prime mover in the organization was very appropriately a granddaughter of Rev. Mr. Cooke, Miss Anna Bradshaw, who lived in his former dwelling-house. It was in 1842 that the informal meetings were begun, from which grew the society. On the 14th day of December of that year a church was duly established, the list of members including the name of Rev. Thaddeus Fiske, the retired minister of the old parish. The site on which the meeting-house was built in 1844 is part of the estate that belonged in the last century

to Parson Cooke. The building has since been considerably altered and enlarged.

The society had but two ministers during the time of which I am now speaking—Rev. Francis Horton, who occupied the position from 1843 to 1854, and Rev. Daniel R. Cady, D.D., who became pastor in 1856.

It is impossible to do more here than mention the names of the West Cambridge pastors. It is clear, from what is remembered or has been recorded, that they were an earnest body of men, true to the duties of their calling, and active in good causes in the community. We find them, for instance, frequently serving as members of the School Committees. Rev. Ebenezer Nelson, of the Baptist church, received in 1834 the unusual honor of a public vote of thanks from the town for his faithful services in that office.

Throughout the sixty years that followed the incorporation of West Cambridge, farming continued to be the principal industry of the town. Its character changed somewhat as time went on. At first it was general farming, like that now carried on in the towns farther back in the country. But with the growth of Boston, agriculture here became more specialized to supply the demands of the city. It would be hard to say when market-gardening became the distinctive industry of the town. The products of the West Cambridge farms early gained the high reputation in the markets of Boston which they still hold, and are not likely to lose, if we may judge the future by the past. The subject is elsewhere treated by a writer who may surely speak with authority, and I therefore pass it over without that detailed account which its importance would otherwise call for.

In manufactures the town was not conspicuous. Those that existed in the early part of the century have been above mentioned. Such other factories as were built were generally, like their predecessors, situated on the brook that has furnished water-power for the mills of many generations. The saw-factory of Welch & Griffiths, situated just below what is now Grove Street, was for a long time an important industry. In 1855 the value of the saws manufactured was estimated at \$40,000, and thirty-five persons found employment in the establishment. In 1832, at about the same time when the saw-factory was started, James Schouler established calico-printing works on the site of Abner Stearns' mill. Here a flourishing industry was carried on for many years. Other manufacturing pursuits were followed—in some cases for a short time only, in other cases for a considerable period. Boots and shoes were made here; so were hats and caps. It was during this time that several existing manufactures were begun, which will be spoken of later. The ice business, which makes Spy Pond a scene of activity in the winter, and gives employment to many scores of men, was begun before 1840.

In its political leanings, as has been said, the town began its career with few Federalists and many Democrats. The disproportion increased as the Federal

party in the State moved towards its end, until ordinarily hardly a score of votes were cast for its candidates. During the administrations of John Quincy Adams and the first term of General Jackson the results of elections in the town reflect the chaotic state of parties, and the votes for Congressional and State candidates are hard to reduce to any rule except personal preference. As the Whig party becomes established, political divisions may again be traced. The town was still Democratic, but the minority was a much larger one than it had been in the Federalist times. For instance, in 1836 the Democratic electors received ninety-three votes, the Whig electors eighty-six. In 1840 the numbers were 152 and 128; in 1844, 182 and 154. Occasionally a popular Whig candidate carried the town. In 1848 the balance of parties changed, and the Whigs obtained a plurality; in 1852 the Democrats again carried the election in West Cambridge. In both these years the Free-Soil candidates obtained a considerable vote. The election of 1856 showed a decided change; the new Republican party cast 186 votes, the Whigs 147, and the Democrats 130. The loss of West Cambridge to the Democratic party was a permanent one, although, as had previously been the case with their opponents, they now and then gained a temporary success. In the election of 1860 183 votes were cast for Lincoln, 119 for Douglas, eighty-four for Bell and two for Breckenridge. In 1864 the Lincoln electors received 246 votes; their opponents 133. In State and Congressional elections the relative strength of parties was usually about the same as in the Presidential elections. The people were called upon oftener then than now to choose their officials. Until 1831 the election of State officers took place in the spring, instead of in the fall. Congressional elections took place, as now, in November. Until 1855 the law required for a choice, not a mere plurality, but an absolute majority of the votes cast. Consequently when there were more than two candidates, a series of elections sometimes had to be held before any result was reached.

Before 1857, when West Cambridge was united with Winchester to form a representative district, the town was entitled to send one representative to the Legislature. Occasionally the town voted to send no representative, probably from motives of economy, as in those days legislators were paid by the towns they represented, and not from the State treasury. Samuel Butterfield was the first representative from the town, serving from 1808 to 1811. His immediate successor, Col. Thomas Russell, had by far the longest term of service of any that have filled the place; he was continuously a member of the Legislature from 1812 to 1827, with the exception of two years when no one was sent from West Cambridge.

IV. THE TOWN OF ARLINGTON, 1867-90.

In 1867 the name of the town was changed to Arlington. The cause of this alteration was in part the

practical inconveniences that occasionally arose from the fact that the old name was easily confounded by strangers with North Cambridge or East Cambridge or was at any rate supposed to stand for a part of Cambridge and not for a separate town. Perhaps an even stronger reason for the change came from a feeling of local pride that desired a name that should signify to all the world that the town was a distinct municipality and not a portion of any other place, however ancient and distinguished. After a good deal of discussion Arlington was chosen as the new name. As has been made evident in the course of time, it is liable to the very objection that its adoption was designed to put an end to, for "Arlington" bears a close resemblance to "Abington," and considerable trouble has been caused the people of both places from the similarity of name.

At a meeting held in April, 1867, it was voted, with but one dissenting voice, to petition the Legislature to change the name of West Cambridge to Arlington. The Legislature took favorable action upon the petition, and the change went into effect April 30th. The event was celebrated May 1st, in a somewhat informal way—with some firing of cannon and making of speeches. The real celebration, however, did not take place until June 17th, and was carried out with a good deal of enthusiasm. There was a long procession made up of official representatives of the Commonwealth, soldiers of the war of 1812, and of the civil war, school-children, representatives of the principal callings in which the townspeople were engaged, as well as of other citizens. After the procession had passed through the principal streets, the children were treated to a banquet in a tent on the Common by the meeting-house of the First Parish, while the citizens and their guests were entertained in another large tent on the grounds of Mr. J. R. Bailey—now of Mr. Samuel D. Hicks. Here there were after-dinner speeches by Governor Bullock, Senator Sumner and other men of distinction. A poem of our townsman, Mr. John T. Trowbridge, was read. Later the festivities concluded with races on Spy Pond.

The town seal was adopted at this time. It bears upon a shield the representation of the two ancient elms that for many years arched the main street at the eastern end of the town, and of which one is standing yet. Between the trees on the face of the shield is the Revolutionary monument with the date 1775 above it and the village beyond. The shield is surmounted by a plough and a sheaf of wheat, typical of the main occupation of the people, and by a scroll giving the names and dates of incorporation of West Cambridge and Arlington. Underneath is the inscription "*Libertatis propugnatio hereditas avita.*"

For two or three years after the change of name little of importance occurred in town affairs. Then came the introduction of a public water supply. Up to that time no arrangements had existed on any con-

siderable scale for the purpose of supplying the town with water. Some families obtained water for domestic use from a system of pipes by which water was conducted from springs in the upper part of the town, but this served a comparatively small part of the population. Most people had to rely upon cisterns and wells for the water needed for household and drinking purposes and farmers especially were exposed to heavy losses in time of drought. In 1870 the Arlington Lake Water Company was established, and in 1871 the Legislature conferred upon it extensive powers to take land in the Great Meadows of Lexington for a reservoir, to use the waters of certain brooks, to lay pipe, and to sell its property or franchise to the town. The proposition that the town should buy the rights of the corporation and go into the enterprise of supplying its citizens with water was soon brought before the voters. Long and excited debates took place in meeting after meeting held in the summer evenings of 1871, for the scheme was far from meeting with universal approval. The balance of opinion in the end, however, leaned decidedly in favor of the plan, and the town voted to buy out the corporation and itself to build and own its water-works. The plan was to build a reservoir on the border between Arlington and Lexington, to be filled by the water coming from the large tract of land known as the Great Meadows. This reservoir would be at such a height above the level of most of the then inhabited part of Arlington, that there would be a sufficient pressure if the water were conducted directly from the reservoir through the mains and pipes by gravity, without pumping apparatus. Apart from the actual expense of construction, there were two main elements of cost to be considered—the damage to the people whose lands were taken and the damage to the mill-owners on Vine Brook, whose supply might be diminished by the diverting into the reservoir of a large amount of water which might otherwise find its way into the brook.

To those who investigated the matter in 1870, neither element of damage appeared very alarming. It was thought that the land damages would not exceed a few thousand dollars, and that the damage to the mills would amount to little or nothing. The whole cost of putting in the water-works was estimated not to be more than \$120,000. With this prospect before it the town began the work. The Legislature, in 1873, confirmed the acts of the town and provided for the management of the water-works. Accordingly Water Commissioners were chosen in 1873, and have since been annually elected. The reservoir was built and the pipes laid, and a considerable portion of the town has been from this time supplied with water. But the introduction of water proved to be by no means such a comparatively inexpensive piece of work as had been anticipated at the outset. Some alterations in plans were made; filters had to be constructed, as the water was, at times, so filled with vegetable matter as to be unfit for domestic use;

while the damage to land and mills turned out to be very much greater than was expected beforehand. There were long controversies in court and out which dragged along many years, and the settlement of which cost the town a good deal of money. In 1878, \$300,000 in water-scrip had been issued. The total expense of the water-works—not counting ordinary repairs—has been more than that amount. This large sum was not raised or borrowed at one time, but has been appropriated from time to time as exigencies arose. The town, having once entered upon a course that involved an expenditure that nobody exactly foresaw, has had no escape from paying. If this experience has been unfortunate, it is certainly not unparalleled in the history of public water supply in Massachusetts.

With the introduction of water, it became possible to take measures for more adequate protection from fire, and in 1872 two hose-carriages were bought—the “William Penn” and the “Highland.” These, with the old “Eureka” and a hook-and-ladder truck, formed the main part of the apparatus of the Fire Department until 1889, when a new hose company, the “Eagle”—at the lower end of the town, was made a regular paid company, and a chemical engine was bought, designed more especially for service at Arlington Heights, which, owing to its elevation above the level of the reservoir, is unprotected by ordinary methods. In the same year a system of electric fire alarm was introduced.

In 1871 the town again suffered from the wind, although to a less extent than from the tornado in 1851. On Sunday, August 27th, there occurred a strong gale, which culminated at about eleven o'clock in the evening in a violent blast that prostrated two steeples—of the First Parish and Pleasant Street Congregational churches—and did also much damage in uprooting trees, blowing down chimneys, etc., not to speak of minor injuries to property.

In 1872 a weekly newspaper—*The Arlington Advocate*—was established, and continues to be published by Mr. Charles S. Parker.

In 1872 the Arlington Land Company began its operations at Arlington Heights, which had previously had few inhabitants. Buying several hundred acres of land, the corporation started a village of considerable size. The hard times that soon came proved a serious hindrance to the growth of the place, but after a time of depression, the village began again to increase, and has since grown steadily and rapidly. There is little local business carried on, most of the residents doing business in Boston. It is distinctively a place of residence, and the people living there display much interest in seeing to it that their neighborhood is kept attractive.

In 1875 occurred the anniversary of the famous day that saw the beginning of the Revolutionary War. The town rationally made no effort to hold a celebration of its own in imitation or rivalry of those which

took place in Lexington and Concord. The Legislature authorized Arlington to raise \$2000 for the occasion, and this amount was sufficient to pay for a proper local observance of the day. The bells were rung, cannons were fired, and plenty of bunting was provided for the decoration of public and private buildings. Few householders were so little moved by the spirit of the time as not at least to show the national colors, while the fortunate occupants of houses that had witnessed the British retreat proudly displayed inscriptions that told the story of plunder or of blood that had made the buildings memorable. Those who were in Arlington on that day are not likely to forget it. The weather was unusually cold—it was dull and cloudy much of the time, with a chilling wind and occasional gusts of snow. The immense number of visitors brought to utter confusion the plans of town committees and of railway managers. The trains slowly made their way through Arlington, crowded to the steps of the platforms and with even their tops covered with human beings. The horse-cars were filled to overflowing. The main street was thronged with a procession of vehicles, all making their way in one direction, while the sidewalks were occupied by those who early came to the sensible conclusion that the only way to reach their destination was to go on foot. In the afternoon the scenes of the morning were repeated, except that the tide ran the other way; and streets and railways were again clogged with hungry, shivering and exhausted sight-seers. But in spite of the inevitable discomforts, there was a certain intensity of patriotic passion, that no man could help sharing, about this first of the centennial celebrations of Revolutionary events, which gave to the occasion a dignity and a meaning.

The interest aroused by this anniversary resulted in a determination to mark by permanent monuments the spots where especially noteworthy events had happened on April 19, 1775. Accordingly, in pursuance of a vote of the town, stones were placed in June, 1878, to mark the sites of Cooper's Tavern, the Black Horse Tavern, Jason Russell's house, the place of the capture of the convoy, and the spot where Samuel Whittemore made his fight.

In 1875 the town received the sum of \$25,000 under the will of Nathan Pratt, who for many years had been a prominent citizen. He gave \$10,000 for the support of the Public Library, \$5000 to the Poor Widows' Fund, and \$10,000 for the benefit of the High School. The terms of the last bequest should be given in full. "I give and bequeath to said town of Arlington the further sum of ten thousand dollars, the same to be invested and allowed to accumulate until such time as the said town shall have erected a new building for its High School. At such time the increase of said sum by accumulation and a portion of the principal not exceeding two thousand dollars shall be expended in the purchase of engravings, books of engravings illustrative of science, art, his-

tory and biography, books of-reference, philosophical apparatus, all for the use and benefit of the pupils of said school, and to be placed or kept in a suitable apartment in the High School building. The unexpended portion of said principal sum shall remain invested and the income thereof be expended for the purposes above named and expressed, and also in procuring special instruction to the pupils of said school by lectures. Said sum and income shall be expended in the manner foregoing under the direction of the School Committee of said town." A board of five trustees was appointed by the town to manage and invest Mr. Pratt's bequests.

The income of the bequest of ten thousand dollars for the Public Library was available at once. In 1870 it was first voted that the proceeds of the dog-tax be devoted to the support of the Library, according to the statute provision directing that this tax must be used for public libraries or schools. In 1872 a vote was passed that the Juvenile Library, as it was still called, should be known as the Arlington Public Library. Its board of managers remained as before—the selectmen, ministers and physicians continuing to act. As a smaller committee seemed desirable, the town in 1878 provided that a board of three trustees, elected by the town, should have charge of the library. Its subsequent history may be briefly told. It has increased in size and in use. After being moved from one room to another in the Town House, it was in 1884 transferred to its present location in Swans' Hall. The increase of room thus acquired allowed the establishment of a reading-room, a valuable adjunct for which the former cramped quarters afforded no space. The library now contains four times as many volumes as it did twenty years ago, and the use made of it by book-borrowers is more than five times as great; while the whole number of persons who then used the library was less than the number added now in a single year. In 1889 a bequest of \$5000 was made to the library by the will of the late Deacon Henry Mott. A fine building is now (1890) being erected for the use of the library by Mrs. Maria C. Robbins of Brooklyn, N. Y.

The public schools have also increased with the growing population. In 1866 a new building—the Adams school-house—was erected, to accommodate the primary scholars in the Russell District. But even with the additional room afforded by this building, it soon became evident that more would have to be done to prevent overcrowding in the schools at the Centre. The question was decisively, if unpleasantly, settled by the accidental burning of the Russell school-house in the summer of 1872. The town voted to build a large brick school-house on the site of the old building, and the present Russell school-house—a steam-heated brick structure—was ready for occupancy in the fall of 1873. It originally contained ten rooms and a hall which has since been converted into two additional rooms. In 1878 the Locke School at

Arlington Heights was built. Originally a primary school for the neighborhood, then taking some of the classes of the Cutter School, it now contains four schools, which form an independent grammar school system. There has been for many years no serious change in the general plan of the schools, except that their number has become greater and the grading more complete as the school population has increased.

The Soldiers' Monument was dedicated June 17, 1887. The movement to erect a permanent memorial to the men of the town who fell in the war for the Union began in 1865, with the gift of \$500 for that purpose from the Ladies' Soldiers' Aid Society. A committee of citizens then set to work and began to collect money. It was, however, found impossible to proceed far at that time. In 1869 the town appropriated \$4000 and there appeared to be a good prospect of building the monument, but there was difficulty in obtaining a suitable site, the appropriation reverted to the town treasury and the project lapsed for many years. In 1885 a vigorous and successful effort was made to complete the work. The money already collected, with accumulated interest, amounted to about \$1800, the town added \$2500 and the citizens subscribed \$7689. The monument and its site cost altogether more than \$11,000. It stands at the junction of Arlington Avenue and Broadway—the old Concord and Charlestown roads. It is a granite shaft forty-two feet high, surmounted by the figure of an eagle, and bearing upon panels inscriptions denoting its purpose and the names of the soldiers to whose memory it was raised. At its dedication appropriate exercises were held. A procession, in great part made up of soldiers of the civil war, including the survivors of the Mozart Regiment, passed through the principal streets. Buildings were suitably decorated. The monument was dedicated according to the ritual of the Grand Army of the Republic, the services being conducted by the Arlington post of that order—Francis Gould Post 36. A poem was read by Mr. John T. Trowbridge, and an oration delivered by Lieutenant-Governor John Q. A. Brackett, the present Governor of the Commonwealth. Both orator and poet are residents of the town.

The last decade has been uneventful in town affairs. Apart from the matters already mentioned, the town has been called upon to consider few subjects outside of the ordinary course. Questions of the establishment of new streets, of the sale of cemetery lots—matters of this sort, together with the usual reports and appropriations for the different departments, have made the substance of the business of town-meetings. Few events of general interest or importance have occurred. The town has been growing steadily and of late rapidly. What might almost be termed a separate village has grown up at the eastern end of the town, and the opening of several large estates near the centre of the town has given an impetus to building there.

The history of the churches in Arlington may be briefly given. Rev. Charles C. Salter was succeeded in the pastorate of the First Parish by Rev. George W. Cutter, who remained until 1877. Rev. William J. Parrot became minister in 1878 and resigned in 1881. Rev. John P. Forbes held the position from 1882 to 1887. Rev. Augustus M. Lord, was installed in 1887, and remained until September, 1890. This parish held services Oct. 9, 1889, commemorative of the one hundred and fiftieth anniversary of the establishment of the church.

Rev. Dr. Cady closed a pastorate of more than twenty-one years over the Pleasant Street Congregational Society in 1877. He removed to Westboro, where he had been settled as minister many years before, and died there in 1879. Dr. Cady took a deep interest in all good causes in the town, and his retirement from his work here was much regretted. Rev. J. Lewis Merrill succeeded him in 1878. His lamented death occurred in 1880. Rev. Edward B. Mason, D.D., became minister March 9, 1882, and resigned his charge April 2, 1889. Rev. S. C. Bushnell was installed Feb. 6, 1890. Alterations and improvements were made in the church building in 1882, and it was rededicated Feb. 25, 1883. Dr. Mason preached a sermon on the occasion commemorative of the fortieth anniversary of the foundation of the church.

The Baptist church continued under the charge of Rev. Amos Harris until 1875. Rev. Charles N. Spaulding succeeded him in 1876 and remained until 1880. The present pastor, Rev. Charles H. Watson, was settled in 1881. The meeting-house was extensively repaired in 1871. While the work was in progress, considerable injury was done to the building by the gale in August of that year, causing added delay and expense.

Rev. J. W. Keyes resigned the pastorate of the Universalist Society October 1, 1869. Rev. William H. Rider was minister from July, 1871, to June 30, 1873. Rev. William F. Potter had charge of the parish from June, 1875, to January 1, 1882. Rev. E. L. Houghton became pastor April 1, 1885, and remained until March 31, 1886. Rev. Francis A. Gray was minister from September 1, 1886, to May 12, 1889. Rev. Irving C. Tomlinson became pastor September 1, 1889.

To the four existing Protestant societies there was added in 1869 a Catholic parish. Before that time the Catholics living in Arlington had had no church nearer than Cambridge. A church building was erected in Arlington, on Medford Street, and first used in 1870. Rev. M. P. Dougherty, the pastor of St. Peter's Church, in Cambridge, who had been much interested in the new parish, remained in charge of it until 1873, when Rev. Joseph M. Finotti took his place. Fr. Finotti was a man of learning and a writer on ecclesiastical subjects. He remained in Arlington until 1876. His successor was Rev. Matthew Harkins, now Bishop of Providence. He was

pastor of the parish until 1884, and had the respect and confidence of the community. The present pastor, Rev. Thomas Shahan, has been in charge since 1884. The church has received the name of St. Malachy. A parochial school was opened in 1888 in a building erected for its use near the church.

A Methodist Episcopal church was organized nearly twenty years ago. Services were held from time to time as occasion permitted, but the society was not strong enough to make it prudent to erect a church building, and public exercises have been for a long time discontinued.

A Protestant Episcopal parish, known as St. John's, was organized January 19, 1876. A chapel was built at the corner of Academy and Maple Streets, in which services were first held January 21, 1877. Rev. D. G. Haskins, of Cambridge, had charge of the parish until 1880. Rev. Charles M. Addison was the first rector resident in Arlington, remaining from September, 1882, to April 6, 1885. He was succeeded by Rev. Charles J. Ketchum, who held the position from July 8, 1885, to April 22, 1889. Rev. Thomas Bell was rector from July 5, 1889, to March 10, 1890. He was followed by the present rector, Rev. Frederick Pember.

At Arlington Heights religious services of an undenominational character were held at first in a hall and afterwards in a chapel built by subscription mainly of residents. The chapel was dedicated December 30, 1885. Prof. Daniel Dorchester, Jr., of Boston University, resident of the Heights, who had previously conducted the services, continued to preach in the chapel until April, 1887. From April, 1887, to April, 1888, Rev. Bradford K. Pierce, D.D., was in charge, and from April, 1888, to April, 1889, Rev. Alfred Free. Since April, 1889, Prof. G. M. Harmon, of the Tufts Theological School, has been minister of the society.

There are several fraternal and benevolent societies in Arlington, belonging to various orders and associations. The branch of the Masonic order—Hiram Lodge—was first instituted in Lexington in 1797. Afterwards it was transferred to West Cambridge and has since remained established in the town. Bethel Lodge of the Independent Order of Odd Fellows was established in 1842.

In its politics Arlington has remained on the side of the Republican party. In the election of 1868 the Republican electors received 259 votes; the Democratic electors 152. Four years later 306 votes were cast for the Republican ticket and 186 for the opposition. In the election of 1876, Hayes obtained 386 votes and Tilden 343. In 1880 the inequality was greater, the Republican ticket receiving 415 votes, the Democratic, 293. In 1884, 410 votes were cast for Blaine, 371 for Cleveland, 41 for Butler. In the last Presidential election the Republican vote was 499, the Democratic 477. In State and Congressional elections, the Republican candidates have in some

instances failed to gain a majority of the votes of the town, but usually the result in the elections for these offices has been the same as in the Presidential elections; and the above figures are enough to give a sufficiently correct comparison of the relative strength of parties in Arlington for the last twenty-two years.

In conclusion a few statistics may be given. The population of Arlington in 1885 was 4673; by the census of 1890 it is 5528. The real estate was valued May 1, 1889, at \$4,386,275 and the personal estate at \$822,821. The town spends annually in its various departments about \$100,000.

Arlington is becoming more and more each year distinctively a place of residence. With the growth of Boston and the consequent pressure of population in the nearer cities and towns, there is a rapidly-growing demand for house-lots, and consequently new streets are opened through old estates, and the process of converting a country town into a thickly-settled suburb goes on. It is not to be supposed, however, that there has been a disappearance of the other pursuits that have long been carried on here. Farming—the ancient business of the place—continues to flourish and manufactures are by no means discontinued.

Manufacturing is carried on now, as in times past, mainly along Vine Brook. Highest on the brook is the factory of Charles Schwamb, where, since 1862, he has carried on the business of making oval picture frames and straight mouldings. Next below is the factory of Theodore Schwamb. Here he, with his four brothers, began in 1853 the business of turning, sawing and piano-case work. Since 1860 he has carried on piano-case manufacturing. His factory is at the privilege owned a century ago by Gershom Cutter. A short distance farther down the brook is the establishment now used by the Lamson Store Supply Company for printing. Deacon John S. Hobbs long conducted there the manufacture of leather-splitting knives as well as a general machinist's business. Below Brattle Street and near the brook is the piano-case factory of the late Jacob Schwamb, whose sons now carry on the business. Next come the sites of what were, a generation ago, the most important manufactories of the town—the Schouler Print Works and Welch & Griffith's saw factory. The former of these was burned and the latter has been for several years unused. The Cutter mill on Mill Street is now used by Samuel A. Fowle. His own mills stand on the site of Ephraim Cutter's, and, as has been said, not far below the place where Col. Cooke built his dam more than two hundred and fifty years ago. They are used, in part, as grist-mills and in part for grinding drugs, dye-woods and other materials.

The ice business is and for a long time has been an important industry of the town. William Fletcher, who died in 1853, was, according to the statement on his grave-stone, "the first man that ever carried ice

into Boston market for merchandise." Several small ice-houses were built on the shores of Spy Pond about half a century ago to supply the neighborhood. The business was first begun on a large scale, however, in West Cambridge soon after 1840, when Gage, Hittinger & Co. undertook the work. Their first ice-houses stood on the Belmont shore of the pond. Afterwards they acquired and built at various times other ice-houses on the opposite side. The firm of Gage, Hittinger & Co. was succeeded by that of Gage, Sawyer & Co., and in 1859 by that of Addison Gage & Co., which is still carrying on the business at Spy Pond. Addison Gage, the head of these successive firms, lived in the town from 1852 until his death, in 1868, a public-spirited and respected citizen. The business was from the first, in large part, and finally altogether, a foreign business. The Spy Pond ice went all over the world—to the Southern States of our own country, to the East and West Indies, to China, to India, to South America, even to Australia. Ordinarily from two hundred to two hundred and fifty men were employed in the work in the busy season—about the same number now engaged in a winter when a full quantity is cut, as the improved facilities for doing the work counterbalance, so far as the employment of labor is concerned, the increased extent of the business. During the war the Southern trade was, of course, stopped, while the foreign trade continued. With peace the business resumed its old channels. About 60,000 tons of ice are ordinarily cut in a favorable year, and employment is given to many men at a time when farming operations have ceased and work is scarce.

In connection with the ice business should be mentioned the factory where for many years the firm of William T. Wood & Co. has carried on the manufacture of ice-tools. The factory stands not far from Spy Pond and its products have a deservedly high reputation.

The history of Arlington for more than two hundred and fifty years has now been traced. If the story lacks picturesqueness, it has at least the interest that must always attach to an account of the doings of former generations of men who have lived their lives, and wrought their work on the soil now trodden by us. The past of the town may have been—except for one memorable day—uneventful, but it should not be without honor in the eyes of those who appreciate the sober virtues whereby our Puritan forefathers built up their little community, and whereby their descendants transmitted it to the keeping of the men of to-day.

CHAPTER XIV.

ARLINGTON—(Continued).

MARKET GARDENING IN ARLINGTON AND BELMONT.

BY WARREN W. RAWSON.

In preparing this article it will be necessary to date back about forty years, when market gardening began to be a prominent business in these towns, which were at that time called West Cambridge. It was about this time, 1850, that glass was first used for forcing vegetables in the winter and spring, and those who took the lead went ahead and prospered. They studied the business, made use of their instruction, and succeeded, and are to-day noted for their success, and their names stand as landmarks in this industry, which has improved and advanced until the town of Arlington stands first of any town in this country for the amount of production per acre, the quality of the products, and for the *personnel* of the men engaged in the business. The county of Middlesex is famous for its vegetable productions, and many men are engaged in this industry.

Market gardening is very different from farming, and since glass has been extensively used, especially for the last twenty years, it has become a science, and those who studied it were intelligent, and studied the nature of their soils, and the crops best adapted to them. All have been successful, and many have become wealthy.

Among the leading market gardeners of forty years ago were: Captain George Pierce, Aaron Dixon, Mr. Sprague, John Fillebrown, Warren Rawson, Albert Winn, Samuel Butterfield, Joseph Butterfield, Josiah Crosby, David Puffer, A. P. and J. P. Wyman, Abbot Allen, Cyrus Cutter, T. P. Pierce, Elbridge Farmer, Benjamin and H. J. Locke, Bowen Russell, William Whittemore, Stephen Scymes, Luke Wyman, Charles Hill, George Hill, Varnum Frost, Warren Frost, Silas Frost, Henry Frost, N. C. Frost, Oliver Wellington, Joseph Hill, Charles Winn, Henry Locke, Henry F. Hill, Amos Hill, Warren Heustis, William Richardson, David Locke, Lewis Bartlett, Stephen Swan and Abel Pierce. Most of these men have sons who succeeded them.

The leading ones of to-day are: W. W. Rawson, W. H. Allen, Wyman Bros., J. P. Squire, Varnum Frost, J. O. Wellington, John Lyons, H. J. Locke, George P. Winn and D. L. Tappen. Most of these are quite young men and are very successful. We will not try to mention the number of kinds of vegetables grown by these different men, but all have some specialty best adapted to their soil and locality.

These men so managed their business that they have educated the people to a large use of vegetables, which has made the Boston market the best in this country for a fine quality of products.

A few years ago the Boston Market Gardeners' Association was organized, which has proved a great benefit to the market gardeners of this section. W. W. Rawson was chosen president, and is the present incumbent.

Notwithstanding the magnitude of this business, it is moving back from the city, and we predict that within twenty years very few market gardeners will be found in the towns of Arlington and Belmont.

We will now mention the men and location of their places: Captain George Pierce, place located on Arlington Avenue, and extended to Spy Pond. He was the leading market gardener of fifty years ago, and raised large quantities of early apples, using glass to some extent. Mr. Josiah Crosby was in his employ, and afterwards bought a place on Lake Street. The Pierce place, after the death of Mr. Pierce, was leased for a number of years, and recently a part has been sold to Mr. John Lyons.

The Albert Winn place, located between Summer and Mystic Streets, was carried on for a number of years by Mr. Winn, and later by Winn Brothers. Then young Albert died, and George P. Winn leased the place and has conducted it successfully for a number of years, and is the present occupant.

Abbot Allen place, located on Arlington Avenue, was carried on by him a long time, then was conducted by his sons, W. H. and A. Allen. Later W. H. purchased his brother's interest and associated his son Abbot with him in the business, and they are among the most successful. The place of John Fillebrown was purchased by Mr. W. H. Allen in 1890.

William Adams' place was located on Arlington Avenue, next to Abbot Allen. It was sold to Mr. Allen, and Adams moved to Winchester.

A. P. and J. P. Wyman's place, located on Arlington Avenue and Lake Street, was carried on for a number of years; then divided, the one on Lake Street taken by A. P., and he at one time carried on the largest business in this town. He had, as his assistant, E. N. Pierce, who afterwards married one of Mr. Wyman's daughters and moved to Waltham. The place has since been conducted by Wyman Bros.—Frank and Daniel—they building two green-houses and putting in a large water plant for irrigation. Since the death of Mr. A. P. Wyman the place has fallen to the brothers.

Mr. J. P. Wyman's place, located on Arlington Avenue. He carried it on for a number of years after separating from A. P., after which he leased it to John Lyons, and it has been run quite successfully by him. He has recently bought part of the place owned by Captain Pierce, formerly carried on by Arthur Pitts, and in earlier times, by Crosby & Dickey. John Lyons has two large green-houses.

Mr. Samuel Butterfield—place on Arlington Avenue and Lake Street—was one of the oldest market gardeners and very successful. He was formerly in business in the Quincy Market. Since his death

his place has been leased to Mr. Irvin Johnson (who was Mr. Butterfield's foreman), and he and his sons are very successful.

Warren Rawson's place is located on Warren Street, extending to Mystic River. He was originally in the employ of Albert Winn and purchased this place while there. His funds were limited and he was obliged to work very hard for a number of years. He was one of the first to grow vegetables under glass. Soon after the close of the Rebellion, the business being very successful, his son, Warren W., then seventeen years of age, assumed charge of the help on the place, and, after becoming proficient in the business, purchased his father's entire interest.

Mr. John Fillebrown. Place on Warren Street. He was very successful, but his health failed him, and the last few years he was not able to attend to the business. He died in 1889 and the place was sold to Mr. W. H. Allen.

Josiah Crosby. Place on Lake Street. At one time Mr. Dickey was associated with Mr. Crosby. Mr. Crosby was a fine market gardener, his place always looked tidy, and every crop was set out by line. He was the improver of the Crosby Corn and Egyptian beet. Since his death, in 1887, the place has been very successfully managed by his sons, Walter and Charles Crosby.

Davis Locke. Place is located in eastern portion of the town, near Alewife Brook, and is carried on by James Purcell & Sons. Levi Russell bought a portion of the farm of Mr. Locke. Mr. Russell's place is now conducted by his son, Irwin L. Russell. The larger part is located in Somerville.

Chas. Hill. Place situated on Pleasant Street. He is what is called old-fashioned, believing the old way is the best. He never owned a horse and always cultivated his land with a spade and fork.

Geo. Hill. Place located on Pleasant Street. He was a very intelligent market gardener and one of the leading ones of twenty years ago. A reservoir supplies water for irrigation. He raised large quantities of strawberries and took many premiums at the Massachusetts Horticultural Society exhibitions, both for strawberries and vegetables; his place has two large hot-houses for raising lettuce and cucumbers. He died in 1889. His two sons, George and Arthur, succeeded him, both very capable and intelligent young men.

Addison Brooks. Place on Lake Street. He was very active for a long time and did a large business. He sold one of his places to Mr. James Marden, who carried it on about fifteen years, then sold to Mr. W. H. Allen, who is the present owner. Mr. Brooks sold his other place to J. P. Squire and moved to Brockton, Mass., carrying on the same business there.

Mr. Joseph Butterfield, located on Lake Street, bought his place of Samuel Butterfield and was very successful. He died in 1875 and was succeeded by his son Joseph, who continued the business with success.

Mr. Charles Crane had a place on Arlington Avenue and Broadway, and was successful. He removed to the West.

David Puffer, about forty years ago, purchased the place on Broadway where he is now located. He has four sons—one, Warren, associated with him in market gardening; the other three compose the firm of Puffer Bros., marketmen.

J. P. Squire's place is located at Lake Street and Arlington Avenue. About twenty years ago Mr. Squire began cultivating his land near his homestead, and since that time has purchased several other places and cultivated them as market-gardens. His business is quite extensive, and at present is under the direction of Eugene O'Neil.

Walter Russell purchased his place of Mr. Flanders and for a time carried on quite an extensive business. He subsequently sold part of his land to W. W. Rawson.

Mr. Sprague's place, corner of Medford Street and Warren, was sold to Cyrus Wood, who carried it on about fifteen years. It was then sold to a land company.

J. F. Whittemore carried on the place owned by W. H. Whittemore, his brother. It was recently purchased by Mr. G. D. Moore, who later leased it to Mr. C. A. Learned, who was formerly in the employ of Mr. W. W. Rawson. Mr. J. F. Whittemore, about 1883, moved to Florida, where he is engaged in the same business to some extent.

Mr. Elbridge Locke's place, located opposite the Russell House, in the upper part of the town, is now carried on by different parties.

Sandy Boles, formerly in the employ of J. S. Crosby, purchased a place near the Arlington Reservoir. It is now laid down to grass.

Timothy Eaton, located just above the heights on the road to Lexington, was succeeded by his son, Joseph Eaton.

Mr. John Pierce's place, at the Foot of the Rocks, carried on a small business in vegetables and fruit-growing. Since the death of Mr. Pierce the place has been leased.

Thomas Pierce's place, located on what is now called Arlington Heights, was sold to a land company.

The Elbridge Farmer place, near the Foot of the Rocks, is now carried on by his son, E. S. Farmer, who learned the business while in the employ of Mr. Varnum Frost, of Belmont.

The Bowen Russell place, situated on Arlington Avenue, is now conducted by his son, Ira Russell.

The B. & H. J. Locke place is situated on Arlington Avenue. Upon the death of Benjamin, a few years since, H. J. succeeded to the business, and still conducts it.

Cyrus Cutter place, located on Summer Street, was one of the oldest in the business. He was succeeded by his sons, Cyrus and A. P. Cyrus' sons succeed him as Cutter Brothers.

The Abel Pierce place is situated on the hill near Winchester. It is now occupied by Augustus Pierce, a grandson, who succeeds his father.

The William Whittemore place, located on Mystic Street, is now occupied by J. S. Crosby, formerly of Belmont.

The Luke Wyman place, situated on Mystic Street, was purchased about twenty years ago by Mr. Huffman, the present proprietor.

The Stephen Scymes place, on Mystic Street, is one of the oldest in the town. Mr. Frank Frost, of Belmont, son of Henry Frost, is the present occupant.

Warren W. Rawson. (See biography.)

The Aaron Dixon place, in the eastern part of the town, was a very sandy farm. Mr. Dixon was succeeded by his son Porter, who sold the farm to Asa Durgin, who carried it on for four years, when it was purchased by the Catholic Church for a cemetery.

Mr. N. C. Frost was associated with Mr. David Fisher, who owned a place in Winchester, which he carried on in connection with those owned by Mr. Frost in Belmont. Mr. Fisher sold his interests in Winchester, and purchased the Ephraim Tufts place, which he also carried on with Mr. Frost. Mr. Fisher living in Arlington and Mr. Frost in Belmont. Mr. Fisher married Mr. Frost's sister.

A daughter of Mr. Fisher married D. L. Toppen, who is the present occupant of the place.

BELMONT.—Mr. Joe Wellington is a prominent market gardener of Belmont. He has occupied his present place about twenty years, having succeeded his father.

M. W. Marsh is the oldest inhabitant in Belmont who has pursued farming as an avocation. He was ninety years of age August 7, 1890. Small fruits have been one of his specialties as well as apples.

George Prentice, whose farm is on the Highlands, is one of the oldest farmers in this town. His products have been chiefly milk and vegetables. His farm is now under the control of his son, whose products are fruit, vegetables and milk. He has about three hundred hot-bed sash, insuring early vegetables.

Jonathan Frost was one of the earliest farmers in this town. Upon his death, about thirty years ago, he left four sons, viz.: Warren S., Varnum, Artemas F. and Herbert F., all of whom are now successful gardeners and have pursued this business from boyhood. Seth Frost and son Newell C., were also farmers here. Sylvester Frost has been in the business about twenty years. He is a son of Isaac Frost.

Willard Hill was a son of Joseph Hill. He occupied his father's farm about five years and then became a member of the firm of Winn Ricker & Co.

Leonard Stearns, Sr., died fifteen years ago. His son Leonard, Jr., now occupies the place.

Nathan Robbins, now dead, once sold produce for Abbott Allen, father of Henry. His vehicle was a two-wheel tip-cart, and his market was Charlestown Square.

James Russell

Isaac Lock, who died fifty years ago, was father of George Lock. George died in 1870. He was the father of Edwin, Isaac and W. H. Lock. The three latter died in 1889. The sons of W. H. are in business in Quincy Market. This was a market-gardening family, and the old estate on Pleasant Street is very valuable.

Charles Winn, Sr., came from Woburn about 1850, and was a good gardener. He died a few years ago. His son, Charles Winn, now occupies the place.

Mr. Morton, whose residence is upon Spring Lane, is among Belmont's reputable gardeners. Mr. Morton's advent into the business of market-gardening was made about the year 1855. He was employed successively by one Adams, of Winter Hill, Somerville; Warren Rawson, then West Cambridge; George Hill, Arlington; Charles Winn and Joseph Hill, of Belmont. He then bought the farm tilled by Edward Phillibrown. He had for many years the enviable reputation of succeeding in keeping celery later in the winter season than any other farmer. His son Edward succeeds him.

Silas Frost, who died in 1889, was also a market gardener. His residence was on Pleasant Street, and three sons now succeed him.

Henry Y. and Amos Hill, brothers, were market-gardeners from boyhood, both born in Belmont. The farm of Amos is now carried on by his son, Amos Edwin. The farm of Henry is leased, in part, to Warren Eustice.

William Richardson, now eighty years old, has spent the last forty years in market-gardening, and many of the devices in machinery that he originated are now used by the trade.

William Hill was the first to raise cucumber-plants under glass to set out in the open field. He was also the first to introduce Boston market celery. He was a deep thinker, and many of the modes of operation that are in vogue to-day in the business were first practiced by him. He was born in Belmont.

Warren Eustice, born in Vermont, came to West Cambridge (now Belmont) when quite young; is now seventy years old and vigorous. Market-gardening all his life, his operations in pig-raising have engaged much of his time. In 1861 he brought the first Chester White pig that came into Massachusetts. In 1870 he bought a Yorkshire boar that was imported by Colonel Hoe, of printing-press fame, and crossed upon his Chester White stock, and this is the stock that is now known as the Eustice strain of Yorkshire pig.

Hittinger Brothers are successors of their father, who raised fruit principally. The sons, in addition to fruit, are also engaged in market-gardening. They built several large green-houses, and are growing lettuce and cucumbers extensively.

P. Schahan, located near Fresh Pond, is very successful in growing lettuce in green-houses. Mr. Schahan first introduced the use of roffea for tying vegetables. Large quantities are now used.

Henry Richardson, situated near Fresh Pond, has several large green-houses, used for growing lettuce, and was among the first to use them for that purpose.

Davis Chenery's place, situated by the side of C. H. Slade, has one green-house, and devotes his attention mostly to fruit-growing.

D. A. Hart's place is located opposite Mr. Slade, known as the Tainter estate. He learned the business with Mr. Henry Locke.

Howard Richardson carries on the old Thomas Richardson place. Has one green-house.

Thomas Richardson carried on the William Richardson place.

Frank and Edward Stone have done quite an extensive business. Frank died a short time ago, and the place is now run by his brother.

Mr. T. L. Creeley occupies the place formerly carried on by his father in the milk business.

C. H. Slade, located in the southern part of Belmont, was formerly associated with William Cook, and hired the Brown and Stone places; afterwards Mr. Slade carried on the business and bought the Stone estate, which he now occupies, and has been quite successful. He has built two green-houses, raises quantities of currants and is a breeder of swine.

BIOGRAPHICAL.

JAMES RUSSELL.

James Russell was born January 14, 1788, in that part of Charlestown that now forms the city of Somerville. His father, James Russell, was a respected and substantial citizen, and the family had been long established in Middlesex County. He was graduated from Harvard College, in the class of 1811. Among his classmates were several who afterwards attained marked distinction, of whom, perhaps, the most noted was Edward Everett. After completing his college course he began the study of the law in the office of Hon. William Austin, of Charlestown, at that time a leading member of the bar. He was admitted to the bar in 1814, and entered upon the practice of his profession in West Cambridge—a place with which his family connections were numerous and close, and here he made his home for the rest of his life.

For many years Mr. Russell attended to nearly all the legal business, not merely of his fellow-townsmen, but of many people in neighboring towns; for his reputation as a sound and sagacious counsellor was wide-spread. He lived in days before his profession had become specialized, and his practice was a varied one. With a knowledge of the law he combined a native good judgment which made him a wise adviser, and his known uprightness held public confidence. By

Nathaniel Robbins

André B. B. B.

Emerson

a discriminating judgment he joined a sympathetic and generous disposition. To many of those with whom he was brought into business relations he gave needed assistance at critical times, and his outside charities were numerous and unpretentious. The frequent tokens of appreciation and gratitude that came to him in his later years were but the legitimate results of his own acts.

AMOS ROBBINS.

Amos Robbins was born in West Cambridge (now Arlington), Massachusetts, December 28, 1817, and received a limited education in the public schools of the time and locality. At the age of fourteen he became a poultry buyer and dresser for his brother Nathan, who had been for some time established in Faneuil Hall Market in Boston. At the age of sixteen Amos Robbins removed to Boston, and was employed in his brother's business there until 1836. It was at this time that Simeon Hoyden, who kept the Tremont House in Boston, and had a high appreciation of these industrious young men, became proprietor of the Astor House, New York City, and remarked to Nathan, the eldest, the dearth of first-class poultry in Fulton Market in that city, and suggested that there was a fine opening for some New England man, who would attend to business and keep out of bad company. This was exactly what the Robbins boys knew how to do,—accordingly, in 1836 Amos Robbins went to New York and secured a stand in Fulton Market in that city, consisting of some planks laid over two saw benches; the business was conducted on a very moderate scale to what it is at present; and the receipts of all the dealers in Fulton Market at that time would hardly equal what some single firms in that busy centre now take in and send out daily. In 1839 he was joined by his brother Eli, who was associated with him in his dealings in poultry and game, and in 1841 they formed the firm of A. & E. Robbins, which became and continued to be the largest receivers and shippers of poultry, game, etc., in the country. At the death of his brother Eli, the latter's nephew, Milton Robbins, son of Mr. Amos Robbins, became a member of the firm, which was changed to A. & M. Robbins. The gains of the firm of A. & E. Robbins were the reward of years of plodding and successful traffic, and resulted in a competency for the brothers.

Mr. Amos Robbins was married at the age of twenty to Miss Adelia Martling, of Tarrytown, New York, who has borne two sons and two daughters who were reared and married, but who died in early womanhood. Mr. Robbins, in his declining years, was in the enjoyment of well-earned wealth, and such had been his character from boyhood that he was held in equally high regard in business circles and among his intimate friends, and was esteemed alike as an intelligent and influential citizen, and as a friendly, whole-souled Christian gentleman.

ELI ROBBINS.

Mr. Eli Robbins was born in West Cambridge (now Arlington), Mass., September 22, 1821. He was not a strong child, but being healthy and self-reliant, he soon mastered the rudiments of such knowledge as was convenient to his circumstances, and began his business career at an early age, by providing a horse and wagon for himself, and purchasing poultry of the neighboring farmers, which he dressed with his own hands, and carried to Boston for customers. Three years later, in 1839, Eli followed his brother Amos to Fulton Market, New York City, at first as an employee; but in 1841 they entered into partnership under the firm-name of A. & E. Robbins, which has since become familiar to all frequenters of the streets of New York. It was a small beginning—two country boys, aged eighteen and twenty-one, with a capital of two hundred and thirty-six dollars each. But they had an advantage in the superior style in which they dressed their poultry, and they were not ashamed to work. Add to this their determination not to speculate nor run in debt, and the result might easily have been predicted. They soon distanced all competitors, and for more than forty years have stood at the acknowledged head of that line of business in the United States, thus affording a notable instance of conspicuous success obtained solely by honorable enterprise and strict integrity.

On the 13th of May, 1845, Mr. Robbins married Miss Maria C. Farmer, of his native town, a young lady with whom he had been acquainted from childhood and whose subsequent devotedness, as wife and mother, amply justified the prophetic foregleam of his youthful affections. The abundant means which her husband furnished enabled her also to gratify every hospitable impulse and refined taste. Their first home in Brooklyn was on Washington Street, where two dear children came to work their mission of love—Warren, born Sept. 21, 1846, and Clinton, Dec. 27, 1848. The birth of these children was a joy which could only be adequately measured by the terrible grief that followed their early departure—Clinton died April 26, 1864, and Warren, Nov. 12, 1869.

Eli Robbins, was, by nature and early training, inclined to economy and careful in his investments; yet he was not indifferent to any worthy cause. His benefactions to private families and individuals were so secret and unostentatious, that none but those who were the recipients of it can compute the sums which he annually bestowed among them. In religion he was a Universalist. On removing to Brooklyn, while yet a young man, he became a member of the first Universalist Society, and remained ever after loyal to that form of Christian faith. This furnishes the key to his whole moral character. He never sought for novelty, nor shrank from the dictates of duty. He had the two things which made men strong—an intelligent conscience, and the quiet courage to obey it. True courage is not noisy; it does not find its expres-

sions in defiant manners, or vapory speech; but it does consist in a quiet determination to do right, because it is right, and in traveling in a straight, though unpopular pathway. With such a conscience, and with such a courage, Eli Robbins entered upon the career which lay before him and followed it successfully to the end. The end came while he was yet far from being an old man—he died on the morning of June 21, 1883, in the 62d year of his age, leaving as the result of his life, a character for business integrity against which no word of suspicion was ever breathed, and a competency—the reward of honorable efforts. His will, which was written ten years before his death, disposes of some three hundred thousand dollars in various bequests; among which are the legacies to the Church of Our Father, located in the city of Brooklyn, N. Y.; the Brooklyn Orphan Asylum of the same city; the Blind Asylum, of New York; the Unitarian and Universalist churches at Arlington, Mass., and his native town, to which his body was taken for interment.

It is fitting and proper to add, in connection with the above, that Mrs. Maria C. Robbins, his widow, has about completed arrangements for the erection of a substantial stone structure to be located in Arlington, Mass., the native place of herself and her late husband, and intended for a Public Library, and reading-room, which is to be known as the "Eli Robbins Memorial Library Building."

JOHN P. SQUIRE.

John P. Squire, the son of Peter and Esther Squire, was born in the town of Weathersfield, Windsor County, Vermont, on the 8th day of May, 1819. His father was a farmer. The years of his boyhood were spent at his home, attending the public schools, and working on the farm.

On the 1st day of May, 1835, he entered the employment of a Mr. Orvis, the village store-keeper, at West Windsor, Vermont, and remained with him until the winter of 1837, when he attended the academy at Unity, New Hampshire, of which the Rev. A. A. Miner was then principal. He taught school at Cavendish during a part of the winter of 1837-38. On the 19th of March, 1838, he came to Boston, entered the employ of Nathan Robbins, in Faneuil Hall Market, and continued with him until May 1, 1842, when he formed a co-partnership with Francis Russell, and carried on the provision business at No. 25 Faneuil Hall Market, under the style of Russell & Squire, until the year 1847, when the co-partnership was dissolved.

Mr. Squire continued the business alone, at the same place, until the year 1855, when he formed a new co-partnership with Hiland Lockwood and Edward Kimball, under the name of John P. Squire & Co. The firm-name and business have continued until the present time, and the changes in the partners have

been as follows: the retirement of Edward D. Kimball in the year 1866; the admission of W. W. Kimball in the same year, and his retirement in 1873; the admission of his sons, George W. and Frank O. Squire, in the year 1873; the death of Hiland Lockwood in the year 1874; the retirement of George W. Squire in the year 1876; and the admission of Fred F. Squire, the youngest son, January 1, 1884—leaving the firm to-day composed of John P., Frank O. and Fred F. Squire. In 1855 Mr. Squire bought a small tract of land in East Cambridge and built a slaughter-house. Since that time the business has grown to such an extent that the firm of John P. Squire & Co. has to-day one of the largest and best-equipped packing-houses in the country, and stands third in the list of hog-packers in the United States.

In 1843 he married Kate Green Orvis, daughter of his old employer. Eleven children were born of this marriage, ten of whom are now living, as follows: George W., Jennie C., Frank O., Minnie E., John A., Kate I., Nannie K., Fred F., Nellie G. and Bessie E. Squire. One son, Charles, died in infancy.

In 1848 he moved to West Cambridge, now called Arlington, where he has ever since lived.

Mr. Squire joined the Mercantile Library Association when he first came to Boston, and spent a good deal of his leisure time in reading, of which he was very fond.

The position which he holds to-day in commercial circles is due to his untiring industry, undaunted courage and marked ability.

WARREN W. RAWSON.

Warren W. Rawson, son of Warren Rawson, was born in West Cambridge (now Arlington), January 23, 1847. He was educated in the public schools of his native town, also at the Coting Academy and at a commercial college in Boston. He pursued his studies with diligence and attention, and succeeded in procuring an education which well qualified him for his subsequent successful business career. At the age of seventeen he began work with his father, who was a leading market gardener. He studied the science of the business, nature and plants, soil best adapted to them, etc., and was successful. When twenty-two years old he purchased half of his father's farm and three years later purchased the remainder. He also owns a place corner Medford and Warren Streets, purchased about ten years ago of Mr. W. H. Whittemore. His residence, a fine one, and hot-houses are located on this place. Mr. Rawson has advanced rapidly in the business. He was the first to build hot-houses to any extent in this town, and the first to put in an irrigating plant for outside purposes. He was also the first to use steam in heating green-houses, and the first to use electric light in bringing forward plants. He found that this light hastened the growth of plants about fifteen per cent., particularly in the winter season.

John P. Squire

H. W. Rawson

His place embraces one hundred acres. He employs sixty-five men and twenty-five horses; uses three thousand cords of manure each year, beside fertilizers, and is the most extensive market gardener in this part of the country. He is the leading producer of celery, and also has a large seed store at 34 South Market Street, Boston. He grows large quantities of seeds to supply the market gardeners, and has been instrumental in introducing many new kinds of vegetables.

Mr. Rawson is an energetic, public-spirited man, and occupies many prominent positions. He is president of the Middlesex Agricultural Society of Concord; president of the Market Gardeners' Association of Boston; member of the State Board of Agriculture and one of the Executive Committee of that board; member of the Board of Control of the Massachusetts Experiment Station at Amherst; president of the Brackett Club, which was instrumental in electing J. Q. A. Brackett Governor in 1889; chairman of the Republican Town Committee and a member of the School Committee—now serving his third term of three years each. He is a parliamentarian of ability and often officiates as moderator of the town-meetings. He is a well-known lecturer on agriculture; is the author of a work entitled "Success in Market Gardening," and also of a work on celery culture. In the spring of 1890 he was appointed, by the Governor, chairman of the Gypsy Moth Commission. Mr. Rawson is a man of large executive ability, and has filled the various positions to which he has been called with credit to himself and the satisfaction of the public.

February 20, 1868, Mr. Rawson united in marriage with Helen M. Mair and their family consisted of two children, only one of whom (Mabel) survives. His wife died May 4, 1872. He married his present wife, Sarah E. Mair, September 21, 1874, and their family consisted of three children, two of whom (Alice and Herbert) survive.

CHAPTER XV.

MELROSE.

BY ELBRIDGE H. GOSS.

EARLY HISTORY.—The choosing of selectmen and other officers at annual town-meetings was first adopted by Massachusetts; and to Charlestown—of which Melrose was originally a part—belongs the honor of establishing the first "Board of Selectmen," in 1635, six years after its settlement. Dorchester, two years before, had tried a plan which approached this idea, but the inhabitants of Charlestown matured and consummated it, and adopted an order, the original of which is still preserved, with its signatures,

and of which the following is a copy; and a fac-simile of which may be found in Frothingham's "History of Charlestown:"—

"An order made by the inhabitants of Charlestown at a full meeting for the government of the Town by Selectmen.

"In consideration of the great troubles and dissenting of the Inhabitants of Charlestown by reason of the frequent meeting of the townsmen in general and y^e reason of many men meeting things were not so easily brought unto a joyn^t issue. It is therefore agreed by the sayde townsmen ioyntly, that these eleven men whose names are written on the other syde (wth the advice of Pastor and Teacher desired in any case of conscience), shall entreat of all such business as shall concerne the Townsmen, the choice of officers excepted, and what they or the greater part of them shall conclude, of the rest of the towne willingly to submit unto as their owne proper act, and these 11 to continue in this employment for one yeare next ensuing the date hereof, being dated this: 10th of February, 1634 (1635).

"In witness of this agreement we whose names are under written have set o^r hands."

Soon afterward the General Court embodied this idea in its legislation, and made all the necessary arrangements for town government. From that day to this the town-meeting has been the true glory of New England; and before the Revolution it was, indeed, "the nursery of American Independence."

Concerning our early town system, George William Curtis has said:

"Each town was a small but perfect republic, as solitary and secluded in the New England wilderness as the Swiss cantons among the Alps. No other practicable human institution has been devised or conceived to secure the just ends of local government so felicitous as the town-meeting."

The town of Melrose was incorporated May 3, 1850. Most of its territory previous to incorporation was known as North Malden. A small portion of it, now forming the northwestern corner of the town, was set off from the eastern part of the town of Stoneham, by legislative act, March 15, 1853. The name of Melrose was suggested by William Bogle, a native of Scotland, who had been a resident for several years, coming before the Boston and Maine Railroad was built,—which was opened July 4, 1845—and when he had to go back and forth by the stage-coach line, which commenced running between Boston and Reading in 1798. It is situated in the most eastern part of the county of Middlesex, seven miles directly north of Boston. It has a superficial area of 2921 acres, about 2700 of which are taxable.

It is bounded on the north by Wakefield, on the east by Saugus (which is in the county of Essex), on the south by Malden and on the west by Stoneham and a small corner of Malden. Its shape is somewhat irregular, having a width on the Wakefield line of about a mile, on the Saugus line two and one-half miles, about three miles on the Malden, and two and a half on the Stoneham and Malden line. Its surface is pleasantly diversified; it has hills, valleys, ponds and streams. The larger part of the settlement is in the valley, which has L Pond in its centre. As the town is growing rapidly, the hills on either side are being fast encroached upon, that on the east being already largely occupied with fine residences. The

line of hills on the west side of the valley is more wooded, and in the southerly part there is a pretty waterfall, from the edge of what may be termed a many-path-lined wildwood, which lies partly in Melrose, partly in Malden and partly in Medford.

This is a portion of the 4000 acres surrounding Spot Pond, now known as the Middlesex Fells.

Within the town's borders there are several summits, from which very extended views of the surrounding country may be had—from the ocean on the east, the Blue Hills on the south, Mount Wachusett on the west and Mount Monadnock and other distant summits on the north. These local summits are Mount Zion, Mount Hood, Boston Rock, Atlantic Rock, Barrett Mount and Vinton Hill or West Rock.

The largest body of water within its limits is L Pond, containing about thirty acres, so named from its shape, and so referred to in the Charlestown Records as early as 1638. In early documents it has been variously spelled Ell, Eel, Ele and L; the different spelling probably arising by a misapprehension of the sound.

The other ponds are Swain's, Bennett, Dix, Highland and Long pond; this latter extends into the town of Saugus. Both Long and Swain's Ponds were named as early as 1660, being thus referred to in the Charlestown records. L Pond Brook, the outlet of that pond, runs through the centre of the town, and is joined at Wyoming by the Spot Pond Brook, the outlet of Spot Pond, which lies within the territory of the town of Stoneham. Both these brooks, thus united, flow into the Malden River, at Malden.

Melrose has five divisions or settlements: the Middlesex Fells—generally called Fells—and Wyoming in the southern part, the Centre, Melrose Highlands in the north, and Norrisville in the northeastern part, each having a railroad depot, with the exception of Norrisville. The Highlands depot is also called the Stoneham depot, as for many years a horse railroad has connected with that town, two miles distant. About two years ago the Malden and Melrose Horse-Railroad was extended from Malden, running through Main and Green Streets to Norrisville, thence through Franklin Street and connecting with that at the Highlands Station, the whole consolidated with the East Middlesex Horse-Railroad Company.

Originally the territory of Melrose belonged to the town of Charlestown, which was settled in 1629, and was a far more extensive region than now, as it included what is now Malden, Everett, Melrose, Woburn, Stoneham, a small part of Cambridge, Somerville, Burlington, a large part of Medford, and Reading. Differences of opinion connected with the boundaries of the different towns arose, and were settled by the General Court. July 2, 1633, Mystic-side (now Malden) was granted to Charlestown, and it was ordered "that the ground lying betwixt the North Ryv^r [sometimes called "Three Myle Brooke," now Malden River] & the creeke on the north side of

M^t. Mauacks, & soe vpp into the country, shall belonge to the inhabitants of Charlton." As "vpp into the country" did not determine how far the line should go, another order, passed March 3, 1636, was more definite: "Ordered, that Charles Towne bounds shall run eight myles into the country from their meeting-howe, if noe other bounds intercept, reserueing the prprietie of fermes graunted to John Winthrop, Esq., M^r. Nowell, M^r. Cradocke & M^r. Wilson, to the owners thereof, as also free ingresse & egress for the serv's & cattell of the said gentt, & common for their cattell, on the backside of M^r. Cradocks ferme." And the Charlestown records of 1638 say that "the Gen^l Court had settled there Bounds by granting eight miles from the old Meeting-house into the Contry Northwest Northrly."

As Charlestown increased, its inhabitants passed over the Mystic River as early as 1640, and in that year a mill was built near Mount Prospect, by Thomas Coitmore. In 1649, this "Mystic-side" was set off by the General Court, and named Malden, from a town in England bearing that name, whence some of the early settlers came. Captain Edward Johnson, in his "Wonder-Working Providence of Zicn's Saviour in New England," says that Malden was settled "by certain persons, who issued out of Charles Town, and indeed had her whole structure within the bounds of this more elder Town, being severed by the broad-spreading river of Mistick, the one from the other, whose troublesome passage caused the people on the North side of the river to plead for Town-priviledges within themselves, which accordingly was granted them."

The act of incorporation was brief, as compared with one passed nowadays: "Upon the petition of Mistick-side men, they are granted to be a distinct towne, & the name thereof to be called Mauldon." All the northern part of this new town, a tract of over two thousand acres, was for many years called "The Commons." It was "full of stately timber," and, says the Charlestown records, "indeed generally all the country round about was an uncouth wilderness." It was the home of the Indian and the wild beast. It has been said that when the first settlers at Boston sent out an exploring expedition, they came as far as the line of small hills in Malden, and turning back, reported that beyond the hills was a dense wilderness, and that probably nobody would ever penetrate the jungles.

In the process of time this land came to be very desirable both as woodland and pasturage; and action was taken by the town looking to its preservation and utility. The Malden records, March 26, 1694, contain the report of a committee "to run lines between the Common and proprietors' lands, as follows: Run y^e bounds Round Reedy pond, y^e bounds are first a great buttonwood tree before Joseph Lines dore—and so bounded Round with seuerall trees marked with letter C next common." November 20th of the same

year it was "Voted, That y^e common shall be divided: bottom and top, yt is, land and wood;" and November 26th a committee of three—Major William Johnson, Captain John Brown and Captain John Smith—reported to the town the manner in which it should be done, giving to every freeholder in the town a proportion according to his ratable estate. A committee of seven were chosen to proceed with the division. It was voted that this committee "employ an artis to lay out the lots." Every lot was to "run 82 poles in length," and there was to be allowed "two poles in breadth between every range of lots for highways . . . Every proprietor's name to be written distinctly, and y^e lots be well shuffled together, and one man chose by the town to draw them out of a bag. The first name drawn to have the first lot." This division was thus made in 1695, when seventy-four freeholders, then in Malden, received their respective allotments.

But a number of families had taken up their abode in this region ere this division of "the commons" took place. They were the Spragues, the Lyndes and the Greens; soon after came the Barretts, Uphams, Howards and Vintons. There are many representatives of all these families in Melrose to-day. At a little later date, a while before, or at about the time of the Revolution, came the Pratts, Grovers, Emersons, Edmundses, Herrings, Larrabees, Boardmans, Hemenways, Tainters, Goulds, Coxes, Eatons and Fullers. Most of these families also have many descendants still living in Melrose.

Some of these older families have an interesting history. As to the Lyndes: In former times they have owned nearly all of the southern territory of Melrose. Thomas Lynde came from England, settled in Charlestown, and became a freeman in 1634. His son, Ensign Thomas Lynde, came to Malden very soon after its incorporation, and from him all the Melrose Lyndes descended. There are several of the old homesteads of this family still remaining, one of them, that on Washington Street, being at least two hundred years old.

At a town-meeting held May 18, 1694, it was voted "that Samuel Green shall enjoy his hous and y^e land y^e stands on, and so much land about It as y^e Comite shall se cause to lay to It," and the records, referring to lot No. 64, say, "part east against Redding Rhode and part on y^e west of y^e Green's farm." This refers to a farm of sixty-three acres situated at the Highlands, and belonging to Samuel Green, who was a son of Thomas, who settled in Malden about the year 1651.

In 1629 three brothers, Ralph, Richard and William Sprague, settled in Charlestown, and their names are first on a list of inhabitants for that year. Richard and William signed the document establishing the first Board of Selectmen in Charlestown, and Ralph was one of the eleven selectmen then elected.

John, the oldest son of Ralph, settled in Malden,

near the Coitmore Mill, which was for many years in possession of the Sprague family. The youngest son of John, Phineas, came to Melrose not far from the year 1700. The old homestead was on what is now Foster Street, and the residence of the late Liberty Bigelow stands on its site. The grandson of Phineas, also named Phineas, was the Revolutionary patriot of whom many interesting anecdotes are told; and he succeeded to the old farm and homestead on Foster Street. He kept a diary, which gives a few details concerning the old couplet:

"In 1780, the nineteenth day of May,

Will ever be remembered as being the dark day."

"FRIDAY, MAY THE 19TH 1780."

"This day was the most Remarkable day that ever my eyes beheld the air had bin full of smook to an uncommon degree So that wee could scarce see a mountain at two miles distance for 3 or 4 days Past (ill this day after Noon the smook all went off to the South at sunset a very black bank of a cloud appeared in the south and west the Nex morning cloudy and thundered in the west about ten o'clock it began to Rain and grew vere dark and at 12 it was almost as dark as Nite so that wee was obliged to lite our candel and Eate our dinner by candel lite at Noon day but between 1 and 2 o'clock it grew lite again but in the Evening the cloud calim over us again the moon was about the full it was the darkest Nite that ever was seen by us in the world."

During one of the intercolonial wars between the French and English Colonies, this same Sprague furnished a substitute:

"JAN. 13, 1761.

"Received of Phineas Sprague June'r eight Pounds lawfull money yt being for my going a Solger to forte cumberland and I had a promise, not of Six Pounds be fore.

"Pr me

JOHN BATTs."

When slavery existed in Massachusetts some of these old families in Melrose were slave-holders, as is witnessed by the following document given to this same Sprague:

"Know all men by these present that I, Thomas Nickels, of Reding, In the County of middlesex, gentilmn for and in Consideration of the sum of thirty three pounds six shillings and Eight pence lawfull money of New England to me in hand paid by phineas Sprague, Jun of Malden in the same County above s^d Cordwinder whereof I do hereby acknowledge the Receipt and my self therewith fully and entirely satisfied have bargened sold set over and Delivered, and by these present in plain and open markit according to the due fourm of law in that case mad and provided do bargain set over and Deliver unto the said phinas Sprague Jun a negro woman named pidge with one negro boy to have and to hold to his proper use and behoofe of him the said phinas Sprague his heirs, executors administrators and assigns for ever and I Thomas nickles for my self my heirs executors administrators and assigns gant all in all manner of person I shall warrant and for ever Defend by these presents In witness whereof with the Deliver of the bargained persons I have set to my hand and seal the twenty-five Day of april in the 17 fifty-three year of y^e Reign of oure Souerign lord gorg the Second ouer grate Britton.

"THOMAS NICHOLS [seal].

"Signed and our Seal 1753 and Delever in the present of us,

"JOHN KILDER

"EDWARD LANBERT."

James Barrett first settled in Charlestown in 1635, from whence he went to Malden, where his son James was born, in 1644. His son, Deacon Jonathan Barrett, born in 1675, went to Melrose about the year 1705, locating on Barrett Lane (now Porter Street). He died in 1749, bequeathing to his son Joseph a slave named Israel, to serve him for six years. Is-

rael, wishing to learn a trade, was indentured to Joseph's brother Jacob, as follows:

"This Indenture witnesseth that whereas Deacon Jona. Barritt, late of Malden, deceased ordered in his last will and Testament yt his Negroman Survant Israel should serve his son, Joseph Barritt faithfully for ye space of six years after ye decease of ye above sd Testator, of which time there being Two years Past the sd Negro being desirous of Learning ye Trade and art of a Cooper which his sd master, Joseph Barritt complied with and by these Presents Putts and Binds the above sd Negroman a Prentice unto Jacob Barritt of the town of Lancaster in the County of Worcester and Province of Massachusetts Bay in New England Miller and the sd apprentice to serve him and wife from ye Day of ye Date hereof for and during the full term of fore years next during all which time ye sd apprentice his sd master and mistress faithfully shall serve, there secrets keep, there lawful commands gladly everywhere obey. He shall do no damage to his sd master nor his mistress nor see it to be done by others without Letting or giving notice thereof to his sd master or mistress Goods or Lend them unlawfully to any one, he shall not Commit Fornication nor contract matrimony within sd term. At Cards or Dice or any other unlawful Game he shall not play, whereby his said master or mistress may be damaged, with his own Goods nor the goods of others he shall not absent himself Day or Night from his masters or mistress services without their Leave nor haunt ale-houses taverns or play houses. But in all things behave himself as a faithful Apprentice ought to do during said term. And the sd master and mistress shall use ye utmost of their Endeavors to teach and instruct the said apprentice in the trade and mystery of a Cooper and procure and provide for him sufficient meat drink apparel washing and lodging fitting for an apprentice during ye sd term and at the expiration of ye sd Term return ye sd Apprentice as well clothed as at present to ye above sd master Joseph or his heirs who shall by these presents be obliged to receive the sd apprentice and clear the sd Jacob Barritt and his Heirs from all charges yt may arise after his time is out with him and for the true performance of every part of the sd covenants and agreements, either of ye Parties Bind themselves to the other by these presents in witness whereof they have Interchangeably put their hands and seals this seventh Day of September Anno Domini one Thousand seven Hundred and fifty-one and in the Twenty fifth year of his Majesties Reign.

"JOSEPH BARRETT.

"JACOB BARRETT.

"EEN HARKDEN.

"SAMUEL SPRAGUE."

During the Revolution Joseph, son of the above Joseph, paid bounty money as follows:

"CAMBRIDGE, Augt. 17, 1781.

"Recd of Mr. Joseph Barrett the sum of Twelve Pounds Solid Coin in full for all Accompts, Debts Due and Demands Against Mr. Joseph Lyonds or Mr. Joseph Barrett's Class for Procuring a man for three years' service in the Army.

"Recd by me,

BENJ. PERKINS."

Captain Jonathan, son of the above Joseph, was the first to begin the manufacture of shoes in Melrose, an industry still carried on by a grandson Jonathan Barrett. There are numerous Barretts now living in Melrose, among them Artemas, son of Captain Jonathan, from whom the foregoing documents were obtained, and who owns many others of like interest.

Lieutenant Phineas Upham, of Malden, was the son of John Upham, who came to this country and was admitted freeman in 1635, and settled in Malden about the year 1650. Lieut. Upham was an active officer in the "King Philip's War," conducting many scouting-parties, and was mortally wounded at the battle of "Narragansett Fort," December 19, 1675.

At the State House is the original document which

he signed, together with other commissioned officers,

Phineas Upham

a few days before the fight, and which they sent "To the Hon. Governor and Council now Sitting at Boston," in which they made a request for company quartermasters, horses, trumpeters, etc.

From this Lieut. Upham descended all the Malden and Melrose Uphams; his grandson, Phineas, settled on Upham Hill, not far from the year 1700, where some of the old homesteads still remain, on one of which, that of George Upham, is still seen the old-fashioned well-sweep with its "iron-bound bucket."

Other interesting details concerning these and a number of the other early families may be found in the "Historical Address, delivered in Melrose, Massachusetts, July 4, 1876," in accordance with Congressional act and Presidential proclamation, known as "The Centennial Fourth."

ROADS.—The first road, and only one for many years which passed through Melrose, was laid out by order of the General Court, at a session held September 10, 1653, when

"Thomas Marshall, John Smyth & John Sprague being chosen to lay out the country high way between Redding & Winesmest do lay it out as follows: from Redding towne, through Maldon bounds, betwixt the pond & John Smyth's land, & so by the east side of Mr. Joseph Hills land, to New Hockley Hole, & so in the old way by the Cow Pen, & thence along on the east side of Thomas Coitmore's lott, by Ele Pond, in the old way to Thomas Lynds land, then through the first field, and so by the field by his house, from thence, on the old way, by Maldon meeting house, through the stony swamps, &c. . . . the sd way to be fower poles broad, in good ground, & six or eight where need requires."

"The old way," so often referred to in this order, means the old crooked Indian or bridle-path or trail, in use before this date, winding hither and thither, going around this hill, shunning that swamp or bog, and over which the early traveler wended his way between Reading and Chelsea. Portions of this old original road are still traceable within the bounds of Melrose, and the rocks in the wheel-ruts show the abrasion of the old-time usage very distinctly.

On a plan of Malden, surveyed by Peter Tafts, Jr., of Medford, in 1795, the only roads laid down in what was then North Malden are, this main road, called the "Reading Road," and a "Stoneham Road," now Wyoming Avenue, which leaves this near, where Masonic Hall now stands. About this time "Upham Lane," now "Upham Street," was built through to Chelsea line, a portion of which town, at that time, extended up to Reading, between Malden and Saugus; and what is now Howard Street had been built through to Saugus, making a continuous county road from Stoneham to Lynn. Main Street, as now existing, was laid out in 1806. For many years these were the only roads or streets in Melrose, which now has forty miles of streets within its borders.

CHAPTER XVI.

MELROSE—(Continued).

ECCLESIASTICAL AND EDUCATIONAL HISTORY.

THE first organized religious society in Melrose (then North Malden) was the Methodist Episcopal Church. In the spring of 1813 a committee, consisting of Phineas Sprague, James Green and Jesse Upham, requested the Rev. Timothy Merritt—then a member of the Legislature from Maine—to preach in the little old school-house, which was situated on the corner of the old road, now Lebanon Street, and Upham Lane, now Upham Street. A political sermon had been delivered in the Orthodox Church at Malden Centre, which caused great dissatisfaction among the residents of North Malden; and the call to Mr. Merritt was the result of an indignation meeting held in one of their barns. After a few Sabbaths Mr. Merritt was succeeded by Rev. Thomas Pierce, who was to receive \$2.00 a Sunday.

In September following, Rev. Ephraim Wiley was engaged to preach, and some time during the next year a house was hired of Cotton Sprague, which stood on the site now occupied by the residence of the late Liberty Bigelow. In consequence of their continued success, a society was formed in 1815; and in 1818 a meeting-house, thirty feet long by thirty-two wide, was built at the junction of Main and Green Streets. Rev. Orlando Hinds was pastor at this time. He was followed by Rev. Isaac Jennison, and in 1820 the Rev. Ephraim Wiley again became pastor, being sent this time by the Methodist Conference. Next in succession came Revs. Leonard Frost, John Adams and Samuel Norris. Then came a period when the pulpit was supplied by local preachers, about which time some dissatisfied members withdrew and formed the Protestant Methodist Church, hereafter referred to.

The Methodists continued to occupy their meeting-house until 1842, when it was enlarged, improved and re-dedicated November 30th of that year. This house was occupied until 1858, when it was sold, moved to Main Street in the centre of the town, changed into Concert Hall, and was burned November 30, 1875, with Boardman's Block, just thirty-three years from the day it was dedicated.

Their present church edifice on Main Street, was dedicated April 1, 1858, and up to this time the following ministers had been settled over the society: Revs. G. W. Fairbanks, Le Roy Sunderland, Ezra Sprague, R. D. Estabrook, Mudge, Otheman, Newhall, R. Wallace, D. Richards, H. M. Bridge, Nathaniel Bemis, John C. Ingalls, F. Griswold, John Merrill, Mark Staples, W. H. Hatch, Shepard, W. C. High, J. W. Perkins, N. D. George and J. A. Adams.

The first pastor settled in the new meeting-house was Rev. H. V. Degen. He was followed by Revs. A. D. Merrill, John L. Hanaford, George Prentice—

now professor in Wesleyan University, Middletown, Conn.,—Henry Baker, Frank K. Stratton, M. E. Wright, A. W. Mills, S. B. Sweetzer, Isaac H. Packard, Dr. William Butler, John D. Pickles and Samuel Jackson, who is the present pastor, with a church membership of 324.

The Sabbath-school connected with the church was first formed in 1824; its present membership is 394.

A parsonage on land adjoining the church has just been built, at a cost of \$5700.

About the year 1828 some members of the Methodist Episcopal Church became dissatisfied with some portions of its church government, and withdrew therefrom. They organized as the Protestant Methodist Church, purchased the old district school-house and moved it to the corner of Main and Upham Streets, near where now stands the First Baptist Church.

This was replaced a few years later by a larger building, and the original school-house church moved to Foster Street, on the corner of Myrtle, where it was altered into a tenement-house, and burned at the time the Orthodox Congregational Church was destroyed, February 19, 1869.

For several years the Protestant Methodist Church prospered. Meanwhile, many Baptists had become residents of the town, and, on January 1, 1856, by mutual agreement, the Protestant Methodist Society was merged into the First Baptist Church, then formed, and which took possession of all the church property. Many of the Protestant Methodists remained and joined the Baptist Church. This new organization immediately called and settled the Rev. Thorndike C. Jameson as pastor. He remained until November 2, 1858, when he went to Providence, R. I., and was afterwards chaplain in the Second Rhode Island Volunteers during the Great Rebellion.

Rev. James Cooper succeeded Mr. Jameson, and remained until January 30, 1862, when he resigned to accept a pastorate in Philadelphia, Pa. In December, 1862, Rev. Lewis Colby became pastor, who officiated until July 23, 1864. In September following Rev. William S. Barnes was ordained. He remained until June 15, 1868, when, having changed his theological views, he resigned and entered the Unitarian denomination, receiving at once a call from the newly-organized Unitarian Society of this town. He afterwards went to Woburn, and is now in Montreal, Canada. Rev. James J. Peck was pastor from August, 1869, until April 1, 1871. September 15th of that year the Rev. Almond Barreille became pastor, and he remained until April 1, 1875. During his pastorate the old church edifice was sold to the Catholics, and a handsome brick chapel built on its site, which was dedicated November 17, 1874. A year later the Rev. Napoleon B. Thompson was installed, who remained until November 1, 1876. Rev. Robert F. Tolman was ordained pastor June 27, 1878, and remained until April 1, 1886. The present

pastor, Rev. George A. Cleaveland, was installed October 21, 1886. The number of church members is 349, and the Sabbath-school has a membership of 357.

THE ORTHODOX CONGREGATIONAL CHURCH was organized July 11, 1848. Services had been held previous to this in the parlors of Dr. Levi Gould and Deacon Jonathan Cochran; and the first minister, Rev. Stillman Pratt, began to preach as early as April 25th of that year, in Deacon Cochran's house, on Grove Street. The first house of worship, costing \$3500, was erected on Foster Street, and dedicated May 17, 1849. This was built largely through the efforts and solicitations of Deacon Cochran and Dr. Gould, both of whom worked upon its foundation with pick and shovel. Deacon Cochran died January 6, 1885, nearly ninety-four years of age. Their church edifice was remodeled, enlarged and re-dedicated January 5, 1889, at a cost of \$10,000, and was burned February 17, 1869. The present building, costing \$42,000 was dedicated October 26, 1870. Mr. Pratt resigned his pastorate in April, 1851, and was succeeded, January 15, 1852, by Rev. I. H. Northrup. He resigned the following March, and January 12, 1854, the Rev. Alexander J. Sessions was installed. He held the pastorate until July, 1858, and was followed by Rev. Edward H. Buck, who was installed in September, 1859. He died January 31, 1861. Rev. Henry A. Stevens was ordained September 12, 1861, and remained until May, 1868. The present pastor, Rev. Albert G. Bale, was ordained December 3, 1868. On the 2d of December, 1888, Mr. Bale preached an historical sermon, it being the twentieth anniversary of his settlement, and the fortieth of the church. In 1883 a parsonage costing \$6000 was built on the old church lot, which joined the land purchased for the present edifice.

The Sabbath-school was established before the first church was built, and, by the kindness of the Boston and Maine Railroad Company, met in the old passenger depot at the centre station, where the church services were also held for a considerable time. The present membership of the church is 385; and of the Sabbath-school, 472.

THE FIRST UNIVERSALIST SOCIETY of Melrose was organized February 10, 1849. Previous to this there had been occasional preaching by Universalist ministers, first in the little school-house at the corner of Lebanon and Upham Streets, then in the school-house on Upham Street, where now stands the grammar school-house, and which was built in 1829. The first settled pastor Rev. Josiah W. Talbot was installed March 18, 1849. Under his untiring energy and perseverance a church building was erected and dedicated January 1, 1852, with a sermon by Rev. A. A. Miner, D.D. Mr. Talbot resigned the pastorate November 13, 1853, and was succeeded by Rev. Mr. Cooledge, who remained until 1856, when Rev. J. S. Dennis was installed as his successor, April

1, 1856; Mr. Dennis resigned in 1858, and in November of that year Rev. B. F. Bowles was installed. He remained only until the end of 1859. Rev. George H. Deere commenced his labors September, 1860, continuing until 1862, when he was succeeded by Rev. George W. Quimby, who remained until 1864. Rev. Selden Gilbert was settled in 1865, remaining one year. From 1866 until 1869, Rev. B. H. Davis was the pastor, being succeeded by Rev. John N. Emery September 1, 1869. In 1872 Mr. Emery resigned and was succeeded by Rev. J. E. Bruce, who remained until 1875. March 6, 1876, Rev. William A. Start was installed, and he resigned in December, 1877. Rev. Charles A. Skinner was settled as pastor September, 1878, who resigned May 1, 1881. He was succeeded by Rev. Richard Eddy, D.D., who was installed in September, 1881. He remained until September 1, 1889, when he resigned. On November 14, 1889, Rev. Julian S. Cutler, the present pastor, was installed. During the latter part of Dr. Eddy's pastorate it was decided to build a new church. The old one was sold, moved to another part of Essex Street and converted into our present Franklin Hall. The new church edifice was dedicated March 24, 1889; sermon by Dr. Eddy and the address to the people by Rev. A. A. Miner, who preached the dedicatory sermon for the old church January 1, 1852. Present membership of the church 62, of the Sabbath-school 167.

THE TRINITY EPISCOPAL CHURCH was formed in 1856. Beginning April 13th, five services were held in the parlor of Mrs. Theresa Rice, on Lake Avenue, after which they were held in Lyceum Hall, Main Street. The first rector was Rev. William H. Munroe, who organized the Sunday-school and remained until 1862, when he resigned. He is now the rector of Christ Church, Boston. During his pastorate a church edifice was erected on Emerson Street, which was consecrated March 25, 1860, by the Rt. Rev. Manton Eastburn, Bishop of Massachusetts. Mr. Munroe's successor was Rev. John B. Richmond, who remained until July 1868. Rev. Robert Ritchie succeeded and remained one year. Rev. Charles Wingate was chosen rector June 13, 1870, resigning in 1876. During a year's absence of Mr. Wingate in Europe, Rev. Samuel P. Parker had charge of the parish. April 27, 1876, Rev. Henry A. Metcalf was chosen rector, remaining until 1880, when he was succeeded by Rev. Charles L. Short, holding his first services December 21, 1880. He was pastor until May, 1888. June 21, 1887, a new stone church was consecrated. It was built by the Tyer family as a memorial to Henry George, Elizabeth, and Catharine Louise Tyer. Its cost was \$28,467.40. Under one of the trusses on the south side is placed a carved stone from the ruins of Melrose Abbey, Scotland, obtained through the efforts of the late William L. Williams.

The present rector, Rev. Charles H. Seymour, was settled over this church September 12, 1888.

Present number of communicants, 120; membership of Sabbath school, 101.

UNITARIAN CHURCH.—The first permanent movement for the establishment of a Unitarian Church was made in 1866, when services were begun in Concert Hall, on Main Street, by Rev. W. P. Tilden, under the auspices of the American Unitarian Association. Soon after the Unitarian Congregational Society of Melrose was organized, in July, 1867. It continued to hold services in Concert Hall for several years; having for pastors, beside Mr. Tilden, Revs. John D. Wells, John A. Buckingham, William Silsbee and William S. Barnes, who left the Baptist denomination and was settled over this church for a few months, resigning in January, 1869. July 7, 1869, Rev. A. S. Nickerson was installed as pastor and resigned in April, 1870. At this time, while without a settled minister, a new church was built on the corner of Emerson and Myrtle Streets, and dedicated May 1, 1872. Services had been continued meanwhile by the friendly offices of a number of pastors. The first minister to be settled in the new church was Rev. Daniel M. Wilson, who was installed November 15, 1872. He resigned March 1, 1876, and is now settled at Quincy, Mass. From September 1, 1878, to September 1, 1881, Rev. Nathaniel Seaver, Jr., was the pastor. Rev. Henry Wescott was settled over this parish in conjunction with the newly-formed one in Malden, November 1, 1881. He died July 17, 1883, much lamented. A handsome memorial volume was published soon after his death, containing a number of his sermons and a memoir by John O. Norris. The Rev. John H. Heywood, forty years pastor at Louisville, Ky., was installed September 7, 1884, remaining until September 1, 1889, when he resigned and returned to his old home in Louisville. The present pastor Rev. Joseph H. Weeks, was installed February 7, 1890. The membership of the church is 100, of the Sabbath-school 102.

ROMAN CATHOLICS.—Until 1873 the Catholics of Melrose were included in the parish of Malden and Medford, when it was set apart as a separate parish under the care of Rev. W. H. Fitzpatrick. The church edifice of the First Baptist Society was purchased and removed to Dell Avenue and used in October of the same year. Previous to this, May 1, 1870, a Sunday-school had been organized and had held its services in Freemason's Hall; and a Catholic service, or Mass, had been held on Grove Street, December 25, 1854. Mr. Fitzpatrick was succeeded a few years after the organization by the present incumbent, Rev. Dennis J. O'Farrell.

There are two temperance societies connected with this church—the Loyal Temperance Cadets and the Catholic Total Abstinence Society.

THE HIGHLANDS CONGREGATIONAL CHURCH was organized September 29, 1875, with Rev. D. A. Morehouse as its pastor. Preaching services had been held

quite regularly for several years previous to this, in the chapel corner of Franklin and Tremont Streets, the gift of Deacon George W. Chipman. Here the Highland Union Sunday School also held regular sessions for many years. November 19, 1876, the present pastor, Rev. John G. Taylor, began his pastorate. The same year a movement was begun to build a church. The edifice, situated on Franklin Street, was finished and occupied September 29, 1880. An additional chapel was built in 1885, and the total cost of the building has been \$12,500. In 1883 Mr. Taylor went abroad for fourteen months, and during his absence the Rev. Henry Bates officiated as pastor. Present number of members of the church, 130; of the Sunday-school, 259.

Soon after the establishment of the Boston Rubber Shoe Company's works, at the Fells village, in 1882, the First Baptist Church organized a Sunday-school, and began to hold religious services. On the 25th of January, 1889, the Fells Baptist Church was organized with 26 members. The pastor is Rev. William H. Hackett, who had officiated for some time previous to the organization of the church. The present membership is 71; and that of the Sunday-school, 133. Both church and Sunday-school meet in a hall at the corner of Main Street and Goodyear Avenue, the property of the Boston Rubber Shoe Company, free of all charge. The hall was built soon after the works were established, and has always been placed at the disposal of this religious movement; and in it was kept the Converse School previous to the building of the new school-house on Washington Street for the Fells District.

All of these churches have their auxiliary societies, some thirty in number; among them, Social Circles, Missionary Societies both foreign and home, Young People's Society of Christian Endeavor and the Epworth League.

Initiatory measures have been taken with a view of establishing a Young Men's Christian Association; there was one formed in 1858, but it was not of long duration.

SCHOOLS.—The only school in Melrose for many years was held in the plain, unpainted district school-house, which was sold to the Protestant Methodist Society in 1828. It was built in 1800, was twenty by twenty-five feet in size and was situated on a knoll on the old road, now Lebanon Street, about a dozen rods south of "Upham Lane," now Upham Street. In this old school-house Robert Gerry, who died in Stoneham, April 1, 1873, in his ninetyeth year, taught school during the winter season for twenty-four years in succession, beginning in 1803. After this house was sold, a new one was built on Upham Street, in 1828, by the schoolmaster, Mr. Gerry, for the town of Malden. This was burned about the year 1845; and the one built on its site was the only school-house Melrose had when it was incorporated; in it was kept a primary, intermediate and grammar school. This

house was burned in April, 1874, and succeeded by the present structure, the "Centre Grammar School." The High School building on Emerson Street was erected in 1869. Melrose now has eleven school-houses, with thirty-two teachers. The amount of money appropriated for schools for the year 1890 was \$28,700. The amount of the "Town Grant" for schools in 1851 was \$1200; and there was received from the State School Fund \$55.90, making a total of \$1255.90 expended for school purposes.

CHAPTER XVII.

MELROSE—(Continued).

Military History—Societies, Associations, Clubs, etc.

MILITARY HISTORY.—Many Melrose men were engaged in the Revolution. Malden, of which Melrose was then a part, was a very patriotic town, and sent forth not only her sons, but several spirited manifestoes, before and during the war. So eloquent, forcible and patriotic were her "Instructions of the town to its Representative, Passed May 27, 1776," that Chief Justice Marshall quoted them in his "Life of Washington." Among the sentiments expressed were these: "It is now the ardent wish of ourselves that America may become *Free and Independent States*. . . . Unjustifiable claims have been made by the king and his minions, to tax us without our consent. These Colonies have been prosecuted in a manner cruel and unjust to the highest degree. The frantic policy of Administration hath induced them to send Fleets and armies to America, that by depriving us of our trade, and cutting the throats of our brethren, they might awe us into submission and erect a system of despotism which should so far enlarge the influence of the Crown as to enable it to rivet their shackles upon the people of Great Britain. . . . We, therefore, renounce with disdain our connection with the Kingdom of Slaves; we bid a final adieu to Britain, . . . and we now instruct you, Sir, to give them the strongest assurance, that if they should declare America to be a Free and Independent Republic, your constituents will support and defend the measure to the *Last Drop of their Blood and the Last Farthing of their Treasure*."

In Captain Benjamin Blaney's company of Malden men, which went, on the 19th of April, "to resist the ministerial troops," were the following Melrose men: Sergt. Jabez Lynde, Nathan Eaton, Joseph Lynde, Jr., Ezra Howard, John Vinton, Benjamin Lynde, William Upham, Ezra Upham, John Grover (3d), Unite Cox, Joseph Barrett, Jr., Phineas Sprague, John Grover, Jr., John Gould, Phineas Sprague, Joseph Lynde and John Pratt. There was hardly a man living in North Malden at that time, who was able to bear arms, who

did not start as a "minute-man" when the alarm was sounded.

Thomas, Timothy and Ezra Vinton lived at the Highlands and went in Captain Samuel Sprague's company from Stoneham. "After the men had left for Concord, the women, fearing that they might suffer for want of food, filled some saddle-bags full of provision, put them upon an old horse owned by Phineas Sprague, and Israel Cook mounted the horse and started for Concord. When near the place, fearing that he might meet the British on their return, he turned into a by-road to avoid them. They soon came in sight, and discovered him. One of the soldiers left the ranks, crossed the field, shot at Cook and killed the horse, and then hastened back to the ranks. Cook, nothing daunted, shouldered the saddle-bags, and trudged on till he met the men, who were sadly in want of something to eat."¹

Melrose took an honorable part in the Great Rebellion of 1861-65. Some of her men were in the service as soon as any after the time Fort Sumter was bombarded, and continued until the end of the war. When Senator Wilson telegraphed to Governor Andrew, April 15th, for twenty companies of militia to be sent immediately to Washington, for three months' service, five Melrose men immediately enlisted—George W. Batchelder, Gordon McKay, Thomas Smith and William Wyman, in Company B, Fifth Massachusetts Regiment, and Seth Morrison in the Fourth Regiment. Of these, all that were in the Fifth Regiment entered the service again in the three years' regiments.

May 3, 1861, President Lincoln issued his second call for troops, for three years' service, and on the same day the selectman issued a warrant for a town-meeting, which was held in Concert Hall, May 6th. It was then

"Voted, that the town of Melrose appropriate the sum of \$3000 for the relief of the families of the citizens of Melrose now absent in the service of the United States, or who may hereafter volunteer into the service of the United States or the State of Massachusetts; also to aid volunteers of the town in their equipment, and to give such relief in the premises as the exigencies and necessities of each case may require. Also voted that above all other appropriations the sum of Fifteen dollars per month be paid to those persons having families and the sum of Ten dollars per month to those who are single during their time of service in the war now pending. Also voted that the Treasurer be authorized to borrow such sums of money upon the credit of the town as may be wanted from time to time to cover the appropriations in the vote just passed."

On that evening, or immediately after, there were sixteen enlistments in three different regiments, fourteen of which were in the Thirteenth Massachusetts Regiment. On a Sunday evening previous to the departure of this regiment these brave boys, from our best families, assembled in the Baptist Church, and received from its pastor, the Rev. James Cooper, a Testament, on the fly-leaf of which was written, "God and our Country." From that time on throughout

¹ Artemas Barrett, in the *Melrose Journal*.

the war, in answer to the various calls for troops, Melrose continued to furnish its quota of men; and at the end of the Rebellion it was found that she had not only filled its quotas, for three years', nine months', one hundred days' and ninety days' men, but had exceeded the same to the number of seventy-four men:

"PROVOST-MARSHAL'S OFFICE, 6TH DISTRICT, MASS.,

"LAWRENCE, December 31, 1864.

"This is to certify that, as appears by the records of this office, the surplus of the Town of Melrose, over all calls, is seventy four (74) men.

"H. G. HERRICK,

"Captain and Provost-Marshal, 6th Dist., Mass."

The whole number of men furnished by Melrose for the war, for the several terms of service, of all arms, including both army and navy, and including the eight citizens who enlisted on other quotas, was 454. Of these, 21 enlisted men lost their lives; 5 were killed on the battle-field, 1 was accidentally shot, 13 died of disease contracted in the service, and 2 died in rebel prisons. The number of commissioned officers furnished by Melrose* was eighteen, two of whom lost their lives, one on the field of battle, and one died of disease contracted in the service.

The names of these twenty-three "unreturning braves" from Melrose are as follows: Lieut. George James Morse, Lieut. George Thomas Martin, Henry Franklin Fuller, Martin Greene, William Henry Macey, Sydney Bradford Morse (2d), William Francis Barry, John Parker Shelton, Thomas H. Stevens, Jonas Green Brown, Benjamin Lynde, Nathan H. Brand, Richard Lever, Augustus Green, Edmund Wallace Davis, Albert Waterston Crockett, James Roland Howard, Francis Peabody, George Elwin Richardson, Benjamin F. Wilde, John Eastman Stilphen, George Warren Lynde and William F. Krantz.

At the battle of Galveston, Texas, January 1, 1863, twenty-five Melrose men in Company G, Forty-second Massachusetts Regiment, were taken prisoners; but their imprisonment was of short duration. Besides these the following were taken prisoners at different times, and suffered the terrible hardships of rebel prisons; Henry H. Jones, Col. Archibald Bogle, George E. Richardson, Albert W. Crockett, William H. Eastman, Edmund W. Davis, George W. Batchelder, Benjamin F. York, Frederick W. Krantz, George W. Elliot, John E. Quinn and Henry Stone. Ten of these lived to return to their homes, and two, Richardson and Crockett, were starved to death at Salisbury and Andersonville.

Under the "Enrollment" or "Conscription Act," a draft was ordered to be made in July, 1863, and forty-nine men were drawn from Melrose. Of these, three furnished substitutes, four paid commutation, and the rest were exempted for various causes. This was the only draft of effect that took place in Melrose. Twenty-four persons were drawn May 17, 1864, but as there was no deficiency at this time, all the quotas

of our town having been filled, the drafted persons were not required to appear for examination.

In June, 1864, a citizens' committee, consisting of Wingate P. Sargent, Daniel Norton, Jr., Levi S. Gould, Isaac Emerson, Jr., Thomas A. Long and Joseph D. Wilde, was appointed to raise money for recruiting purposes; and by the spirited and liberal action of the citizens, the sum of \$5650 was raised and passed over to the recruiting committee, consisting of the selectmen, John H. Clark, William B. Burgess, and George M. Fletcher, and Stephen W. Shelton, Isaac Emerson, Jr., Rufus Smith and Charles H. Isburgh.

Throughout the war constant and continued action for the relief of soldiers and their families was taken by the town and by private citizens.

SOCIETIES, ASSOCIATIONS, CLUBS, ETC.—Of temperance organizations there are many, the oldest one being *Guiding Star Lodge No. 28, Independent Order of Good Templars*, which was organized in 1861, and has a membership of fifty-eight; *Siloam Temple of Honor, No. 24*, in 1866, with seventy-five members; *Siloam Social, No. 6*, in 1867, 150 members; *Melrose Women's Christian Temperance Union*, in 1882, 410 members, active and honorary; *Young Woman's Christian Temperance Union*, in 1887, seventy members; *Temperance Wide-Awakes*, in 1882, 480 members; and *Juvenile Temple, No. 16, Faithful Workers Independent Order of Good Templars*, in 1888, eighty-nine members. Previous to the organization of the I. O. of G. T. there had been the "Sons of Temperance," members of which, after disbandment, joined other societies. In addition to these religious and temperance organizations, Melrose has a large number of clubs, societies and associations of other kinds. It is safe to say that no town of its size in New England has as many.

In the Masonic Fraternity there is the *Wyoming Lodge*, which was organized in 1856, which has 183 members; the *Waverly Royal Arch Chapter*, in 1863, 208 members; *Hugh de Payens Commandery of Knights Templar*, in 1865, 162 members; and the *Eastern Star, No. 14*, in 1861, sixty-six members. They all meet in the Masonic Temple, on Wyoming Avenue, which was built and dedicated to Masonic uses in 1866, by the Waverly Masonic Association.

Of the Independent Order of Odd Fellows there are two bodies: the *Melrose Lodge, No. 157*, organized in 1871, and has 140 members, and the *Daughters of Rebekah, Golden Rule Degree Lodge, No. 23*, in 1874, has forty members.

Of the social, musical and literary clubs, the oldest is the *Roundabout Club*, which was organized in 1873. It has a membership of nearly 100, and meets during the winter, fortnightly. The *Centennial Club* meets in the same manner, was organized in 1875, and has a membership of seventy. The *Avon Club* has a membership of sixty, and was organized in 1878. The *Melrose Women's Club*, organized in 1882, has 110

members and meets semi-monthly. *The Franklin Fraternity*, in 1863, has twenty-eight members, and now meets but yearly. *The Alpha Local Circle, Chautauqua Scientific Society*, in 1884, eighteen members, meets twice a month. *The Social Circle*, in 1875, fifty-five members, meets twice a month. *The Unity Club*, in 1887, sixty-two members. *Melrose Orchestral Club*, in 1856, fifteen members. *Melrose Choral Society*, in 1888, sixty-four members.

Among the large number of insurance and benevolent societies that have lodges, are these: *Bethlehem Council, No. 131, Royal Arcanum*, established in 1876, and has 148 members; *Guardian Lodge, No. 406, Knights of Honor*, in 1876, thirty-three members; *Washington Council, American Legion of Honor, No. 89*, in 1880, forty-eight members; *Wonongo Tribe, No. 60, Independent Order of Red Men*, in 1888, seventy members; *International Benevolent and Fraternal Society*, in 1888, forty members; *Middlesex Council, No. 75, United Order of Friends*, in 1883, seventy-five members; *Melrose Commandery, No. 99, United Order of the Golden Cross*, in 1880, seventy-five members; *Cotton Mather Colony, United Order of Pilgrim Fathers* in 1887, seventy members; *Melrose Council, No. 125, Home Circle*, in 1888, thirty-seven members; *Iron Hall, Branch No. 491*, in 1887, eighteen members; *Sisterhood's Branch, Iron Hall*, in 1887, twenty-five members; *Garfield Lodge, No. 32, Associated Order of United Workmen*, in 1881, ninety-five members; *Knights and Ladies of Honor, No. 1239*, in 1887, fourteen members; *Melrose Assembly, No. 164, Royal Society Good Fellows*, in 1888, twenty-one members.

The two great political parties are each represented: *The Republican Club* has a membership of 150, and the *Jefferson Club* has 50 members. *The Melrose Woman's Suffrage League* was organized in 1885, and has 180 members.

U. S. Grant Post 4, G. A. R., was organized in 1867, and has 68 members; *William F. Barry Camp, No. 79, Sons of Veterans*, in 1887, 45 members; *U. S. Grant, No. 16, Women's Relief Corps*, in 1882, 71 members.

The Melrose Improvement Society, organized in 1881, with a membership of 342, has done much in the way of setting out shade-trees and improvement of streets; the *Melrose Highlands Business Men's Association*, organized in 1888, has 75 members.

The Melrose Athletic Club occupies a handsome suite of rooms in Eastman's Block, on Main Street, was organized in 1883, and has a membership of 150; *The Pastime Athletic Club*, in 1888, 27 members; *Melrose Club*, in 1885, 145 members; *Rifle Club*, in 1884, 25 members; *Lawn Tennis Club*, in 1885, 40 members; *Ashland Tennis and Social Club*, in 1885, 30 members. There is a *Melrose Base Ball Association*, with a capital stock of \$2500, and a half dozen baseball clubs. There are still other minor associations.

CHAPTER XVIII.

MELROSE—(Continued).

BIBLIOGRAPHY AND MISCELLANEOUS.

MELROSE is the home of many writers. Their works are of many kinds—historical, biographical, theological, political, scientific, electrical, educational, medicinal, musical, fiction, etc. It will be impossible to enumerate all, but some of the most important will be referred to, giving the authors' names alphabetically.

REV. JOHN GREENLEAF ADAMS, D.D. was a Universalist minister. Born in Portsmouth, New Hampshire, July 30, 1810; died at Melrose Highlands, May 4, 1887. He was a prolific writer. Among his most important works are "Memoir of Thomas Whittemore," "Universalism of the Lord's Prayer," "Talks About the Bible," "Fifty Notable Years," and "The Inner Life." For many years he was editor of various Sabbath-school papers of the Universalist denomination.

CAPTAIN GEORGE PICKERING BURNHAM was born in Boston, April 24, 1814. He came to Melrose in 1850, the year in which it was incorporated. His literary career covers a period of over fifty years. In journalism he has been reporter, sub-editor, editor, and the writer of many sketches and stories. He has given much attention to a specialty in fowls and birds, and has written a dozen books connected with that subject, including his humorous treatment of "The History of the Hen Fever," published in 1855, and which had a very extensive sale. In this same year he also wrote an anti-slavery story, entitled "The Rag-Picker; or, Bound and Free." His other writings include "Memoirs of the United States Secret Service," "American Counterfeits," and "A Hundred Thousand Dollars in Gold."

COLONEL SAMUEL ADAMS DRAKE has written many works of an historical character. He was born in Boston, December 20, 1833. At the breaking out of the Great Rebellion he was a resident of Kansas, and was appointed colonel of the Seventeenth Regiment of Kansas Volunteer Infantry, serving throughout the war. His first book was "Old Land-marks and Historic Personages of Boston," issued in 1873. This was followed by "Historic Fields and Mansions of Middlesex," "Nooks and Corners of the New England Coast," "Bunker Hill," "General Israel Putnam, the Commander at Bunker Hill," "History of Middlesex County," "The Heart of the White Mountains," "Around the Hub," "New England Legends and Folk Lore," "Our Great Benefactors," "The Old Boston Taverns and Tavern Clubs," "The Making of New England," "The Making of the Great West," "Burgoyne's Invasion of 1777," and "The Taking of Louisbourg." He has written one historical novel, entitled "Captain Nelson: a Romance of Colonial Days."

Besides contributing articles to a number of the magazines, he has written the articles, "Florida," "Georgia" and "Sebastian Cabot," for the "Cyclopædia Britannica."

REV. RICHARD EDDY, D.D., was born in Providence, R. I., June 21, 1828. For several years he was a pastor of the Universalist Church. Many of his sermons have been printed. His larger works are: "History of the Sixtieth Regiment, New York State Volunteers," of which he was chaplain; "Universalism in America," "Alcohol in History" and "Alcohol in Society." He has been editor of different newspapers and is now editor of the *Universalist Quarterly and General Review*.

HON. DANIEL WHEELWRIGHT GOOCH was born in Wells, Maine, January 8, 1820. Graduated at Dartmouth College in 1843, and admitted to the Suffolk Bar in 1846. Came to Melrose (then North Malden) in 1848. Elected representative to the General Court in 1852, and a member of the Constitutional Convention in 1853. He was an adherent of the Free-Soil party until the formation of the Republican party, with which he has ever since acted. He has several times been elected a Representative to Congress; was a member of the Thirty-fifth, Thirty-sixth, Thirty-seventh and Thirty-eighth Congresses, in the latter serving as a member of the Congressional Committee on the Conduct of the War, and was chairman on the part of the House; its four years of investigations were printed in several volumes. Having been elected to the Thirty-ninth Congress, he resigned, September 1, 1865, to accept from President Johnson the appointment of naval officer for the port of Boston, which position he held for a year. In 1868 he was elected a delegate to the Chicago Convention. In the Forty-third Congress he again served as Representative for the Fifth Massachusetts District. From 1875 to 1886 he was pension agent at Boston, after which he resumed the practice of the law. A number of his legal arguments have been printed, notably those in the "Hoosac Tunnel," "Troy & Greenfield Railroad" and "Joseph M. Day, Judge of Probate," cases. Many of his Congressional speeches were printed in pamphlet form; among them were "The Lecompton Constitution and the Admission of Kansas into the Union," "Polygamy in Utah," "The Supreme Court and Dred Scott," "Organization of the Territories," "Any Compromise a Surrender," "Recognition of Hayti and Liberia" and "Secession and Reconstruction."

FREDERICK KIDDER was born in New Ipswich, N. H., April 16, 1804, and died at Melrose December 19, 1885, in his eighty-second year. Went to Boston in 1822, and with his brother was several years in business in Wilmington, N. C.

In 1845 Messrs. Benjamin F. and Charles Copeland, together with Mr. Kidder, bought of the Barings, of London, a tract of land on the Schoodic Lakes, in

Eastern Maine, containing over a hundred thousand acres, being more than thirty miles in extent. This proved to be a very profitable investment, and would have been much more so had they continued to hold the land for a while longer than they did. He was one of the trustees of the Public Library from 1870 to 1882, most of the time chairman.

His first literary work was a history of his native town, New Ipswich, N. H., which was issued in 1852. In that early day of town histories, this was one of the most complete and thorough works that had appeared. His other volumes are: "The Expedition of Captain Lovewell, and his Encounters with the Indians," "Military Operations in Eastern Maine and Nova Scotia during the Revolution," "History of the First New Hampshire Regiment in the War of the Revolution," and "History of the Boston Massacre, March 5, 1770." His magazine articles reprinted in pamphlet were: "The Adventures of Captain Lovewell," "The Abenaki Indians," "The Swedes on the Delaware," and "The Discovery of North America by John Cabot. A First Chapter in the History of North America."

ROBERT FOWLER LEIGHTON, born in Durham, Maine, January 23, 1838, was for several years principal of the High School of Melrose, during which time he wrote several educational works: "Greek Lessons," "Latin Lessons," and "Harvard Examination Papers." Since then he has given his attention to historical works, and has written a "History of Rome," "History of Greece," "Cicero's Select Letters," and "Historia Critica M. T. Ciceronis Epistularum ad Familiares;" this was published in Latin, in Leipsic, Germany.

MARY ASHTON LIVERMORE was born in Boston, December 19, 1821; was a teacher in Charlestown and Duxbury, Mass. In 1857 her husband, Daniel P., established the *New Covenant*, a Universalist journal of which she became associate editor for twelve years, during which time she frequently contributed to periodicals of her denomination and edited the *Lily*. When the Rebellion broke out she became connected with the United States Sanitary Commission, headquarters at Chicago, performing a vast amount of labor of all kinds—organizing auxiliary societies, visiting hospitals and military posts, contributing to the press, answering correspondence, and the thousand and one things incident to the wonderful work done by that institution. She was one that helped organize the great fair in 1863, at Chicago, when nearly \$100,000 was raised, and for which she obtained the original draft of the Emancipation Proclamation from President Lincoln, which was sold for \$3000. As she says in her extremely interesting volume "My Story of the War": "Here were packed and shipped to the hospitals or battle-field 77,660 packages of sanitary supplies, whose cash value was \$1,056,192.16. Here were written and mailed letters by the ten thousand, circulars by the hundred thou-

sand, monthly bulletins and reports. Here were planned visits to the aid societies, trips to the army, methods of raising money and supplies, systems of relief for soldiers' families and white refugees, Homes and Rests for destitute and enfeebled soldiers, and the details of mammoth sanitary fairs."

When the war was over she instituted a paper called the *Agitator*, which was afterwards merged in the *Woman's Journal*. Of this she was editor for two years and has been a frequent contributor to it since. On the lecture platform she has had a remarkable career, speaking mostly in behalf of the woman suffrage and the temperance movements. A few years ago she was "one of the four lecturers that were most in demand and that commanded the largest fees, the other three being men." Many years she has traveled 25,000 miles annually, speaking five nights each week for five months of the year.

Her printed volumes are: "Thirty Years Too Late," first published in 1847 as a prize temperance tale, and republished in 1878; "Pen Pictures; or, Sketches from Domestic Life;" "What Shall We Do with Our Daughters? Superfluous Women, and Other Lectures;" and "My Story of the War. A Woman's Narrative of Four Years' Personal Experience as Nurse in the Union Army, and in Relief Work at Home, in Hospitals, Camps and at the Front during the War of the Rebellion." Of this work one has well said: "Should every other book on the war be blotted out of existence, this one would completely reflect the spirit and work of the Women of the North."

For "Women of the Day" she wrote the sketch of the sculptress, Miss Anne Whitney; and for the "Centennial Celebration of the First Settlement of the Northwestern States, at Marietta, Ohio, July 15, 1788," she delivered the historical address.

REV. DANIEL PARKER LIVERMORE, born in Leicester, Mass., June 17, 1818, Universalist minister, besides editing the *New Covenant* for a dozen years and contributing to newspapers and magazines, has published several pamphlets of a denominational character, and a half-dozen on the subject of "Woman Suffrage," in favor of which he strongly argues.

THOMAS D. LOCKWOOD, born in England, December 20, 1848, is an eminent electrician, an acknowledged authority in all matters pertaining to electrical telephony. He is electrician in charge of all matters connected with patents, and the collection and collation of electrical information for the American Bell Telephone Company. Besides very many articles contributed to the electrical press, he has had published three volumes: "Electricity, Magnetism and Electric Telegraphy," "Electrical Measurement and the Galvanometer," and "Practical Information for Telephonists."

GILBERT NASH was born in Weymouth, Mass., April 22, 1825, and died there April 13, 1888. He lived many years in Melrose. He wrote a history of

his native town, a "Memoir of General Solomon Lovell," and a volume of poems, entitled "Bay Leaves."

WILLIAM FREDERICK POOLE, A.M., LL.D., the eminent librarian and bibliophile, was born in Salem, Massachusetts, December 21, 1821. While in Yale College he became assistant librarian, which was the beginning of a life-long profession. He has been the librarian of the Mercantile Library Association of Boston, the Boston Athenæum, the Public Library of Cincinnati, the Public Library of Chicago, and is now in the Newberry Library of Chicago, founded by the munificence of the millionaire, Walter L. Newberry. For many years he lived in Melrose during which time his pen was ever busy. During the controversy between the Webster and Worcester Dictionaries, in 1855-56, he published three pamphlets championing Webster as being the best authority. He has issued several pamphlets connected with "Cotton Mather and Salem Witchcraft," and wrote the chapter on "Witchcraft in Boston," for the "Memorial History of Boston," issued in 1880; and for Justin Winsor's "Narrative and Critical History of America," vol. 6, he wrote the chapter entitled "The West, From the Treaty of Peace with France, 1763, to the Treaty of Peace with England, 1783." In the discussion concerning the historical claims of "The Popham Colony," he wrote many articles and issued one pamphlet. In 1867, a new edition of Edward Johnson's "Wonder-working Providence of Zion's Saviour in New England," was published for which he wrote an introduction and numerous notes. In 1874-75, in Chicago he edited a monthly literary paper called *The Owl*, which was succeeded by *The Dial*, to which he has been a constant contributor, chiefly in historical criticism, in which he has few equals. "In this department his work has always been in the nature of a plea for judicial fairness and candor in historical writing, and his pen has constantly been on the alert to discover and expose the pet fallacies of the villifiers of the fathers of New England, and of all those with whom the demands of rhetoric seem louder than those of truth." His best known work is "Poole's Index to Periodical Literature," which was first issued in 1848, as "Index to Subjects in the Reviews, and other Periodicals to which no Indexes have been published," enlarged as "An Index to Periodical Literature," in 1853, and again enlarged and issued in 1882. To this supplement is to be published every five years. This "is a work of the times, for the times; the vast and hitherto pathless continents of periodical literature are surveyed, systematized, and made accessible." Dr. Poole has been president of the "American Historical Association," and of the "American Library Association."

One of the most prominent and best-known citizens was Hon. Samuel Edmund Sewall, who was born in Boston November 9, 1799, and died, in Boston De-

ember 20, 1888. He graduated from Harvard College in 1817. He came to North Malden in 1846, when it had but two or three hundred inhabitants. He was elected State Senator from Stoneham in 1852, as his house was just over the line from Melrose; but this territory was detached from Stoneham and joined to Melrose in 1853. He was identified with the anti-slavery movement from its beginnings, being one of the few who joined William Lloyd Garrison when he came to Boston in 1830. He was an active member of the Massachusetts Anti-slavery Society and the National Anti-slavery Society. Upon the organization of the Liberty party he was for two years its candidate for Governor. He acted with that and the Free-Soil party until they were merged in the Republican party. He was ever foremost in advocating the passage of laws for the benefit of women, and while in the Senate he drafted a bill which became a law, giving married women the right to hold property. His only printed work is a pamphlet entitled "Legal Condition of Women in Massachusetts," which was first issued in 1868; then revised in 1870, again in 1875 and again in 1886. Many years ago he was editor for two years of the *American Jurist and Law Magazine* (a quarterly). He also edited, in connection with Willard Phillips, two editions of Sir John Bayley's *Summary of the Law of Bills of Exchange, Cash Bills and Promissory Notes*.

Many other books and pamphlets have been issued by Melrose writers, which cannot here be enumerated.

Melrose has two weekly newspapers: *The Melrose Journal* and *The Melrose Reporter*. The former established in 1870, the latter in 1887. In 1856, a small monthly paper, called the *Melrose Advertiser*, was published by Messrs. Severy & Co., for about a year when it was merged in a Malden paper.

The bibliography of writings pertaining particularly to Melrose is brief:

"The Melrose Memorial, The Annals of Melrose, County of Middlesex, Massachusetts, in the Great Rebellion of 1861-65, By Elbridge H. Goss, Privately Printed by Subscription 1868."

"The Centennial Fourth. Historical Address Delivered in Town Hall, Melrose, Mass., July 4, 1876, by Elbridge H. Goss. Also, The Proceedings of the Day. Privately Printed, Melrose, 1876."

"History of Melrose, by Elbridge H. Goss," for the "History of Middlesex County, Massachusetts," Edited by Samuel Adams Drake, who wrote for it the "General History of the County," 1880.

Various communications to the "*Malden Messenger*" during 1868, and since then to our local papers, containing copies of original documents and "Historical Notes" by Artemas Barrett.

"The Origin and Present Condition of Free-Masonry in Melrose. Prepared by direction of the Waverly Masonic Association, for the purpose of being deposited in the Corner-Stone of their new edifice,

at Melrose, June 25, A.D. 1866. By Levi S. Gould, Past Master of Wyoming Lodge, 1866.

In 1832, the Rev. S. Osgood Wright preached "An Historical Discourse," at Malden on Thanksgiving Day, which contained "A Sketch of the History of that Town from the Settlement to the Present Time," in which two or three pages are devoted to "that part of the town, called the North End."

SPOT POND WATER.—Nestled amid the higher lands of Stoneham and Medford lies Spot Pond; so named by good old Governor Winthrop, in February, 1632, when he, with others, traversed its surface on an exploring expedition, because "the pond had divers small rocks standing up here and there in it." Originally, it was much smaller than now, but was largely increased by the building of a dam by the Sprague family, which had possession of it for over a hundred years, many of which were spent in litigation in maintaining these rights. "Still this old hero, Timothy Sprague, at great cost and sacrifice of time, always came off victorious. He was greatly annoyed and harassed through his life, which was frequently in danger. But for this unflinching old veteran the dam would long ago have been removed, and the pond have been worthless for the purposes for which it is now used. To the several towns now enjoying this luxury he proved to be a great benefactor; for, in fighting these battles for himself he was laboring to bless future generations, and is deserving of their gratitude."¹

The high-water mark of the pond is one hundred and forty-three feet above marsh level, and its area, when full, is two hundred and ninety-six acres. The purity of its water having been proven by analysis caused Boston to cast wistful eyes toward it, previous to the introduction of Cochichewick water in 1848.

Not until 1867 was any action taken to secure this natural reservoir of water to the inhabitants of the surrounding towns. In that year an act was passed by the Legislature incorporating the "Spot Pond Water Company for the purpose of supplying the inhabitants of said Melrose, Malden and Medford with pure water." More than two years passed away before any action was taken by either of these three towns toward purchasing the franchise of this company—according to one of the provisions in this act—and then almost simultaneous action was taken. At a town-meeting held September 24, 1869, Melrose voted to join with Malden and Medford, and purchased the franchise, and elected the following gentlemen to act as Water Commissioners: Wingate P. Sargent, Jeremiah Martin, Dexter Bryant, Elbridge Green and Joel Snow. A contract to build the water-works was made with Mr. George H. Norman, and on the 25th of August, 1870, the town was supplied with water; and from that day to this our citizens

¹ "Timothy Sprague and Spot Pond," by Artemas Barrett, in *Melrose Journal*, Jan. 31, 1885.

have been blessed with an abundance of water for domestic and manufacturing purposes. The first cost of the water-works was \$100,000. Since then the pipes and hydrants have been extended through many additional streets, a new reservoir and pumping station for the high-service system introduced in 1886, at a cost of about \$39,000, which makes a total net cost of the water-works, January 1, 1890, of \$268,785.77. \$100,000 worth of the water bonds first issued, mature July 1, 1890. The Water Loan Sinking Fund Commissioners will then have in hand \$50,000. The total length of main and distributing pipes is now nearly forty miles, and there are over seventeen hundred water-takers.

MELROSE PUBLIC LIBRARY.—At a town-meeting, held in Concert Hall, March 27, 1871, the following vote was passed: That the money now in the treasury, refunded to the town by the county treasurer, pursuant to Chapter 250 of the acts of the Legislature in 1869, and all that shall hereafter accrue to the town under said act, be appropriated for a "Public Library and Reading Room." This is what is known as the "dog-tax." Three trustees were also chosen, viz.: Messrs. Frederic Kidder, E. H. Goss and Charles C. Barry. The library was opened November 1st, with 1400 volumes. It was first located in the Waverly Block, near the centre depot, but was removed to its present location in town-hall building, upon its completion, in 1874. A reading room was opened in connection with the library, December 16, 1885. A small annual appropriation, together with the dog-tax, has maintained the institution, and January 1, 1890, there were 8195 volumes and 1143 pamphlets in the library, besides a large number of Congressional Records and United States Government volumes, donated by Hon. D. W. Gooch, not yet catalogued. Number of persons using the library January 1, 1890, 3454. Whole number of volumes issued during the past year, 33,052. Number of persons using the reading-room during the same time, 11,701. Present trustees, Elbridge H. Goss, Charles C. Barry, Ruby F. Farwell, Mary L. Charles and Charles A. Patch.

TOWN HALL.—A handsome brick Town-house was erected at a cost of \$65,000, and dedicated June 17, 1874, with an address by George F. Stone, Esq., now secretary of the Chicago Board of Trade. The tower clock was the gift of Hon. Daniel Russell. Besides the hall and the town officers' rooms, the building accommodates the Public Library and Reading Room, and the Savings Bank.

MELROSE SAVINGS BANK.—The Melrose Savings Bank was incorporated in 1872, but did not organize until the fall of 1874. The total amount of deposits Oct. 1, 1890, was \$383,304.08, with 2218 depositors. Whole number of accounts opened since the bank was established, 4285. Its banking-room is in the town-hall. Its present officers are: Daniel Russell, president; W. Irving Ellis, vice-president; John Larrabee, clerk; Elbridge H. Goss, treasurer; Daniel

Russell, George Hart, W. Irving Ellis, George Newhall, John Larrabee, Daniel Norton, Elbridge H. Goss, Joseph D. Wilde, Charles H. Isburgh, Moses S. Page, Lewis G. Coburn, Samuel S. Bugbee and Seth E. Benson, trustees.

CEMETERIES.—There are three cemeteries in Melrose. The old village cemetery in the centre of the town, on Main street, the Jewish Cemetery on Linwood Avenue, and the Wyoming Cemetery at the south part of the town, which was purchased and dedicated to burial purposes in 1856. This is a beautiful resting-place for the dead, charmingly diversified in scenery, environed with hills, and secluded from residences. It had originally twenty-one acres, but in 1887 it was enlarged by the purchase of the adjoining Pratt farm, consisting of twenty-five acres, at a cost of \$10,000.

RUBBER WORKS.—In 1882 the Hon. Elisha S. Converse purchased what was known as the Joseph Lynde farm, at the southern part of the town, and built thereon the Rubber Works for the Boston Rubber Shoe Company, known as factory No. 2—the works at Edgeworth being No. 1. The Melrose Factory averages to employ 1200 hands, and has a capacity for employing 1400. It is situated on the west side of Main Street, near the Middlesex Fells Railroad Station. On the east side of Main Street, there is a large tract of wild land, a part of which belonged to the Lynde farm, and a part was acquired by subsequent purchase, which Mr. Converse has laid out and beautified, building miles of roads, and named "Pine Banks Park." It is a charming spot through which to roam or drive.

The following citizens have been elected members of the General Court:

REPRESENTATIVES.

John T. Paine, 1851.	Nelson Cochran, 1872.
Daniel W. Gooch, 1852.	Elbridge H. Goss, 1874-75.
Samuel O. Dearborn, 1853.	W. Irving Ellis, 1877-78.
John Vial, 1855.	Joseph D. Wilde, 1879-80.
Guy Lamkin, 1857.	B. Marvin Fernald, 1881-82.
Walter Littlefield, Jr., 1858.	Wingate P. Sargent, 1883-84.
Loren L. Fuller, 1859.	John W. Farwell, 1885-86.
Artemas Barrett, 1861.	John Larrabee, 1886-87.
Isaac Emerson, Jr., 1863-64.	William E. Barrett, 1888-89-90;
Rufus Smith, 1866.	and Speaker of the House of Representatives 1889-90.
Levi S. Gould, 1868-69.	
James C. Currie, 1871.	

SENATOR.—Daniel Russell, 1879-80.

COMMISSIONER OF INTERNAL REVENUE FOR BOSTON DISTRICT.—Frank E. Orcutt.

TOWN OFFICERS FOR 1890-91.

SELECTMEN.—Levi S. Gould, John P. Deering, Charles W. Higgins.
TOWN CLERK.—John Larrabee.
TOWN TREASURER.—George Newhall.
ASSESSORS.—Henry A. Leonard, John B. Norton, Dexter Pratt.
COLLECTOR.—Addison Lane.
WATER COMMISSIONERS.—Wilbur D. Fiske, George L. Morse, William H. Miller.
COMMISSIONERS OF WATERTOWN SINKING FUND.—Daniel Russell, Royal P. Barry, John W. Farwell.
SCHOOL SUPERINTENDENT.—Guy C. Channell.
SCHOOL COMMITTEE.—John O. Norris, John C. Maker, Charles F. Loring, Mrs. Arethusa K. Miller, Mrs. A. B. P. Waterhouse, Mrs. Sarah W. Bradbury.

Benjamin Kissel

AUDITOR.—Frank E. Orcutt, Walter I. Nickerson, Gilbert N. Harris.
OVERSEERS OF THE POOR.—Henry G. Fields, John Singer, Jr., Mrs. Martha D. Bule.

SUPERINTENDENT OF STREETS.—Walter B. Ellis.

REGISTRARS OF VOTERS.—Alfred Hocking, Walter Babb, Victor C. Kirtues, John Larrabee.

WATER REGISTRAR.—Elbridge H. Goss.

BOARD OF HEALTH.—Dr. Erest S. Jack, Frank L. Washburn, George W. Burke.

THEN AND NOW.—The first town-meeting of Melrose was held May 10, 1850, seven days after the date of incorporation, in "Academy Hall," then standing on Berwick Street, and which was afterwards moved to Main Street, where it became "Lyceum Hall," and where it was destroyed, with other buildings, by the fire of August 21, 1870. The warrant had two articles, viz.: "To choose a moderator; to choose all necessary Town Officers for the year ensuing." The warrant for the town-meeting held March 3, 1890, had fifty-three articles to be acted upon. The first town report, issued April 1, 1851, was a small broadside, ten by twelve inches, entitled "Report of the Financial Concerns of the Town of Melrose, from May 20, 1850, to April 1, 1851," and is signed by Jonathan Cochran, Josiah W. Talbot and John Blake, Financial Committee. This is not only a very scarce document, but is something of a curiosity; presenting, as it does, a striking contrast in the town expenses in that day of small things, when compared with those given in the "Reports of the Town Officers of Melrose for the Financial Year ending December 31, 1889."

When incorporated, forty years ago, Melrose had a population of 1260; to-day it has over 8500. It then had 125 dwelling-houses; to-day over 1800. Then our valuation was \$483,446; in 1890 it was \$6,724,705. Then it had one school-house with three schools; now eleven houses with thirty schools. Then three churches; now eleven. Then the old-fashioned well-sweep and pump; to-day Spot Pond water running through its forty miles of streets. It has the illuminating gas, furnished by the Malden & Melrose Gas Co., for house purposes, and the electric lights for the streets. With a Town Hall, Public Library, Savings Bank, Fire Department, with a steam fire-engine, a Choral Union, the Melrose Orchestra, a Lyceum with yearly course of entertainments, many Temperance organizations, Odd-Fellows and Masonic associations, a Grand Army Post, two local papers, a number of literary clubs; with all these institutions and others not here enumerated, situated so near Boston, with railroad facilities unsurpassed, it may well be surmised that Melrose will continue to grow; and at no very distant day will be knocking at the Common-

wealth's door for admission to the rank of one of her cities.

BIOGRAPHICAL.

DANIEL RUSSELL.¹

Daniel Russell, son of Daniel and Mary W. Russell was born in Providence, R. I., on the 16th day of July, 1824, and educated at the public schools of Providence. The necessity of self-support was early impressed upon him, and at the age of seventeen he began real life in his own behalf as a mechanic. For three years he served an apprenticeship at one branch of carriage manufacturing in his native city, and upon graduating from this school he labored in the same place and at Middleborough, Mass., as journeyman for four years, at the end of which time (1847) accompanied by a fellow-workman he moved to Boston and began the business of selling small wares by samples. Two years later he determined to go to California, but the Hon. Nathan Porter offered him employment in Providence, where he remained for two years, returning to Boston in 1852 and entering the employ of Edward Locke & Co., clothiers.

Three years later Mr. Russell became connected with the wholesale clothing house of Isaac Fenno & Co., and became a member of the firm in 1861, retiring in 1869 with a competency.

In 1853 Mr. Russell went to Melrose to reside and has ever since been intimately identified with the welfare of the town.

He has served three years on the Board of Selectmen, and is at present commissioner of the water loan sinking fund. He is also president of the Melrose Savings Bank. In 1878 he was elected to represent the Sixth Middlesex Senatorial District, serving as chairman of the committee on insurance, and as a member of the committee on agriculture. He was re-elected in 1879, and in 1880 was a delegate to the National Republican Convention.

He is a director of the Malden and Melrose Gas-light Company and the Putnam Woolen Company, and is connected with the Masonic organizations of Melrose.

October 21, 1850, Mr. Russell married Mary, daughter of Nathan and Mary Lynde, of Melrose. Their children are: William Clifton and Daniel Blake Russell.

¹ From "One of a Thousand."

CHAPTER XIX.

PEPPERELL.

PAROCHIAL AND ECCLESIASTICAL.

BY LORENZO P. BLOOD.

SETTLEMENTS in that part of Groton lying west of the Lancaster or Nashua River were commenced as early as 1720. After the Peace of Utrecht, A.D. 1713, Indian hostilities and depredations had in great measure ceased, and were no longer seriously dreaded. Thus relieved from anxiety and fear on that score, the frontier settlements extended the line of civilization farther into the wilderness. Territory that heretofore had been the haunts of the bear and the savage was transformed into thrifty farms and civilized abodes. The modern advice, "Go West, young man," was evidently in the air, if not yet materialized at that early date. Following this impulse, the young man of Groton pushed his way across the "Great River," and took up for his farm and home a portion of the fertile lands lying westerly therefrom.

At first the settlements were confined to the vicinity of the river, for several reasons. The river afforded an easy means of transportation, as well as a ready supply of food. The intervalle land was more easily cultivated than that more remote.

The river was fordable at two places—"Stony Wading Place," at Hollingworth's Mills, and the "Jo. Blood Fordway," near the covered bridge—and thus there was easy communication between the new settlers and their paternal homesteads, only a few miles away. Although emigrants, they were still within the municipality of their old homes: still under the fostering care of the Groton Church. Meanwhile the new settlement grew and prospered until in 1740 it numbered over forty families, and the people began to feel that they were numerous enough to be a separate parish. The affection for the old homesteads and the mother church had become absorbed in a love for the new homes and a desire for a church of their own. Of several petitions from the inhabitants of the northerly and westerly parts of Groton, and the easterly part of Dunstable, presented to the General Court about this time, praying for a township, or district, the following was granted:

"To his Excellency William Shirley, Esq., Captain General and Governor in Chief in and over his Majesty's Province of ^{y^e} Massachusetts Bay in New England; To ^{y^e} Honourable his Majesties Council and House of Representatives in General Court Assembled on ^{y^e} Twenty-sixth Day of May, A.D., 1742.

"The Petition of us, the Subscribers, to your Excellency and Honours Humbly Sheweth that we are Proprietors and Inhabitants of ^{y^e} Land Lying on ^{y^e} Westerly Side Lancaster River (so called) in ^{y^e} North west corner of ^{y^e} Township of Groton; & Such of us as are Inhabitants thereon Live very Remote from ^{y^e} Public worship of God in ^{s^d} Town, and at many Times and Seasons of ^{y^e} year are Put to Great Difficulty to attend ^{y^e} same; and the Lands Bounded as Followeth (viz): Southerly, on Townshend Rode; Westerly, on Townshend Line; Northerly, on Dunstable West Precinct & old Town, and Easterly on said River as it now Runs to ^{y^e} First mentioned Bounds, being of the Contents of about

Four Miles Square of Good Land well Situated for a Precinct; And the Town of Groton hath been Petitioned to Set of ^{y^e} Lands bounded as afores^d to be a Distinct and Separate Precinct, and at a Town Meeting of ^{y^e} inhabitants of ^{s^d} Town of Groton Assembled on ^{y^e} Twenty Fifth Day of May Last Past The Town voted ^{y^e} Prayer of ^{y^e} ^{s^d} Petition and that ^{y^e} Lands before Described should be a Separate Precinct and that ^{y^e} Inhabitants thereon and Such others as hereafter Shall Settle on ^{s^d} Lands should have ^{y^e} Powers and Privileges that other Precincts in ^{s^d} Province have or Do Enjoy; as per a Copy from Groton Town Book herewith Exhibited may Appear, &c. For the reasons mentioned, we, the subscribers as afores^d, Humbly Prayes your Excellency and Honours to Set off ^{y^e} ^{s^d} Lands bounded as afores^d to be a Distinct and Separate Precinct and Invest ^{y^e} Inhabitants thereon (Containing about ^{y^e} No of Forty Families), and Such others as Shall hereafter Settle on ^{s^d} Land, with Such Powers and Privileges as other Precincts in ^{s^d} Province have, &c., or Grant to your Petitioners Such other Relief in ^{y^e} Premises as your Excellency and Honours in your Great Wisdom Shall think Fits and your Petitioners as in Duty bound Shall Ever pray, &c. Benjamin Swallow, Samuel Shattuck (jun), John Blood (juner), William Spalden, James Shattuck, Josiah Parker, Isaac Williams, David Shattuck, Jacob Ames, Ebenezer Gilson, David Blood, Jonas Varnum, Elias Elliot, Jonathan Woods, Moses Woods, Zachery Lawrence, jun^r, John Shadd, Jonathan Shattuck, Jeremiah Lawrence, Jam^s Green, Jonathan Shattuck, Jun^r, John Mozier, John Kemp, Josiah Tucker, Nehemiah Jewett, William Allen, Eleazar Green.

"In the House of Rep^s Nov^r 26, 1742.

"In answer to the within Petition ordered that that Part of the Town of Groton Lying on the Westerly side of Lancaster River within the following bounds, viz: bounding Easterly on said River Southerly on Townsend Road so called, Westerly on Townsend line and Northerly on Dunstable West Precinct, with the inhabitants thereon, be and hereby are set off a distinct and separate precinct and vested with the powers and privileges which other Precincts do or by law ought to enjoy, always provided that the Inhabitants Dwelling on the Lands above mentioned be subject to pay their first part and proportions of all ministerial Rates and Taxes in the Town of Groton already Granted or Assessed.

"Sent up for Concurrence,

T. CUSHING, Spk.

"In Council Nov^r 26, 1742. Read and Concurred,

"J. WILLARD, Sec^y.

"Consented to

W. SHIRLEY."

The Townsend road above mentioned was the old county highway as then traveled from Groton to Townsend. This road, which lies wholly within the present town of Groton, is still passable for carriages its entire length from Fitch's Bridge to the Townsend line, although it has been discontinued for many years the greater part of the distance.

By an adjustment of boundary lines made about the time of this petition, the "old Dunstable line" was moved farther north, leaving a triangular strip of land between Groton West Parish and New Hampshire. This tract was three hundred rods wide at its westerly end on Townsend line, and extended over five miles eastward, running to a point a short distance west of the Nashua River, containing about two and a half square miles. It has often been incorrectly called the "Groton Gore." It remained a part of Groton until 1751, when it was ceded to the West Parish upon petition of its inhabitants. In 1803 about four acres lying between the road and the river, at Fitch's Bridge, were re-annexed to Groton.

According to the records the first "legal" meeting of the new parish was held at the house of William Spalden January 17, 1742, "by virtue of a warrant granted by William Lawrance, Esq., a justice. Benjamin Swallow was chosen moderator and the following officers were elected: Eleazar Gilson, clerk; Ben-

jamin Swallow, Isaac Williams, James Lawrance, Jonathan Woods and Joseph Whitney, committee; Samuel Wright, treasurer; Jonas Varnum, Moses Woods and Jeremiah Lawrance, collectors. The sum of £10, lawful money, was voted to be assessed, "to defray the necessary charges Risen and arising in the Parish."

At a second "Legal" meeting held at the house of James Lawrance, February 16, 1742, it was voted, "that Samuel Wright be a committee to provide preaching till the last day of April next." Also "Voted to build a Meeting-House in Sd Parish, voted that the Meeting-House should stand at the most convenient place near Jo Blood's fording." The reason for this location may be inferred from a vote passed at a subsequent meeting; "Voted to Receive the People on the East side of ye River that have Petitioned to be annexed to us, Provided they will consent to have the Meeting-House set at ye most Convenient Place on ye West side of ye River near ye Bridge, next below Jo Blood's fordway, so called." But the people living in the westerly part of the parish naturally objected to thus locating the meeting-house at the extreme limit of the precinct; and their remonstrance was so decided and persistent that, at a meeting September 6, 1743, it was "Voted to reconsider the vote that was passed Concerning the Place that was first pitcht upon for ye setting of a Meeting-House in Sd Parish; Voted to set the Meeting-House at the end of three-Quarters of a mile Northeast of the Center of Sd Parish or at the next Convenient Place."

This compromise seems to have settled the matter for the time, as the meeting proceeded to vote "to Build a Meeting-House forty-two feet Long and thirty feet Wide and Twenty feet High." Committees were chosen and a surveyor employed to make the necessary survey and determine the location agreed upon. This spot was decided to be on the farm now owned by J. A. Tucker, Esq., near the junction of Hollis and Tucker Streets. Now the geographical centre of the parish, as then bounded, was near the present residence of B. W. Shattuck, on Heald Street, about half a mile west of the Common; and a line running thence northeast three-quarters of a mile terminates near Hovey's corner—so called—more than a mile north of west from the spot decided upon by the committee. Whether there was a suspicion that the committee had acted unfairly in the matter, or only a feeling that they had made a most unwarrantable use of the qualifying clause, "at the next Convenient Place," does not appear, but the result was a renewal of the controversy, followed by a long and bitter quarrel, which threatened the disruption of the parish. Materials had to some extent been gathered at the spot fixed upon, but it began to look doubtful whether there would be enough of a parish left to build a meeting-house or form a church.

As a last resort, it was agreed to refer the whole matter to the "Great and General Court," and abide

by its decision. Accordingly, at a meeting November 23, 1744, it was "Voted, that Peleg Lawrance and Josiah Sartell be a Com'ee to go to the Great and General Court Concerning ye having a Meeting-House Place in Sd Parish." Their petition was favorably received by the Court, and a committee was appointed to survey the place and locate the meeting-house. A committee was also chosen by the parish to "show the Court's committee the inhabitants of the place." So promptly was the business attended to and settled that the parish voted, the following February, "to set the Meeting-House on ye Place that the General Court prefixed," which is the spot now occupied by the meeting-house of the First Parish. This decision was, of course, final, although some of the inhabitants of the east part were unreconciled. When the men that were employed to move the timber to the site settled upon, were in readiness with their teams to perform the work, several of these disaffected persons attempted to prevent their progress by pricking the noses of the oxen, and otherwise annoying them. Whereupon James Lakin, who had been prominent as a champion for the minority during the previous troubles, took the lead. He was a stout, athletic man, and evidently a firm believer in the church militant; for he made so effective an exhibition of "muscular Christianity," that there was no further attempt to hinder the work. The building was erected, and finished for occupation early in 1745, but no record of a dedication can be found. Previous to this time, as appears by the records, the houses of Enoch Lawrance and Nehemiah Hobart were used as places of public worship. Mr. Lawrence lived near Nissittissit Square, and Mr. Hobart on River Street, nearly opposite the house of Elijah A. Butterfield.

Rev. Mr. Emerson, in his sermon delivered at the dedication of the second meeting-house, in speaking of this whole matter, says: "There is one thing I can't but mention, as a kind interposition of Divine Providence; tho' considered as such by very few at the time, and that is;—The fixing the place for the Meeting-House, by the Court's committee; tho' at first contrary to the mind and vote of the majority of the inhabitants, yet proves now to be with much more equity, and where all seem to be universally contented with. Had it been erected in the place designed and where the timber was drawn to, what trouble, change, and 'tis very likely contention, we must have been exercised with before this day."

The house was not finished for several years, if indeed it ever was, as is shown by the following votes passed at various times from 1744 to 1755:

"Voted, That Sd committee frame, Raise and board the outside and shingle ye Roof, Lay the under floor and make suitable Doors and han the same.

"To build the Pulpit and ye Body seats below.

"To seat the Public Meeting-House and set off the Pews, or Pew-ground to the Highest Payer in the three last Rates, upon their being obliged to build their own Pews and the Ministerial Pew, To seal the Meeting-Houses as high at ye girls all round, that Windows be cut where needed, Provided they that cut them maintain them upon their own

Cost, that they be no Parish Charge To finish the Building, the Seats in the Gallery, and to Seal the Meeting-House from ye Gallery floor up to the beams."

"Voted, To Glaze ye Public Meeting-House and to provide boards to Lay Loose on ye floor overhead."

This was in March, 1749.

The following year it was "Voted to give ye Men that are seated on ye fore seats below Liberty to set a Row of Banisters with a Rail stop before ye fore Seats at their own Cost and Charge." The building at best could have been but little better than a barn; and it must have required no little exercise of fortitude and resignation to sit through the lengthy services of the forenoon and afternoon in an unfinished, unglazed and unwarmed house, especially in midwinter. But our hardy ancestors had not attained to the modern ideas of church luxury and parish debt.

In the settlement of a minister they appear to have proceeded in a more united and prayerful way. March 13, 1744, the parish voted "To keep the last day of March instant a day of fasting and prayer to Almighty God for direction in the important affair of settling a minister." It seems rather unfortunate that in this vote the location of the meeting-house was not also included.

About this time Rev. William Vinal, who was then preaching for them, received a call to settle among them in the work of the ministry, but declined to accept the call. The distracted condition of the parish at that time certainly did not present a very inviting field of labor for a young minister. "September 25th, 1746. Voted, To give the Rev. Joseph Emerson, of Malden, a call to settle in the gospel ministry in the said parish, and to give him one hundred and twenty pounds settlement, and sixty-two pounds, twenty-two shillings, yearly, and thirty cords of fire-wood, cut and delivered at his door."

In January following the parish voted to give Mr. Emerson forty acres of land within a mile of the meeting-house, and to add to his salary twelve pounds, ten shillings, whenever the parish should contain one hundred ratable families; at that time there were seventy-two families. Mr. Emerson accepted the call, and was ordained February 25, 1746, O.S. The ordination sermon was preached by his father, minister of Malden, from the text, "Now, therefore, my son, be strong in the grace which is in Christ Jesus." A church had been "gathered" on the 29th of January preceding, to which Mr. Emerson was formally admitted a member on the morning of his ordination. The church consisted of about fifteen male members and several females who had withdrawn from the Groton Church, for the purpose of forming a church in Pepperell—the exact number of female members cannot be ascertained.

Mr. Emerson's salary was regulated according to the price of provisions. The following list made out by a committee for that purpose was accepted by the parish and by Mr. Emerson:

"Ninety Pounds on W. I. Goods.—W. I. rum at 21s. per gall.; molasses, 15s. per gall.; loaf sugar, 7s. per lb.; cotton wool, 13s. per lb.; salt, 3s. 32s. per bush.

"Forty Pounds upon Meat.—Beef at 9d. per lb.; pork, 15d.

"Sixty Pounds upon Grain.—Corn at 12s. per bush.; rye, 16s. per bush.; barley, 14s. per bush.; oats, 7s. per bushel.; wheat, 22s. per bush.

"Sixty Pounds upon Sundries.—Sheep's wool at 10s. per lb.; flax, 3s. 6d.; shoes, 30s. per pair; labor at £60 per year; butter, 2s. 6d. per lb.

To estimate the salary annually upon such a basis must have been rather perplexing, and in 1767 the district abandoned the plan, and voted to give Mr. Emerson £73 6s. 8d. annually, computing silver at 6s. per dollar, and 6s. 8d. per ounce. Upon this change Mr. Emerson remarks:

"I heartily rejoice that you have seen fit to set aside the old contract, which hath been the occasion of so much trouble. As to the sum you offer me instead of it, I thankfully accept of it. All things considered, it is honorable and kind, and is a token that, after so many years, my labors are yet acceptable among you. I hope, through divine grace, to go on with more cheerfulness in the work of the ministry, and while I am partaking of your carol things, that the Lord may abundantly shower down spiritual blessings, in the sincere prayer of your affectionate pastor. I desire this may be recorded in the parish book."

Mr. Emerson's farm of "forty acres of land within a mile of the meeting-house" was located on Elm and Townsend Street, including the lands now owned by William Kendall, Miss Freeman, and others. It also extended easterly on Elm Streets, comprising the whole area from the "common" to Green's Brook, and as far east as the land of Mrs. D. B. Sibley. His house was where the "Shipley" house now stands. The large flat stone which served as the door-step of his study, still remains in its old position.

In 1767, the parish having outgrown, in more senses than one, the old meeting-house, preparations were commenced for the building of a new one. The sum of eighty pounds was voted to be raised for the purpose. It was also voted "that the house be built workman-like." A vote was also passed that, "considering we are engaged in the important affair of building a new house for the worship of God, voted to set apart Thursday as a day of fasting and prayer, to confess our manifold sins, whereby we have provoked our God to frown upon us in our public affairs, and earnestly implore the return of his favor, and particularly to humble ourselves before God for our unprofitableness under the means of grace we have enjoyed in the old meeting-house, and entreat his guidance in erecting a new one." This new house was built in 1769, on the site of the old one, which the building contractor, Cornet Simon Gilson, took in part payment for his contract, and removed to his farm (now J. M. Belcher's) where he converted it into a barn, probably without much change. In 1830 it was destroyed by the act of an incendiary. In March, 1870, the new meeting-house was dedicated with appropriate religious services, on which occasion Mr. Emerson preached a sermon from this text: "Then Samuel took a stone, and set it up between Mizpeh and Shen, and called the name of it Ebenezer, saying,

Hitherto has the Lord helped us." In this discourse Mr. Emerson enumerated many reasons why the people of Pepperell should follow the example of the prophet—the preservation of the church when threatened with destruction; the increase of population since his settlement from seventy-two to one hundred and fifty-two families, and a proportional increase in their substance, so that they had been able to pay the charges of their becoming a parish and then a district, and of building a house for worship; their preservation from savage enemies when they were under the necessity of taking their firearms with them to meeting, as they had done since his settlement." He exhorted them "to acknowledge with gratitude that they had been preserved while erecting the second meeting-house, not a life having been lost or a bone broken while providing the timber, raising the frame and finishing the house," and in conclusion he said that he himself would on that occasion set up his Ebenezer, it being the twenty-third anniversary of his ordination, and acknowledged that hitherto the Lord had helped him, both in temporal and spiritual matters. In building this second meeting-house the people appear to have acted in harmony, the only question of difference being in regard to a steeple, which, as they had no bell, was finally decided in the negative. Subsequently, however, a steeple was built of the height of one hundred feet and a bell placed therein. The house was sixty feet long and forty-five feet wide, and was built in the style of architecture common to the New England churches of the time—a plain, yellow building with a belfry and two porches, a deep gallery along three sides of the interior, and a high pulpit on the fourth side, with the deacons' seat below and the queer sounding board above. The ground floor was filled with high, square pews, intersected by rectangular aisles. The noon-house, or Sabbath-day house, as it was often called, was a building especially adapted to the times. It usually consisted of a single room with a fire-place, and was furnished with a table and seats. It was owned by one or more of the prominent men of a neighborhood remote from the meeting-house. Thither the owners, with their families and friends, would repair during the intermission between the forenoon and afternoon services, to refresh themselves with a picnic dinner, and spend an hour of social intercourse. The idea of heating the meeting-house was not even tolerated in those days, and in winter the blazing fire in the noon-house was a real comfort to the worshippers; and from the glowing embers the women replenished their foot-stoves for the afternoon meeting. There were eight of these houses situated in different directions and within a radius of twenty rods from the meeting-house. They continued in use until stoves were introduced, although with much opposition, into the meeting-house about the year 1826, after which time they one by one disappeared.

Mr. Emerson was not permitted to enjoy the priv-

ileges of the new sanctuary many years. In the summer of 1775 he went to Cambridge to visit his numerous parishioners, serving under Colonel Prescott in the Continental Army, there assembled. Tradition says he there offered the first public prayer in the American camp. While ministering to the temporal, as well as spiritual, needs of the soldiers, he took a cold from exposure, which resulted in a fever, terminating his life on the 29th of October, 1775, at the age of fifty-one years. He died an early martyr to the cause of that liberty whose principles he had so zealously and practically instilled into the minds of his people. The following incident, as related by Colonel William Prescott, forcibly illustrates the peculiar blending of conservatism and radicalism in his character. Previous to the battle of Bunker Hill, secret meetings of the Committee of Safety were frequently held in the town. On a Saturday evening one of these meetings was held in the tavern which stood on the present site of the church of the Second Parish. Mr. Emerson had been present during the early part of this meeting, but had returned home. After midnight, as from the window of his study he looked across the Common and saw the lights still burning in the committee-room, indicating that the session was not yet closed, he hastened to the tavern, and, admonishing the committee that the Sabbath had come, insisted on an immediate adjournment. During the twenty-nine years of Mr. Emerson's ministry he baptized 807 persons, and admitted 196 into the church. Eight deacons, elected by the church, were ordained by him, viz.: Jeremiah Lawrence, John Spafford, January 11, 1747-48; Josiah Fisk, January 18, 1754; Peleg Lawrence, August 21, 1754; Thomas Laughton, August 3, 1759; David Blood, April 9, 1762; Daniel Fiske, April 23, 1773; Edmund Parker, October 8, 1773. It was customary for one chosen deacon to signify his consent by a formal letter of acceptance, when he was inducted into office by a solemn charge from the minister, and thereafter was privileged to sit in the "deacon's seat."

The form used by Mr. Emerson on these occasions was as follows:

"*Dear brother:*—We congratulate you upon the honor which the Lord Jesus Christ, the Head of the Church, hath been pleased to confer upon you; for we doubt not that you had a call to this office, which under the influence of his spirit, as we trust, you have accepted; that Spirit, which Christ hath purchased and promised to send down, not only to convince and convert the sinner, but also as a guide and teacher to his people, and hath assured us that he should lead us into all truth. You are sensible there is a work as well as an honor attending the office, which you must see to it that you fulfil. I would therefore charge you in the name of the Lord Jesus Christ, who shall judge both the quick and the dead, another day, before the elect angels and this assembly, that you faithfully discharge the duties of your station, that you fulfil the ministry you have received. See to it, that you answer the character of the deacons in the word of God. 'Be grave, not double-tongued, not given to much wine, not greedy of filthy lucre, hold the mystery of the faith in a pure conscience.' See to it, that you govern your children and household well, 'be blameless, be an example to believers themselves; let your conversation be as cometh godliness, watch and pray continually, that those who seek occasion to speak evil of you, may find none; live always as under the eye of the Lord Jesus Christ, who will

shortly call you to give an account of your stewardship.' If you thus behave and do, 'you will purchase to yourself a good degree' of favor with God and good men, and great boldness in the faith which is in Jesus Christ. And let me put you in mind, that as the Lord Jesus and this his people, expect more from you in this relation than ever, so there is strength enough in Christ for you, and he will not leave you if you do not first forsake him. O, then, repair to him by a lively faith. Go out of yourself, trust wholly in him; so shall you fulfil your course at length with joy, and your Lord will say to you, 'Well done, good and faithful servant: as you have been faithful over a few things, I will make you ruler over many things; enter into the joy of your Lord.' May this at last be your and our portion, through Jesus Christ, to whom be glory in the church, world without end. Amen."

Mr. Emerson's virtues are thus enumerated upon the tablet, which the town erected over his tomb:

"Steadfast in the Faith once delivered to the Saints. Fixed and laborious in the cause of Christ and precious souls. Exemplary in visiting and sympathizing with his Flock. Diligent in improving his Talents. A Kind Husband; a tender Parent; A Faithful reprove; a constant Friend; and a true Patriot. Having ceased from his Labors, his works follow him."

Amid the anxieties and distresses of the Revolutionary War four years elapsed before a successor to Mr. Emerson was decided upon. Regular preaching was, however, maintained the greater part of the time. Mr. Joseph Emerson, a son of the late pastor, supplied the pulpit during the year 1776. His promise of a useful life was soon blighted by an early death. In 1778 Mr. Jonathan Allen received a call to become the minister of the parish, which he declined.

Mr. John Bullard, of Medway, a graduate of Harvard University, of the class of 1776, was ordained October 18, 1779. His ministry comprised a period of almost forty-two years, which were prosperous and happy. Warm in his sympathies and genial in his conversation and habits, he is spoken of by a contemporary as "of that almost peculiar urbanity which led him to treat all men of learning and fair moral character as friends and companions." Although, apparently, more of "a man of the world" than his predecessor, he possessed none the less the virtues and excellencies of a true Christian minister. He was much interested in the cause of education; was one of the founders of the Groton Academy, and a trustee of that institution during his life. Three of his four sons were educated there preparatory to their entering college. The Sunday-school was instituted in 1819, by the efforts of Mrs. Nehemiah Cutter and some other ladies, who were greatly assisted and encouraged in this work by their pastor. Mr. Bullard died September 18, 1821, aged sixty-five years, universally beloved and lamented. During his ministry he baptized 556 persons, and admitted 156 members to his church. Four deacons were elected—Nathaniel Hutchinson and Nathaniel Lakin, April 23, 1789; Joseph Parker and Edmund Jewett, August 15, 1805.

Rev. James Howe, of Jaffrey, New Hampshire, a graduate of Dartmouth and of Andover, was ordained October 16, 1822. For several years the relations between pastor and people were harmonious; but at length dissatisfaction began to be expressed by certain of the more liberally-inclined in regard to ex-

changes; the complaint being that Mr. Howe was too exclusive in that matter. After several ineffectual attempts, the town finally passed a vote in May, 1831: "To excuse Rev. James Howe from preaching six Sabbaths in the course of the ensuing year, and permit the pulpit to be supplied on those Sabbaths by ministers of other denominations." The enforcement of this vote by its advocates Mr. Howe regarded as an expulsion from his pulpit. Accordingly, he, with nearly the entire church and a large majority of the congregation, peaceably withdrew and formed a separate religious society under the title of "The Evangelical Congregational Society of Pepperell," to which the church allied itself, and of which Mr. Howe was recognized as pastor, by a council called for that purpose, February 1, 1832. Thus the town was divided into two parishes and two churches; each church, however, claiming to be the original "First Church of Pepperell."

The First Parish, which now included all the legal voters that had not "signed off," and the remnant of a church which still adhered to it, was left without a minister or even a deacon. But it retained several of the wealthiest and most influential families of the town and a legal possession of the real estate and personal property of the original parish. With a zeal stimulated by the sharp controversy, the remaining members of the parish immediately proceeded to reorganize by the election of necessary officers, and chose a "Committee to hire preaching." Dr. John Walton and Mr. Benjamin Hale were chosen deacons.

After having heard several candidates preach during the year, a decision was made in favor of Rev. Charles Babbidge, of Salem, a Harvard graduate—class of 1828—and he was ordained and settled February 13, 1833. "A gentleman and a scholar" in the fullest import of the phrase, courteous and affable to all, without distinction of sect or party, he soon gained the esteem and affection of his people. He married, January 21, 1839, Miss Eliza Ann Bancroft, daughter of one of his parishioners, Luther Bancroft, Esq.; he bought a farm, built a house, and so fully identified himself with the people of Pepperell and their interests, that he repeatedly refused calls to much larger congregations and more eligible pulpits. He was a member of the School Board for forty years; and in 1859 he represented his district in the Legislature. At the commencement of the late war he was chaplain of the Sixth Regiment, and the first minister in the country to enlist; thus giving to Pepperell the honor of furnishing the first chaplain for the War of the Rebellion as well as of the Revolution. Having served through the three months' campaign of the Sixth, he received, in November, 1861, a commission as chaplain of the Twenty-sixth Massachusetts Regiment, in which he served three years. Upon his discharge from the service, November 7, 1864, he returned to the peaceful pursuits of his professional life, and to his people, who gladly

welcomed him home. During the greater part of Mr. Babbidge's absence Rev. John Buckingham officiated as pastor in charge.

February 13, 1883, the semi-centennial anniversary of Mr. Babbidge's ordination was celebrated with appropriate religious exercises and social festivities, in which several of his classmates in college and the Divinity School participated. The Rev. A. P. Peabody, D.D., in his congratulatory speech on the occasion thus addressed Mr. Babbidge:

"I do not forget that you have been wanted elsewhere, that wistful eyes were often turned hitherward from our metropolis on the statement of the eminent historian who used to pass his summers here, that the best preaching he heard was in Pepperell. Nor can I forget that when the trustees of the Meadville Divinity School sought a wise man of the East to hold office in it, they found you at the bottom of your well, and having read in their childhood that truth had such a home, they were all the more earnest to capture for their service the transparent truth and genuine Christian manhood, which they heard as they talked with you over the well-curb, and saw in you when you emerged into the light of day."

Rev. Joshua Young, pastor of the First Church in Groton, who followed, in an address of fellowship, said:

"You loved, rather, the simple life, the simple manners, the simple folk of the country. You loved the scented fields, the deep and shady woods, the hills and the rocks;

'Their colors and their forms were to you an appetite,
A feeling and a love.'

And so it was pleasant to you to unite with an intellectual and sacred calling the cultivation of the seed-receiving soil, and, methinks, that every time you went forth from the study to the farm, it was to touch the ground Anteus-like and receive new strength from Mother Earth; and, therefore, we see you to-day, after an active and interrupted ministry of fifty years, at the age of seventy and six—almost four-score—still at your post, your eye not dim, nor your natural force abated, wearing gracefully the marks of a well-spent life 'of virtue, truth, well-tried and wise experience;' in green old age, like an oak worn, but still steady amidst the elements, while younger trees—so many of them—are fallen."

The following summer Mr. Babbidge was honored by Harvard University with the degree of D.D. In February, 1886, in the eightieth year of his life, he resigned his charge of the church and society of which he had been pastor fifty-three years, although he is still a constant attendant at the Sabbath services.

Mr. Walter C. Moore, from the Meadville Divinity School, was ordained and settled over the parish September 7, 1887.

The old meeting-house, having become antiquated and much out of repair, was, in the year 1836, completely remodeled and rebuilt in modern style; and re-dedicated October 27th of that year.

The Second Parish, immediately upon its organization under the name of "The Evangelical Congregational Society of Pepperell," commenced to build a commodious house of worship, which was dedicated October 31, 1832. Previous to this time their public services had been held in an unfinished hall over the store where the town-house now stands.

Mr. Howe, with an hereditary predisposition to pulmonary disease, found his health and strength

gradually failing under the work and excitement of the new parish, until he was obliged to ask for a colleague to assist him in his labors. From among several candidates, the choice fell upon Mr. David Andrews, a graduate of Amherst and of Andover, and he was ordained January 29, 1840. Mr. Howe died the following summer, July 19, 1840, at the age of forty-four years. He was a man of unusual sagacity and foresight, with remarkable tact as well as judgment. His administrative abilities were of a high order. Very few ministers could have led off so successfully, and withal so peaceably, as he, a large majority of the church and congregation. There was no legal controversy, no actual quarrel. A spirit of bitterness, however, was developed among the people, and the town was divided into two politico-theological parties, which existed for many years. But the ministers of the opposing sects, although they could not meet in theological fellowship, always met each other as gentlemen on the common ground of Christian courtesy. Mr. Babbidge, in his discourse at his semi-centennial anniversary, said of Mr. Howe:

"The incidents of his ministry, his pure life and early death, are matters that have fallen within the personal knowledge of many of you who hear me, and need no words from me. I feel, however, that I may on this occasion bear my humble tribute to the memory of one who, whether he erred in judgment or action, gave ample evidence of his wish to serve God conscientiously and faithfully. Becoming, as I did, his successor in the pastoral office, and also his fellow-townsmen, it was my lot to come frequently into communication with him, and I cherish with great satisfaction the pleasant intimacy that sprang up between us, and continued unbroken to the end of his life."

Mr. Andrews, who became sole pastor on Mr. Howe's decease, was, in many respects, quite different from his predecessor. Though a thorough scholar and a forcible writer, he was no orator. A perfect gentleman at heart, kind and sympathizing, yet he was externally cold and uncongenial, and in manner awkward and constrained. He had no policy, no *finesse*, but in everything pursued a straightforward, outspoken course. He preached the Gospel as he believed it, plainly and with a directness that was often more pungent than agreeable to his hearers, many of whom began to grow dissatisfied, and demand a more entertaining, if not a more liberal style of preaching. He labored faithfully and conscientiously more than ten years of the best part of his life for this church and parish, only to feel at last that he was unappreciated. He tendered his resignation April 2, 1850. He afterwards preached several years at Tiverton, R. I., and then settled in Winona, Minn., where he died in 1870.

The 29th day of January, 1847, being an anniversary of Mr. Andrews' ordination, and without due correction for change of style, the centennial of the founding of the First Church in Pepperell, was celebrated by the Evangelical Congregational Society, on which occasion the pastor delivered a discourse containing an interesting account of the settlement of the parish and its ecclesiastical history during the one hundred years of its existence.

But the church and society of the First Parish, claiming, at least, an equal right to the title of "First Church in Pepperell," and feeling somewhat indignant at having been totally ignored in the whole matter of the celebration, made arrangements for a true centennial celebration, which took place on the 6th day of February, 1847, exactly one hundred years after the organization of the church.

Mr. Babbidge delivered a polemical address pertinent to the occasion, in which he strongly protested against the action of the other church and society, because he "thought it due to the church connected with the ancient religious society, to the officers and members of this church and to society at large." He concluded thus: "We of this town are an excitable people. The inhabitants of Pepperell have always been so. There is something in the atmosphere upon our hills that infuses a mercurial, a sensitive principle into our blood. We are great sticklers for equal rights and popular liberty. The very name of 'Bunker Hill' stirs our hearts as the sound of the trumpet does the war-horse. Being aware of this common characteristic of ours, let us beware how we give each other occasion for offence. Let us live together *peaceably*, in that spirit which becometh the followers of the Son of God."

Rev. Lyman Cutler, of Dorchester, a graduate of Dartmouth and of Andover, was ordained January 22, 1851. He was a fine classical scholar, and was ambitious for literary distinction. He was gifted with a ready command of language and a nervous style of thought and delivery that thrilled his hearers to their fingers' ends. Open-hearted and free from guile, he counted upon the same traits in all men, and although greatly admired by his people, he was not looked up to as a safe adviser and guide in temporal matters. He was unsuited to the parochial duties of a country parish, and his request for a dismissal was granted in November, 1853. The following year he was settled in Newton, where, after a brilliant but brief career, he died May 2, 1855.

Rev. Thomas Morong, a graduate of Amherst and of Andover, was ordained April 12, 1854, and dismissed November 4, 1855.

June 11, 1856, Rev. Edward P. Smith was ordained pastor of the church. He was graduated from Yale and Andover. On his first visit to Pepperell, to preach as a candidate, he lost his valise, which contained his sermons and a change of raiment. Nothing daunted, however, he went into the pulpit in his traveling suit, and preached an extempore sermon, so fraught with freedom, fervency and zeal that he aroused the enthusiasm of the congregation, and received a call from them directly. He was a man of remarkable executive ability; with him to think was to act; so much so that he was liable to hastily follow his first impulse, rather than wait for the sober second thought. In his preaching and his whole life

—pastoral, civil and political—this characteristic was prominent. At the beginning of the War of the Rebellion he took an active part in arousing the people and procuring enlistments. Having obtained a month's leave of absence in January, 1863, he attached himself to the United States Christian Commission, and went to the front. The month's absence was extended indefinitely. At length his repeated request for a dismissal was granted December 7, 1864, his people being satisfied that he could never be contented to settle down again to the quiet life and circumscribed sphere of Pepperell. He became general agent of the Commission, with full charge of the field work.

At the close of the war he engaged with his characteristic ardor in the cause of the freedmen, and held a prominent position in the American Missionary Association. He was afterwards appointed (by President Grant) commissioner of Indian affairs. While holding this latter office he exposed some of the malfeasance connected with this department, and thereby aroused a political excitement and opposition that led to his resignation. In 1875 he was elected President of the Howard University, Washington, D. C., and went to Africa to become more intimately acquainted with the needs of the negro race, and the most feasible methods of missionary work among the native tribes. While on this mission he died of African fever, on board the United States vessel "Ambrig", in the Gulf of Guinea, June 15, 1876, aged forty-nine years. One of his co-laborers thus writes of him: "He was noted for his love of children, his mirthfulness, his generosity, his strong attachments, and his advocacy of the cause of the oppressed. Doing good in forgetfulness of self was his business, and he pursued it to the end."

In July, 1859, the meeting-house was destroyed by fire, together with Mr. Luther Tarbell's tavern and store building, in which the fire originated. The house had just been repaired, and the basement finished into a convenient vestry, which the congregation were expecting to use for the first time on the ensuing Sabbath. Instead of which, they met, on that Sabbath, in the Unitarian house, whose use for the afternoons had been cordially tendered, and listened to an impressive discourse by Mr. Smith, from the text, "Our holy and our beautiful house where our fathers praised Thee, is burned up by fire." (Psa. lxiv. 11.) After considerable delay, occasioned by a want of unanimity on the question of location, the present commodious and well-arranged house was erected on the site of the old one, and dedicated January 29, 1860.

The same council that concurred in the dismissal of Mr. Smith installed Rev. S. L. Blake, a graduate of Middlebury and of Andover. Having preached acceptably to the people four years, he asked for a dismission December 28, 1868, in order to accept a call from the Old South Church, in Concord, N. H.

His successor was Rev. Horace Parker, an Amherst graduate, who was installed March 17, 1870, and dismissed September 16, 1873, on account of ill health. By means of his earnest and persevering efforts a debt of nearly \$3000, which had been gradually accumulating, was canceled, and two hundred dollars additional raised for repairs on the meeting-house. A parsonage was also bought during his pastorate.

Rev. George F. Swain was ordained March 12, 1875. He entered the ministry, not through the ordinary course of college and seminary, but from a business education and experience; therefore he was more inclined to disregard the conventionalities and technicalities of clerical speech and deportment than was agreeable to many of his parishioners. His connection with the church and society was dissolved in Dec., 1879, and he returned to a business life.

Mr. Swain was succeeded by Rev. William G. Shoppe, from Bangor Theological Seminary, who was ordained November 11, 1880. A man of native simplicity and purity of character combined with great personal dignity, he commanded the love and respect of his people. His resignation, that he might accept a call to a church in Neponset, was reluctantly granted, November, 1887.

Rev. Charles L. Tomblen, a graduate of Amherst, and of Andover, is at present the pastor in charge.

The first serious endeavor to introduce the services of Methodism in Pepperell was made during the fall and winter of 1855, by Oscar F. French, who formed a "class" at the North Village School-house. With occasional assistance from Revs. A. D. Merrill and M. M. Parkhurst, his efforts were so successful that, the following spring, Rev. G. Adams was sent from the New England Conference as the first pastor of a church, which was organized May, 1866.

For several years the Sabbath services were held in Parker's Hall, at Nissittisset Square; but, in 1873, through the zealous and untiring labors of Rev. A. W. Baird, a fund was raised sufficient to build a plain, convenient chapel in Babbittasset Village. The society increased and prospered. In 1885 a commodious parsonage was built, and three years later the interior of the chapel was tastefully decorated and refurnished. The succession of ministers since Rev. G. Adams has been: 1867, Rev. M. R. Barry; 1869, Rev. Asa Barnes; 1871, Rev. A. W. Baird; 1874, Rev. J. H. Emerson; 1875, Rev. J. R. Cushing; 1877, Rev. Alfred Noon; 1880, Rev. W. D. Bridge; 1881, Rev. Daniel Atkins; 1883, Rev. Phineas C. Sloper; 1884, Rev. L. A. Bosworth, who was obliged, on account of ill health, to relinquish his charge in the fall of the same year. Mr. Sloper returned and completed the year, and continued as pastor for the next two years.

In 1887 he was succeeded by Rev. James Mudge, the present incumbent.

A Catholic mission was established at the Depot

Village in 1871, and a small chapel was erected, in which services were held fortnightly by the priest from Ayer. In 1881 the chapel was enlarged and rebuilt into a new and attractive church. In 1884 a fine parochial house was built; and the following year Rev. Henry J. Madden was appointed pastor of the parish, which was then instituted, and which now numbers about nine hundred communicants.

CHAPTER XX.

PEPPERELL—(Continued).

MUNICIPAL AND MILITANT.

On the 12th day of April, 1753, by act of the General Court, Groton West Parish, upon petition by its inhabitants, was made a district, and named Pepperell, in honor of Sir William Pepperell, the hero of the memorable capture of Louisbourg, in 1745. Rev. Mr. Emerson, who had been a chaplain in that expedition, probably suggested the name of his old commander as appropriate for the new district. Sir William acknowledged the compliment by the customary present of a bell, which, however, was never received by those for whom it was intended. It was cast in England, and bore the inscription of the donor's name and the legend:

"I to the church the living call,
And to the grave I summon all."

It was shipped to Boston and there stored. Its future history is chiefly conjectural. One tradition is that it was destroyed by the British soldiers during their occupancy of Boston in 1775, some twenty years after, which is hardly probable. Another story, equally apocryphal, is that the people of Pepperell, being earnestly engaged in the great struggle for independence, neglected to send for the bell, until it had been confiscated and sold to pay the expenses of storage, etc. The tale that it was purchased by the Old South Church in Boston, and placed in their belfry, has been disproved by actual investigations made by the late Samuel Chase, the antiquarian of Pepperell, who made a personal inspection of every church bell in the city of Boston. Still another version is that a committee of three, afterwards reduced to one, was chosen by the town to go to Boston and get the bell; that he went, sold the bell, put the proceeds into his pocket, and returning, reported the bell "non inventus." But no record of any such committee or mention of the bell can be found in the town records. Mr. Chase, however, believed the last story to be mainly true; he even claimed to know that the bell was sold to a society in New Hampshire, and that the church on which it was placed was afterwards burned to the ground; but "for the credit of all parties," as he used to say, he always positively refused

to testify further in the case. At all events, one thing is certain, the people of Pepperell never got that bell. Sir William always spelled his name with two "r's," and for many years the name of the town was so spelled.

As a district the inhabitants were entitled to all the rights and privileges of a town, except that of sending a representative to the General Court. They still continued to be represented by the member from Groton. In 1786, by act of the Legislature, all districts that had been incorporated previous to 1777 were made towns. Pepperell, however, from and after 1775, appears to have sent to the General Court her representative, who was received and recognized as such, but by what authority it is not known; probably by "right of revolution." Although the town of Groton, in its earlier history, had suffered severely from Indian raids, the people of Pepperell, for reasons already stated, were generally exempt from any serious attacks. Yet the knowledge of the characteristic treachery and vindictiveness of the Indian kept the settlers in a state of constant anxiety. Mr. Emerson makes the statement, in one of his discourses, that for several years after his settlement the men were accustomed to carry their guns to meeting. Many are still living who can recall the thrilling tales told by the grandames of a century ago about Lovewell's fight and Chamberlain and Paugus; of Indian cunning and white man's circumspection, as received from their grandmothers, whose husbands, fathers or brothers were the heroes of the story. There was, however, very little actual warfare within the limits of the settlement. As far as can be ascertained, only one white man was killed within the territory of Groton West Parish. In July, 1724, John Ames, who lived in a garrison-house, on the intervalle west of the Nashua River, about half a mile below Hollinsworth's mills, was surprised and shot in his door-yard by one of five Indians, who had been lurking about the place for several days. His son Jacob avenged the death of his father by shooting the Indian from the house with his father's gun. Midway between the "Munger corner"—so called—and the river, the spot where Mr. Ames' house stood is still indicated by the partially filled-in cellar. In 1744 hostilities were renewed between England and France, and the Colonists were again involved in a war with the French and their Indian allies. But Pepperell was no longer a frontier town, and the theatre of war was removed farther to the northward. We have no record of the participation of any of the inhabitants of the district in the Old French War except that of Simon Green, who died in the army in 1748.

In what is called the French and Indian War, however, which commenced in 1756, Pepperell was called upon to furnish its quota of troops for the prosecution of the war, and promptly responded to the call. Mr. Emerson's previous experience and martial proclivities led him to take an active interest in mili-

tary matters; to his influence and encouragement, undoubtedly, was due much of that military and patriotic spirit which has always characterized the inhabitants of Pepperell, and has furnished so many brave officers and soldiers from among her citizens. In the spring of 1758 a company from Pepperell and its vicinity was enlisted for the French and Indian War, under the command of Capt. Thomas Lawrence. Previous to their departure to join the army, Mr. Emerson preached a sermon appropriate to the occasion, in which he addressed them thus:

"My friends and brethren. 'Tis a matter of rejoicing to me that so many of you have engaged in this affair with so much cheerfulness, and proffered your services for your country; and some of you, I hope, have entered upon it with becoming seriousness. If the present expedition should go forward according to our present expectation—which God grant it may!—and not be stigmatized, as some former ones have been, by the name of a mock expedition, whereby we have become the shame of our friends and the contempt of our enemies. I say, if the army should proceed, you will, doubtless, be called into action, and must expect to jeopardize your life in the high places of the field. Fix then this in your minds, that danger you must encounter; imagine not that you are going out against a weak and effeminate enemy, who will be affrighted as soon as they hear of your approach, or be intimidated by the very sound of your drums, and run away as soon as you charge them, and you have nothing to do but fall upon the prey and load yourselves with the spoils. Far from this; you are going against an enemy who are far from being dastardly; an enemy flushed with various and repeated successes. And as you are designed by the present concerted scheme of operation to enter the very heart of the enemy's country, you may well expect that they will not tamely resign their possessions into your hands. I say not these things to discourage you, but rather to animate you to set out with greater resolution and courage. If you alight upon dangers, this will not make them heavier when they come, and it may serve something to lighten them when they come. You are to fight; you are enlisted to this end; you are paid for this purpose. Boldly then advance into the heart of the enemy's country. Fear them not; let it never be said of a New England soldier—let it never be said of a Pepperell soldier—that he was afraid to face his enemies, or that he ever turned his back on them and cowardly deserted the cause of his country."

Capt. Lawrence was not disobedient unto the ministerial injunction. He was a man of extraordinary size and strength; resolute and daring, and experienced in Indian warfare. Holding in contempt the valor of the savages, he was accustomed to boast that he would never run from the Indians, nor be taken alive by them, which assertion he was destined to verify. In July, 1758, while out in command of a scouting-party, at Half-way Brook, near Lake George, he was suddenly surprised by the Indians, and, with the exception of a few who fled at the first fire, the whole party were killed, the gallant captain being the last to fall. His body, when found, bore witness to the desperation with which he had fought. The following men from Pepperell are reported as having lost their lives in this war: William Blood, John Parker, James Coburn, Jr., John Kemp, Oliver Kemp, Jabez Kemp, Samuel Fisk, Jr., Capt. Thomas Lawrence, David Shattuck, Jr., Stephen Kemp, Ephraim Hall, Nathaniel Green, John Avery and Charles Barron.

Trained in such a school, and inspired by so zealous an apostle of liberty as Mr. Emerson, the people of Pepperell were all prepared to enter with ardor into the contention between Parliament and Provinces, which led to the Revolutionary War. They were

among the first to notice and protest against the arbitrary acts of the British Ministry, and among the first to sustain that protest by active and forcible measures.

The district voted, on October 25, 1765, to give the following instructions to their representative in the General Court :

"To Abel Laurence, Esq.: Taking into consideration the measures that have been adopted by the British ministry, and acts of Parliament made, which press hard upon our invaluable rights and privileges, by the royal charter granted to the first settlers of this province, the power of making laws and levying taxes invested in the General Assembly. It is certain we were not represented in Parliament, neither were the remonstrances sent by this province admitted there when the late act, called the stamp act, by which an insupportable and unconstitutional tax is laid on the Colonies, was made. We, therefore, think it our indispensable duty to desire you, by no means, to join in any measures for countenancing or assisting in the execution of the said stamp act. Furthermore, as the trade of this province is greatly obstructed, and the people labor under an almost insupportable debt, we expect you will use your utmost endeavors, in the General Assembly, that the monies of the province drawn from the individuals, may not be applied to any other uses, under any pretence whatever, than what is evidently intended in the act for supplying the province treasury."

Mr. Emerson preached a Thanksgiving Sermon January 24, 1766, on the repeal of the Stamp Act, which was printed for general circulation. The text was from Ezra 9, the latter clause of the 13th and first part of the 14th verses—"hast given us such deliverance as this: Should we again break thy commandments." Mr. Emerson spoke of the repeal of the Stamp Act as one of the great deliverances in English history; he expressed the hope that the oppression of Great Britain was over; and exhorted the people to humble and hearty thanksgiving therefor. A few extracts from his sermon will show the feeling of the colonists towards the mother-country at this time :

"Let us cultivate in our own minds and in the minds of our children an affection for our mother country, and a love and respect for those who have signalized themselves in our behalf. There is such a connection between Great Britain and her American colonies, and such their mutual dependence, that they must stand and fall together. We should always look upon her friends as our friends, her enemies as our enemies. When this deliverance was granted us there was universal joy among our brethren at home, among all who wished well to the true interests and sought the true honor of the nation. Let us seek their welfare to our utmost, promoting their interests, remembering them at the throne of Grace. Of Great Britain will we say, '*Peace be within thy walls and prosperity within thy palaces.*'" . . . "Let us have reverence for and be duly subject to lawful authority. Government is drawn from God, though the practical form of it is left to the prudence and discretion of man." . . . "Anarchy is, in some respects, worse than tyranny." . . . "We have a king who is well worthy of our affection and obedience. We have the greatest assurance that he will not infringe upon our liberties; let him have our most dutiful submission. We have subordinate rulers and excellent laws; let us see to it, that we lead quiet and peaceful lives in all godliness and honesty."

This does not sound like rebellion! But all these sanguine hopes were doomed to disappointment. It soon became apparent that in the repeal of the Stamp Act the British Ministry were actuated by motives of policy rather than a sense of justice. The colonists soon found that although the Act had been repealed, the spirit which instigated it still survived to be manifested in more odious forms of taxation. Repeated acts of oppression at length convinced both

pastor and people that their expressions of loyalty to the "mother-country" were of no avail, and that obedience to the injunction "Honor the King" was no longer a Christian duty.

In 1772 the following article was inserted in a warrant for a district meeting:

"To see if the district are so generally inspired with true patriotic spirit, as to propose any method in order to retrieve and recover the constitutional liberties that have been extorted from us, contrary to the royal charter, and in order to prevent any further unjust taxes, tonnage, poundage and the like, and act thereon as shall be thought proper, and most conducive to the happiness of all true sons of liberty, and to American subjects in general."

At a district meeting held January 15, 1773, a committee of nine men was chosen "to consider what is proper for this district to do, at this alarming time, respecting the encroachments that have been made upon our civil privilege." This committee reported the following communication to the Committee of Correspondence, and also a letter of instructions to their representative, both of which follow:

"To the Committee of Correspondence Boston:

"GENTLEMEN,—You will be so good as to inform the town of Boston that we have received their kind letter, together with the pamphlet setting forth our liberties as men, as Christians, as subjects, with the infringements which have been made upon them. Desire them to accept our hearty acknowledgements for their vigilance over our common interests, and remitting to us so particular accounts of the innovations made upon our charter privileges. Assure them that we are greatly alarmed at the large strides which have been made by the enemies of our excellent constitution towards enslaving a people. We of this place are unanimous; no less than one hundred have signed a request to the selectmen to call a meeting, though we count but one hundred and sixty families; and when met the fullest meeting that was ever known on any occasion, and not a dissenting vote or voice. We feel for ourselves, we feel for our posterity, we feel for our brethren through the continent. We tremble at the thought of slavery, either civil or ecclesiastical, and are fully sensible of the near connection there is between civil and religious liberty. If we lose the former the latter will not remain; our resentment (not to say our indignation) rises against them, let them be in whatsoever relation they may, who would dare invade our natural or constitutional rights. Tell our brethren at Boston, that we entirely agree with them in their sentiments transmitted to us, both with respect to what are our rights, and those infringements which have been made upon them; and stand ready to co-operate with them in all measures warranted by them and the constitution, and the law of nature, for the recovery of those privileges which have been unreasonably and unconstitutionally wrested from us, and for the establishment and security of those we do enjoy. Offering up our unfeigned desires to the all-wise God that he would, in this day of darkness, be a lamp to our feet, a light to our path and graciously direct to those measures which may be effectual for this purpose."

"To James Prescott, representative of the town of Groton, and the districts of Pepperell and Shirley:

"SIR,—We, his Majesty's most loyal and dutiful subjects, the freeholders and other inhabitants of the district of Pepperell, legally assembled, July 18, 1773, being ever ready to give due assistance and encouragement to government in a constitutional way, at the same time greatly concerned that the rights and privileges of British subjects (our birth-right and the richest inheritance left us by our fathers) may be securely enjoyed by us and transmitted entire to our posterity, cannot but be greatly affected at the frequent innovations which have been made upon our happy constitution; the particulars of the encroachments made upon our liberties we shall not at this time enumerate, but referring you to a pamphlet sent from Boston to every town in the province, which we think very justly states our rights, and the encroachments made upon them; we, therefore, who are no small part of your constituents, do desire and expect that you exert yourself in the Great and General Assembly to the utmost of your ability, for the regaining of such privileges as have been unjustly wrested from us, and establishing those we do enjoy. We trust that you will ever be watchful, that you be not

induced by any means to consent to any vote or votes, in the Great and General Assembly, that may have a tendency to weaken our constitutional rights and privileges, or ever in a like case to be made a precedent of, to the disadvantage of us and our posterity. Presenting the above instructions to your wise consideration, we wish that you and all true friends to the English constitution may be under the divine direction, that you may be led into the paths of truth, and never be driven aside from seeking the welfare of your country."

The district unanimously accepted this report and chose a committee to transmit the communications to the parties to whom they were addressed.

"In February, 1773, the district voted to add two casks of powder, and lead answerable, to their stock of ammunition."

June 27, 1774, the district passed the following preamble and resolutions, and voted to send a copy of the same to Boston:

"Under a deep sense of the distressing and very extraordinary circumstances of this land are unhappily brought into, by—as we think—a bad ministry in our parent country, by the innovations already made in our civil liberties, and what seems to be further threatened, we are with concern of opinion, that it behoves us and all this province, and all North America, to set up a general correspondence and to cultivate harmony, that there may be a united voice with resolution throughout this land, that we may make a proper stand, and lift up our united prayers, to Almighty God to pity us, and vouchsafe to us his gracious protection, and direct us into such measures as he will please to prosper and succeed for our deliverance from the great difficulties and embarrassments we are under, and secure and save us from impending ruin, with which we are further threatened by some in power, who carry on their wicked designs as if by magic art assisted. We seriously recommend to all amongst us and the whole of North America to lay aside all contentions, broils, and even small quarrels, and to omit the practice of everything that tends to disunite us as brethren, as neighbors, as countrymen, that are interested in one and the same cause, and must stand or fall together. Therefore, resolved,

"1. As the opinion of this district that we have a just and lawful right to meet together when and so often as we shall have occasion, to cultivate harmony and to transact our town affairs; and that we will hold, use, and improve that privilege, and will never give it up, or quit the usual practice of meeting, on any mandate whatever.

"2. That neither Lord North, nor any other British minister or person whatever, hath any right to trample America under his feet, nor to invade its privileges, either civil or religious.

"3. We are resolved to do all in our power, by abstinence or any other lawful and proper way, to secure and preserve our charter rights and privileges, and that we will not tamely submit to the yoke of bondage.

"4. That we will not have any hand in the consumption of teas, West India or British goods, wares or merchandise, imported after the last day of August next, nor deal with any person who shall import such goods, wares or merchandise, contrary to the general sense and agreement of the inhabitants of this much abused province.

"5. We return our hearty thanks to our patriotic friends at Boston, for their firmness, care and vigilance the time past, for the good and safety of this country. And we desire you not to give over now, although your circumstances are very discouraging. We sympathize with you in this day of darkness, and bad situation of affairs, and will, when need be, attest our ability, administer our substance, and whatever may be beneficial to the cause, and are determined to exert ourselves in the cause that so much concerns us. And we hope and pray that the Lord of Hosts will direct us, and you, and all the colonies into a right way, that His blessing may be upon our united endeavors, and may success, with peace and harmony, crown the whole to the glory of God and the tranquility of the American colonies."

The following extract from the instructions given to their representatives in 1775 shows that the inhabitants of Pepperell had already, more than a year before the Declaration of Independence was formulated, arrived at the conclusion that their only hope was in a complete separation from the British Government:

"We therefore instruct you, sir, that you, in our name and behalf, signify to the Great and General Court, of which you are a member, that our opinion is, that independence is the only alternative for the safety of this oppressed land, and that if the honorable Congress should think it best for the safety of the United Colonies to declare them independent of Great Britain, we acquiesce heart and hand, and are determined, at the risk of life and treasure, to support the measure."

These expressions of independence were not mere words. Active preparations had for some time been in progress to enforce their principles by actual resistance; and the leader was already in the field.

William Prescott was born in Groton, February 20, 1726; but at the age of twenty years he removed to the West Parish, and "took up" a farm lying partly in the parish and partly in the "Groton Gore," so-called. The whole farm afterwards became a part of Pepperell. He inherited martial proclivities. His great-grandfather, who emigrated from England, was said to have served under Cromwell; his grandfather was captain of militia at the time of the Indian depredations; and his father had been colonel of the militia of Middlesex and Worcester Counties. He himself had been a lieutenant of the provincial troops that were sent, in 1775, to remove the neutral French from Nova Scotia; and on his return from that expedition had been promoted to a captaincy. In 1768 he was chosen a committee to represent Pepperell in the General Committee of Safety, composed of members from the several towns in the Province. He was sent a delegate to the Provincial Congress at Salem; and was in 1774 appointed colonel of a regiment of "minute-men" enrolled in Pepperell, Groton and Hollis. The settlers of "West Dunstable" were almost all from the neighboring town of the Massachusetts Province. In fact, until the establishment of the boundary line in 1751, they had considered themselves citizens of that Province, and in their business relations and social sympathies they were still inclined in that direction. Moreover, Colonel Prescott was a near neighbor and friend of Captain Dow, Lieutenant Goss and many others of the Hollis company; and his brother-in-law, Colonel John Hale, was one of the leading patriots of Hollis. These were, probably, the reasons that induced the Hollis company to join Colonel Prescott's regiment, rather than one in their own State.

The muster-roll of the Pepperell company was:

Captain John Nutting, First Lieutenant Nathaniel Lakin, Second Lieut. John Mosher, Sergeants Edmund Bancroft, Silas Pierce, Josiah Newell, Abijah Parker, Corps. James Mosher, Ebenezer Nutting, John Boynton, Peter Perham, Drummer Robinson Lakin, Privates Jeremiah Shattuck, John Chamberlain, George Abbott, Abraham Boynton, George Attridge, Moses Blood, Joseph Chamberlain, Jonathan Blood, Nathan Fisk, Simon Green, William Green, Daniel Mosher, Joshua Lawrence, Francis Lee, John Adams, Thos. Lawrence, Sam'l Nutting, Abel Parker, Josiah Shattuck, Michael Sawtell, Sam'l Seward, Josiah Seward, Moses Shattuck, Philip Shattuck, Reuben Shattuck, Joseph Shattuck, David Shattuck, Josiah Shattuck, Eleazer Whipple, Robert Conant, Joseph Chamblay, Oliver Shattuck, Jonas Warren, Joseph Tarbell, James Tarbell, Isaac Williams, Joseph Woods, Daniel Shattuck, Joseph Whitney, Thos. Wetherbee, Reuben Spaulding, Abijah Shattuck, Sampson Woods, Nathaniel Parker, William Warren, Edmund Pierce, Wainwright Fisk, John Shattuck, Jeremiah Shattuck, Jr., Ebenezer Laughton."

In addition to these there were in Captain Asa Lawrence's company in Groton the following soldiers enrolled from Pepperell:

"First Lieut., Tho' Spaulding; Sergeants, Thos. Spaulding, Samuel Gilson; Corporals, Joseph Shedd, Jonathan Stevens, Samuel Farley; Privates, Jonathan Boyden, Levi Woods, David Avery, Joseph Adams, James Bowers, Joseph Jewett, Samuel Green, Simon Green, Benjamin Jewett, Jonathan Lewis, Samuel Lovejoy, Simon Lakin, Eleazar Parker, Eleazar Spaulding, David Wetherbee, Tho' Lawrence (id.), Benjamin Wood, William Spaulding, Phineas Douglass, Aaron Scott, James McCune."

About nine o'clock on the morning of the memorable April 19, 1775, a messenger from Concord arrived in Pepperell with the thrilling tidings of the skirmish at Lexington, and the advance of the British regulars towards Concord. Colonel Prescott immediately gave orders to the Hollis and Pepperell companies to march to Groton and there join the other companies of the regiment. These minute-men, well organized and ready for action, promptly responded to the summons. So well prepared were they for such an emergency and so expeditious in their rally, that they arrived at the Groton rendezvous, five miles distant, before the companies there were ready to march; and after a halt of a few minutes, impatient at the delay, they marched on in advance of the Groton companies.

The following incidents will show how promptly the minute-men obeyed the call to arms:

Edmund Bancroft, a sergeant in Capt. Nutting's company, was living with his father, on Bancroft Street, but had just started for Maine when the messenger arrived to notify him. Mr. Bancroft's father said: "Perhaps he is not out of hearing yet," and, running out in the field, and mounting a high rock he called to his son, who heard, returned to the house, took his gun and hastened towards Concord.

Another of Capt. Nutting's company, Abel Parker, —afterwards judge of Probate for Cheshire County, N. H., and father of the late Chief Justice Joel Parker—was plowing on his farm nearly three miles distant, but as soon as he heard the alarm, he left the plow in the furrow, and, without stopping to unyoke his oxen, ran to the house and seizing his coat in one hand and his gun in the other, started on a run and did not stop until he overtook his comrades, near the "Ridges," some three miles below Groton.

Col. Prescott hastened on with his regiment to Concord, but being unable to arrive there in time to take any part in the conflict of that day, he followed the retreat of the "regulars" to Cambridge, and made that place his headquarters.

The women of those days were not a whit inferior to the men in patriotism and courage, nor in a *manly* exhibition of heroism. After the departure of the minute-men, the women in the vicinity of the bridge over the Nashua River—now the covered bridge—collected, dressed in their absent husband's clothes, and armed with the most effective weapons they could find. Having chosen Mrs. David Wright their commander, they patrolled the road, firmly deter-

mined that no enemy to freedom should pass that bridge,—and to good purpose, too, for they soon had the satisfaction of arresting Capt. Leonard Whiting, of Hollis, a noted Tory, and the bearer of despatches from Canada to Boston. He was compelled to dismount and submit to a search. The treasonable correspondence, which was found in his boot, was forwarded to the Committee of Safety, and he was detained as prisoner, and sent to Oliver Prescott, Esq., a brother of Col. Prescott. Mrs. Wright's maiden name was Prudence Cumings. She was born in Hollis, November 26, 1740; was married to David Wright, of Pepperell, December 28, 1761, and by him had eleven children, two of whom she named Liberty. One of her brothers was in Capt. Dow's company, but two other brothers were Tories. Capt. Leonard Whiting was born and had been reared in the same neighborhood with Prudence Cumings. He knew her well, and, tradition says, that when he recognized her voice through her disguise at the bridge, he remarked that it was of no use to resist, and surrendered unconditionally. In November, 1889, a memorial stone of polished granite was erected near this bridge by a great-great-granddaughter of Prudence Wright—Mrs. H. A. Pevear, of Lynn, Mass.—to commemorate the heroism of her ancestress. At the same time, through the efforts, principally, of Mrs. Dr. William F. Heald and Mr. Frank W. Ames, assisted by several others of the members of a magazine club, two similar stones were erected—one at "Munger's Corner," to mark the spot where Mr. Ames was killed by the Indian (an event previously related), and the other at the junction of Townsend and Bancroft Streets, where the British officers (paroled prisoners of war) who were quartered in Pepperell and Townsend, after the surrender of Burgoyne, in 1777, were allowed to meet and sympathize with each other.

The expense of these monumental stones was defrayed by the proceeds of an art loan exhibit and subscriptions from Pepperell people, several of whom were non-residents.

Soon after his arrival at Cambridge, Col. Prescott with most of his men enlisted for eight months, it being the prevalent opinion that by that time the war would be over. In the latter part of May, following, he received from the Provincial Congress a commission as colonel in the army. His regiment of ten companies numbered about four hundred and twenty-five men. His staff officers were: Lieut. Col., John Robinson, of Westford; Major, Henry Woods, and Adjut., William Green, of Pepperell.

On the 16th day of June, 1775, the commander of the army, in accordance with the recommendation of the Committee of Safety, took measures to fortify Bunker Hill. Orders were issued for "Frye's, Bridge's and William Prescott's regiments to parade this evening at six o'clock, with all the intrenching tools in this encampment." They were also ordered to furnish themselves with packs, blankets and rations

for twenty-four hours. A detachment of about two hundred Connecticut troops, and Capt. Samuel Gridley's company of artillery, of forty-nine men and two field-pieces, was also ordered to parade. Col. Prescott was placed in command of this force, with written orders from Gen. Ward "to proceed that night to Bunker Hill, build fortifications to be planned by Col. Richard Gridley, chief engineer, and defend them until he should be relieved—the order not to be communicated until the detachment had passed Charlestown Neck." The detachment, numbering about twelve hundred men, paraded as ordered on Cambridge Common; and after listening to a prayer by President Langdon, of Harvard College, commenced under cover of night its silent and mysterious march. Col. Prescott, wearing a simple uniform dress, with blue coat and three-cornered hat, led the troops over the "Neck," and then, having ordered a halt, made known the object of the expedition. A long consultation followed in regard to the place to be fortified, and it was finally determined to erect a redoubt at the southerly end of the Bunker Hill range, on the eminence locally known at that time as Breed's Hill. "When the detachment reached Breed's Hill the packs were thrown off, the guns were stacked, Col. Gridley marked out the plan of a fortification, tools were distributed, and about twelve o'clock the men began to work." Col. Prescott immediately detailed Capt. Maxwell with several of his men to patrol the shore and watch the motions of the enemy during the night. The Boston shore opposite was lined with British sentinels. On either side in the waters around them were moored several men of war, and floating batteries, all within gunshot. "This proximity to an enemy required great caution, and a thousand men, accustomed to handling the spade, worked with great diligence and silence on the intrenchments, while the cry of 'All's well,' heard at intervals through the night by the patrol, gave assurance that they were not discovered. Col. Prescott, apprehensive of an attack before the works were in such a condition as to cover the men, went down twice to the margin of the river with Major Brooks to reconnoitre, and was delighted to hear the watch on board the ships drowsily repeat the usual cry." "He was often heard to say, after the battle, that his great anxiety that night was to have a screen raised, however slight, for his men before they were attacked, which he expected would be early in the morning, as he knew it would be difficult, if not quite impossible, to make raw troops, however full of patriotism, to stand in an open field against artillery and well-armed and well-disciplined soldiers. He therefore strenuously urged on the work, and even subaltern and private labored with spade and pickaxe, without intermission, through the night, and until they resumed their muskets, near the middle of the day. Never were men in worse condition for action, exhausted by watching, fatigue, and hunger,—and never did old soldiers behave better."

The intrenchments had been raised about six feet in height before they were discovered at early dawn the next morning. A heavy cannonade from the ships and Copp's Hill then began, but the Americans, protected by their works, were not injured, and kept steadily at work. At length a private was killed by a cannon-shot, and some of the men began to exhibit signs of fear.

To reassure them and to inspire confidence, Colonel Prescott mounted the parapet and walked leisurely around it, inspecting the works, giving directions to the officers and encouraging the men by approbation or amusing them with humor. This had the effect that was intended. "The tall, commanding form of Prescott was observed by General Gage as he was reconnoitering the Americans through his glass, who inquired of Councilor Willard (a brother-in-law of Colonel Prescott), near him, who the person was who appeared to command? Willard recognized his brother-in-law. 'Will he fight?' again inquired Gage. 'Yes, sir; he is an old soldier, and will fight as long as a drop of blood remains in his veins.'"

The first attack of the British soldiers was made about three o'clock and was easily repulsed. Of the second attack, Judge Prescott, the colonel's son, thus writes: "The discharge was simultaneous the whole length of the line, and though more destructive, as Colonel Prescott thought, than on the former assault, the enemy stood the first shock, and continued to advance and fire with great spirit; but before reaching the redoubt the continuous, well-directed fire of the Americans compelled them to give way, and they retreated a second time, in greater disorder than before. . . . Colonel Prescott spoke of it as a continued stream of fire from his whole line from the first discharge until the retreat."

By much exertion the British officers rallied their men for a third attack, which was successful. The ammunition of the Americans was spent. They fought desperately with their bayonets and the butts of their guns, but were compelled to retreat. "The British had entered the redoubt, and were advancing, when Colonel Prescott ordered a retreat. He was among the last, and before leaving it was surrounded by the enemy who had entered, and had several passes with the bayonet made at his body, which he parried with his sword—of the use of which he had some knowledge." He received several thrusts through his garments, but he was not wounded. He was always confident that he could have held the fortifications if he had been supplied with sufficient ammunition. On his return to Cambridge he immediately reported to General Ward, commander-in-chief, the result of the battle, assured him that the confidence of the British would not be increased thereby, and offered to retake the hill that night or perish in the attempt, if three regiments, of fifteen hundred men, well-equipped with ammunition and bayonets, were put under his command. "He had not yet done

enough to satisfy himself, though he had done enough to satisfy his country. He had not, indeed, secured final victory, but he had secured a glorious immortality."

Of the Pepperell soldiers who fought in this battle, eight were killed and eight were wounded:

Killed—Jeremiah Shattuck, aged thirty; Nathaniel Parker, thirty-three; Wm. Warren, twenty; Wainwright Fisk, twenty-four; Ebenezer Laughton, twenty-seven; Joseph Spaulding, thirty-seven; Benj. Wood, twenty; Edmund Pierce, forty-four.

Wounded—Jonathan Stevens, Moses Blood, Simon Green, Adj. Wm. Green, John Adams, Thos. Lawrence (3d), Abel Parker, Wm. Spaulding.

The following letter to John Adams, at that time a delegate to the Continental Congress, contains Col. Prescott's own account of the battle:

"CAMP AT CAMBRIDGE, Aug. 25, 1775.

"Sir—I have received a line from my brother, which informs me of your desire of a particular account of the action at Charlestown. It is not in my power, at present, to give so minute an account as I should choose, being ordered to decamp and march to another station.

"On the 16 June, in the evening, I received orders to march to Breed's Hill, in Charlestown, with a party of about one thousand men, consisting of three hundred of my own regiment, Colonel Bridge and Lieut. Bricket, with a detachment of theirs, and two hundred Connecticut forces, commanded by Captain Knowlton. We arrived at the spot, the lines were drawn by the engineer, and we began the intrenchment about twelve o'clock; and plying the work with all possible expedition till just before sun-rising, when the enemy began a very heavy cannonading and bombardment. In the interim the engineer forsook me. Having thrown up a small redoubt, found it necessary to draw a line about twenty rods in length from the fort, northerly, under a very warm fire from the enemy's artillery.

"About this time, the above field officers being indisposed, could render me but little service, and the most of the men under their command deserted the party. The enemy continuing an incessant fire with their artillery, about two o'clock in the afternoon, on the seventeenth, the enemy began to land a northeasterly point from the fort, and I ordered the train, with two field-pieces, to go and oppose them, and the Connecticut forces to support them; but the train marched a different course, and I believe those sent to their support followed, I suppose, to Bunker's Hill.

"Another party of the enemy landed and fired the town. There was a party of Hampshire, in conjunction with some other forces, lined a fence at the distance of three-score rods back of the fort, partly to the north.

"About an hour after the enemy landed they began to march to the attack in three columns. I commanded my Lieut.-Col. Robinson and Major Woods, each with a detachment, to flank the enemy, who, I have reason to think, behaved with prudence and courage. I was now left with perhaps one hundred and fifty men in the fort. The enemy advanced and fired very hotly on the fort, and meeting with a warm reception, there was a very smart firing on both sides. After a considerable time, finding our ammunition was almost spent, I commanded a cessation till the enemy advanced within thirty yards, when we gave them such a hot fire that they were obliged to retire nearly one hundred and fifty yards before they could rally and come again to the attack. Our ammunition being nearly exhausted, could keep up only a scattering fire. The enemy being numerous, surrounded our little fort, began to mount our lines, and enter the fort with their bayonets. We were obliged to retreat through them, while they kept up as hot a fire as it was possible for them to make. We having very few bayonets, could make no resistance. We kept the fort about one hour and twenty minutes after the attack with small arms. This is nearly the state of facts, though imperfect and too general, which, if any ways satisfactory to you, will afford pleasure to your most obedient, humble servant,

"WILLIAM PRESCOTT.

"To the Hon. John Adams, Esq."

Col. Prescott remained with the army in the vicinity of Cambridge, during the "siege of Boston."

After its termination by the evacuation of the British in March, 1776, he was stationed at Governor's Island, New York, until after the battle of Long Island; and when the American forces were obliged to retreat from New York City, he withdrew his regiment so skillfully and successfully as to call forth the public commendation of Gen. Washington. In the fall of 1777 he, with several of his old officers, went as a volunteer to oppose the onward march of Burgoyne, and was present to witness the surrender of that formidable but discomfited army, which, according to the British program, was destined to insulate New England from the other Colonies, and thus effectually crush the rebellion.

This was Col. Prescott's last military service, if we except his hastening to Concord, at the time of Shays' Insurrection, to assist in protecting the courts of justice and in preserving law and order. He returned to his farm in Pepperell, honored by his fellow-citizens, whom he served in the various municipal offices of town clerk, selectman, magistrate, and also as representative to the General Court for three years. He died October 13, 1795, at the age of sixty-nine years, and was buried with appropriate military honors.

In person he was of tall and commanding stature, large and muscular frame, well marked and intellectual features, with brown hair and blue eyes. He was somewhat bald on the top of his head, and wore a tie-wig. He had only a limited education, but he was self-taught, and was very fond of reading, especially history. He was never in a hurry, never unduly excited, but always cool and self-possessed in times of commotion and danger. In deportment he was plain and courteous; in disposition, kind and benevolent—liberal to a fault, and always ready to assist others even to his own disadvantage.

Mrs. Abigail (Hale) Prescott, of Sutton, was an exceedingly amiable, prudent and estimable woman. Her rare combination of the virtues of thrift without selfishness, and frugality without parsimony, was a fortunate supplement to the easy liberality of her husband.

In the old burying ground at Pepperell, within the shadow of the old church, stands a plain tomb, built of four upright granite slabs, forming a square inclosure about three feet high, upon the top of which rest two horizontal tablets of slate-stone bearing the following inscriptions:

IN
memory of
MRS. ABIGAIL PRESCOTT,
widow of the late
COL. WILLIAM PRESCOTT,
who died
Oct. 19, A.D. 1821,
Æt. 89.

This stone is erected
in memory of
Col. William Prescott,
of Pepperell,
who died on the 13th day
of October, Anno Domini 1795,
in the seventieth year
of his age.

Simple and unpretentious as it is, the Pepperell farmer who commanded the yeomanry of Middlesex at the battle of Bunker Hill needs no costlier or more imposing mausoleum. His epitaph might well be,

"Exegi monumentum aere perennius."

In addition to the soldiers that were in Col. Prescott's regiment, the following Pepperell men served in the Continental Army for different terms of service, varying from three months to seven years; Daniel Hobart, killed at the battle of White Plains in 1776; James Locke, Dennis Organ, Joseph Plummer, John Whipple, Andrew Tufts, Eleazar Gilson, Nathaniel Sartell, Isaac Williams, Noah Wright, Samuel Moody Emerson, Shubael Conant, Jonathan Barron, Edmund Wright, Jacob Nutting, Jonathan Bancroft, David Tarbell and Dudley B. Kemp.

On the muster-roll for Middlesex County, June, 1777, the following persons from Pepperell were returned as enrolled in Col. Jackson's battalion, Capt. Benj. Brown's company, viz.:

James McComer, Jonas Green, Ebenezer Shattuck, Abraham Shattuck, Daniel Shattuck, Benjamin Green, Sampson Woods, William Scott, John Gilson, Thomas Lawrence, William Lakin, John Shattuck (3d), Lemuel Parker.

They served a campaign in Rhode Island.

The following were out on the brigantine "Hague," under command of Commodore Manley:

Edmund Blood, John Hosley, Samuel Wright, Peter Stevens, John Stevens, Joel Shattuck, Peter Powers, Luke Day, John Barnard, Oliver Tarbell, Joseph Emerson, M. Lovejoy, Theodore Lovejoy, Joseph Lovejoy, Richard Holden, Daniel Holden, Oliver Holden, Ezekiel Gowen, David Pratt, David Lewis, David Shedd.

Few, if any, towns of its size furnished so many men for the war as Pepperell. It was one of the first places in which a "liberty-pole was erected," and there was not a single Tory within its limits. As we have already seen, it was dangerous for one to attempt even to pass through it.

The patriotic and military spirit in the town did not cease with the war. The names of Prescott and Bunker Hill became synonyms of "liberty and independence." The 17th of June was a "red-letter" day, whose anniversary quite overshadowed that of the "Fourth of July." The Revolutionary survivors, especially those that had been wounded at Bunker Hill, were looked upon as "heroes in history," and regarded with feelings akin to veneration. An active interest in military matters was kept up, and the title of "Captain" became an honor to be coveted.

A volunteer militia company was organized about the year 1820 under the name of the "Prescott Guards." From this company the following captains were promoted to field officers in the "Old Sixth" Regiment: Col. William Buttrick, Gen. Geo. Green, Maj. Jos. G. Heald, Maj. Luther S. Bancroft, Col. Samuel P. Shattuck, Maj. Geo. T. Bancroft, Col. Alden Lawrence, Maj. Edmund A. Parker and Col. E. F. Jones.

On the 15th of April, 1861, Col. Jones received the following order:

COMMONWEALTH OF MASSACHUSETTS, ADJ. GENERAL'S OFFICE,

"BOSTON, April 15, 1861.

"COL. JONES, SIR:—I am directed by his excellency, the Commander-in-Chief, to order you to muster your regiment on Boston Common

forthwith, in compliance with a requisition made by the President of the United States. The troops are to go to Washington. By order of his Excellency, the Commander-in-Chief,

"WM. SCHOLLER,

"Adj. General."

Although the regiment was scattered over thirty towns, yet in a few hours seven hundred men, twenty-two of whom were from Pepperell, were present in Boston ready for duty. After an exchange of their old guns for new rifles, Governor Andrew presented the regimental colors to Col. Jones with these words:

"Soldiers, summoned suddenly with but a moment for preparation we have done all that lay in the power of men to do—all that rested in the power of your State Government to do—to prepare the citizen soldiers of Massachusetts for this service. We shall follow you with our benedictions, our benefactions and prayers. Those whom you leave behind you we shall cherish in our heart of hearts. You carry with you our utmost faith and confidence. We know that you never will return until you can bring the assurances that the utmost duty has been performed which brave and patriotic men can accomplish. This Flag, sir, take and bear with you. It will be an emblem on which all eyes will rest, reminding you always of that which you are bound to hold most dear."

In receiving the flag Colonel Jones thus replied:

"Your Excellency has given me this Flag, which is the emblem of all that stands before you. It represents my whole command; and so help me God, I will never disgrace it."

The record of the "Old Sixth," its intrepid march through Baltimore on the twice memorable 19th of April, the great service it rendered the government at a most critical period, have all become a thrilling part of the history of the country.

Congress passed the following vote of thanks, which was engrossed on parchment and sent to Col. Jones:

"Thirty-seventh Congress of the United States, at the first session in the House of Representatives, July 22, 1861. *Resolved*, that the thanks of this house are due, and are hereby tendered, to the Sixth Regiment of the Massachusetts Volunteers for the alacrity with which they responded to the call of the President, and the patriotism and bravery which they displayed on the 19th of April last, in fighting their way through the city of Baltimore on their march to the defence of the Federal Capital.

"GALUSHA A. GROW,

"Speaker of the House of Representatives.

"Attent:

"EM. ETHERIDGE, Clerk."

Pepperell furnished about one hundred and fifty soldiers for the War of the Rebellion. The regiments in which they enlisted were the Sixth, Thirteenth, Fifteenth, Sixteenth, Twentieth, Twenty-sixth, Thirty-second, Thirty-third, Thirtieth, Thirty-ninth, Forty-fourth, Forty-seventh and Fifty-third Massachusetts Infantry; Sixth New Hampshire Infantry; Eighth New Hampshire Cavalry; Second Massachusetts Cavalry; First New Jersey Band; Lowell Brigade Band; and the band of the Third Brigade, Third Division, Twenty-fourth Army Corps.

The following soldiers lost their lives by reason of the war:

Marvin Adams died of chronic diarrhoea and fever at New Orleans, July 9, 1863, aged forty-three.

Aaron Carter, killed in battle at Cedar Creek, Va., Oct. 19, 1864, aged forty-two.

Thomas H. Bailey died of measles at Harrison's Landing, Va. His body was brought home and buried with appropriate services.

Corp. Chas. H. Balcom died of typhoid fever at Suffolk, Va., aged twenty-one. His remains were also brought to Pepperell for interment.

Henry G. W. Clark died of wounds received on picket duty in front of Petersburg, Va., July 7, 1864, aged eighteen years.

Charles Durant died in Confederate hospital at Petersburg, Va., Feb. 15, 1864, aged thirty-seven. He was wounded at the second battle of Hatcher's Run and taken prisoner. His death was caused by hemorrhage resulting from amputation of the leg.

Henry W. Durant died of disease contracted in the army, November 4, 1867.

James Fitzgerald died of disease contracted in the army, August 26, 1866, aged thirty-seven years.

Maurice Flaherty died of disease contracted in the army June 18, 1867.

Lieut. Thos. Hosley, killed in battle of Port Hudson, June 14, 1863, aged twenty-four. He was distinguished for his activity and bravery. His body, when found after the battle, was pierced with eleven bullet-holes.

Cyrus H. Gray died of disease contracted in the army January 14, 1868, aged fifty.

Eben F. Lawrence died of wounds and diphtheria at Aquia Creek, Va., June 11, 1863, aged twenty years.

John F. Miller died of disease contracted in the army September 12, 1868, aged twenty-four years.

Benj. Augustus Williams was discharged from the service for disability at New Orleans, November 25, 1862. He died on board the United States ship "Fenton" when four days out on his homeward passage, and was buried at sea. He was thirty-seven years of age.

Robert F. Webb was born in Stroudwater, Gloucestershire County, England, but came to America when a youth. He enlisted in the Sixth Regiment, and, at the expiration of term of service, re-enlisted in the Thirty-sixth Regiment; received a first sergeant's commission March 17, 1863, and joined Gen. Burnside's Ninth Corps. After the battles of Fredericksburg and Peach Orchard, he was promoted to second lieutenant. He was killed in battle at Poplar Grove, near Petersburg, Va., September 30, 1864, and was buried in the Ninth Corps Cemetery, in front of Petersburg. An officer of his regiment says of him: "Lieut. Webb was a noble and brave officer, and fought bravely to the last for his adopted country."

Thomas A. Parker was born in Pepperell, Nov. 27, 1834. Soon after becoming of age he went to Boston, and obtained the situation of gate-keeper, South Boston House of Correction. By his fidelity and ability he gained the confidence of the officers of the institution and was repeatedly promoted until he became deputy warden. He enlisted in Company H, Second Massachusetts Cavalry, June 14, 1864. On the 16th of July following, at the battle of Rockville, Hanover County, Va., he, and two hundred others, held the town over night against forty thousand Confederate troops, but in the morning they were obliged to surrender. He was taken to Libby Prison, Richmond, Va., and from there was removed to Danville, Va., where he died of starvation Dec. 10, 1864. After the close of the war his remains were brought to his home in Pepperell and buried with all the honors due to a brave soldier and noble martyr to the cause of freedom.

In 1849 there commenced a contest between the town and certain members of the First Parish, which continued several years, and caused a great deal of local excitement. About the time of its incorporation the parish acquired possession of two acres of land, one-half of which was appropriated for a burying-ground, and the other acre, upon which the meeting-house was located, was used as a "common."

Upon the incorporation of a second parish in 1831, the question arose regarding the legal ownership of this common; there appears to have been no dispute about the burial-ground. The First Parish claimed to be the rightful successors of all property that had been appropriated to parish uses by the original parish and town united. This claim the town were willing to allow, but argued that the "common" had been

devoted to municipal purposes by the united corporation, and therefore had ceased to be the private property of the parish, and had become vested in the town.

The controversy, however, remained a merely verbal one until 1849. In September of that year the First Parish voted "that inhabitants and members of the parish who may associate together for that purpose, be authorized to build sheds on the common for their use, and at their own expense; such sheds to be located and built under the superintendence and direction of a committee chosen for that purpose."

Pursuant to this vote, a row of horse-sheds was built, extending from the meeting-house easterly to the spot now occupied by the receiving tomb, the back of these sheds being only five and a half feet distant from the burying-yard wall. As the ground slopes considerably, the sheds were built upon two levels, but even then the stone underpinning at the easterly end of each level was several feet high. Along the southerly wall of the burying-yard were four tombs, the entrance to three of them being outside of the wall, and within the common. After the erection of the sheds, the only access to these tombs was through one of the sheds, and a small door in the back part thereof into the narrow space between the sheds and wall. At the time of the laying of the foundation the chairman of the selectmen and others, in behalf of the tomb-owners, forbade the workmen to proceed with the work, but to no effect. At a town-meeting, January 21, 1850, it was voted "that the selectmen remove the horse-sheds at the expense of the town."

At a subsequent meeting, March 5th, voted "that the selectmen notify the shed-owners to remove their sheds forthwith, and if they did not, then the selectmen should see that the said sheds be removed within a fortnight from this day peaceably." The owners were notified accordingly, but did not move the sheds. Before the expiration of the fortnight the owner of one of the tombs had occasion to open it for the burial of a member of the family, and, under authority of the selectmen, took down and removed the shed in front of that tomb, but the next day the shed was rebuilt by the owner. A few days afterwards the selectmen and the owners of the several sheds, or their representatives, demolished the entire row of sheds, and removed the lumber from the grounds.

Thereupon the "horse-shed war" began in earnest. Suits for trespass were immediately commenced against the parties engaged in the tearing down of the sheds; which suits the town assumed and defended. For about three years the great question in town matters was *horse-sheds*. Town-meetings, were repeatedly called for that only. The town officers were elected on that issue alone. Compared with that question, all others were of minor importance and interest.

At the June term, 1851, of the "Court of Common

Pleas" of Middlesex County, a verdict was rendered in favor of the plaintiffs, but the defendants appealed to the Supreme Judicial Court, where the verdict was set aside, and judgment rendered for the defendants.

The opinion of the Court was that the town was entitled to a right of convenient access to the burying-yard, over the common, and therefore that there had been no trespass in the removal of any obstructions thereto. This settled the case of trespass, but the question of the legal ownership of the common was not touched; and it remains an unsettled question to this day.

The Worcester and Nashua Railroad, which was opened for travel in 1848, was located along the eastern bank of the Nashua River, through Groton. A station for Pepperell was located opposite Babbittasset village. This was a nucleus toward which business naturally gravitated, and around which a village grew up, identified in all its business and social relations with Pepperell rather than with Groton. A new bridge was built connecting the two villages, and reducing the distance to Pepperell centre to almost one mile, while Groton centre was nearly four miles away. The inhabitants of the new village, therefore, very reasonably asked to become an integral part of Pepperell. This request the town of Groton was willing to grant, but, with a liberality whose disinterestedness was somewhat questioned, insisted upon giving away the whole northeastern end of her township. This generous gift was finally accepted, and in 1857, by act of the Legislature, a territory of about two square miles area was annexed to Pepperell.

Politically Pepperell was always a staunch Democratic town until 1854, when it was captured by the "Know-Nothing" faction. But the next year it wheeled into line with the Republicans, and has ever since carried a large majority for that party.

The population of Pepperell, according to the several census returns have been as follows: 1790, 1132; 1800, 1198; 1810, 1333; 1820, 1439; 1830, 1444; 1840, 1571; 1850, 1754; 1860, 1895; 1870, 1842; 1880, 2347. At the State census of 1885 it was 2586, and at the coming census the number will probably reach 3000.

The valuation of the town was, in 1850, \$557,000; in 1860, \$762,000; 1870, \$1,102,605; 1880, \$1,309,000; 1889, \$1,675,000.

CLERKS OF GROTON WEST PARISH AND PEPPERELL.—Eleanor Gilson, from January, 1742-43, to March, 1743; Samuel Wright, Jr., March, 1743, to 1752; Josiah Fisk, March, 1752, to 1763, and of the town until 1768; also from 1770 to 1773; William Prescott, 1768-69, 1773 and 1788; Nehemiah Hobart, 1774 to 1780, except 1777; William Green, 1777; Henry Woods, 1780 and 1790; Joseph Heald, 1781 to 1806, except 1788 and 1790; Nehemiah Jewett, Jr., 1806 to 1816; Dr. John Walton, 1817-24; Hon. Abel Jewett, 1824-25, 1832-33; William Buttrick, 1826-27; Hon. James Lewis, 1828 to 1832; Samuel Farrar, 1831, 1849-52; Arnold Hutchinson, 1834-35, 1841-42; George W. Tarbell, 1836-41; Samuel Tucker, 1843-44; John Loring, 1845 to 1849; Charles Crosby, 1852, and 1854-64; S. R. Herrick, 1853; Levi Wallace, 1864; D. W. Jewett, 1865 to 1880; Dr. W. F. Heald, 1880 to 1886; P. J. Kemp, 1886.

REPRESENTATIVES TO THE GENERAL COURT.—Captain Edmund Bancroft, 1776; Colonel Henry Woods, 1777 and 1780; Captain John Nutting, 1781; Colonel William Prescott, 1783, '83, '85 and '86; Joseph Heald, 1787-1808, except 1795, 1796 and 1802; William Hutchinson, 1809 and 10; Nehemiah Jewett, Jr., 1811 to 1819, except 1817 and '18; Hon. Abel Jewett, 1820, 1821, 1823 and 1831; Francis Blood, 1824 and '25; Colonel William Buttrick, 1827, 1829, 1832 and 1834; Hon. James Lewis, 1827, 1830 and 1832; Arnold Hutchinson, 1830, 1832, 1838, 1839, 1841 and 1843; David Blood, Jr., 1836 and '37; Joseph G. Heald, 1836; John P. Tarbell, 1839-41, 1843; Luther Lawrence, 1844, 1845 and 1850; Charles Farrar, 1847; John D. Fiske, 1851; Thomas J. Dow, 1851 and '52; Sumner Carter, 1855; Alfred L. Lawrence, 1856; Charles Tarbell, 1857; Rev. Charles Babbidge, 1859; Samuel P. Shattuck, 1861; Albert Leighton, 1863 and 1871; Colonel E. F. Jones, 1865; Levi Wallace, 1866; A. J. Saunders, 1876; S. P. Lawrence, 1879; Charles H. Miller, 1882; Frank Leighton, 1885; John O. Bennett, 1889.

SENATORS.—Abel Jewett, 1825 to 1828; James Lewis, 1828 to 1830; John P. Tarbell, 1842; Asa F. Lawrence, 1844 to 1844; C. W. Bellows, 1848; A. Hutchinson, 1850; Levi Wallace, 1862 and '73; A. J. Saunders, 1877, '78.

DELEGATES TO THE PROVINCIAL CONGRESS.—Colonel William Prescott, at Salem; Captain Edmund Bancroft, at Cambridge and Watertown.

DELEGATE TO THE CONVENTION TO FORM STATE CONSTITUTION.—Colonel Henry Woods.

DELEGATE TO THE CONVENTION TO ADOPT THE FEDERAL CONSTITUTION.—Daniel Fisk.

DELEGATES TO CONVENTIONS TO AMEND STATE CONSTITUTION.—In 1821, Dr. John Walton, Hon. Abel Jewett; in 1852, Luther Lawrence.

CHAPTER XXI.

PEPPERELL—(Continued).

EDUCATIONAL.

In 1741 the town of Groton voted to have a school kept a part of the time at Nissittisset. This was, probably, the first school on the west side of the river. In 1749 a petition from the inhabitants of the West Parish, for the means of supporting a school, was granted by the town of Groton on condition that a school-room be provided by the parish without expense to the town. This condition being fulfilled, the town granted the sum of £13 6s. 8d. The school appears to have been kept at the home of Jonas Varnum. In 1753 the district voted to raise £7 10s. for schooling, and that the school should be kept at the nearest convenient place to the meeting-house; also that all who lived more than two miles distant might draw their proportion of the money, and appropriate the same for schooling as they might see fit. In 1754 it was voted that the school should be kept in three places, but this number was afterwards reduced to two. We find the first mention of a school-house, at the centre, in 1764. It was situated on the corner where the Town House now stands, but was subsequently moved southward several rods, to make room for the building of a store. Yet notwithstanding the existence of this school-house, it was voted, in 1770, to have the school successively in four different parts of the district, and in dwelling-houses. The school-house is again mentioned in 1771, when a vote was passed to have a grammar master. But the school-house appears to have belonged to individuals,

for in 1772 the district voted to purchase it for the sum of £10 13s. 4d., and also to build four more. About this time the district was divided into six "*squadrons*," as they were called, which were distinguished as Middle, North, South, East, West and Southwest; and a committee of three persons in each "*squadron*" was annually chosen, to see that the money that was appropriated be properly expended. In 1809 the name of *squadron* was changed to school district, and these districts were designated by number. In 1819 District No. 7 was formed from the easterly part of No. 1; and the following year, No. 8 was taken from the westerly part of No. 6, and has always been known as the "Pine Orchard School." In 1849, No. 9 was formed from parts of No. 3 and No. 5. The territory east of the Nashua River, on its annexation to the town in 1857, became District No. 10.

In 1868 the town voted to abolish the district system, since which time the term "district" has lost its municipal meaning, and the designation of the several schools by number has gradually become obsolete.

The old district system was somewhat peculiar and anomalous. The district was a miniature republic, occupying a certain accurately-defined territory. It had its annual meetings duly called by legal warrant, at which meetings the necessary district officers were chosen for the ensuing year, and the financial business of the district transacted. Money could be raised and appropriated for school purposes, and a tax for the same levied upon the inhabitants; and in all these matters every legal voter of the district was entitled to a voice and a vote.

The district was obliged to provide, at its own expense, a school-house, and keep the same in repair; also the fuel and necessary incidentals for the school. The money that was raised by the town and appropriated for school purposes was apportioned among the several districts, but could be used only for the payment of teachers; and no teacher could draw from the treasury any money in payment for his services, without a certificate of competency from the Board of School Committee. Without such certificate he even had no right to enter the school-room to take charge of the school. The executive officer of the district was chosen annually, and was styled the "prudential committeeman." It was his duty to take charge of the school property, to supply the fuel and other needs of the school, and to employ the teacher. But here his accountability ceased. He hired the teacher and set him to work, but had no authority over him; he couldn't discharge him even for gross misconduct. To the School Committee, and to them alone, was the teacher amenable. So long as he had their support, he could, if he chose to be persistent, remain in charge of his school in spite of the whole district; but if they discharged him the united district could no longer retain him, except at their own expense.

This divided responsibility resulted occasionally in

a serious "unpleasantness" between the district and the School Committee, in case of an unsuccessful teacher. The prudential committeeman would be ready to absolve himself from blame with the plea that the School Committee had "approved" the teacher and taken the responsibility upon themselves; while the committee would, with fair show of reason, argue that they did not hire the teacher, but simply examined him, as presented to them; and that the examination had been satisfactory.

But the system was, undoubtedly, well adapted to the condition and needs of the community at that time. Every individual had an active participation in the affairs of his district, and felt a live interest in the welfare of his school. There was a laudable, although rather clannish, ambition to have "our" school the best in town, and this feeling excited and maintained in the school an emulation that otherwise would have been difficult of attainment.

The school-houses of that period were also peculiar. They were nearly all built after the same conventional pattern. A low, quadrangular structure of wood, or of brick, twenty-five to thirty feet square, with a door, often a porch, at one end, and a chimney at the other. In the interior, along the centre, was a level space some six feet in width, called "the floor," from each side of which a floor inclined gradually upwards to the side of the building. Upon this slope were built the heavy plank benches and desks, rising one above the other like the seats in an amphitheatre. The teacher's desk was usually either by the door or by the fire-place; but in some houses the entrance, the fire-place and the desk were all at the same end, and in such case the opposite end was built up and filled with benches similar to the sides. In some school-houses the benches extended the whole length of the building; in others they were divided by aisles into two or more sections. The seats were narrow, and at such height as to render it impossible for the younger occupants to rest their feet upon the floor. With a hundred boys and girls crowded into such a room,—all fresh from the out-door life and freedom of the farm,—boisterous, and sometimes inclined to malicious mischief, the management of the school was no sinecure. The first question in regard to the teacher was, "Can he keep order?" His literary qualifications need not be of a high order. If he was a tolerably good reader and speller, had "ciphered" through Adams' Old Arithmetic, could set a fair round-hand copy, and had a general knowledge of grammar and geography, he was judged competent to "teach." But unless he could also be "master" of his school, his occupation was soon gone. The branches of study taught were confined to the "three R's," with perhaps a class or two in grammar or geography. The text-books commonly used were "Adams' Arithmetic," "Scott's Lessons" and "Pierpont's American First Class Book," "Webster's Spelling Book," and a compilation of Scripture stories and extracts called "Beauties of the Bible."

Murray's Grammar and Morse's or Olney's Geography were optional studies. There were no ornamental branches. The young man of sixteen to twenty years of age, who had the advantage of only two or three months' schooling during the year, could not afford to waste any of his time in fancy studies. To him, whatever education he was enabled to obtain "meant business."

The money annually raised for the support of schools was sufficient to maintain them only five or six months. This time was divided into two terms: one of three months in summer, and one of three months, more or less, according to funds, in winter. The summer school was invariably taught by a "School Ma'am," and the winter schools, usually, by a "master." The pay of the former, exclusive of board, varied from two to three dollars per week, and that of the latter, from twenty to thirty dollars per month; and these wages were considered so liberal as to cause the supply of teachers to equal and often exceed the demand. The prudential committeeman was required to "engage" the teacher; and as nepotism in this matter was not regarded dishonorable, he often improved his opportunity to favor some relative or friend. Tradition says that at a certain annual district meeting, during the balloting for committeeman, a neighbor contrived to get a position directly behind the candidate, and before the announcement of the result of the ballot had been fairly concluded, leaned forward, and made application for his daughter to teach the school; and, moreover, verified the old adage respecting the "early bird."

When, on account of the appropriations being unusually small, or the wages of the teacher for some reason uncommonly high, the term of school was likely to be abridged, it would often be extended several weeks by voluntary contributions from the district. Sometimes a more economical arrangement could be made for the teacher to "board round," whereby the contribution was paid in board as an equivalent for cash; and the teacher, moving around, from week to week, among the principal householders of the district, was enabled to add a chapter to his experiences in the "spice of life," and also receive the benefit of a free course of practice in peripatetics.

Such were the common schools of three-score and ten years ago. But rude and imperfect as they may now appear to have been, they fulfilled a noble mission in their day and generation. To them are we indebted for our grand system of free public education. They were the seminaries in which were fostered those germs of character that in these developments have made the name of New England a synonym for mental activity, enterprise and independence throughout the world.

In 1831 the school-house at the centre having become dilapidated, and its location being desired for other purposes, a brick building was erected east of the meeting-house. It was divided into two apart-

ments, one being used for a primary school during the winter, and the other for the scholars of larger growth. This first attempt toward graded schools continued four years and was then abandoned as impracticable. At that time the summer school was for the younger children exclusively. When the lad had attained the age of a dozen years he was considered old enough to stay at home and help on the farm. Henceforth he must make the most of the winter school, which was kept for the benefit of the older scholars. Under such an arrangement, with different teachers, and an interchange of scholars twice a year, and with no sequence, except that of time, from one term to the next, a proper grading of the schools could hardly have been expected. The building was subsequently remodeled into one room, and continued to be used for a school-house until 1877, when it was converted into an engine-house, and as such has been occupied by Company No. 1. In 1849 the Babbittset District abandoned their old house on the corner of Main and River Streets and built a new one some thirty rods nearer their village. It was built in modern style and furnished with "Boston desks." For many years it was the pride of the district, and the model school-house of the town. It was destroyed by fire in the early part of 1881; and the same year the present house was erected upon the site. Incited by the good example of No. 7, the other districts gradually fell into the line of progress, and the old school-houses one by one were remodeled and refurnished, until the last inclined floor had been reduced to a level, and the last ponderous bench become a mere relic of the past.

In September, 1833, Mr. Erasmus D. Eldridge, a graduate of Amherst College, who had previously taught in Pembroke, N. H., opened a private school for the fall in the school-house at the Centre. The decided success of this school stimulated an interest in education already awakened in the community, and the desire for a school of higher grade than the common district school, and was the cause of immediate active efforts. Early in February, 1834, the following agreement and subscription paper combined was circulated among the prominent citizens of the town:

"PEPPERELL, January 27, 1834.

"We, the Subscribers, believing that the interests of sound learning and true religion would be promoted by an Academy established in this town, agree and engage to pay the sums annexed to our respective names, to purchase an eligible site, and to erect thereon a building suitable for the purposes of such an institution, the following conditions being understood, viz.:

"I. The funds thus subscribed shall be placed in the hands of a Treasurer chosen by the Subscribers, to be faithfully applied, under their direction, to the object for which they were subscribed.

"II. This subscription shall be taken up in shares of twenty-five dollars each, and each share shall entitle a subscriber to a vote in the disposal of the property.

"III. When completed the building shall be under the control of the subscribers till such time as they may see fit to appoint a Board of Trustees and procure for them from the Legislature of the Commonwealth an act of incorporation.

"IV. No subscriber shall dispose of his shares without having first

offered them for sale to the other subscribers, at a regular meeting, at a price not exceeding that which he originally paid for them. And in case of the death of a subscriber, it shall be the duty of the surviving subscribers by a regular assessment to pay over to the heirs of said subscriber the amount of his subscription, and such payment shall be full satisfaction to the claims of said heirs."

To this the following subscriptions were made:

Seth Nason, 4 shares \$100	Ralph Jewett, 1 share \$ 25
Nehemiah Cutter, 7 shares . . 175	John Lawrence, 1 share 25
Samuel Parker, 3 shares 75	Rev. James Howe, 1 share . . . 25
Henry Jewett, 2 shares 50	John Bullard, 4 shares 100
Jonas Parker, 1 share 25	Arnold Hutchinson, 1 share . . 25
Jacob Chase, 1 share 25	David Blood, Jr., 2 shares . . . 50
John Blood, 1 share 25	Nathan Shipley, 1 share 25
And Emerson, 1 share 25	John Ames, 2 shares 50
Edmund Blood, 1 share 25	E. D. Eldridge, 1 share 25
A. B. Cobleigh, 1 share 25	Noah Blood, 1 share 25
Samuel T. Ames, 1 share 25	
Samuel Farrar, 2 shares 50	
	40 shares \$1000

It appears by the records that the above subscribers met, "agreeably to notice," February 6, 1834, and organized as an association, and chose their necessary officers.

At this meeting John Bullard, having offered an eligible site for the academy building, as payment in full for his subscription of \$100, it was voted to accept his offer, and to authorize the treasurer to see that a deed of said land be legally executed. Accordingly, March 19, 1834, a deed was executed by John Bullard, conveying the land to James Howe, Nehemiah Cutter and Henry Jewett, to hold the premises as joint tenants, and not as tenants in common, as trustees for the aforesaid subscribers and proprietors. No vote, however, is recorded whereby Howe, Cutter and Jewett were appointed or authorized to act as trustees. The policy of thus restricting the tenure of the property, however wise it may have appeared at the time, was eventually the cause of much dispute and difficulty.

A site having been secured, Dr. N. Cutter contracted to erect a suitable building for the remaining \$900 and attended to the work so promptly and energetically that in less than three months he had completed it to the acceptance of the proprietors. On the 10th of June, 1834, the building was dedicated with appropriate religious exercises; and Mr. Eldridge, who had returned in the spring and re-opened his school, took possession with fifty-two scholars, under the name of the Pepperell Academy.

Mr. Eldridge, although a stern and often severe disciplinarian in school, was, when off duty, exceedingly genial and companionable. A shrewd observer of human nature, and endowed with a full share of executive ability, he possessed in an eminent degree the faculty of making a school popular. His methods of teaching were practical and quite in advance of his time. Excelling in the study of the natural sciences, he encouraged a love of them in his pupils. He extemporized a chemical apparatus, and gave frequent experimental lectures in chemistry and natural philosophy, not to the school alone, but to crowded and admiring audiences of the people of the town. With

only a school building, without a dollar of funds, or a single volume of a library, and with no apparatus except that of his own furnishing, he succeeded in making Pepperell Academy the most flourishing institution in the vicinity. Students flocked to it from a distance of thirty miles or more. In the catalogue for 1836 we find the total number of scholars during the year to have been, "males, 90; females, 82," with an average attendance of seventy. Of these, forty were classical students, and ninety were from other towns. The academy building was found to be inadequate to suitably accommodate so large a number, and accordingly, this year—1836—an addition of twelve feet was built upon the west end of the building, and was paid for by private contributions. At the close of the fall term, 1837, Mr. Eldridge resigned, in order to enter the ministry. He closed his labors in the school with a studied examination, and a grand exhibition in the evening, where, with ushers and programs and music and original orations, he made his exit triumphantly.

He was succeeded by Rev. George Cook, of Dartmouth College, who continued in charge of the school three terms, and was followed by Harvey B. Wilbur, of Amherst College, who left at the end of his second term. He afterwards became prominent in connection with the establishment of schools for the feeble-minded. In March, 1839, Willard Brigham, of Williams College, took charge of the school. At his resignation, in May, 1840, the trustees invited Rev. Horace Herrick, the preceptor of Groton Academy, to become principal of Pepperell Academy; and as an inducement they raised, by subscription, the sum of two hundred dollars, which they expended in the purchase of chemical and philosophical apparatus. This inducement proved sufficient, and Mr. Herrick accepted the invitation. He was in many respects like the first principal of the school. He had a natural aptitude for teaching, and a rare talent at explanation and illustration. He revived the practice of public philosophical lectures, which, by aid of the new apparatus and a thorough experimental knowledge of physics, he was able to make very entertaining, as well as instructive. But a popular teacher is usually aspiring, and Mr. Herrick could not resist a call to the flourishing academy at Franconetown, N. H.

He was succeeded, June, 1841, by Josiah Pillsbury, a recent graduate of Dartmouth, who, in his management of the school gave general satisfaction. But at the close of the summer term, 1842, the report was circulated that Mr. Pillsbury was in sympathy, both politically and theologically, with the Garrison Abolitionists, and the fact that he was a brother of the noted Parker Pillsbury tended to confirm the credibility of the rumor. 'Midst the conflicting opinions, at that time, in regard to the slavery question, and the acrimonious character of the controversy, this matter foreboded to the trustees serious embarrassment. But all anxiety was speedily allayed by the prompt

resignation of Mr. Pillsbury and his prudent withdrawal from the scene of excitement.

The succeeding term the school was taught by Charles Cummings, of Hollis, N. H. During the winter following, for the first time in its history, the academy building was unoccupied.

The next March, 1843, Rev. Moses P. Case became principal of the school, and remained in charge until May, 1844, when he left to take charge of an educational institution in Freehold, N. J. But failing to realize his expectations in that place, he returned to Pepperell in March, 1845, and again took charge of the academy until November, 1847. He then left, to become principal of the Putnam Free School, in Newburyport. He was afterwards principal of the Salem High School, and also of the Lynn High School. He remained at the latter but a short time, being obliged to give up teaching on account of pulmonary disease. He again returned to Pepperell, where he spent the remainder of his days. He died November 18, 1859, at the age of forty-five. As a Christian gentleman, and one of the foremost educators of his day, he was universally esteemed.

During the "interregnum" between the two administrations of Mr. Case the school was under the care of Mr. J. E. B. Jewett. The teachers that succeeded were as follows: J. Stone, till May, 1849; Everett Boynton, till 1850; Rev. Z. M. Smith, till November, 1851; L. P. Blood, from April, 1852, to November, 1853; Charles S. Farrar, during the fall term of 1854.

In 1841 an act to incorporate the Pepperell Academy was passed by the Legislature as follows:

"Commonwealth of Massachusetts. In the year one thousand eight hundred and forty-one. An act to incorporate the Pepperell Academy.

"Be it enacted by the Senate and House of Representatives in General Court assembled, and by the authority of the same as follows: *Sect. 1.* David Blood, Sr., Seth Nason and Nathan Shipley, their associates and successors, are hereby made a Corporation by the name of the Pepperell Academy, to be established in Pepperell, in the County of Middlesex, with all the power and privileges, and subject to all the duties, restrictions and liabilities set forth in the Forty-fourth chapter of the Revised Statutes.

"*Sect. 2.* The said incorporation may hold real estate to the value of five thousand dollars, and personal estate to the value of fifteen thousand dollars, to be devoted exclusively to purposes of education."

The three corporators here named were subscribers and proprietors under the original agreement and deed, but who their "associates" were does not appear. The proprietors held a meeting August 2, 1841, and chose a board of fifteen trustees, "to manage the concerns of the Academy in future," reference being made in the records to Article 3d, of the original agreement. Of these fifteen trustees, only five were original subscribers; and a majority of them were not citizens of Pepperell and were elected, apparently honorary, rather than executive members. No conveyance of the real estate, either by deed of vote of the original association, was ever made to the corporation or the board of fifteen trustees, and no legal connection can be traced between the two

organizations. Nevertheless the said board of trustees organized August 11, 1841, adopted a constitution and thereafter claimed the control of the affairs of the Academy. But as there never was a dollar of funds in the treasury, their trust must have been in one sense at least, a "dry" one. They drew up a comprehensive code of laws and regulations for the control of the school, and then virtually buried it among the records. They were expected to be present and preside at the annual examination of the school at the close of the fall term, and to hold their annual meeting at that time; and for several years these expectations were partially realized. But their interest in the school gradually declined. There is no record of any meeting after March, 1855. The board of fifteen had practically become extinct. One-half of the signers of the original agreement were dead, and a majority of the remainder had outlived their interest in the institution. The last clause of the original compact had been totally disregarded, and doubts began to arise as to the legal title to the property. No one seemed to have any authorized control of the property, and the building stood ready for the occupancy of any respectable person who might choose to risk his chance of a school. It was thus successively occupied for a longer or shorter time by H. T. Wheeler, S. C. Cotton, D. W. Richardson, Miss Caroline A. Shattuck and A. J. Huntoon. The building was kept in repair by funds raised by tea-parties, fairs and similar spasmodic efforts at sundry times. Occasionally the teachers paid for actual necessary repairs, rather than attempt to collect from the public.

In 1860, an interest in the school having been revived through the efforts of Rev. E. P. Smith, Mr. A. J. Saunders, a graduate of Brown University, who had been teaching with marked success in Groveland, was induced to take charge of the Academy. Under his management the school seemed to recover new life, and for several years was prosperous. In 1864, the town having voted for a school of higher grade, and appropriated \$700 for that purpose, also appropriated the academy building, and dispossessed Mr. Saunders by appointing him principal of the school. The school was maintained four years, and then suspended till 1873, when it was re-established, continued six years and again discontinued. Meanwhile about \$800 had been raised by subscription for additional stock in the academy, and a conveyance of the property made to the new shareholders by the surviving member of the trustees mentioned in the first deed. The building, having been remodeled and thoroughly repaired, was then rented to the town for school purposes.

By the census of 1880 it appeared that Pepperell contained over five hundred families, and consequently was obliged to maintain a High School according to law. The following year, therefore, the town made due appropriations for such school, and established it in the Academy building under the

charge of Harold C. Child, in September of that year. Mr. Child has been succeeded by A. F. Amidon, 1885; Edwin H. Webster, 1886; and George W. Ransom, September, 1888.

In 1888 a new school-house was erected at "Chase Hill." It is built in modern style with latest improvements, and will accommodate four schools. Upon its completion, early in 1889, the High School and Grammar School were removed from the old Academy building, which was then sold by the proprietors, but still stands unoccupied, patiently awaiting the "law's delay," for a decision in regard to the validity of the title and conveyance.

In 1860 a boys' boarding-school was opened by Rev. David Perry in the house that stood upon the site now owned by Rev. J. E. B. Jewett. This school was quite successful. But in May, 1853, the whole establishment was destroyed by fire, together with the boarding-house and Insane Retreat of Drs. N. Cutter and J. S. N. Howe. Mr. Perry removed his school to Brookfield, Mass., but returned with it to Pepperell in 1857, and established it on the farm now occupied by Col. S. P. Shattuck. Upon the decease of his wife, some three years after, he discontinued the school and left town.

A female boarding-school was commenced in 1852, in the house now owned by Charles D. Hutchinson, and for several years was well sustained by Mrs. A. E. Conant and her two daughters.

In January, 1827, the young men of Pepperell formed a literary association under the name of the "Washington Fraternity." None but members were allowed to participate in the exercises of their regular weekly meetings, but every year one or more public "exhibitions" were given, at which the members displayed their rhetorical and historic abilities to the mutual admiration of themselves and their audience. By subscriptions and donations from honorary members, a library was gathered of about four hundred choice books and standard works, which, upon the payment of a small fee, was open to "all persons of good character in town." The society flourished for several years and attained to a membership of over fifty. The interest in the "Fraternity," however, gradually declined. Several of its prominent members, had left town, and after 1833 the meetings of the society ceased entirely. The library was neglected and many of the books were taken away and not returned.

Upon the establishment of the academy, about this time, a "Lyceum" was formed for the benefit, not only of the school, but of the public generally, which afforded ample opportunity to all aspirants for elocutionary honors to distinguish themselves.

In 1838 a few of the old members of the Washington Fraternity "called a meeting to reorganize the library." Luther S. Bancroft, Charles Stevens and A. Emerson were chosen a committee to "collect what books are to be found and put them in order." It

was also voted "that the library be kept at the academy," and that "the above committee appoint a librarian to take charge of the books, and adopt such rules and regulations as they may think proper." This committee attended to the matter very promptly and efficiently. Many of the missing books were recovered. About three hundred volumes were gathered up and placed in the academy building. Henry F. Spaulding, a student, was appointed librarian. The library was much used by the scholars, and for a time was appreciated; but after one year Mr. Spaulding left town, and, no successor being appointed, the books again became scattered. They were again collected by L. S. Bancroft, and for two years were kept in good order in the tailor-shop of T. W. Atherton, in the store building situated where the Town House now stands. In 1842 Mr. Atherton gave up the care of the books, and Mr. Bancroft removed them to his residence, where they remained until his death, when they were delivered over to Col. S. P. Shattuck, one of the few surviving members of the old "Washington Fraternity." They were kept by him until 1877. A public library having been established by the town that year, this old circulating library, together with another library of several years' standing, owned by a private association, and comprising about five hundred volumes, was donated to the town as a nucleus for the public library.

This library has received annually from the town an appropriation of the proceeds of the "dog tax," averaging about \$300. It now numbers over six thousand volumes, and is very generously patronized by the public.

CHAPTER XXII.

PEPPERELL—(Continued).

INDUSTRIAL PURSUITS.

IN the petition of the settlers of West Groton to be set off as a parish, the territory was, not inaptly, described as "good land, well situated." The surface corresponds well with that of the State; the eastern part being level and rather sandy, the central undulating and fertile, and the western decidedly hilly and rocky. The soil is generally good and well adapted to fruit culture, to which considerable attention has been paid. Along the Nashua River are several fine intervals of productive land of easy tillage.

The town is noted for its beautiful scenery and fine drives, and is more and more resorted to by the inhabitants of the cities as a residence during the summer season. The principal industry in the earlier history of the place was farming. The prevailing style of architecture was a square, two-storied house,

with a large chimney in the centre, around which were clustered four or five rooms on each floor. Sometimes, however, the house was two stories in front and one in the rear, the roof descending steeply to within eight or ten feet of the ground. If painted, the color was either red or yellow with white trimmings. The barn usually stood at some distance from the house, often on the opposite side of the road. It was set on the ground without any cellar or scarcely an underpinning, and was furnished with but few implements of husbandry, and those of primitive and ponderous make. Many of the farm-houses were supplemented by a cooper-shop, wherein the enforced leisure of winter months and stormy days was utilized by the making of barrels. The delivery of these barrels at Boston necessitated a journey of two or three days and nights with an ox-team. The merchandise was loaded upon the "barrel-rigging," a wagon peculiar to those times, and the driver, well supplied with provisions for himself and provender for his cattle, took an early start, often several hours before sunrise. His route was over the old stage road from Boston to Keene, N. H. This "great road," which passes through the southerly part of Pepperell, was then the principal thoroughfare for travel and transportation, and was "fortified" by a tavern about every two miles throughout its entire length. The teamster, therefore, had ample opportunities to vary the monotony of his slow journey by an occasional halt at one of these "wayside inns," where, while warming up his outer as well as inner man, he could also refresh himself with the latest batch of news from the loquacious and cosmopolitan landlord. Having disposed of his merchandise in Boston, the farmer could easily secure a return load of goods for the home market and sundry commissions from neighbors, thus making his homeward trip a profitable one.

Till within half a century the transportation of produce and merchandise between Pepperell and "the city" was almost wholly carried on by these farmer teamsters.

The farmer of these days was dependent mainly upon his own resources. His table was supplied from the products of the farm. He raised his own flax and wool, which was made into clothing by the female members of the household. The hum of the spinning-wheel was heard in almost every house, "filling its chambers with music," as in the days of John Alden and Priscilla; and no maiden considered herself as ready to be married until she had with her own hands spun and wove linen and woolen fabrics sufficient to furnish the chambers and table of her new home.

For many years the Centre with its meeting-house was the principal village of the town. The five roads that centred here were all laid out "to the meeting-house," which was the ecclesiastical and secular Capitolium of the municipality, while the Common was its Campus Martius.

A tavern was soon built where the Second Parish Church now stands. It was kept by John Mosher as early as 1769, and afterwards by Solomon Rodgers. Not long after the exploit of the women at Jewett's Bridge in 1775, an article was inserted in the warrant for a town-meeting: "To see what the town will vote or order to be paid to Mr. Solomon Rodgers for entertaining Leonard Whiting and his guard." Mrs. Tileston's house was then a store, where was kept the post-office, with its weekly mail brought up from Groton. The hill on which it stood has since been cut down in front to the level of the street. Both the tavern and store property passed successively into the possession of William Braser, Esq., Samuel Chase, Lemuel Parker, Esq., and Captain Lemuel Parker. The latter converted the store building into a dwelling-house, and removed the business into the building on the town-house corner, which had previously been occupied as a store by Captain Nathan Shipley, and afterwards by Luther Tarbell.

Rev. John Bullard's house was situated on Heald Street, just opposite the tavern, and facing the Common. After Mr. Bullard's death, in 1821, Mr. Tarbell purchased the house for a new tavern. He afterwards built an addition to the southerly end, and opened a store therein. This tavern and store was kept up till 1859, when it was totally destroyed by fire.

Captain Parker associated with himself in the mercantile business And Emerson, a grandson of Rev. Joseph Emerson. Mr. Emerson's father was an eccentric man, and named his first three children Mary, And, Another. The last-named afterwards chose for himself another name, which was not Another; but "And" always retained his conjunctive prenominal, which, however, was often mistaken by strangers for the abbreviation of Andrew. The sign on the store building was "PARKER AND EMERSON." Mr. Emerson, having bought out his partner, simply painted out Mr. Parker's name and left his own name in full remaining.

The "Evangelical Congregational Society" upon its organization, in 1832, bought the old tavern lot, and the building was removed to give place to the new meeting-house. The old parsonage had been converted into the new tavern, and now, by the adjustments of time, the old tavern was supplanted by the new church.

Captain Lemuel Parker had already built an extensive addition to the Shipley store building, and upon the disappearance of the old tavern he opened a "Temperance House"—somewhat of a novelty then—on the corner; the store and post-office occupying a part of the new addition. A stage route had just been opened from Lowell to Springfield, and Pepperell was the first stopping-place for a relay of horses and breakfast. The stage left Lowell at five o'clock A.M. and went through to Springfield, a distance of ninety miles, in one day, which was at that time con-

sidered "rapid transit." "Capt. Parker's" was selected as the stage tavern, and was extensively known as a first-class hostelry. The "tavern" in those days was an institution. There were no less than five in the little town of Pepperell, and all were well patronized.

The stage-route, after a few years, was rendered unprofitable by the construction of railroads, and was discontinued. Captain Parker sold his whole hotel property to the firm of Cutter, Ames & Swasey, who also bought the store. They, however, continued in the business but a short time, and it passed into other hands. William S. Crosby, Esq., was the last proprietor of the tavern and store combined. On his retirement, in 1838, the tavern business was abandoned, and the house thereafter was rented for a dwelling. The store was then occupied by Mr. John Loring, who, with his son, carried on an extensive and lucrative business for many years. Mr. Loring afterwards removed to the store now occupied by Mr. C. D. Hutchinson, where he remained until his death, in 1878. The old tavern-house was occupied by various parties for sundry purposes until 1873, when it was purchased by the town for a site whereon to build the town-house.

Dr. Nehemiah Cutter, a native of Jaffrey, N. H., a graduate of Middlebury, and afterwards from the Yale Medical School, commenced his practice in Pepperell about the year 1818. He became a distinguished physician and founded a private asylum for the insane—probably the first one of the kind in the country. In 1848 he became associated in the management of the asylum with Dr. James S. N. Howe, the oldest son of Rev. James Howe. In May, 1853, the whole establishment was burned to the ground, some of the inmates barely escaping with their lives. Dr. Howe gathered his "family" together at his old homestead (now Colonel S. P. Shattuck's) and immediately commenced the erection of a large building there, suitable for the accommodation of his patients. In a few years, his health failing, he relinquished the business, and Dr. Cutter resumed it at his residence, now Mrs. Jonas Fitch's. But a life of unusual care and vicissitude had made him prematurely old. He had lost the vigor of his earlier days, and was soon obliged to retire from active life. As a man he was kind-hearted and courteous; as a citizen he was remarkably public-spirited and liberal, generally foremost in the advancement of all measures for the improvement and general welfare of the town. In his profession he was widely known and highly esteemed. He died March 15, 1859, aged seventy-two years.

Dr. James M. Stickney had charge of the asylum for two years, and then returned to the practice of his profession, in which he continued until his death, in 1889. Meanwhile the building that Dr. Howe had erected had been removed to the original site, on Main Street, and here, in 1865, Dr. Howe, having regained his health, re-established the asylum. Dr.

William F. Heald became the owner of the property in 1882, and, having greatly improved it, gave the institution the name of the "Cutter Retreat for Nervous Invalids." It is at present under the management of Joseph B. Heald, M.D.

About the year 1817, Mr. Joseph Breck, a son-in-law of Rev. John Bullard, commenced the manufacture of carriages in Pepperell. He built the house now owned by Mr. C. D. Hutchinson, and also a shop just north of the house. His work was confined principally to the making of chaises, a two-wheeled vehicle then much in vogue. But he had a natural love for horticulture, and in 1832 he gave up his trade and removed to Lancaster, where he commenced the business that was more congenial to his taste, and which has since made his name a household word to every farmer and gardener. At this time and subsequently for several years Mr. John Durant did a large business in the manufacture of light wagons. His shops were situated on Townsend Street west of Colonel Alden Lawrence's stables.

About three-quarters of a mile beyond the centre of the town to the westward is a small water-power on what is known as Sucker Brook. An unsuccessful attempt to start a button factory was made here early in the fifties. A few years later Aaron Burkinshaw, an enterprising Englishman, who had served his seven years' apprenticeship in Sheffield, bought the property and utilized the power for a cutlery factory which he established. He was a painstaking and industrious workman and a shrewd buyer and seller. He trained his own apprentices and employed only English workmen, who, locating here, soon formed an English hamlet in the vicinity of the mill, on the street named, by Mr. Burkinshaw, Sheffield Street. Finding that there was a demand for a fine grade of pocket-knives, Mr. Burkinshaw made that branch of the trade a specialty, and built up a good business, which since his death has been carried on by his sons under the name of Aaron Burkinshaw's Sons.

Some quarter of a mile below Burkinshaw's the stream affords another water-power, which, a century ago, was employed by Captain Nathaniel Sartell for a grist-mill, and also for a shop wherein were manufactured wooden ploughs, the only kind then known. The captain was succeeded by his son Deacon Nathaniel, who changed the grist-mill into a lumber-mill. The deacon's youngest son, Levi Sartell, now owns the property, and has built a new mill, into which he has introduced additional power by steam.

About two miles north of the centre, at a small "privilege" on Nissittisset River, a settlement was early commenced. A grist and saw-mill was erected, a store and tavern followed, and the little village was for a time quite a centre of business for the vicinity.

In course of time a carding and clothier's mill was established by Mr. Farewell Farrar, who carried on a prosperous business for many years. But by the discontinuance of wool-growing, the local supply and de-

mand ceased, and the larger manufactories absorbed the general trade. The mill was afterwards bought by Samuel S. Davis and used for the manufacture of cotton batting, and later of shoddy while that article was in demand but its usefulness in this direction was suddenly terminated by an untimely fire; and a second mill devoted to the same purposes shared the fate of its predecessor.

In 1866 Mr. Davis built a paper-mill on the site of the old mills. This was burned in 1872, and was immediately rebuilt; but, after having proved an unprofitable investment to several owners, was also destroyed by fire in 1884, and the business was then abandoned.

The place now reminds one of "the deserted village." The mills have never been rebuilt, the dam has broken through and been carried away, and most of the houses are tenantless. Its remoteness from the railroad is a serious disadvantage to the improvement of the "privilege."

Upon an eminence, near by, commanding an extensive and beautiful prospect, stands the old mansion built by Colonel William Prescott, and which still remains in possession of the family, having descended to the son, Judge William Prescott, to the grandson, William H. Prescott, the historian, and to William G. Prescott, Esq., the great-grandson, who is the present owner and occupant. It was built in the conventional style of the old New England farm-houses. Here was born the son, who afterwards became an eminent jurist, and who invariably spent the summer months of each year at the old homestead. An addition to the west end of the house was made by him for the purposes of a study and library, in which it is said the grandson, during his annual sojourns in Pepperell, wrote considerable portions of those histories which have immortalized his name. The building is a plain, unpretending structure, with no especial claims for notice, except the many interesting associations with which it is connected.

Not long after the settlement of the parish, a grist-mill was erected on the Nissittisset, at the East Village. A store was afterwards built, and then a tavern; and the village was generally known as "the Lower Store." At one time considerable business was done there in the manufacture of tinware by Colonel William Buttrick. In 1832 Captain Fred. F. Parker, who then owned the store, built the large building still standing on Nissittisset Square, and opened therein a tavern, which he named "The Nissittisset House." A part of the building was occupied for a store. The old store, that had stood nearly in the middle of the square, was removed. After the death of Captain Parker, in 1841, the tavern was discontinued. The property was sold and a portion of the building, enough to make two dwelling-houses, was moved to the opposite side of Hollis Street. The store, however, was kept up by various owners, until within a few years. The East Pepperell Post-Office was established here in 1847, J. A. Tucker, Esq.,

who then owned the store, being the first postmaster; but in 1858 the office was removed to the Depot Village, and has now become an office of the third class.

The mill privilege was for many years owned by Dr. Ebenezer Lawrence, and the business was conducted by two of his sons, Joseph and E. Appleton Lawrence. In 1835 it was bought by Deacon L. W. Blake, who, in company with Mr. Luther Ballard, established a machine-shop. Mr. Ballard, in 1840, relinquished his interest in the business to his partner, and went West. Deacon Blake's large family all had a remarkable aptitude for mechanics. The oldest son, Deacon Gilman Blake, took charge of the saw and grist-mills, while the five remaining sons, as they successively grew up, were associated with their father in the machine business. The two daughters, even, became the wives of prominent machinists. After the death of the father in 1864, the firm was changed to "Blake Brothers," and in 1884 again changed to "Henry Blake & Son." In addition to the ordinary work of a machine-shop, they manufacture a "belt-fastener," and "Blake's Turbine Water-wheel," both patented inventions of members of the family.

The first paper-mill in Pepperell was built at the lower privilege on the Nissittisset, in the year 1818, by Mr. Ben. Lawrence. Paper at that time was manufactured principally by hand labor, requiring some three weeks' time between the "beater" and the finishing-room. This mill was operated by several paper-makers, prominent among whom were Edward Curtis, Col. Buttrick, And Emerson and J. A. Wilder. While owned by the latter, in 1841, it was burnt down, but soon after rebuilt. About 1864 it was bought by Henry A. Parker, again burnt and again rebuilt; it is now used for the manufacture of sheeting paper and leather board; and, together with a lumber-mill and a grain-mill, is known as "The Nissittisset Mills," the business being conducted under the firm name of H. A. Parker & Co.

About the year 1834 And. Emerson built a paper-mill at Babbittasset Falls on the Nashua. The privilege is one of the best on the river, and had been early utilized. It appears by the records of the town of Groton, that at a town-meeting held October 24, 1726, it was voted "to give liberty to any person or persons that should appear to do the same, to build a mill on Lancaster River at a place called Babbittasset Falls. Provided the person or persons be obliged to build and constantly keep in good repair a good and sufficient corn-mill for said town's use . . . and to do the same within the space of two years after the date hereof, the person, or persons to have the liberty of said stream so long as he or they keep said mill in good repair and no longer." There is also a record of the laying out of a road in 1730 past Gilson's grist-mill at Babbittasset Falls.

In course of time a forge and small foundry was set up, and the place thereafter went by the name of "The Forge." About the same time Dr. Ephraim

Lawrence commenced the manufacture of powder, concerning whose quality some amusing though rather disparaging traditions are still extant. Afterwards a fulling and a carding-mill were built and occupied, the former by Samuel Tenney, the latter by Isaac Bennett. Mr. Tenney died in 1825 and was succeeded in the business by Joseph Tucker, and not long afterwards Mr. Bennett relinquished his business to Earl Tenney, son of Samuel. Both the mills gave place to the new paper-mill. At this time there were but five dwelling-houses in the village, three of which were cottages. One of these is the cottage on Mill Street now owned by Mrs. Harper. Three still stand at the juncture of Main Street with Mill and Canal. The Adam Ames house, which occupied the present site of A. J. Saunders' store, was removed and is the dwelling of Mrs. Gleason on Canal Street.

With the establishment of this paper-mill, a new era in the industrial history of the village began. Mr. Emerson introduced the Fourdrinier machinery, and commenced making paper with a rapidity that fairly astonished the old paper-makers. The business prospered for a time. After a few years, however, the mill was destroyed by fire. A new building was erected, but when this was also burned, Mr. Emerson's financial embarrassments were such that he was forced to abandon the business. The property passed into other hands. New mills were built, which during the next twenty years were occupied successively by different firms with varied success, or want of it. At one time there were three separate mills, with as many owners, each competing with the others, and all dependent upon the same water supply. At length, in 1862, H. M. Clark, who was connected with the firm of S. D. Warren & Co., obtained possession of the entire property and immediately began to develop its capacities. For the past ten years the business has been under the control of the Fairchild Paper Co. The plant consists of two first-class mills, which give employment to about two hundred and thirty operatives, and manufacture daily twenty tons of the best quality of book paper and of government paper.

The Champion Card and Paper Co. commenced operations in 1880 as an adjunct of the Fairchild Paper Co. But three years later it was established as an independent company, being incorporated under the laws of New Hampshire, with a capital of \$50,000. A mill, one hundred and twenty-five feet wide and five hundred feet long, was built near the covered bridge and fitted up with the most approved machinery and furnishings. Under the able and energetic management of its president, C. M. Gage, and treasurer, P. A. Hammond, it was so successfully conducted that in 1887 the capital stock was increased to \$150,000, and the company was re-incorporated under the laws of Massachusetts. Its manufactures consist principally of glazed and colored papers and card-boards of the finest quality, lithographic-plate paper being a specialty.

The success of the Champion Co. was so apparent that it stimulated competition. In 1889 another company was organized and incorporated under the name of the Pepperell Card and Paper Co., with a capital of \$50,000, H. C. Winslow, Superintendent of the Fairchild Mills being elected president, H. A. Parker, treasurer, and J. M. McCausland, superintendent. A mill, 60 by 160 feet, comprising two stories and basement, with an engine-house and boiler-room adjoining, was erected "at the most convenient place near Jo Blood's fordway," and was soon in active operation. The thorough knowledge of the trade and the business tact and ability possessed by the managers are a guaranty for the success of the new enterprise.

The beginning of the shoe business in Pepperell was made about the year 1824, by John Walcott, a native of Danvers, who married a Pepperell woman and afterwards settled in Pepperell, on the farm now owned by Roland H. Blood. His sons, as they grew up, went to Natick, and became pioneers in the shoe business in that place.

At the time Mr. Walcott came to Pepperell division of labor was just being introduced into the shoe manufacture. Previously the entire shoe had been made by one man, who first carefully measured the foot of his customer, and then proceeded to cut out, put together and finish up the pair of boots or shoes ordered. The shoemaker was often an itinerant workman, carrying his kit of tools under his arm. Mr. Walcott, taking advantage of the new departure, employed his winter leisure in making shoes. He obtained from Danvers his stock already cut and fitted, completed the work and returned the finished shoes. This kind of work required but a short apprenticeship. Soon more than one kitchen resounded to the tap of the hammer upon the lap-stone, and the number of fire-side shoemakers increased, until some began to think that a shop for cutting and giving out the work would be a good business venture. The prospect was alluring; the capital required was small; the plant consisted of only one or two rooms furnished with cutting-boards, patterns and knives. Here the work was cut out and then distributed to be made up by the employees at their homes or in small shops where several neighbors could work together. These "brogan shops," in time, became quite numerous throughout the town. The first to set up a cutting-shop was Putnam Shattuck, who established one in the North Village, about the year 1834. Eight years afterwards he removed his business to the Centre. By this time he had a number of competitors. But, feasible as the business at first appeared, it was often found to require an amount of knowledge and foresight that had not been anticipated; hence failure was a common result. One impediment in the way of success was the sharp competition with the lower towns. At one time so much work was done for outside firms that it required the time of one man as carrier between the

"brogan shops" in town and the business centres "down below," as the local phrase was.

Albert Leighton, a native of Westford, came to Pepperell in 1848. He was a shoemaker from boyhood, and had been associated with Edward Walcott in the introduction of the shoe business into Natick. He erected one of the first buildings in the Depot Village, (now the Prescott House), and there established a business that eventually became one of the leading interests in town. Five years later, having disposed of his business to Charles Hutson, he followed in the wake of the gold-miners, and spent three years in California. Returning to Pepperell, he built a new shop on Leighton Street, in which he carried on a successful business for ten years. He then went West, but, after a year spent in Racine, Wis., he again returned to Pepperell, and erected, on Main Street, a third building, which was occupied by himself and his sons as a shoe-factory until it was burned, in 1879. As a result of the fire, the firm of Leighton & Sons was dissolved, Mr. Leighton retiring from active participation in the shoe business, although he still continued an efficient citizen of the town whose interests he had already done much to promote, and to whom much of the present prosperity and many of the recent improvements of the lower villages especially are due. He has not only held the highest offices in town, but has twice represented his district in the State Legislature.

Immediately after the burning of the old building the business was reorganized by Mr. Leighton's son, Frank. Plans were made for a new factory, the corner-stone of which was laid June 17, 1879, and the work was carried on so energetically that the building was ready for occupancy in the fall. The existing firm, Leighton Bros., was formed in 1884, and consists of Messrs. Frank, Elbert and Charles Leighton, the latter having charge of their Boston office. Their commodious and well-arranged factory, furnished with all the most approved styles of machinery, affords employment to 350 operatives, and has a capacity for 5000 pairs of brogans per day.

The mineral resources of Pepperell are not abundant. Two clay beds, one near Boynton Street, the other in the southerly part of the town, have furnished the material for the manufacture, at various times, of a few kilns of brick, the one in South Pepperell being still operated by Jerome T. Lawrence.

In the earlier records of the laying out of the roads, frequent reference is made to "the silver mine." This is a strata of shale rock supposed to contain deposits of gold and silver extending from near the New Hampshire line to "the great shading place," as it was called, on the Nissittissit River, about half a mile below the North Village. Various parties prospected here in search of the precious metals. Prominent among these was Joseph Heald, Esq., one of the principal men of the town in earlier days, whose acquaintance with the medicinal properties of plants

had gained for him the additional title of "doctor." Having acquired some knowledge of mineralogy, he became possessed with the idea that gold lay hidden away somewhere in this region. He lived in the westerly part of the town, near the pond which still bears his name. The only outlet to this pond is at its northerly end by a small brook, which, for the first half-mile of its course, runs through a wild gorge, whose precipitous sides rise in many places to the perpendicular height of a hundred feet or more. Along this "gulf," as it is still called, Squire Heald thought he discovered indications of a "gold pocket," and thereupon began to excavate a tunnel into the side of the ravine. He extended this mine into the solid rock a distance of about sixty feet in length, with an average height of six feet. Whether any gold was ever found there has never transpired, but the town thereby acquired a great natural and artificial curiosity, which has not even yet lost all its attractions.

The prospectors at the "Silver Mine" being unsuccessful, became discouraged and abandoned the "claim." The lode remained neglected until its very existence became almost a mere tradition. About the year 1880, however, attention was again attracted to it. Daniel Bates, of Fitchburg, having made a careful analysis of the rock, and having satisfied himself there was money in it, obtained a lease of the land, erected a crushing-mill at the "great shading place" and began active operations. He persevered in the work with a pertinacity that deserved success; but at the end of three years of unremunerative labor and outlay, his funds failing, he was obliged to ask for co-operation.

A stock company was formed under the comprehensive name of "The Fitchburg Gold and Silver Mining Co." New and improved machinery and methods were introduced, and the enterprise was pushed with renewed zeal for two or three years longer, when, on account of continued failure, it was suspended. But within the present year the work has again been commenced by the company with sanguine hopes of ultimate success.

Whether these expectations will ever be realized or not, the continued prosperity of the town is fully assured by the general activity and thrift of its people.

BIOGRAPHICAL.

JONAS FITCH.

Jonas Fitch was born in Pepperell, Mass., March 21, 1811. The majority of people in the State of Massachusetts bearing the name of Fitch are probably the descendants of two brothers, who emigrated from England to this country. One settled in Reading, the other in Bedford. From the latter Mr. Fitch was a lineal

Amos, Sitch,

descendant of the fifth generation. Jonas Fitch, his grandfather, and Zachariah Fitch, his great-uncle, came to Groton and settled there near to each other. Pepperell at that time was a part of Groton. One of their brothers, named William, was killed in the French War. Jonas Fitch was a man of great mechanical genius, especially in the art of clock-making. All the movements of his clocks was his own handiwork. Several of these time-pieces are still in existence at Pepperell and Groton. His special mechanical aptitudes were inherited by his grandson, Jonas Fitch.

Mr. Fitch removed to Boston in 1832, and, after working for one or two business firms, accepted employment from Millard Sears. The relations between himself and employer proved to be so satisfactory that, in 1839, a co-partnership was formed between them, which continued many years; after its dissolution Mr. Fitch conducted his affairs alone. While associated with Mr. Sears, the two erected numerous buildings on Long and Central Wharves, and also in the neighborhood of both localities.

One of the principal embodiments of Mr. Fitch's constructive skill is the Masonic Temple in Boston. All the interior is of his creation. He also wrought the wood-work on the large Fitchburg Depot and on the commanding City Hall of Boston.

Many of the Commercial and State Street blocks were erected under his supervision. The Mount Vernon Church, one of Boston's stateliest structures, is also of his workmanship. He was a member of the commission charged with the duty of supervising the erection of the new State Prison at Concord. To this trust he devoted much time and labor. In the building of the Boston Post-Office he had the responsibilities of the master carpenter.

Not only on the public edifices, but on numerous beautiful private residences and on substantial business blocks in all parts of the city, are the tokens of his practical architectural genius visible.

Their frequent recurrence is also a proof of the high estimation in which his creative abilities were held. Mr. Fitch was one of the very first among the enterprising artificers who introduced steam machinery into the processes of wood-working at Boston. His shop contained a full complement of the most improved and efficient labor-saving devices. His pride was in the fact of his being a complete carpenter—not a builder, as some carpenters style themselves. When the memorable conflagration of 1872 had laid so large a portion of Boston in ashes, he probably did more than any of his contemporaries in the labor of reconstruction. Long before the fire had been extinguished he had ordered the whole of a large saw-mill's annual product, and was thus abundantly supplied with the raw material for large augmentation of his own fortune. Exhaustive in his observation, quick to perceive probable necessity, and prompt in providing the means for its supply, he also enjoyed the utmost con-

fidence of the firms for whom he had raised places of business. Orders for new buildings pressed themselves upon his acceptance. Wherever Jonas Fitch superintended the erection of a building, that very fact was held to be a guarantee of its solid excellence. In civic affairs Mr. Fitch took a conspicuous and an influential part. In the years 1859, 1860, 1864, and 1865 he was a member of the Boston Common Council. He was also a member of the Board of Aldermen in 1866; served as chairman of the Committee on the Fire Department, and as a member of the Committees on Streets, on Bridges, on Military Affairs and also on several joint committees. Re-elected to the same positions in 1867, he served as chairman of the Committee on Faneuil Hall, besides yielding continuance of service on most of the committees to which he had belonged in the previous year. During these two years of aldermanic responsibility he was a persuasive advocate for the widening of Tremont, Hanover and other streets, which were subsequently improved in the manner recommended.

In 1864, 1865 and 1866 he was a member of the Water Board; and from 1862 to 1867, inclusive, was one of the Board of Directors of Public Institutions.

Mr. Fitch has rendered excellent legislative service to his native State, as a member of the Lower House of its Legislature. He represented his district in Boston in the year 1855 and 1857. In the first of these terms he served in the joint Committee on Prisons and in the last as chairman of the Committee on Public Buildings. Here his practical knowledge of architectural construction clothed his advice and action with unrivaled value. In 1871 he was a member of Governor Claflin's Executive Council and served on the Committees on Finance, Harbors, Railroad and Bridges, on the Boston, Hartford & Erie Railroad, and on State Prisons. In 1872 he was elected to membership in Governor Washburn's Council; again served on the same committees as those of the previous years; in addition, in the Committee on Pardons. The ancient and honorable institution known as Free Masonry has also received cordial support from Mr. Fitch. He has been connected with many of the organizations peculiar to it. His first degree was taken in St. Paul's Lodge, South Boston. In December, 1855, he became a member of the Columbian Lodge in the city proper. On the 16th of October, of the same year, he was initiated into St. Paul's Chapter, and was subsequently a member of the Board of Directors for many years. On the 18th of November, 1855, he was made a Knight Templar, and on the 19th of the following month joined the commandery. On the 31st of December, 1874, he was constituted a life member. He was also a member of the Independent Order of Odd Fellows, in which organization he filled various prominent offices. He was one of the directors of the old Mechanics' Mutual Insurance Company for many years. He also held the same office in the Continental

Bank, whose edifice is of his erection. What is more to the credit of a citizen than all his achievements in architectural construction or in the administration of purely business corporations, is the part he has taken in building up the nation in righteousness. It is constitutionally founded on the basis of equal rights—the equal rights of humanity. Slavery was in most flagrant discord with its fundamental principles, and gave the lie to its solemn professors. These facts were as clear as the sun to Mr. Fitch. He became one of the earliest members of the Abolitionist party; and was also, and logically, an active member of the Free-Soil organization, distributing ballots at the presidential election in which James G. Birney was a candidate for the Chief Magistracy. Practice was always in harmony with principle. His life was the embodiment of his beliefs. He gave employment to negroes in his own work-shops at a period in our national history when such a policy involved considerable self-sacrifice and exposure to hostile criticism if not to something worse. Whatever would benefit humanity commended itself to his sympathies and assistance, even if it were only the old hand fire-engine department, of which he was a member. He was always proud of his connection with it, and in later years loved to recount the stirring incidents of his fireman experience. Mr. Fitch was a man of circumscribed literary education. The school in which his real education was received was that of the great world. Here his native ability, caution and sound judgment were developed and disciplined. Had he enjoyed the advantages of High School culture and retained his individuality, there is no social or political position to which he might not have been a successful aspirant. Thorough in all that he undertook and exceedingly exact in all his dealings, he was yet a man of no personal pride. His pride was in his work. That expressed himself, and he was invariably careful that no laxity on his part should mar its excellence or cloud the brightness of his splendid reputation. In early manhood he was a member of the old Marlborough Chapel, and was afterward an attendant at the famous Park Street Church, and a liberal supporter of all its interests. Jonas Fitch was married, on the 19th of June, 1836, to Catharine D., daughter of Abiel and Margaret D. Blodgett. Of four children born to them one died in infancy; three are still living; Annie E., wife of John Wallace, Esq., and Charles Henry and Carrie T. Fitch. Mr. Fitch died on the 19th of February, 1882.

CAPT. ARNOLD HUTCHINSON.

Capt. Arnold Hutchinson, the subject of this sketch, was born in Pepperell, July 19, 1789. He was the son of William Hutchinson, who was a native of the town of Marblehead, Mass., and who bought a large tract of intervalle land on the Nashua River, in the northeasterly part of the town of Pepperell, settled

thereon in his early manhood, and married Mrs. Sarah Blood Pierce, of the neighboring town of Hollis.

Their son Arnold seems to have possessed in a good degree the indomitable will and untiring energy which have been prominent characteristics of the inhabitants of the old town by the sea, which was the birth-place of his paternal ancestor. His childhood and youth were passed upon the farm where he was born, and which in course of time became his own. His early educational advantages were limited to such as were afforded by the district schools of that time, in a small country town. But he availed himself of these advantages with all the earnestness of his nature; thus laying the foundation for a life of active service in the various duties of his home life and those of the public offices which, by the choice of his fellow-citizens, he was called in after-years to fill.

He married, May 20, 1819, Amelia Parker, the sixth of the eleven children of Deacon Jonas and Ruth (Farmer) Parker, both of whom were natives of Pepperell, and they immediately commenced their house-keeping in his boyhood's home. His wife was a helpmeet indeed. Endowed with good health, and a strong constitution, she was also a woman of great strength of character. Possessing sound judgment and a well-stored and discriminating mind, she was of great value to her husband. Twelve children were born to them, ten sons and two daughters, but three of whom are now living; two died in childhood, one in early womanhood and six in the prime of manhood.

He managed successfully his large farm, and for a number of years taught school during the winter, either in Pepperell or one of the adjoining towns.

He was one of the stalwart men of his time. In height he was six feet and two inches, of good proportions, fine physiognomy, a commanding presence and dignified bearing and gifted with remarkable executive ability—one whom nature made a leader among men.

Previous to 1829 he held the offices of town clerk, selectman and other important town offices. Year after year he was chosen moderator of the annual town-meeting and in 1829, '30, '39, '40, '42 and '44 he represented the town in the State Legislature to the entire satisfaction of his constituents.

In politics he affiliated with the Democrats and in 1849 was elected State Senator.

When the military spirit of the olden time was a strong element of power in Pepperell he was chosen commander of the militia, whence he obtained the title of captain, by which, as was customary in those times, he was ever after known.

In religious belief he was associated with the Evangelical Congregational Church, of which he and his wife were prominent members, having a voice in all its councils and laboring to promote the interests of the church and parish.

He was also a stockholder in the old Pepperell Academy, and endeavored, to the extent of his ability

Amos H. H. H. H.

Harriet C. Winston

Amos J. Saunders

to advance the cause of education in his native town. In 1854 he sold the homestead farm, where he had spent sixty-five years, and bought the farm of Dea. Parker, his father-in-law, where he lived until he was obliged by failing health to give up manual labor. He then purchased the house on Park Street, which is now occupied by his youngest son, Charles D. Hutchinson. His golden wedding was celebrated after his removal to this house, and was made a very pleasant occasion.

Faithful and true in all the relations of life, Capt. Hutchinson was a courteous gentleman, a helpful son, a kind husband and father, and a good neighbor, honest and upright in all his dealings.

He died of pneumonia on the 9th day of December, 1873, at the age of eighty-four years, four months and twenty days. Mrs. Hutchinson survived him nearly sixteen years. She died on the 4th of August, 1889. She was born November 21, 1799; consequently lived to the advanced age of eighty-nine years, eight months and thirteen days.

HEWITT CHANDLER WINSLOW.

Hewitt Chandler Winslow was born March 23, 1823, at New Gloucester, Cumberland County, Me. He was a son of Philip and Berthia (Rideout) Winslow, both of whom were natives of New Gloucester, and is a lineal descendant of both the Winslows and Bradfords of Plymouth, Mass., his grandmother being a member of the latter family. Barnabas, the grandfather of Hewitt, was one of the early inhabitants of New Gloucester. Philip, the father, was a soldier in the War of 1812. He served on the coast defences of his native State, and was at Portland when the encounter occurred between the "Boxer" and "Enterprise." Hewitt lived with his father till he was ten years old, when he went to North Yarmouth, Me., and "worked out." All the school instruction he received was what he obtained by an attendance on the public schools three or four months in a year before he was seventeen years old; but, like many another New England boy, he found means of pursuing his studies out of school, and without an instructor.

He worked during the day, and read and studied in the evening by the light of the fire-place, the tallow-candle and the pitch-pine knot. At seventeen he went to work in a factory at Gardner, Me., where he learned the trade of wool-carding and finishing. He soon arose to the position of overseer, in which capacity he served for about six years, after which he engaged in paper-making at the mills of the "Great Falls Paper Company," and was for some time foreman. Since 1865 he has had charge of the paper-mills at East Pepperell. As agent of these mills Mr. Winslow has performed faithful and efficient work. The company has been known by three different names since he took charge of its affairs. It

is now called the "Fairchild Paper Company," and employs over two hundred hands. As a business man Mr. Winslow is devoted to his work and attends strictly to it. It has been his habit to get to his office throughout the year at about seven in the morning and to leave it about eight at night. He is a director in the First National Bank of Ayer, and a trustee and director in the Ayer Savings Bank.

Notwithstanding his devotion to business, he has found time in the midst of his busy life to attend to religious matters. For many years he has been an active member of the Methodist Church and a substantial and reliable supporter of his denomination in East Pepperell, and has repeatedly held the office of trustee and steward of the Methodist Church in that place.

In politics he is a Republican. When a young man he was active and enthusiastic in the anti-slavery movement. Since then he has identified himself with other reforms and placed himself on the right side of questions and subjects the agitation and advancement of which have been for the good of the race. He has never used rum or tobacco and his habits have been exemplary. November 15, 1855, he was married, in Pownal, Me., to Miss Henrietta True. Miss True was a daughter of William and Zilphia Ann True, and was born March 18, 1833. Her father was a native of Freeport, Me., and her mother of Cumberland, Me.

Mr. Winslow has one daughter, Helen True, who was born in Gardiner, Me., October 25, 1861.

AMOS JOSEPH SAUNDERS.

Amos Joseph Saunders was born in Rowley, August 3, 1826. He was the only son of Joseph and Mary (Mighill) Saunders, who were also natives of Rowley. At the age of twelve he entered Dummer Academy at Byfield, which he attended a year. He then returned home and spent some years on his father's farm, occupying his time in the winter season at shoe-making. But farming and shoe-making were not always to be pursued by this enterprising New England lad. He had a fondness for study, an interest in books, and took pleasure in the discussions of the Lyceum and such other literary privileges as were afforded by the country towns of half a century ago. In 1850 he entered Pierce's Academy at Middleboro', where, with the exception of a short time spent at Hampton Falls, N. H., and at Dummer Academy, he remained until he entered Brown University, R. I., at which he graduated in 1855, at the age of twenty-nine. This was the last year in which Dr. Wayland was president of the university. He taught a grammar-school at Danvers, and in August 1856, became principal of the Merrimac Academy at Groveland. In 1860 he took charge of the academy at Pepperell, where he taught till 1866, when he resigned on

account of his health. Shortly after, he became proprietor of a store in Pepperell Centre, with a branch store at East Pepperell, but he soon removed to the latter place, where he still resides and carries on the business. Since leaving his profession as a teacher, Mr. Saunders has continued to show his interest in schools by a long service on the School Board. He has also served as selectman, assessor and member of the Library Committee. He has for many years been an active member of the Republican party. In 1873 he was the Representative of the Thirty-first Middlesex District, comprising the towns of Groton, Pepperell and Ayer, and was re-elected in 1875. In November, 1876, he was elected to the Massachusetts Senate by the Fifth Middlesex District. During his connection with the Legislature, he served on the following joint standing committees: the Liquor Law, Woman Suffrage, Claims, Taxation and Education. In 1874 he was appointed justice of the peace, and has held the office to the present time. In 1856 he married Lucy Parkhurst Savage, a daughter of John and Mary Savage, of Rowley. He has three daughters and one son, viz.: Lucy Blanchard, Joseph Amos, Mary Harris and Stella Fourth. Mr. Saunders, at the age of sixty-four, is in good health, and attends to his daily business with the enthusiasm and efficiency of a younger man. He exhibits the traits of a typical New Englander, who starts out from the ancestral farm and works his way by perseverance and industry to positions of usefulness and trust. Born and reared in one of the oldest towns in Essex County, where the Colonial stock was of sterling quality, he found in Pepperell elements that correspond with the best characteristics of those with whom he was associated in his early days. The place was congenial to his tastes, and he has actively participated in such public measures as have conduced to the public good, and the town has shown her appreciation of the child of her adoption by honoring him with the highest offices in her power to bestow.

CHAPTER XXIII.

HUDSON.

BY RALPH E. JOSLIN AND WALTER H. SMALL.

LOVERS of the antique will find little in the history of Hudson to quicken their pulses and satisfy their longings. The aroma of "other days" is very faint, and is obscured by such a delightful state of mysticism that the prosaic prober after facts is prone to ask at every trace, "How do you know?" Well, sometimes by tradition, sometimes by faith, rarely by sight.

A town which has yet to see her first quarter century completed cannot boast of very ancient history distinctively her own. What there is, is family history, bound inseparably with Marlborough and the other sister towns, which were included in one general grant in 1656.

From the history of Marlborough, then, must be gleaned those records which apply to this northern portion, now called Hudson. But the early records are so badly jumbled, and they have been so carelessly kept by their modern custodians (one complete book is lost) that it is difficult to rest many statements on absolute certainty. Yet some are definitely settled. Among them is the fact that a large portion of Hudson, probably all east of High Street, belonged to the Indian plantation, and all west of that point was a common cow pasture.

The summary of that history is this: In 1656 thirteen leading citizens of Sudbury, feeling they were becoming too crowded for comfort, petitioned, for themselves and their rapidly growing families, that the honored Court "would be pleased to grant unto us eight miles square, for to make a Plantation." They express their preference by saying, "Wee have found a place which lyeth westward about eight miles from Sudbury, which we conceive might be comfortable for our subsistence."

Agreeably to this petition the General Court granted them six miles, "provided it hinder no former grant." But two years previous the General Court had granted to the Indians, on petition of Mr. Eliot, the Indian Apostle, the right to make a town eight miles west of Sudbury, so that the grant to the Sudbury men conflicted with it. A committee was appointed to lay out the Indian grant, and "In case there is enough left for a convenient township for the Sudbury men, to lay it out for them." The result was that the new township lay around the Indian Plantation on three sides, and the Indian planting-field was directly in the centre of the proposed new settlement. The English wanted this field badly and they soon began to encroach upon it. They built a meeting-house on one corner; they allowed their cattle to roam over it, and feed from it, and finally the Indians became disgusted with their neighbors and moved about a mile away.

The early inhabitants of Marlborough seem to have been imbued with the spirit of bitterness and controversy,—a quality which has been duly transmitted, pure and unimpaired, to the present generations. They quarreled over their records, their grants and their ministers, and they selfishly intrigued for the Indian plantation. In 1677 they petitioned the General Court that it should be taken from the Indians, because they "during the recent war had been perfidious and had taken part with the enemy," and should be given to them. The General Court promptly said "No."

In 1684 thirty-five of the inhabitants petitioned for authority from the General Court to buy it from

the Indians, and again they said "No." Nothing daunted, they got a deed from the Indians that same year, which the General Court promptly declared "illegal and is consequently null and void," for in the original grant it was stipulated that it could not be sold "otherwise than by consent of this Honored Court."

But Marlborough was "bigger" than the General Court, and in 1686 proceeded to divide up the plantation, and from that time, in fact, if not in law, it became a part of the township. Persistency finally won, and in 1719 the title was made valid. As before stated, the part of Hudson east of High Street belonged to this tract of land; the part west of said street was in the original grant.

After a settlement had been formed, and about 1000 acres had been divided among the settlers, on February 10, 1662, the proprietors adopted the following: "It is ordered that all the lands situate and lying within this town, that are not already granted" (the meadow lands lying along the brooks, and the Assabet valley) "are and shall remain a perpetual cow common, for the use of the town, never to be allotted without the consent of all the inhabitants and proprietors thereof, at full meeting." February 18, 1706, it was voted, "That the proprietors will divide the Cow Common," but previous to this a settlement had been begun on the river. How a legal title was obtained is unknown, but in 1698 John Barnes came to the Assabet, and took up one acre of land on both sides of the river; on the north side sixteen rods long and six rods wide, and on the south side sixteen rods long and thirteen and one-half rods wide.

On the north side he built a grist-mill, and this is probably the secret of his obtaining the land, for there was no mill nearer than Sudbury, and this was the nearest water-power in the Marlborough township. The town viewed the project favorably, as is seen from the fact that October 16, 1699, they laid out a road over Fort Meadow, by Joseph Howe's mill, four rods wide to Lancaster town line, and October 25th, Lancaster completed the road. John Barnes was a member of the committee on the part of Marlborough. The road was formerly accepted by the town, April 1, 1700.

It would seem from this, taken from the old town records, that Barnes did not run the mill long after building, but in some way put it into the hands of Joseph Howe, as it seems to have been called by his name on the laying out of the road, but a formal deed was not given until January 13, 1701. This was probably the first piece of real estate conveyed in the present town, as it was everywhere bounded by the undivided cow common. Barnes and Howe both lived in Marlborough; Howe dying in 1701, as his estate was settled that year.

On Howe's death the mill probably came into the hands of Jeremiah Barstow, as we find the mill in his possession in 1712, when he marries Howe's oldest

daughter, Sarah. Until his marriage he did not live at the mill, for during Queen Anne's War, among the garrisons formed, was one called the "mill garrison," at which the families of Thomas Barrett and John Banister were to assemble. These were farmers, and seem to have been the only families in this vicinity, for the garrison was at or near the grist-mill. After his marriage Barstow built his house on the site where Solon Wood's store now stands, and proceeded to increase his possessions by purchase. Ten years later he sold out to Robert Bernard, of Andover. As this deed seems to have conveyed a large part of the present township, portions of it are worthy of preservation:

"To all people to whom these presents shall come,

"Greeting. Know ye that I, Jeremiah Barstow, of the town of Marlborough, in ye County of Middlesex, in the Province of Massachusetts Bay, in New England, Miller, for & in consideration of six hundred and sixty pounds, good and currant Money of New England, or equivalent, to me in hand, well and truly delivered & paid by Robert Bernard, of Andover, in the County of Essex, in the Province aforesaid, yeoman, the receipt whereof I, the said Jeremiah Barstow, do by these presents acknowledge & therewith to be fully satisfied & paid & therefore, thereof, & of every part thereof, do hereby acquit, exonerate, and forever discharge him, ye said Robert Bernard, his heirs, executors, administrators & assigns, & for which consideration as aforesaid, I, the said Jeremiah Barstow, with the free consent of Sarah, my now married wife, have granted, bargained, sold & by these presents for myself, my heirs, executors and administrators, do freely, fully & absolutely grant, bargain, sell, alien, enfeoff, convey and confirm unto the above named Robert Bernard all that my homestead message or tract of land lying and being in Marlborough aforesaid, containing by estimation forty-five acres, six score & fifteen rods, be it more or less as the same is butted & bounded and described in ye towne records of Marlborough, together with my dwelling-house and barn or other housing, with all the fencing orcharding & gardens upon and belonging to said message," etc.

The deed then goes on and conveys eighteen other lots or parcels of land, amounting to some 310 acres. Among them is one, "lying near to ye corn-mill place which formerly belonged to Joseph Howe," and "also one acre more of land lying on both sides of said river upon part of which ye Corn-Mill and Mill-Dam standeth adjoined; also the said Corn-Mill with all the accommodations & materials thereto belonging."

This deed is signed by Barstow and his wife Sarah, "this first Day of May in ye eight year of ye reign of our Sovereign Lord George of Great Britain & King, Anno Domini, 1722."

From this deed it seems there were few settlers in this portion of Marlborough, for most of the lots conveyed are bounded by other lots of Barstow's or by common land. Bernard took possession of his property about 1724, and opened a public-house on the road from Marlborough to Lancaster, just above the mill. The site is now occupied by Solon Wood's store. From this time settlers gradually came within the present limits, but they were mostly farmers; there was no central settlement. Among them were the Goodales, Wilkinsons, Wheelers, Witts, Bruces, Howes, Hapgoods and Brighams, whose descendants still reside here, and in a few cases occupy the old homesteads.

Rev. Charles Hudson says of these families:

"Among the earliest, perhaps, we may mention the Goodale family. Samuel Wheeler deeded land to John Witt and John Goodale, from Salem; and Witt conveyed his right to Goodale; that prominent family have occupied the place where David B. Goodale resides, since 1702.

"Thomas Haggood settled in the Indian Plantation before 1700, on what was afterwards called the Colonel Wesson or Spurr place. His descendants have been numerous, and the early generations all resided within the present limits of Hudson. Shadrach Haggood, their original ancestor, came to this country in 1655, and settled in Sudbury. He was treacherously slain by the Indians in Philip's War. The Wilkines came from Danvers, and settled on the Indian Plantation about 1740, where a number of families of the name resided for several generations. Artemas Howe, a descendant of Abraham Howe, married Mary Bigelow, 1767, and settled on the road leading from the Haggoods to the centre of the town, north of Fort Meadow Brook. He was, probably, the first who settled and reared a family of Howes on the present territory of Hudson. Abiah Bush settled in the northern part of Marlborough, as early, probably, as 1690. John Bruce came to Marlborough about 1740, and settled on what has since been known as the Ezekiel Bruce place.

"Solomon Brigham, a lineal descendant of Thomas Brigham, married Martha Boyd in 1754, and about 1756 located himself on the road leading from the 'mills' to the centre of the town, on the place where Charles Brigham now resides."

In 1794 Joel Cranston moved to the "mills," as it was then known, opened a store and public-house, and introduced a number of small industries. Five years later Silas Felton came and joined him. Both were energetic, public-spirited men, and they soon drew others to the village; its name was changed to Feltonville. Among the new arrivals were the familiar names of Peters, Pope, Witt and Wood.

Of these, Hudson says: "George Peters probably came from Medfield. He married Lydia Maynard, and had George, Ephraim, Luther, Adolphus, and John H. Jedediah Wood was the son of Peter Wood, who came from Concord to Marlborough, and was a descendant of the third generation from William, the original emigrant. Jedediah married Betsey Wilkins, and was the father of Col. William H., Elbridge and Alonzo. The Papes were from Salem, and for a time owned the principal land in the village; the family have been prominent in the place. Ebenezer Witt was a descendant of John Witt, who came to Marlborough in 1707. Ebenezer was son of Josiah and grandson of Samuel, who represented Marlborough twenty-three years in the General Court. Ebenezer Witt had one son and three daughters, all of whom married in the town."

Still there was no extensive growth, for the landowners were loath to sell; they believed in farms rather than in towns. The introduction of small but good manufacturing industries, however, gave it a healthy beginning, and from that time its growth was slow but steady, until in 1866 it numbered some 1800 inhabitants, who were desirous of a separate corporate existence. Individual thrift and enterprise and public spirit are the requisites for corporate growth. This is the secret of the marvelous growth of the West; it is also the secret of the growth of many of our New England manufacturing centres. It is the secret of Hudson's origin as a town.

The practical difficulties in the way of transacting town business and the great obstacle to the natural growth of the village of Feltonville, owing to its dis-

tance from the centre of Marlborough and the nearness of the town line of Bolton, were the subject of frequent comment on the part of many and the careful thought of those who were most interested in the future growth and prosperity of the village.

It cannot be said that the citizens of Feltonville did not get their share of the town offices or failed in any other way to receive their proper share of consideration at the hands of the mother town, for, as circumstances shaped affairs at that time, it happened that by a little management on the part of her citizens she was always able to balance one part against the other and through their dissension to carry away the coveted prize. A glance at the lists of town officers for the years preceding the act of incorporation will show the names of many persons who have since been prominently connected with Hudson's growth and corporate existence. There was too, a feeling of attachment for the name and the town which was the native place of a large majority of those living in Feltonville. Sentimental reasons could not long stand in the way of every-day difficulties, and it is barely possible that a feeling was growing up in the mother town that it was perhaps as well to let the off-spring go as attempt longer to keep the lusty child in leading strings.

We can do no better at the present time than to quote extensively from an article in the *Feltonville Pioneer* which sets out many of the practical difficulties referred to above that could be in a large measure avoided by the incorporation of a new township.

Says the writer of the article referred to, which is dated May 13, 1865:

"All are but too well aware that so long as we remain a constituent part of Marlborough, or of any of the other adjacent towns, in order to attend town-meetings, meetings above all others which should be generally attended, because it is at these meetings that the rights, liabilities and privileges of citizens are debated and acted upon, we are obliged to travel a distance of four miles.

"The distance, moreover, to all who reside in that part of Feltonville within the limits of Marlborough, is over one of the hilliest roads in the vicinity. It would, so far as ease and comfort of traveling by private conveyance is concerned, be easier for the inhabitants of this section of Marlborough to go to either Bolton or Berlin than to climb the hills to Marlborough. And this inconvenience cannot be removed except by bringing our municipal affairs to our own midst.

"The convenience by rail is next to nothing. The first train to Marlborough does not reach there until after the annual town-meeting has commenced, at least, and then there is no conveyance back after one o'clock. At the very time when electors should remain, those who patronize the railroad are obliged to leave and return home.

"Second: Town Records.—The records of every town must, of necessity, be deposited in the centre of the town. It is impossible that they should be kept anywhere else. These records are of constant reference, and it is necessary that the town clerk should reside where the records are, in order to render them serviceable to persons desiring to examine them. As inhabitants of this remote part of the town, whenever we wish to examine any of the town records we are obliged to travel four miles—no small inconvenience. Were we incorporated we should have our town records at hand.

"Third: Schools.—Under the present arrangement it is impossible, or next to impossible, for us to avail ourselves of our just proportion of the higher schools in our several towns of which we are constituents. High schools cannot, necessarily, be itinerant institutions. They must be located in the centre of the towns. Those living in the remote parts

of the town are consequently deprived of much or all of their usefulness.

"To illustrate: In Marlborough the high school has been established at a great expense. The building alone cost nine thousand dollars, which was defrayed by the whole town. The current expense of the school is not far from twelve hundred dollars per annum, which, of course, is levied upon the whole town. Now how does it stand with Feltonville? The assessors' books of Marlborough will show that there is in that part of Marlborough known as Feltonville over one-third of the whole taxable property of the town. Within the same limits there are not far from 2000 population. Feltonville capital, therefore, has paid, and still is paying, one-third and more for the high school establishment. How about the benefit derivable therefrom? We are credibly informed that for the past four years, at least, not a single pupil from Feltonville has patronized this school. The sequence is clear. Feltonville capital is paying for a school some four hundred dollars annually and enjoys no conceivable equivalent therefor. The schools in Feltonville are no better and enjoy no more privileges or advantages than the schools of the same grade in the villages in the centre of the town. The high school for the benefit of Feltonville is mere nominal, and while we are a part and parcel of Marlboro' this thing must continue. The distance is so great that it is entirely impracticable for scholars to go to the high school from our village. Were we incorporated this evil could and would be remedied.

"In the management of our own municipal affairs we could provide a high school for the accommodation of our scholars. There would, in addition to the considerations already presented, be a consequential rise in value of property by an incorporation. Everything which tends to increase the social, moral or educational advantages of a place necessarily carries with it an advance in the price of property. The expense of the government of a new town would not be greater than the outlay we are subjected to already, whereas our advantages would be increased twofold."

This, as has been said, was but one of a series of letters which appeared in the local papers, and it is not left to the imagination to suppose that the facts thus brought out gave the citizens food for reflection which led them to believe that a change was desirable and must be had. As a natural result of the agitation, a notice was inserted in the columns of the paper from which we have just quoted, calling upon all of the citizens of Feltonville to meet in Union Hall, Tuesday evening, May 16, 1865, to take some organized action upon this all-important subject.

Pursuant to the call upon the evening in question, the citizens in the village assembled, and having elected James T. Joslin chairman, and Silas H. Stuart secretary, a general discussion arose, participated in by many present, and a strong feeling was developed in favor of separation—peaceable, if possible, but separation anyway.

It was made apparent also at this meeting that many citizens of Bolton and Berlin desired to be included within the proposed limits of the new town; this desire upon their part was favored upon the part of those most prominent in the movement living within the Marlborough limits.

Mr. Wilbur F. Brigham announced to the meeting that he had circulated a subscription paper, and that there was pledged thereon the sum of nine hundred and seven dollars with which to defray the expenses necessarily to be incurred in carrying out the work of separation.

Owing to some informality in calling the meeting, the nature of which does not clearly appear at this time, it was deemed advisable to dissolve and call another meeting for one week from that evening. This first

meeting had, however, served the purpose for which it was intended—to give direction and momentum to local feeling—and upon the evening of Tuesday, the 23d day of May, 1865, the citizens of Feltonville again assembled in Union Hall to take definite action in regard to a separation from Marlborough, whose original borders had already been reduced by similar successful movements.

At this meeting Mr. Francis Brigham was chosen chairman, and Silas H. Stuart secretary. The original memorandum book of records, kept by Mr. Stuart, is still fortunately in existence, and from its pages we are able to gather an abstract of its proceedings.

The following preamble and set of resolutions were presented to the meeting for its consideration, and, after some debate, were adopted; how unanimously the records do not disclose:

"WHEREAS, We, the inhabitants of Feltonville and vicinity, believing that the time has arrived when it will be for our best interests and welfare to withdraw from our respective municipal corporations and be incorporated into a new town; therefore,

"Resolved, That a committee of nine be appointed to take into consideration the subject of establishing the boundary lines of said new town and the most feasible way of drawing up the petition for that purpose, and that they be instructed to procure such legal advice as they may deem necessary on the subject, and report at some future meeting, to be called by them."

It was then voted that the chair appoint a committee of five to retire and nominate the committee of nine, and report as soon as may be.

The committee of five thus appointed retired, and, after due consultation, brought in the following list of names of nine gentlemen upon whom mainly should devolve the labor of fixing the limits of the new town and of arranging the necessary details leading to the consummation of their purpose and hopes: Francis Brigham, George Houghton, E. M. Stowe, S. H. Stuart, J. T. Joslin, of Feltonville; Albert Goodrich, Caleb E. Nourse, J. P. Nourse, of Bolton; and Ira H. Brown, of Berlin.

The citizens at large having thus provided the "sinews of war," and made a selection of their active agents, no longer appear to have taken an organized part in the movement, and in following out the future movements in this interesting effort for a new town, we shall have to do only with the doings of the committee of nine named above.

Again, referring to the records of Clerk Stuart, we find that this committee convened on the evening of the 26th, and, with Francis Brigham in the chair, proceeded to discuss the question of the boundary line for the new town. "After a thorough investigation of the subject," says the record, "it was voted to make the boundary line as follows: Commencing at a point above the house of Daniel Stratton, in Bolton, and striking across to a point near the house of Octa Danforth; thence to a point near the house of Rufus Coolidge; thence across Berlin to the Marlborough line, near the house of Stephen Fay; thence following the town line to the bound on the Northborough

Road; thence to a point about sixty rods south of Simeon Cunningham's house; thence to a point between the houses of Lewis Hapgood and Aaron Maynard; thence to Stow line, near what is called 'Mosquito Hole;' thence by the town line to the point first mentioned."

This line was changed slightly at the next meeting, so as to take in the E. Maynard and Lewis Hapgood places.

The committee, through two of its members, having taken legal counsel of Tappan Wentworth, Esq., of Lowell, and Charles Hudson, of Lexington, recommended that three petitions be drawn up and presented to the next Legislature, one from citizens of Marlborough for a division of the town, with the citizens of Bolton and Berlin on the same in aid, and from each of the last two asking to have portions of Bolton and Berlin annexed to the new town; and at the meeting of June 2d the committee voted to recommend the name, Hudson as the name of the new town.

Upon the evening of June 13, 1865, the citizens again convened in Union Hall to hear the report of their committee of nine upon the question of the boundary line. At this meeting the line was again changed slightly in the vicinity of the house of Daniel Stratton, so as to take in a piece of Stow territory. It was then moved that a new committee of five members be formed to make all the necessary arrangements for the purpose of incorporating the new town, and this committee, as made up by the meeting, was as follows: Francis Brigham, George Houghton and James T. Joslin, of Feltonville, Mr. Daniel Stratton, of Bolton, and Mr. Ira H. Brown, of Berlin, in whose hands finally the management and labor of obtaining an act of incorporation now vested.

At this same meeting an attempt was made to select the name of the new town, due undoubtedly to the energy of those who are always desirous of counting their chickens before they are hatched. It was wisely voted down, as will appear later, for when this question finally came up for settlement it engendered an amount of feeling that would have probably wrecked the whole movement at this period.

At a meeting held two months later it was voted to allow Lyman Pery and others who resided in what is now commonly called the "Goodale District," to petition the Legislature at their own expense to be included within the limits of the new town, and so favorably had everything progressed in the work of the committee of five that the question of a name could not longer be postponed. It was therefore voted to mark for a name. Prior to a settlement of the question it was stated by citizens of excellent financial standing that if the new town should be called "Felton," after Silas Felton, who owned a large store and operated a grist-mill, he would make the town a present of one thousand dollars, and it was understood also that Mr. Charles Hudson would donate \$500 to the use of a public library, should the citizens decide

in favor of calling the new town Hudson, in his honor.

Under these highly interesting circumstances the vote taken at once arouses our curiosity and we can easily imagine the excitement and various arguments for and against the one man and the other, made use of that evening to influence the minds of the voters.

As the village had always been called Feltonville and Mr. Felton offered the larger sum of money it would be natural to suppose that the citizens would favor the name "Felton," but the secretary's record shows that the argument in favor of Hudson was too strong to be resisted by a majority, and so Hudson it was and ever will be. The exact vote is worth preservation and is as follows:

For Butler	1
" Eastborough	1
" Felton	18
" Hudson	35
	—
	55

making a total of fifty-five votes thrown, not one-twentieth of the present voting population of the town.

On motion of Mr. Charles Brigham, who was and always continued to be a strong adherent of the "Felton" party, it was unanimously voted to call the new town Hudson.

The secretary, Stuart, was authorized to collect the funds subscribed and the field of action was enlarged and included, as we shall see, the neighboring towns and finally the Legislature.

We must now return to the committee of five and record their proceedings, which have been carried on during this time and simultaneously with the events which have just been mentioned. Their first act was to issue proposals for the necessary maps and plans which should show the boundary lines of the existing towns, the proposed boundaries of the new town, and the rivers, railroads, factories and dwelling-houses, in so far as possible, situated upon the territory in question.

Mr. George S. Rawson, a civil engineer of the town of Marlborough located in Feltonville, obtained the contract, and the committee in its final report to the citizens stated that his work was performed in a most satisfactory manner. Provided with the necessary equipment to render their propositions intelligible, the Feltonville committee, as they say in their report, established "a system of diplomacy" between the committees from the adjoining towns appointed at the November meetings, at their request and themselves. The first act was to invite all the committees to "perambulate" the proposed bounds with the Feltonville committee, and this invitation was accepted by the Marlborough committee alone. As a result of this "perambulation" the Marlborough committee voted unanimously "not to accept or report to the town the line which had been devised by the citizens of Feltonville," but on their part a line was proposed to run

from Stephen Fay's place on the west to the extreme easterly bound of Marlborough at or near Albion Parmenter's on the Sudbury road, and this line was subsequently adopted by both committees although not all of the Feltonville members were present at the meeting.

A sub-committee, consisting of Mr. Joslin and Mr. Brown, was appointed to confer with the Berlin committee at the office of Dr. Hartshorn, of that town, in order to arrange, if possible, an amicable settlement by which the territory asked for from Berlin might be obtained. Although the committee was courteously received and the whole question fairly debated, the proposition of the Feltonville gentlemen to pay the proportionate part of the town debt, and even more, was not acceded to, and all negotiations with Berlin ceased.

The next venture was on the part of another sub-committee, consisting of Mr. Brigham, Mr. Houghton and Mr. Stratton, to negotiate an arrangement with the Bolton committee, but here again the representatives from Feltonville found strong objection and opposition to their plans. The learned committee on the part of Bolton were well aware of the important interests confided to their care, and were on the alert to guard against the encroachments of the enemy. The Feltonville committee reported to their colleagues that they met the Bolton committee at the house of S. H. Howe, and finding "the temper and spirit of their Bolton friends anything but facile in the premises, no decisive headway was made toward an amicable adjustment of differences. This (Bolton) committee, like the Emperor of France, standing upon their dignity, and jealous of any infringement of their territory, neither suggested a change of line nor submitted any proposition upon which it would be possible to effect a division." The Feltonville committee, as a last resort, submitted a proposition, which "was met with ridicule, and thus terminated attempted negotiations with Bolton." As nothing but a small portion of land was taken from Stow, no objection on the part of that town was made to the proposed separation of the new town.

At the outset, then, the situation with regard to the surrounding towns was as follows: Stow acquiescent, as it had but little interest involved; Marlborough practically willing, if obliged to be, but driving the best bargain possible; Bolton and Berlin in direct opposition. The Feltonville committee practically met with a rebuff on all sides, and the work before it was by no means small or unimportant.

We have seen that the spirit of the citizens within the limits of the new town was active and confident, and their committee, despite the adverse circumstances, went to work with a will to secure the desired end. On the evening of December 18, 1865, the Feltonville committee decided upon and submitted to the committee on the part of the town of Marlborough the following proposition: "That the citizens of Fel-

tonville, residing within the limits of said contemplated new town, will pay to the town of Marlborough twenty-five per cent. of the debt against the town of Marlborough, existing at the time an act of incorporation may be secured, each section to retain the property within its own limits without further division, and each section to support its own paupers, provided, however, that the town of Marlborough shall not directly nor indirectly oppose before the Legislature the prayer of the petition of the citizens of Feltonville for an act of incorporation."

This proposition did not meet with any favor among the Marlborough people, and after much writing between the committees, and after having a town-meeting at which the citizens of Marlborough adhered to their committee's propositions, and after further negotiations, it was agreed that the citizens of Feltonville should not be opposed in their effort for a new town on the following conditions, which were finally accepted by the Feltonville committee. By this arrangement, the dividing line was made to run from Stephen Fay's, on the Northborough line, to Albion Parmenter's, on the Sudbury line, the property in each section to remain the property of that section, with the exception of the almshouse real and personal estate, which, should be sold at auction, the proceeds to go two-thirds to Marlborough, one-third to Feltonville, the new town to pay one-third of the Marlborough town debt, and to receive one-third of whatever might be refunded to the town of Marlborough by Massachusetts, or the United States for bounties paid, or State aid given to families, over and above reasonable expenses, each town to support its own paupers.

In this way the primary and most important part of the work was accomplished, and the committees from the two sections of the old town parted with mutual expressions of esteem and good will.

Petitions in the mean time had been circulating for signatures, and were presented to the General Court at the opening of its session in 1866—one on the part of the citizens of Feltonville, signed by George Houghton and 264 others; one representing certain parties in the northeast part of Marlborough, which had not been included, as we have seen, in the limits of the new town, signed by Lyman Perry and seven others, one on the part of certain residents of the town of Bolton, signed by Daniel Stratton and twenty-four others; and one on the part of certain inhabitants of the town of Berlin, signed by Ira H. Brown and seven others. Unfortunately, there was not at this time entire unanimity on the part of the people living on the Bolton territory sought to be included in the new town, and this made an apparent weakness in the petition on the part of the Bolton people, which was made use of later on in the legislative hearings to defeat the efforts of the petitioners to secure the desired territory from the town of Bolton.

These petitions were referred in due course to the

Joint Standing Committee on Towns, and on January 30, 1866, the matter was set down for a hearing before that committee. It needs no stretch of the imagination to believe that January 30th was a day of great, though suppressed, excitement on the part of the advocates of the new town, and that large numbers took the first train over the Fitchburg, either as witnesses or spectators, for the scene of the argumentative battle which meant so much to the divisionists. That the adjoining towns of Bolton and Berlin felt it to be an important matter is seen from the fact that such well-known advocates as the present United States Senator Hoar, Charles G. Stevens, of Clinton, and Dr. Hartshorn, of Berlin, were in attendance, to guard the interests of Worcester County, Bolton and Berlin respectively. To Mr. James T. Joslin, of the committee, was assigned the task of presenting the cause of the petitioners, who asked the committee to assign a day when they would view the premises. February 1st was appointed, and on that day the committee accompanied by Senator J. W. P. Abbott, of Westford, of this district, Representative Nahum Witherbee, of the House, and representatives of the different parties in interest, came to Feltonville, drove to Bolton and Berlin, and returned to Boston by way of Marlborough and the Old Colony road.

The committee was thus enabled to see the exact situation of the respective towns with regard to each other and to form an idea of the capabilities of the section for sustaining a town government. Stopping for dinner, we are sure that the ladies of Feltonville put in an argument which had telling effect, in the way of all the dainties and delicacies of the season.

On the 13th day of February the committee resumed its hearings, which continued for four days, taking testimony, and on the fifth day the flood-gates of eloquence were let loose. The speeches of the counsel for the several parties were reported stenographically at the time, and printed in full in the local paper, and we are thus enabled to read at this time the respective arguments for and against this movement.

Dr. Hartshorn, of Berlin, was the first to take the floor, and made a brief but concise and forcible argument in behalf of Berlin alone, leaving it to Mr. Hoar to deal with the larger interests of Worcester County and Bolton. The speaker insisted that the desired territory from his town should not be given the new town of Hudson because this matter of getting an act of incorporation was merely the ambitious scheme of the two leading manufacturers of Hudson, Messrs. Brigham and Houghton, for their own aggrandizement, and was opposed to the wishes of the town of Berlin, one hundred and eighty-one of whose voters had signed a remonstrance to the General Court. He declared that the evidence presented to the committee showed that the main, if not the only, purpose of the petitioners in wishing to get this territory was to give the new town a better shape topographically, and to make a little better school district by adding a

dozen houses to the undesirable territory obtained on that side from the town of Marlborough. In discussing the petitioners for this measure, in which he was directly interested for the town of Berlin, he said they were of two kinds, those from Marlborough and those from Berlin. Of the Marlborough petitioners he said that they had no moral weight or standing in the matter, as they were not residents, and could as well petition for a part of Boston or Nantucket. Concerning the Berlin petitioners, seven or eight in number, he declared that only two owned real estate, and that but a small per cent. of the whole territory asked for, either in value or extent. An eminent man in his chosen profession, one cannot fail to see from reading this speech that he was by no means unacquainted with argumentative weapons or unskilled in their use. He certainly made a good use of every opportunity presented to him on this occasion.

The argument of Mr. Hoar was based largely upon the theory that it would be unconstitutional if an act were passed granting the wishes of the petitioners in regard to Bolton and Berlin, because it would interfere with the lines already established for senatorial, congressional and councilor districts, at that time made to conform to county lines, that the decennial census had just been taken and these lines could not be changed until the next one was taken, and until that time Hudson's citizens would be voters in one place for one purpose and in another place for others—an impracticable and improper arrangement—and even if it were possible to be done, it would violate that provision of the State Constitution which provides that no town or ward shall be divided in making up representative districts. He also claimed that it was against public policy to destroy the unity of the older towns for the sake of pleasing the younger manufacturing centres, and that existing towns should be kept intact for the very purpose of having different purposes united in one community, that each may profit from the other. He depicted in eloquent language the tender associations, memories, and affections of citizens for their native towns and expressed the hope that these would not be destroyed in this instance. He touched upon the fact that some of the present residents of the portion desired from Bolton did not favor the petition, and pictured in vivid colors the practical desolation and annihilation of the old town of Bolton, should Hudson's wishes be granted. Calling to mind the great ability of Senator Hoar both as a speaker and acute reasoner, it is hardly necessary to remark that his argument, which is only poorly analyzed here, must have had great weight with the committee.

Mr. Joslin, in closing the case for the petitioners, answered the objections of counsel for the remonstrants, especially Mr. Hoar, claiming that not only was the request of the petitioners constitutional, but also one that in like cases had been frequently granted by the Legislature; that the question of changing boundary lines was entirely within the scope of legis-

lative authority, and had been extended alike to town, county, and even State lines, with the permission of Congress, and cited numerous instances, which he claimed sustained his position. Referring to the relative situation of the towns in interest, he claimed that Hudson's situation was such that naturally she did not obtain her full share of municipal privileges, by that fact alone and not on account of any unfriendliness on the part of the mother towns; that the growth of the place was retarded on account of this fact of its undesirable position and inability to expand in a natural manner. He maintained that this movement on the part of the citizens of Feltonville was in the direct line of progress, and that it was not merely not good policy, but also extremely unjust to an enterprising community to force it to remain shackled to old and decaying towns. In closing he marshaled before the committee the many advantages that would result to the new town, presented statistics to show that the village of Feltonville contained all the elements of a successful town, and appealed to their knowledge of the results in similar instances in the past to support him in the statement that no such ruin as had been claimed would result to the older towns of Bolton and Berlin from having a distant and differing community taken from them.

The subject of an act of incorporation for the place of his adoption was one dear to Mr. Joslin's heart, to which he had applied himself arduously and enthusiastically, and had studied thoroughly, and these facts, together with the fact that he was a young man with his spurs to win, must have inspired him to make the effort of his life, and say, as he did in the opening of his argument, that he felt that he had been guilty almost of a criminal act to undertake so important a matter as the one before them without other and legal assistance.

A week later the committee reported in favor of an act of incorporation from the Marlborough and Stow territory asked for, but refused the petitioners' request in regard to the Bolton and Berlin territory. The reasons for this refusal were the want of unanimity on the part of those living on the desired territory and the difficulties with respect to political boundaries referred to above. An act embodying this decision of the committee was soon passed through the successive legislative stages and was signed by Governor Bullock, March 19, 1866, from which time the corporate existence of Hudson takes its date.

In accordance with the provisions of section six of the act of incorporation, two days later, on March 21st, Charles H. Robinson, a justice of the peace, issued a warrant to James T. Joslin, one of the inhabitants of the new town, requiring him to notify the inhabitants to meet in "Union Hall" on the following March 31st to elect the necessary town officers, and with the election of these officers on that day the new town was successfully launched upon its municipal career. Without giving the names of all of those who have

held town office during the last twenty-four years, it may not be without interest to many to note the names of the first officers chosen to preside over the interests of the people of this place. They are as follows: Selectmen, Charles H. Robinson, William F. Trowbridge, George Houghton; Town Clerk, Silas H. Stuart; Assessors, Alonzo Wood, George Stratton, Lyman Perry; Overseers of the Poor, Augustus K. Graves, Luman T. Jefts, John A. Howe; Inspecting School Committee, Rev. H. C. Dugan, George S. Rawson, David B. Goodale; Treasurer and Collector, George L. Manson; Constable, William L. Witham.

One week previous to this first town-meeting, on the evening of March 24th, the citizens of Feltonville met to hear the report of their committee upon incorporation, of which so much has been said heretofore.

The committee reported in writing, and, with considerable attention to all the details reported its proceedings from the time of its formation to the final passage of the act of incorporation, and in closing made use of the following language, which might very appropriately be inscribed upon the walls of the Town Hall for the guidance of its citizens in town affairs: "The State in its wisdom has conferred upon us municipal privileges and rights, and now the State demands that we as citizens shall so exercise these rights and privileges that no blot shall be placed upon the early history of our town to stand as a lasting disgrace through all coming time, nor that the paramount interests of the State shall suffer any injury through our rashness and indiscretion." The money subscribed was more than sufficient to pay all the bills incurred in obtaining this act from the Legislature, and it may be of interest to note at this time in connection with the large sums of money which are being paid for services in attempting to obtain acts of incorporation, the exact amount which was paid out by the committee of the citizens of Feltonville. According to the statement of the expenses of the committee, the entire outlay was \$889.15, \$400 of which was for surveying, \$433.65 was for expenses at legislative hearings and the balance for sundry items. According to the statements of those now living who were actively interested in this matter, no lobbying was indulged in, no lobbyists hired or unworthy methods employed to gain the desired end, although previously large amounts had been spent by other towns in this way and the feeling at just that time was decidedly against the incorporation of new towns. Hudson, therefore, started upon its history with a clean and honorable record, and without any unpleasant feeling toward it on the part of the older towns from which it had been taken. The question of the name was the only thing which had arisen to disturb the entire unanimity of her citizens, and it is undoubtedly true that there will be many who will always claim that the wrong name was finally adopted. All that was desired or that was really needed to make the new town what it should be, as we have seen, was not ob-

tained in the first act of incorporation, and Messrs. Brigham and Houghton were not in the habit of yielding a point which they had started to make, especially in a matter of this kind where they felt themselves to be in the right.

Consequently before the next Legislature assembled, new petitions were circulated, signed and presented at the proper time to the General Court asking, this time, only for the territory from Bolton, the committee on the part of Hudson deciding by a majority vote that the Berlin territory was not of enough consequence to repay any further labor in obtaining it. With the growth of the town in a westerly direction and the need that is being felt more and more every year, it is unfortunate perhaps that this decision was made, as it is becoming evident yearly that this Berlin territory would be a valuable addition to Hudson, but, left as it is, can never be of much value to the town of Berlin, and will never grow in population or value as it now is.

It is unnecessary to go into detail as to the second contest over the Bolton territory, except to say that it was conducted practically in the same manner and upon the same lines as in the previous year on the part of the petitioners. Mr. Hoar, however, did not appear again in the matter, and the counsel for the town of Bolton resisted the petition upon the same grounds presented before, dropping as untenable Mr. Hoar's theory of the unconstitutionality of a change of county or political lines. The petitioners obtained a favorable report from the Committee on Towns, but were beaten by a majority of one in the House. This was a disappointing result to the Hudson party, and immediately new petitions were sent out and preparations made for a renewal of the contest before the Legislature to convene in 1868.

When it was found that nothing less than separation would satisfy the people living on the territory in dispute, the committee representing the town of Bolton came to the conclusion that it was only a question of time when they would be obliged to assent, and that, as discretion is the better part of valor, the proper thing to do was to let them go and make the best bargain possible for Bolton. The Hudson committee of five, consisting of Francis Brigham, Joseph S. Bradley, George Houghton, James T. Joslin and Augustus K. Graves, therefore found an entirely different disposition manifested on the part of their old adversaries in the fall of '67, when they met to make preparations for a renewal of the contest before the Legislature of '68. Those who were interested in being set off to Hudson selected a committee of five, consisting of R. W. Derby, A. A. Powers, Jonathan P. Nourse, George A. Tripp and Daniel Stratton, and the town of Bolton's committee of five consisted of Amory Holman, E. A. Whitcomb, N. A. Newton, Joshua E. Sawyer and Roswell Barrett. These committees met several times to discuss the different phases of the situation, and after several conferences,

at which many speeches were made, and much wit and eloquence expended, an agreement was made and entered into, signed by the respective committees, which provided for a commission of three competent and disinterested persons who were resident without the limits of the counties of Worcester and Middlesex, and had not been at any time a member of any legislative Committee on Towns before which the matter had been previously heard, the chairman of the commission to be chosen by Bolton and Hudson jointly, and either town to select one of the other members of the board; this commission to decide as to the proposed lines of division, and to name the terms upon which the division should take place, the decision of the commission to be final and binding upon all parties and to be reported to the Joint Standing Committee on Towns of the next Legislature within thirty days, to be passed through the Legislature as the wish of all parties.

In accordance with the terms of this agreement the representatives of Hudson and Bolton jointly selected Hon. James D. Colt, of Pittsfield, Mass., as chairman of the commission, the Hudson committee and the petitioners selected as their member Hon. Josiah G. Abbott, and the Bolton committee selected as their representative Hon. George P. Sanger, the two last named being residents of Boston, all lawyers, and all having been judges of the higher courts of Massachusetts. These gentlemen accepted their appointment and met as a body in Union Hall, Hudson, Tuesday, February 18, 1868, to view the premises and hear the respective parties in interest. The commission sat two days in Union Hall and one day at the Town Hall in Bolton. After due deliberation, the commission made a unanimous finding, fixing the town boundaries as they now exist, and providing for an equitable settlement of the financial relations of the respective towns, including the payment by Hudson to Bolton of the sum of \$10,000 as an equivalent for the territory set off to Hudson, the inhabitants of this territory to pay their back taxes and other obligations, if any, to the town of Bolton. A Legislative act embodying this finding was submitted to the legislature, met no opposition there, and by the signature of Gov. Bullock, on March 20, 1868, became an established law, and ended the struggle between Bolton and Hudson, which had been going on for three years. By this addition Hudson gained a large number of new inhabitants of sterling character, a large amount of most valuable territory, and rounded out the limits of the town upon that side as they should be properly, and making the encroachment of Berlin upon that side even more noticeable and embarrassing—so undesirable, in fact, that it is entirely within reason to suppose that not many more years will pass by, without some effort being made to obtain the territory which the old committee of '67 decided not to ask for.

With this very brief *r  sume* of the history of Hud-

son's incorporation, a history which contains many novel features and reflects great credit upon all of its citizens in general and the committees having it in charge in particular, it will be necessary to take leave of this branch of the story. For the present it is sufficient to say that the new town, after the act of 1868 including the Bolton territory within its limits, had all the elements of a successful township, a sufficiently wide extent of territory, a larger population than is usually found in new towns, its citizens very intelligent and actively engaged in mercantile and manufacturing pursuits, its voters wide awake and imbued with a spirit of progress in all things which prophesied the future growth and success of the town. To give the names of all those who have successively held public office and been honored by its citizens for their ability and devotion is not necessary here, as they can all be found in any collection of the town's annual reports, and space here forbids any mention of public acts except those connected with the greatest advance or change in the town's welfare.

EDUCATIONAL.—In the matter of education the town has always been active, and occupies a fair position in this respect among the other towns of the State. The first school-house was built in 1812. Its history is a fair sample of the energy of her sons. At the beginning of the present century there was only one school-house on their territory. This was two miles from the "mills," and there was no direct road between the two places. The people believed they should have better accommodations for their children, and began the struggle in a town-meeting. In 1812 they succeeded in getting a new district formed and a new school-house voted. There was much opposition manifested after the meeting, and it seemed very probable that the vote would be rescinded at the adjourned meeting, but before the day of adjournment came the people had cut down trees, sawed them into timber, and had the house completed and ready for occupancy. This was situated on what is now Washington Street, where Mrs. Ada T. Woods' house stands. This sufficed until 1855, when there were demands for a larger and better building. This time the citizens of Feltonville couldn't agree among themselves on which side of the river it should be placed. Finally a site was selected by measuring from each man's door-yard to get a geographical centre. This centre was located on the south side of the river, and a building was erected which is now known as the School Street Building. This was the only school building in the village at the time of the incorporation, though there were two in the outlying districts.

The new town immediately set at work upon a new building in the centre and one in the westerly part, which were completed in 1867 at an expense of over \$13,000. In 1878 another building was erected on Green Street, and in 1882 a handsome and commodious

brick building was erected on Felton Street for the use of the High and Grammar schools at an expense of some \$15,000. Twenty teachers are now employed, some of whom have been in the service of the town for many years. Appropriations have increased from \$3,000 in 1866, to over \$10,000 in 1890.

It has kept pace with its buildings in the course of study and grading of schools. At the date of incorporation the schools were rather of the "district" order. The first committee set at work to better the condition, and easy but gradual advancement was made until the system was completely graded and up to the standard of the State. This first School Committee consisted of George S. Rawson, David B. Goodale and H. G. Dugan. Two years later Dr. James L. Harriman was elected a member, and has served continuously to the present time. Of the male teachers, Mr. Lucius Brown, the grammar school master, has been in service ever since 1878.

When the town was incorporated there was a High Grammar school out of which grew the present High School. There have been seven principals, as follows: W. C. Fickett, 1866-69; E. P. Gerry, 1869-71; E. R. Coburn, 1871-73; Albert Stetson, George B. Towle, 1873-74; Frank T. Beede, 1874-79; Walter H. Small, 1879-.

For the first seven years it was not graded, had no well-defined course of study and no assistant. A course was arranged in 1873, and an assistant engaged. There have been nine assistants: Miss S. F. Litchfield, 1873-75; Miss E. P. Parsons, 1875-76; Miss Mary L. Locke, 1876-77; Miss M. E. Manning, 1877-78; Miss Belle Copp, 1878, one term; Miss F. C. Foote, 1878-80; Miss R. H. Davies, 1880-82; Miss E. C. Atkinson, 1882-83; Miss C. Belle Gleason, 1883.

Miss W. May Crook was added as a second assistant in 1890.

Three buildings have been used: School Street building, 1866-67; High Street building, 1867-83; Felton Street building, 1883-.

The number of pupils has varied from thirteen in 1869 to eighty-five in 1889.

Sixteen classes have been graduated, comprising ninety-six young ladies and forty-five young gentlemen.

The school equipment has grown from a dictionary and atlas to a well-selected library in a reference room, opening from the school rooms; from a single pneumatic trough for chemical experiments to a well-stocked laboratory. The most improved anatomical and astronomical charts are used; and the foundation of a geological cabinet has been laid. Philosophical apparatus is also being gradually collected.

The school keeps pace with the needs of the town, and offers educational advantages equal to any outside of the cities.

There have been naturally more frequent changes

in the list of teachers in the remaining schools, but it is worth while to mention the fact that Miss Mary E. Hall is the senior teacher in point of consecutive service, she having been engaged in different schools in town since 1875, more than fifteen years.

PUBLIC LIBRARY.—To supplement the schools a good public library is a necessity. The Hon. Charles Hudson, after whom, as we have seen, the town was named, recognized this fact, and, in his letter thanking the people for the great compliment extended to him, made this proposition: "If the town of Hudson at a legal meeting called for that purpose, vote to establish a free town library for the use of all the inhabitants of the town, and shall appropriate or otherwise secure the sum of five hundred dollars, to be devoted to that object, they may call upon me, my executors or administrators, for the like sum of five hundred dollars, to be expended in furtherance of that object."

The town voted to accept and voted the necessary five hundred dollars. A committee, consisting of James T. Joslin, David B. Goodale and Luman T. Jeffs, was selected to carry the vote into effect. The town received additional donations of \$100 from Mrs. Caroline Wood and \$25 from Silas F. Manson. In November, 1868, the town voted \$200 more. With this the trustees purchased 721 books for general circulation and about 200 volumes for reference. The library was opened in the room now known as Cochran's drug-store, with Ira B. Goodrich as its first librarian. Its circulation the first year was 5214 volumes to 461 different people. In 1871 it was moved into the Savings Bank room, and in 1873 to its permanent home in the town hall building. During this year it received a bequest from Mrs. Emily Bailey of fifty dollars and a gift of twenty-seven volumes from Hon. Charles Hudson, since which time the town has made liberal appropriations yearly, and the library has grown to some 5000 volumes, with a circulation of nearly 17,000. The trustees in their last report say: "The Library is steadily growing in numbers, 350 new books having been added this year, and is as steadily growing in public favor. Considering the few hours per week the Library is open, the demand is an honor to the intelligence of the town. In two years 383 new names have been added to the list of patrons, and over 4000 more books have been drawn."

The present librarian is Mrs. Grace M. Whittemore and the Board of Trustees consists of W. E. C. Worcester, F. O. Welsh and W. H. Small, each of whom has been successively elected to the position, three terms of three years each.

TOWN-HOUSE.—Hudson has always been progressive in her public buildings. Five years after incorporation, after it had laid out and constructed roads, provided for the schools and whatever was deemed necessary for the public prosperity, it was decided to build a town-hall, one which would suffice, not for the present only, but for a prosperous future. A location

directly in the centre of the town was selected, rising gradually from the main street, and on it was erected the large brick structure which stands as a monument to the large-headedness of its projectors, and the liberality of the town in her early years. The building is fifty-five by ninety-seven feet with a vestibule seventeen by thirty-four feet. It is built of brick, with granite keystones and trimmings. The lower story is twelve feet high and contains the rooms for the town officers, the public library, the national bank and a small hall for caucuses and small gatherings. The second story is twenty-two feet high, with stage and gallery, finely frescoed, heated by steam and lighted by electricity. The third story is a series of rooms, used by Doric Lodge, A. F. and A. M., and Trinity Commandery. The cost of the building was \$48,531, the site and grading cost \$10,000 and about \$2500 have been spent in ornamenting the grounds. The grounds are made into beautiful lawns, surrounded by granite curbing. Abundant shade-trees have been planted and all the walks are concreted. Few towns can boast of so thorough and beautiful a hall as this. It was completed and publicly dedicated September 26, 1872. Though the town has more than doubled since then, it still remains large enough for all requirements.

FIRE DEPARTMENT.—The first movement towards forming a Fire Department was made January 17, 1842, when there was called "a meeting of the young men of Feltonville to take into consideration the best methods of forming an engine company." Feltonville Engine Company was formed with a membership of twenty-one men, embracing many who were afterwards prominently connected with the growth and mercantile interests of the town. Francis Brigham was the first foreman, James Wilson, second foreman, and Francis D. Brigham, clerk and treasurer. The latter received the munificent salary of two dollars per year for his services. No one could become a member after election by the company until he had been approved by the selectmen. The engine was procured about the middle of the year, and was a veritable "tub," as she had no suction hose and had to be filled by pails. She was procured mainly through the efforts of Mr. Charles Brigham, and cost about \$200. A syndicate was formed, and shares were subscribed for by different people in the village, until a sufficient sum was raised to make the purchase. Mr. Brigham is believed to be the only surviving member of that first and very original syndicate. In a year's time some of the "volunteers" became weary of their duties and withdrew; a new company was formed, but it was not very prosperous, as the close of the year showed only seventy-five cents in the treasury. This company existed until 1847, when a second reformation was made. In 1849 Marlborough voted to furnish Feltonville an engine if the citizens of the village would furnish the engine-house and company. A company of thirty-eight was

formed and the engine was received July 9th. The name of the engine was "Hydraulic No. 3." Her first actual service was at a fire in the south part of Bolton, on November 14th. The first muster ever held in the village was on December 1st, when the two engines from the centre came over for a friendly bout.

The records say: "They were received near the house of Charles Brigham, where a column was formed and marched through the principal streets, as far as the house of Mr. Jones, and thence to Stephen Pope's, thence to the left over the bridge, thence to the right on to the spot selected for the trial, near the house of Captain Wood. After several trials No. 2 gave up, their machine being out of order. The line was reformed, and the companies marched to the square in front of the Mansion House. Members and invited guests moved to the hall, where refreshments were prepared by Landlord Cox in excellent style." September 7, 1857, the name was changed to Eureka, a name held and made prominent ever since. The present house was built January, 1860, and duly celebrated. The present engine was purchased in May, 1872, and has won many prizes—five first, five second and, one each, third, fourth and fifth; in all aggregating \$2360. The most famous match was with the E. P. Walker Engine Company, of Vinalhaven, Me., for a purse of \$2000. The trial took place at Portland, Me., October 12, 1875. The Eureka made the grand record of 229 feet 1½ inches. Besides this, the oldest company in the history of the town, there is the Bucket Hook-and-Ladder Company, Independent Hose, Eureka Hose, H. E. Stowe Hose and the Relief Hook-and-Ladder Companies. These companies, with 100 hydrants to furnish water, afford ample protection against fire, as has been proved in many cases.

The town has not been visited by many disastrous fires, though the records show many smaller conflagrations. The first extensive fire was the piano-shop of Kaler & Shaw, on Broad Street, July 4, 1874. October 3, 1880, occurred the fire which consumed the wooden block on Main Street, opposite the town-house, and the Hudson House. September 18, 1882, the brick factory of F. Brigham & Company was burned, at a loss of \$60,000. May 9, 1885, Dunn, Green & Co.'s tannery was damaged to the extent of over \$30,000. This was the most stubborn fire ever encountered by the firemen, and it seems very evident that the whole business section of the town would have been swept away, had it not been for the new water-works, which at that time had been in operation only a few months, and had not been subjected to a fire test before. Their thorough efficiency was proved, and few carpens against them could be found the next day. They had saved over five times their cost in that one night.

WATER-WORKS.—The sources of Hudson's water supply is from a lake two miles distant, fed wholly

by springs, and furnishing the purest and softest of water. The lake has an area of ninety acres, and is located above the town, at an elevation sufficient to furnish the water by gravity, with a good head. More than twelve miles of main have been put in, and the water is almost universally used in town, paying a handsome per cent. on the investment.

The matter first came before the town in Article 4 of the warrant for town-meeting, held November 7, 1882, which is as follows:

"To see if the town will choose a committee to take into consideration and investigate the matter of supplying the town with water, and, if considered by them practicable and judicious, to petition the Legislature, in behalf of the town, to grant them leave to take water from Gates Pond in Berlin or any other suitable place or pond in the vicinity of Hudson, or construct a reservoir on Pope's Hill, so-called, so as to force water into the same for the use and supply of the inhabitants of the town, or do or act anything respecting the same."

The town voted: "That a committee of fifteen be nominated by the Board of Selectmen and reported to the town at this meeting for their acceptance, whose duty it shall be to take into consideration the whole subject-matter of this article, and if considered by them advisable, said committee is hereby clothed with full power to carry into effect the full intent and meaning of the same." The town chose as this committee: Benjamin Dearborn, Edmund M. Stowe, William F. Trowbridge, Charles H. Robinson, Luman T. Jeffs, George Houghton, Joseph S. Bradley, David B. Goodale, Cyrus D. Munson, Rufus H. Brigham, Henry Tower, James T. Joslin, Rufus Howe, A. K. Graves and Daniel W. Stratton.

The committee organized with Charles H. Robinson, chairman, and D. W. Stratton, secretary, and at once proceeded to investigate the matter very fully. They looked into the cost in other towns, the system used, whence water could be obtained in sufficient supply and purity, and finally recommended that the town appropriate a sufficient sum to pay for a survey and plan for taking water from Gates Pond, and estimated cost of construction of the works. In April, 1883, \$300 was voted for this purpose. An act had been brought up in the Legislature, and it was passed April 25, 1883. M. M. Tidd was employed as engineer. He made a thorough survey and reported: "We find Gates Pond in Berlin to have an area of ninety acres at its present level. It is a natural pond located in a country that appears to possess all of the qualifications desired.

"It is well removed from settlements, whose drainage might be injurious. The water-shed is clean with a rocky foundation and is precipitous. The pond is unusually clean; the water is soft, limpid, agreeable to the taste, and is without doubt large enough to contain nearly all the water which the shed is capable of discharging into it. On account of the steep character of its shed it is probable that something more than fifty per cent. of the water will be collected there. The water-shed contains 141 acres, from which twenty-one inches in depth can be collected annually.

This would give 80,613,225 gallons per year, or 220,858 gallons per day, equals 55.2 gallons per day per head for 4000 inhabitants for 365 days per year. The situation of Gates Pond is such that a dam can, at comparatively small expense, be constructed at the outlet which will hold the water nine feet higher than the present water level, without materially damaging any one, thus creating an additional storage capacity of 212,355,000 gallons, which can be drawn upon in case of a long-continued drought.

"In case that no rain at all occurred for an entire year, this amount of water alone, after deducting 42 inches for evaporation, would furnish the town with 581,000 gallons per day for a year. The water in Gates Pond at the present time is at an elevation of 103 feet above the curb-stone in the sidewalk at the post-office, and 112 feet above the sidewalk at the factory of Stowe, Bills & Hawley. This will give at the post-office an 1½-inch fire-stream through 100 feet of 2½-inch hose that will reach 125 feet horizontal, or 87 feet high, and will discharge 197 gallons per minute. This will reach the top of any building in Hudson and I think would be considered a good fire-stream."

The report gives a plan of the proposed works at a cost of a little more than \$70,000. The report of the committee of fifteen, embodying the report of the engineer, was submitted to the town at a meeting held December 1, 1883, and the Act of the Legislature was accepted by a vote of 191 to 90, eleven more than the necessary two-thirds. The record of this meeting shows the following: Voted, "That the town of Hudson will introduce water from Gates Pond in Berlin, for the purpose of extinguishing fires, and for domestic uses or otherwise, and will proceed to construct the necessary structures and appliances there." Voted, "To elect three persons to act as Board of Water Commissioners." Charles H. Robinson, Edmund M. Stowe and Benjamin Dearborn were elected and duly qualified in accordance with the provisions of chapter 149, of the Acts of the Legislature, for the year 1883.

In December of the same year it was voted to leave the whole matter of raising the money in the hands of the water commissioners and the town treasurer. The contract for construction was let to Goodhue & Birney for \$64,000. Water was let on for town use December 16, 1884. There were 114 water-takers at the time, 8.2 miles of pipe had been laid. A dam was built at the lower end of the pond, enlarging the area, raising the surface of the pond and increasing the head, so that the following results were obtained: At Benjamin Hastings a head of 75 feet; at corner of Central and River Streets, 95 feet; at Wood Square, 110 feet, and at Stowe, Bills and Hawley's, 119 feet. Extensions have been made every year until there are 12.81 miles of pipes; January 1, 1890, the water was used by 547 families for domestic purposes, and the town had 99 fire-hydrants. The water loan has

been increased to \$125,000. The income from all sources for 1889 was \$7602.07, or deducting the hydrant service, \$1500, leaves \$6102.07. As the net water debt at that date was less than \$90,000, it makes a remarkably good investment for the town, the value of which will increase every year.

COMMUNICATION.—In 1828 a post-office was established at the "Mills" and the name given it was "Feltonville," from Postmaster Felton, and a mail and passenger stage was put on the road to Boston. The route was over the old Sudbury road. The horses were changed at Wayland. Wagons were driven over the same road for all mill supplies and general merchandise. Mr. Gilman Hapgood, who did much of this business, still survives. After the Fitchburg Railroad was built through South Acton some of the freight and passenger business turned in that direction, but not enough to destroy the old route. In 1847 the present branch of the Fitchburg was laid out, the people generally contributing the land, but the railroad building the road at their own expense. Owing to a little difficulty with the citizens of Stowe because the line did not pass through the centre of their town, but through that part known as Rockbottom, the line was not pushed to completion until after 1850. When the line came to Feltonville, the engine was housed in George Houghton's factory. In 1853 the line was pushed to Marlborough. A ledge was struck of so formidable proportions that the company were on the point of abandoning the extension, believing that the business would not warrant the expense. Finally, on solicitation of "Uncle" Charles Brigham, the company, then called the Marlborough Branch Railroad Company, agreed to complete it if he would give them a warranty deed of all the land they crossed, belonging to him. This was done, the road was completed, and, as Mr. Brigham says, "I didn't get much out of it." It was of course of great general benefit to the settlement, though rather erratic in its movements in its first years. In one of the first winters no train was seen for five days. Its first fare to Boston was one dollar and ten cents, more than the fare for the round trip to-day.

The facilities afforded by the Fitchburg Railroad Company have been increased and improved from year to year with the increase in size and wealth of the company, and a new and excellent passenger station has but recently been completed in the place for its patrons. Its yard accommodations for handling freight and coal are very extensive and convenient, but there has always been a vital objection to it as a passenger route to Boston on account of its roundabout course, its unnecessary length. Any town's growth is seriously impeded which is at the mercy of a single railroad for passenger and freight rates, and it was always the desire of those farthest sighted to have Hudson so situated as to be able to command a direct route to Boston by competitive lines.

From the town records it appears that as early as

November 3, 1863, at a town-meeting held upon that date, the question of a railroad from Northampton to Sudbury was broached. This road was to be called the Massachusetts Central Railroad and was to connect with Sudbury and Wayland Railroad, running from Sudbury to Stony Brook Station upon the Fitchburg line. A vote was passed authorizing the selectmen to petition the Legislature for an act of incorporation for such a road, with a capital stock of three millions of dollars. A copy of the petition which was presented to the Legislature is upon record, and a most devious route would have been followed, had the road been put through all the towns named in it. Those most actively interested in the new route secured from the Legislature of 1869 an act of incorporation for a road from Williamsburg, Mass., to Sudbury. This act also allowed the consolidation of the Wayland and Sudbury road with it, so that the eastern terminus would be at Stony Brook as stated. Francis Brigham, of Hudson, is named in this act (chapter 260, Acts of 1869) as one of the corporators, and under its provisions the towns mentioned in it, through which the road might pass, had the power to subscribe and incur a debt to an amount not exceeding five per cent. of its assessed valuation for the purchase of the capital stock to assist in building the road.

In accordance with this act, the town of Hudson at a meeting held November 2, 1869, voted to subscribe for five hundred and fifty shares of the common stock of the company and to issue bonds to the amount of fifty-five thousand dollars to pay for the same. Later on, in 1872, it was voted to make notes instead of bonds, to be paid in not less than five nor more than twenty years. It should be noted that at the time this vote to subscribe was passed, the town had had a corporate existence but little more than three years, and the sum voted under the circumstances was a very large one, showing the enterprise of the place, and the confidence of the people in the benefit that would follow to the town from the building of the road.

The history of the building of the road is about like that of most of our railroads; first, a delay on account of the crisis of 1873, then a failure on the part of those in control to adopt the best methods, frequent changes in the management, all conspiring with the opposition of older and competing lines to obstruct the building of the road. Meanwhile the funds of the corporation were being spent in the construction of the line at different points wide apart, but nothing effective was done or any apparent result arrived at until the road became almost a laughing-stock, and was despaired of by all except its most ardent friends, some of whom were in Hudson. Throughout this period of depression the town of Hudson, by its votes, acceded to all the requests of the managers of the line to help it out of difficulty. In June, 1878, the town voted to assign its stock to a trustee, Thomas Talbot, three-fourths of which should go to the

company in case the road was built and equipped on or before November 1, 1880; but this was not done, and the town voted to do even more than this and modified its agreement so that it should be binding in case the road was built and in operation in part from the town of Oakham to a point on the Boston and Lowell Railroad, the Fitchburg terminus having been given up before this. This second agreement was in the early part of the year 1880, but November came and found the road still wanting. It was then voted to extend the agreement one year, or until November 1, 1881. At this last date Mr. Norman C. Munson, the contractor, had the road in operation to Hudson, but as this did not comply with the terms of the contract the whole arrangement fell through. Mr. Munson succeeded in keeping the road in operation for about two years, when he was obliged to suspend. In 1883 the road was reorganized, and on December 7th, of that year, the town voted to exchange its stock for the same amount of Central Massachusetts stock. After the reorganization, in 1884, the road was leased to the Boston and Lowell Railroad Company, once more opened and completed to Northampton.

As a result of all these complications and changes, the town's stock naturally had been fluctuating from nothing to a point as high as thirty-three cents on the dollar, and a majority of the citizens of the town concluded to sell the stock when, in the judgment of the selectmen and treasurer they could make a good sale of it. The town finally realized about fourteen cents upon the dollar, and closed its financial connection with the road.

It would not be a just statement to declare that the town has thus lost that which was invested in the road. The results aimed at, competition, lower rates, more direct communication with Boston, Worcester and the West, have all been obtained, and will increase in the years to follow. Already it is possible to load a car at this point to ship through to San Francisco direct. Like the town-house, water-works and school buildings, the investment is sure and is proving daily the wisdom of this town and of others along the line in encouraging the construction of the road.

It is to be regretted that Francis Brigham, the one of all others in Hudson, who, by speech and his money, steadfastly upheld and advocated this road, did not live to feast his eyes upon the line in operation. Those who knew how strongly he was attached to the success of this company, alone can realize how much it would have repaid him for a great deal of his hard and generally discouraging labor.

This line of railroad is now under lease to the Boston & Maine Corporation, and forms an important factor in its Southern Division. The service is most efficient, and the indications now are that in the near future it will be double-tracked and become a trunk line to the South and West.

Through trains are now run daily over this line *via* the Poughkeepsie bridge between Boston and Phila-

delphia and Washington and between Boston and Harrisburg, Pennsylvania.

Hudson is thus most fortunately circumstanced, as all trains stop at this point.

MILITARY AFFAIRS.—It would be most interesting, were it possible to devote the space to it in this place, to narrate in detail the military history of the people who have been residents of this place during its different stages of evolution from the "Mills" to Feltonville and thence to the present time. There is a peculiar fascination attending things military, especially to the younger generation of men, and the old system of May training, when all were expected to turn out as a part of the military forces of the State at least one day in the year, was productive of a varied assortment of colonels, majors and captains, traces of which still linger in our midst. The citizens of Marlborough and Feltonville, we are inclined to believe, were more than ordinarily interested in military affairs, and among the older men of the place can be found many who recount with evident pleasure their memories of "war," mimic war, in which they indulged as far back as 1840.

The Marlborough Rifles was the organization which, under various changes from time to time, enlisted the sympathy and membership of most of the young men of Feltonville, and although it was a Marlborough organization, a fair share of its commanders were Feltonville men, among whom were Captain Francis Brigham, Gilman Hapgood and Daniel Pope, the last-named of whom was especially fond of the militia.

This company was a part of the Fifth Regiment of Militia, commanded at one time by Colonel Benjamin F. Butler, and attended musters in most of the towns in Middlesex County. At home the territory now lying between Felton and Church Streets was an open field, and drilling took place here, a day at a time, the citizens patriotically setting out the necessary rations.

Feltonville was not forgotten in the larger musters, and the territory lying east of Lincoln Street, then owned by Caleb E. Nourse, was the scene of martial arrays, in which the local company made a prominent showing in their elaborate uniforms. There seems to be a unanimity of belief that the principal "enemy" was located about in the rear of what is called Peters' Grove.

For a short time from 1859 until after the breaking out of the Rebellion, this company of rifles seems to have been a part of the Second Battalion, made up of companies from Sudbury, Natick and Marlborough, and commanded by a Major Moore, of Sudbury, who, fortunately, or unfortunately, died at about the time a call was made for volunteers for the suppression of the war. His death necessitated a delay, and another organization, the Third Battalion of Rifles, from Worcester, was sent to the front among the three months' men. This Major Moore was succeeded in the command of the battalion by Captain Henry Whitcomb,

of Hudson, who held a major's commission for a time during the years 1861-62. By the time the services of this command were wanted a new order of things was arranged, the old battalion formations were broken up and the Marlborough Rifles became a portion of the Thirtieth Massachusetts Volunteers, one company, "F," under the command of Captain Whitcomb, and the other company, "I," under the command of Captain Robert C. H. Schreiber, of Boston. A third company, "G," of the Ninth Massachusetts Volunteers, made up of Irishmen, also went to the front and saw a great deal of hard fighting and suffered the great hardships of the Army of the Potomac, to which they were attached. The history of these companies is the history of the Army of the Potomac from July 16, 1861, when they were mustered into the United States service for three years, and it need not be detailed here. They suffered their share of the hardships and privations, lost their full share of men by death or disability and are entitled to the great honor which always attaches to patriotic and unselfish acts. A reference to the official records discloses the fact that a great many of the members of these companies of the Thirtieth have since become prominent in the various walks in life both in Marlborough and in Hudson. As they did not continue a company existence after the expiration of their term of service, we are obliged to leave them here.

Less than a year after the companies of the Thirtieth and Ninth had gone to the front, or, to be exact, in the month of May, 1862, the situation was such that a demand for more volunteers was deemed imminent, and the citizens of Feltonville having petitioned for the formation of another company there, an order was issued from the office of the Adjutant-General of Massachusetts, addressed to Daniel Pope and eighty-four other petitioners, directing them to meet in "Union Hall," for the purpose of electing the necessary officers, the company to be lettered "I," and attached to the Fifth Regiment.

The company was accordingly organized by the election of William E. C. Worcester as captain, Charles B. Newton, first lieutenant, and Luther H. Farnsworth, second lieutenant. It was the common expectation then that the company would immediately be ordered with the regiment to the front; but it was not until the 10th day of September following, that they went into camp at Wenham, Massachusetts, and upon the 16th day of that month were mustered into the United States service. Previous to this there had been several changes among the officers of the company and regiment. Captain Worcester was made major and the vacancy in the company was filled by the promotion of Lieutenant Newton and the election of William S. Frost, the present county commissioner, to the position of second lieutenant, several others declining an election for various reasons. The membership of this company was made up more distinctively of Feltonville men, although they are

found credited to Marlborough, Bolton and Berlin. On October 22d the regiment left camp for Newbern, North Carolina, by way of the United States steamer "Mississippi." This place was reached on the 28th, and within forty-eight hours the regiment received orders to march, and for the next six months they were given a large amount of hard and dangerous duty to perform. The Fifth was a good regiment, and its colonel, George H. Peirson, an excellent officer, so that more than their share of the time they were doing the most difficult and dangerous part of the duty. Their first encounter with the Confederate troops was at Planter's Creek, in which skirmish three men were killed; the next was at Woodington Church, and the first heavy engagement was that known as the battle of Whitehall, on the 16th day of December, 1862, the Fifth being on the right of the line and in the thickest of the fight. Upon this tour of duty, which was for the purpose of destroying the Wilmington and Weldon Railroad, the regiment marched one hundred and eighty miles, and, on account of their valiant services, were directed by Major-General Foster to inscribe on their colors the names of Kinston, Whitehall and Goldsboro'.

In March, 1863, the regiment was ordered out for the purpose of making an advance on account of hostile demonstrations by the rebels, and was ready to march in *fifteen minutes* from the receipt of the order. They went to a place known as Deep Gully and suffered much from the extreme cold weather. The next month, April, saw two more hard marches and a fight at Blount's Creek. At Cove Creek occurred another meeting with the "Johnnies," in which the Fifth won applause. On the 21st of May occurred an attack upon a large force at Mosely Creek, and the Northern forces captured more than two hundred prisoners, forty-three horses and mules, eight ambulances, seventeen wagons, one gun, five hundred stand of arms, seventeen rounds of ammunition, together with the entire hospital furniture and supplies of the enemy. This was the last expedition in which the Fifth was engaged, and in some respects the hardest, owing to the intense heat, miry swamps and almost impenetrable jungles through which the troops were forced to march.

On the 26th of May four hundred men, under command of Major Worcester, were commanded to proceed to Wilkinson's Point, on the Neuse River, twenty miles below Newbern, to erect and occupy fortifications at that place; but as the order was countermanded, the force returned to camp on the 28th. The regiment reached home on June 22d, and was enthusiastically received by the people of Boston and by the citizens and authorities of Charlestown. When "I" company reached Feltonville they received a welcome which was more enjoyable to them, and if not so much of a demonstration as they had witnessed in Boston, it was nevertheless as hearty as the people of the place could make it.

The regiment was mustered out of the service July 2, 1863.

By this hasty review it will be seen that the regiment did an unusual amount of arduous service during its term of enlistment, beginning but a few hours after it set foot upon hostile soil, and continuing until the eve of its departure for Massachusetts, marching about six hundred miles over the wretched roads of North Carolina and sailing over two thousand miles in crowded transports, and having enough shot and shell hurled at them to have killed every one of them a dozen times over had they but hit the intended mark.

Until July 16, 1864, the Fifth remained a part of the Massachusetts Militia, but did not see any active service. Upon this day the regiment was again mustered into the service for one hundred days and ordered to the defences at Baltimore. Company "I" at this time was commanded by Captain A. A. Powers, Lieutenants Frost and Luther H. Farnsworth. Major Worcester in the mean time had advanced a peg to the position of lieutenant-colonel. Arriving at their destination, the regiment was distributed among the different forts in that vicinity, and occupied the time in doing guard duty, an arduous, but by no means exciting or, under the circumstances, dangerous occupation.

At the expiration of this term of service, the regiment was again mustered out of the service of the United States, and remained a part of the State's military force.

Company "I," at first named the "Banks Guards," after the town was incorporated, in 1869, changed its name to that of the Hudson Light Guard, and as such was known during its connection with the State force. The company performed good service in November, 1872, at the time of the Boston fire, doing guard duty two days and a night, and under its different commanders enjoyed varying degrees of prosperity until it was disbanded by a general order from the Adjutant-General's office, in September, 1876, when, in common with others, it was done away with in order to reduce the size of the State's militia.

For the sake of future reference, a list is appended of the names of those who held commission in the company or rose from its ranks to higher offices in the regiment:

Lieutenant-Colonel, William E. C. Worcester; Majors, William E. C. Worcester, Andrew A. Powers; Captains, William E. C. Worcester, Charles B. Newton, Andrew A. Powers, Augustus S. Trowbridge, Joseph W. Pedrick, S. Henry Moore, John F. Dolan, Edward L. Powers; First Lieutenants, Charles B. Newton, Andrew A. Powers, William S. Frost, Augustus S. Trowbridge, Joseph W. Pedrick, David B. Whitcomb, Calvin H. Carter, William H. Trow, Edward L. Powers, Thomas O'Donnell; Second Lieutenants, Luther H. Farnsworth, S. Henry Moore, William S. Frost, David B. Whitcomb, Calvin H. Carter, Wm. H. Trow, John F. Dolan, Fred O. Welch, Thomas O'Donnell, Frank E. Emery.

In 1887 the State force of militia was again increased, and after an interim of eleven years Hudson again became represented in the Fifth Regiment. On November 16th of that year a new company was

mustered in and lettered "M," and has been commanded during the time since by Captain Adelbert M. Mossman, First Lieutenant William H. Brigham, and Second Lieutenant Frank K. Freeborn. The new company has assumed the old name of Hudson Light Guard, and has had an honorable and successful record since its formation.

GRAND ARMY POST.—Having recounted, all too briefly, the record of Hudson's soldiers during the Rebellion, it is but natural that we would turn next to an account of their doings since that time.

In April, 1866, a movement was set on foot to organize an association of the citizens of Hudson who had served their country in the army or navy for the purpose set forth in their declaration of principles: "Of perpetuating the pleasant relations heretofore existing between us as comrades in arms; to assist each other and those of our fellow-citizens who may hereafter return from the hardships of the service to procure employment; also to be instrumental in assisting the disabled and the families of those who have fallen; to place on record for the use of posterity any facts that may come to our knowledge concerning the patriotic service of any of our comrades during the late Rebellion."

This movement met with a general response from the soldiers of Hudson, and, on the 1st day of June, the by-laws of the "Hudson Army and Navy Union" were adopted, and the new society started on its mission under the most favorable auspices. The "Union" was not intended to be in any sense a machine, nor was it secret, the meetings being open and any question was considered in order and debatable, and many who could not become members attended the meetings. For a short time the Union was successful, but before long two disturbing elements arose to cloud the brightness of its members' dreams. There were too few offices to go around, and too much politics for peace, so that the longer the Union lived the less union existed among the members. In the following spring, having learned that an effort was being made to unite the soldiers and sailors of the Union army and navy in a grand National brotherhood, James S. Bailey succeeded in obtaining a copy of the constitution, and consulted with many of the more prominent veterans with a view to securing a charter.

It was decided that this would be a great improvement over the existing order of things, and on March 16, 1867, a committee of ten was appointed to apply for a charter, and upon the 10th day of April following Post No. 9 of the Grand Army of the Republic was organized with a charter membership of fifty-nine.

When it came to choosing a name, the admirers and advocates of the name Reno were in the majority, and succeeded in adopting this as the name of the new post. During its existence the post has gathered together about eight thousand dollars by means of their individual and collective efforts, and has disbursed

almost all of it in relieving the necessities of veterans and their families. As time has gone on, the membership has increased, and the interest increases rather than abates as death gradually thins the ranks of those remaining.

On February 12, 1872, a Ladies' Relief Society was organized by the wives of the members of the post, and has been a valuable adjunct to it, its members keeping alive the social relations always so pleasant among comrades, and in times of sickness and distress rendering those tender offices which women alone can do.

Thus far we have been treating of Hudson and its citizens in its corporate capacity and tracing its growth and prosperity in a collective capacity. Let us now turn to a consideration of the industries which have been the mainstay of its people and made possible the achievements which have been described.

MANUFACTORIES.—While Hudson remained a mere farming community there was little growth, little centralizing; a grist and saw-mill, a general store and a tavern near the mills sufficed; but when industries demanding skilled labor were introduced, the land near the store and the mills and the tavern began to be dotted with buildings. The first little attempts at manufacturing were made nearly a century ago by Joel Cranston, who tried wool-carding and cloth-dressing. In 1810 Phineas Sawyer started a small cotton-factory, but only yarn was produced. The weaving was done in families. Some satinets were also made. A distillery for cider brandy was put in operation by Cranston & Felton on the spot where Tripp's box factory now stands. A little tanning was done, and also a little saddle and harness-making. None of these grew to any proportions, but they were the pioneers of the great manufacturing industries of to-day, drawing settlers to the village and beginning that permanency which creates large business centres.

Of the great staple industry of Hudson to-day, shoe manufacturing, the beginning seems to have been made by a Peter Wood. He cannot properly be styled a manufacturer; he was, perhaps, a cobbler, who would make a pair of shoes when ordered. In 1816 Daniel Stratton, grandfather of Town Clerk Daniel W. Stratton, began manufacturing shoes in a small way. In 1821-22 he built a small factory on the spot now occupied by the house of Mrs. Alfa L. Small. Here he employed four hands, and carted his goods to Providence rather than to Boston. In a few years he moved to the farm now known as the Stratton Farm. His son, Lorenzo, bought the old place; but, instead of doing business for himself, took shoes from a Stoneham manufacturer. By him the old house recently known as the Waldo Brigham place was built, and work was carried on in the barn.

The factory built by Daniel Stratton was moved across the road, and now forms the northern portion of Martin Reynolds' house. The property of Lorenzo Stratton passed successively into the hands of William Brigham, Solomon Brigham and Francis Brigham.

It was at this place that Mr. Brigham learned his trade, and that he first began that business that has since endured, and put the making of shoes upon a permanent foundation in the town. He soon moved to a small factory which stood just back of William Chase's Block; then to the spot now occupied by Holden's Block; then to the building now occupied by C. L. Woodbury. The business thus created has been carried on continuously ever since under the firm-name of F. Brigham & Co. This firm has had a prosperous career. It weathered the financial crises of 1837, 1847 and 1857 and the seventies. It has made over twenty millions pairs of shoes, is one of the oldest firms in the United States, has introduced many improvements in shoe-making, has graduated some of the successful manufacturers of the town to-day, and has grown from the lap-stone and bristle to the best modern machinery. As it is our pioneer firm, a brief history will not be out of place.

Mr. Brigham's beginning and experience is the oft-repeated story of the beginning and experience of most of the successful men of business in this country. He was cradled in adversity, and, without the patronage of wealth or helpful friends, had to hew his own way over the rugged paths of life. He was a practical shoemaker, working for two years at the bench, and acquiring in every detail and process the manufacture of shoes. At twenty-one years of age he was running his own business, employing only a few hands. In those early days of the shoe industry the men worked in "teams" of four. One would fit the stock and last, one would peg, another put on the heels, and the fourth would trim them and take off the last. The laster waxed his own thread and secured the ends to the bristle. An old ledger of 1847-8-9, contains many entries like the following: "Henry Priest, Cr., by work in Hapgood's team, \$14.95." "Jonathan F. Wheeler, Cr., By 140 pairs, \$11.90."

The lap-stone was an adjunct of every bench, and the construction of the shoe was as primitive as the shoe itself. The style seldom changed, and three pairs of "strap cacks" were sold for one dollar. In those days the work was given out in large quantities, and the stock was joined into shoes in small shops scattered through all the surrounding villages. In the private houses over a radius of many miles, "Hannah sat at the window binding shoes," as Elias Howe had not then mastered the problem that has since produced a revolution in the stitching of the world. This firm used the first sewing-machine in town in 1855; it was made by Grover & Baker, being regarded as one of the wonders of the world at the time, and was run by Mrs. Persis E. Brigham. A sole-cutting machine was used in the early part of the forties. F. Brigham & Co. introduced the pegging machine in 1857, and were the first to run it successfully in this country. They added the binding machine to their labor-saving machinery as early as

1856. Lasting-machines were put in in 1861, but proved to have no practical value. Leveling, crimping, skiving, nailing, burnishing, trimming, sanding, heeling, and an infinite number of other machines, adding wonderfully to the beauty, durability and rapidity of production of shoes, have been introduced and adopted by this firm since 1860. They have always been among the first to adopt and use the best machines and appliances for the production of the best work, regardless of cost.

Prior to 1847 this firm moved twice to larger factories, owing to the increase in their business. In 1847 they erected what was regarded at the time as one of the largest and best equipped shoe-factories in this section of the State. They occupied it ten years, when steady growth and the popularity of their goods called for more room. In 1856 mills and a water-power, which had been in use since 1690, were purchased for ten thousand dollars, and the buildings removed from their old sites, and work was commenced on the extensive plant they now own.

Since this beginning in 1834 the industry has grown from a few hands employed in a small shop to eight large plants with a capacity of 20,000 pairs per day.

The firm of Stowe, Bills & Hawley was established by Mr. Edmund M. Stowe, senior member of the firm in 1854, L. T. Jefts in 1859, George Houghton in 1857, A. P. Martin in present shop in 1887, W. F. Trowbridge in shop now occupied by Frank H. Chamberlain in 1866, Bradley & Sayward in 1880, Frank H. Chamberlain, then Moulton & Chamberlain in 1884, and H. H. Mawhinney & Company in 1890. These firms occupy large and convenient factories, supplied with the best machinery modern ingenuity has been able to devise, and with all the perfected methods of protection against fire and panic. A glance at one factory will serve for all. At the Main Street factory of Stowe, Bills & Hawley one finds in the engine-room a powerful duplex fire-pump, its pipe hot with steam, with large coils of hose ready for instant use. In addition to this is a large standpipe under full pressure of the town water, a complete equipment of automatic sprinklers, chemical fire extinguishers, fire pails, an electric watch clock to ensure the watchman's punctual rounds at night, and on the outside a loud automatic gong to give the necessary alarm. All the factories are equally well equipped.

Around this central industry has been gathered its feeders, die factories, last factories, tannery, machine-shops, building material, elastic webbing.

New industries have been drawn in, such as the Goodyear Gossamer Company, and the Woodward Manufacturing Co., with its wood pulleys, foundry castings and finished planers and band-saws, and the New England Knitting-Mills. The making of boxes was begun about 1844 by Silas Stuart at the location on River street where Cranston & Felton's apple

brandy refinery was, half a century before. Mr. Stuart then made all the boxes needed by the shoe manufacturers in Marlboro' and Feltonville (now Hudson). Later on the property was leased by Tripp Brothers, bought by them in 1869, and the business increased until they now occupy a plant of one and one-half acres, with a building three stories high, supplied with every needed machine, operated both by water and steam-power; 100,000 feet of lumber are made into boxes every month, and yet the shoe industry has so increased that this is only one of three plants for the manufacturing of shoe cases for Hudson.

The last business had the following beginning. In the month of March, 1859, Philip E. Millay, a native of Whitefield, Maine, who had served an apprenticeship with an old last-maker, by the name of Silas Mason, in the town of Gardiner, Me., and who had also worked ten years as journeyman in the city of Lynn, came to Hudson with his brother, David N. Millay, and started a last factory in the old tannery building, shortly after moving to the basement of what was then known as the "Old Red Shop." They had no last machine at first, but had all their lasts turned in St. Stephens, New Brunswick, brought to Hudson and finished in their factory. In 1863 P. E. Millay bought his brother's interest in the business, which had greatly increased, and also put in his first last machine to do his own turning, shortly after moving to his present quarters. This business has always been prosperous and has never been out of the family.

The tannery business was one of the first industries ever begun in Hudson, and, like the shoe business, has grown to large proportions, and done much towards building up the town. Its inception was by Joel Cranston about the year 1799, and was bought by Stephen Pope in 1816. His tan-yard was located where the Methodist Church now stands. He conducted the business successfully for many years, tanning in the best periods 5000 calf-skins, and considerable Russia leather. In 1866 the property was offered for sale, and Mr. George Houghton, believing that there was an opportunity to make leather sufficient to supply the shoe-factories in town, called together the five principal manufacturers and submitted to them the proposition. They did not look upon the matter very favorably, even though Mr. Pope claimed that he had five per cent. advantage over other tanners in his water supply. This was on Saturday evening. Monday morning Mr. Houghton, with his characteristic push, bought the property and in six weeks he had built Houghton Street, moved four buildings upon it, and had built and stoned the present canal. He afterwards filled in the lower part thirteen feet. As the old buildings and vats did not seem suitable for the business proposed, new ones were constructed and leased to Fay & Stone. The business was continued for twelve years and then sold

to Butler & Dunn, now Dunn, Green & Company. Their tannery has received many additions until it is now one of the most complete in all its arrangements of any tannery in New England. It is situated in the centre of the town and borders on the Assabet River, with a spur of the Fitchburg track running directly through the yard, enabling them to unload their bark from the cars into their mills.

The buildings consist of a tannery 225 feet long, 60 feet wide, containing 209 pits; a leach-house 165 feet long, 25 feet wide containing 24 leaches, with all the latest improvements; a beam-house 110 feet long, 46 feet wide, containing 64 limes and soaks; a currying shop 320 feet long, 32 feet wide, four stories high, heated by steam and containing all the modern improvements in the way of tools and machinery that are to be found in any first-class factory for the manufacture of buff and split leather. They have also a large bark shed, 125 feet long, 42 feet wide capable of holding three hundred loads of bark. They have also a large storehouse for hides, a brick engine-house containing two first-class engines of one hundred fifty horse-power, also a stable and other out-buildings.

Dunn, Green & Co. tan and finish here 1050 hides per week, or 54,000 hides per year. They make buff and split leather, making 108,000 sides and 216,000 splits, or 324,000 pieces a year. To do this they employ 150 men. Their leather is used in all the principal shoe towns in New England, and has long enjoyed the reputation of being the best buff and split made in the country. They use the best of domestic cowhides, as well as the best material and labor that money will buy. They received a medal and diploma from the Paris Exposition, a medal and diploma from our Centennial Exhibition, and a medal and diploma from the Massachusetts Charitable Mechanics' Association for their exhibit of buff and split leather, made at this tannery.

Of the new industries, the Goodyear Gossamer Company stands at the head. The business was begun in the fall of 1885 by the present proprietors, Messrs. L. D. Apsley and J. H. Coffin. These gentlemen had had a large experience in the gossamer business, and brought with them a thorough knowledge of the manufacturing department and an extensive acquaintance with the best wholesale and retail trade throughout the country, and they have devoted themselves to the development of the business with such success that in their third year they did the largest gossamer business in this country, leading all their competitors in volume of sales.

They began business in the frame buildings on Washington Street, formerly occupied by the Hudson Fabric Company. To meet the demands of their increasing trade, additions were made to the original building, from time to time, until their capacity was doubled; but it was apparent that a more radical step was required to keep pace with the growing de-

mand for their goods, and when, in December, 1888, their coating and cementing departments were destroyed by fire, the firm resolved to erect a plant which would meet the requirements of the future. They accordingly purchased a tract of land along the north side of the Central Massachusetts Railroad, upon which the new buildings now stand. These buildings are built of brick and iron, and, with the exception of the stitching-building, are provided with $3\frac{1}{2}$ inch Portland cement floors, so that they are as nearly fire-proof as they can be made. The plant consists of seven buildings, having the following dimensions: 105x44, 80x40, 20x25, 25x25, 32x20, 35x32 and 130x50. There are now being daily coated with rubber 6000 yards of the various kinds of cloths, which include Foulards, woollens and silks in upwards of three hundred patterns. They have recently added an English coating-machine and built a drying-room 20x25, where the cloth is subjected to a heat of 240 degrees. The various manufacturing buildings are lighted by electricity, and are well ventilated and provided with various appliances for the comfort of the employees and for economy of labor in doing the work. When the manufacture of gossamer garments was begun, the circular and Newport were almost the only styles of ladies' garments made, but the business has been developed so greatly that these are now but a small part of the great variety of styles made. The firm has always been in the advance in the introduction of new and attractive styles of garments, and is constantly introducing new patterns, which are made in such a variety of cloths, and with so much attention to perfection of fit and beauty of design, that this department of their business resembles that of a large cloak-making establishment. All qualities of goods are thus made up—from the ordinary cotton Foulard to the finest grades of woollens and silks—all of which are made thoroughly water-proof by their coating of pure Para rubber.

The most wonderful improvement ever made in water-proof cloths has become widely known to the trade under the name of "India Stripes." These goods were first made and introduced by this firm, and have become general favorites on account of their beauty, water-proof quality and durability, being undoubtedly superior to all other rubber-surface garments made. Prior to their introduction, various attempts had been made to introduce variety of pattern upon the rubber coating, but none of them were successful as the coloring material either destroyed the rubber coating or disappeared on exposure to the weather. By the method employed by this firm these objections have been overcome, and they are enabled to produce a great variety of stripes in many colors, giving the garment the appearance of having a cloth surface, while being more thoroughly water-proof than a printed cloth can be made, and retaining their beauty much longer.

Situated beside the Gossamer Company, and receiv-

ing their power from the same eighty horse-power Corliss engine, is the Woodward Manufacturing Company. This company is the outgrowth of a small business carried on in Lowell by W. A. Woodward, under the name of the Woodward Machine Company. Mr. Woodward had been doing a good business in a small way, but having made several valuable improvements in machinery—principally in wood-rim pulleys—and not having capital, decided to form a stock company for that purpose. The subject was brought to the attention of the Hudson Board of Trade, who appointed a committee to take the matter in charge, and after thorough investigation another committee was appointed to solicit subscriptions for the stock. On January 5th the necessary capital had been secured, and the company was incorporated with a capital of \$100,000. A tract of land was purchased on the line of the Central Massachusetts Railroad, and suitable buildings have been erected to carry on the business, consisting of a factory 100x40 feet, two stories, with a foundry 70x40, and dry-house for drying lumber. The whole is equipped with first-class machinery.

An account of Hudson's manufacturing interests without a statement of the great work of one of the strongest and most influential men would be incomplete. Mr. George Houghton, now retired, is the man referred to. He was one of the "war-horses" in forming the town, has conducted some of its greatest business interests, and aided many a citizen to an honest living and competency. Of lowly birth and meagre education, the world seemed to hold out little to him except hard work. He labored faithfully at his bench, earning some two dollars a day, until 1857. Mr. Tarbell, then depot-master at Rockbottom, proposed that they should unite forces and make shoes. Mr. Tarbell was to look after the books and furnish the money and Mr. Houghton was to have charge of the work. After cautious inquiries work was begun in the cottage where Mr. Houghton lived, the western portion of his present residence. As the business grew it was removed to a shed which now stands back of his home near the hot-house. About this time Mr. Tarbell withdrew and Mr. Houghton attempted to close the business to return to his bench, but Boston parties insisted on sending their orders for him to fill and furnished him the leather. So he continued until he outgrew his shed and built his first factory, sixty feet long and four stories high. He continued building until, in 1872, his was considered the model factory in the State. His success was due to native push and inability to recognize the word "can't." Before he retired he had done over \$17,000,000 of business. During the war his manufacturer's tax was the largest paid by any one person in Middlesex County. A pleasing experience in his business life was the visit paid by the Japanese Embassy, August 2, 1872. The arrangements for the excursion were made by a committee of the Boston Shoe and Leather

Exchange. They made the trip by a special train on the Fitchburg Railroad, having the same engineer and conductor who ran the first train over the road in 1851. The *Boston Journal* of August 3d says of this trip:

"The train left Boston at nine o'clock and arrived at Hudson at quarter past ten. The party were met at the station by a crowd of people, who were apparently satisfied with a passing glance at the strangers, who were introduced to Mr. George Houghton and conducted at once to the tannery. This branch of industry is under a social ban in Japan, the men engaged in which are placed among the lowest order of workmen. The modern process of curing hides by immersion in vats of concentrated liquor, the dressing and finishing of the same by machinery, instead of hand, as was done in the infancy of the business, was examined and then the party entered the extensive factory, following through the various departments the necessary stock of leather taken from the tannery, from which a dozen pairs or so of shoes were made during the stay of two hours at the factory of Mr. Houghton, which the Japanese will carry home as specimens of a special branch of Massachusetts industry."

The Embassy was reported as "highly delighted and instructed in the course of their tour through the establishments of the peggers, and heelers, and stitchers, and binders."

Each kind of business is dependent upon many others for the highest degree of efficiency and success, and Hudson has acquired these various accessories with the passage of time, so that it may be said to possess all the modern requirements of trade in the way of banks, newspapers, electric-lights, telephone and telegraph companies.

An account of the origin and growth of some of the principal institutions of this character must be included in a work of this kind and most properly follows the history of the larger industries already described.

BUSINESS ACCESSORIES.—The first bank located in Hudson was the Savings Bank. Its act of incorporation is dated February 26, 1869, and says that Francis Brigham, Edmund M. Stowe, George Houghton, their associates and successors, are hereby made a corporation by the name of the Hudson Savings Bank.

The first meeting of the corporators was held in George Houghton's office, April 12th, where the bank was organized by the election of the following officers: Francis Brigham, president; George Houghton and Edmund M. Stowe, vice-presidents; Francis D. Brigham, treasurer; Luman T. Jefts, clerk, and a board of sixteen trustees. The treasurer was put under \$40,000 bonds, "with not less than five bondsmen."

April 23d it was voted, "that each of the trustees of Hudson Savings Bank deposit a sum not less than ten dollars, to remain in the bank five years without interest," \$210 were thus deposited, which paid the initial expenses of the bank. The bank was opened for business in Brigham's Block (now Cochran's), May 1, 1869. The first depositor was Robert S. Harlow; amount, \$100. On the first day \$2110 were deposited.

There have been few changes in the bank officers. Francis Brigham remained its president until his death, in December, 1880. In January, 1881, Edmund M. Stowe was appointed president until the an-

nual meeting, when Francis D. Brigham, who had been the treasurer, was elected president, and Daniel W. Stratton was elected treasurer. Owing to ill health Mr. Brigham did not qualify for the position, and Edmund M. Stowe was elected president. He still holds the office. On the completion of Jefts' Block, in 1881, the bank was moved into it, giving it a more central location. In January, 1870, the deposits were \$31,076; January, 1880, \$206,244; January, 1890, \$528,521. The last statement, July, 1890, shows \$547,457. In a strictly manufacturing town this shows three things—the thriftiness of the workmen, the sagacity of the bank officials and the confidence workmen have in the bank. A large part of its deposits are loaned to other workmen, who build and eventually own their own houses. January, 1870, the loans on real estate were \$16,370; January, 1880, \$134,170; January, 1890, \$349,775; July, 1890, \$377,175. This bank is one of the solid institutions of the town, and a potent factor in its growth.

Though for many years workingmen could deposit their money, there was no place where employers could make their exchanges. All banking business had to be done through Marlborough, Clinton or Boston. This inconvenience was severely felt, and in 1881 Mr. Charles H. Robinson began actively to canvass for the location of a National Bank in the town. The first meeting of the subscribers was held October 26, 1881. Charles H. Robinson was chosen chairman, and H. E. Stowe clerk. On the following evening another meeting was held, and the corporation was organized with a capital of \$100,000. The following directors were chosen, November 22, 1881: C. H. Robinson, J. S. Welsh, H. C. Tower, E. M. Stowe, L. T. Jefts, J. S. Bradley, Henry Tower, G. A. Tripp, Benj. Dearborn—all of Hudson; N. L. Pratt, of Sudbury; A. D. Gleason, of Stow; J. D. Tyler, of Berlin; Joel Proctor, of Bolton; E. H. Dunn, of Boston, and H. B. Braman, of Wayland. The officers elected were—President, Luman T. Jefts; Vice-President, E. M. Stowe; Clerk, H. C. Tower.

Mr. George A. Lloyd, a teller in the Cambridge National Bank, East Cambridge, was selected as cashier, January 19, 1882, and Mr. Caleb L. Brigham, the present cashier, as clerk of the bank, March 20, 1882. The charter was dated January 23, 1882, and business was commenced March 7, 1882.

Mr. Lloyd, having been called to a position in the Lechmere National Bank, resigned his place in the Hudson Bank, April 23, 1883, and Mr. Caleb L. Brigham was elected cashier, which position he has filled ever since.

On the first day there were three depositors; amount, \$3344.48. In one year the deposits amounted to \$74,058.09. March 7, 1890, after doing business eight years, the deposits amounted to \$105,733.09. Every week it disburses on factory pay-rolls from ten thousand to twenty-five thousand dollars. One month after it opened, its loans and discounts were \$106,-

902.49, and in July, 1890, \$200,275.22. During the last year the cashier's checks on the Blackstone National Bank amounted to over \$1,700,000. These statements indicate somewhat the commercial basis and activity of the town.

The Hudson Co-operative Bank was incorporated October 22, 1885, with the following officers: Luman T. Jeffs, president; Charles H. Welch, secretary; Josiah S. Welsh, treasurer. It issued its first series in November and has done a constantly increasing business. On May 1, 1890, they began their tenth series. The deposits amount to \$48,035, of which \$45,300 are loaned on real estate. The present officers are: Arthur T. Knight, president; Charles H. Hill, secretary; Charles E. Hall, treasurer.

It is doubtful if any manufacturing town in the county or State can show as good a record of the sobriety and thriftiness of its citizens as can be gleaned from the preceding statements of these banks. It certainly augurs well for Hudson, when the finances of her working class increase at the rate of fifty thousand dollars per year as they have since 1888. The town is supplied with all the modern business accessories, telegraph and telephone connections; eleven mails daily, two express companies—one a local express, Houghton's, founded in 1866 by H. B. George and purchased by Willard Houghton the year following, the other being the "American." Train service is better than any other town enjoys twenty-eight miles from Boston. The Fitchburg Railroad runs five trains daily and two Sundays; the Boston and Maine, Central Massachusetts Division, runs eight daily trains and two Sundays either way between Hudson and Boston. The running time varies from forty-five to sixty-five minutes. Fares are very low, a single ticket on either road costing but fifty-three cents.

An electric light plant was established September 16, 1886, under the name of the Hudson Electric Light Company with a capital of \$15,000. The plant consists of a sixty horse-power engine and two dynamos, with a capacity of forty-five arc and six hundred and fifty incandescent lights.

NEWSPAPERS.—Hudson had its first newspaper just previous to its incorporation. It was begun in February, 1865, by Charles A. Wood, in Manson's Hall, which stood on the spot now occupied by Chase's Block. The owner, twenty-five years later, says: "It was in the closing days of the Rebellion, and just after a few weeks' sojourn in the vicinity of 'the seat of war,' that the publisher of the *Hudson Pioneer*, like hundreds of other ambitious youths, gave up the avocation of guard-mounting and seized the stick and types to make for himself fame and fortune. The town, or more properly the village, was hardly of sufficient size to warrant a venture of this kind. The newspaper was not a 'long-felt want,' in the true sense of the word, and, like the history of many another poor country editor and publisher, it was hard work and poor pay."

The paper experienced a good many changes in location and ownership, but it still exists in a feeble way under its old name.

In 1883, Wood Brothers, one of whom was the originator of the *Pioneer*, believed the time had come for a genuine live town paper. On September 29, 1889, they issued their first number of the *Hudson Enterprise*. It was a twenty-eight column paper, with ten columns of local advertisements. Its circulation was about three hundred. Its first issue contained a good description of the birth of its older rival. "The office of the *Enterprise* (in Chase's Block) stands almost directly over the spot where we commenced the publication of the first paper ever printed in Hudson, over eighteen years ago. But how different the surroundings! Then we were located in Manson's Hall, over a shed of wide dimensions, and in cold weather, well, wasn't it cold! We commenced business in the primitive style. Our paper was printed on an old Washington hand-press, and about all our jobbing was done on the same. All our editorial work was done in the ante-room adjoining the work-room, and it usually occupied our time from five o'clock Friday afternoon until some time Saturday morning, when the *Pioneer* was born, there being no specified time, as we were at the mercy of Sam and the 'devil,' until the last sheet was pulled through and off the old press, when we once more assumed full control."

The *Enterprise* began with the best modern equipment in steam-power presses. It has grown from the first size to an eight-page, forty-eight column paper, with a circulation of 1200. It has also added other towns to its list, so that its combined weekly issue is over 4000. Its Christmas issue has always been a novelty, has attracted much attention and received many flattering notices. September 3, 1889, they began a four-page daily, with a circulation of four hundred. In six months it has increased so that the edition varies from 800 to 1200, according to the quality of the news. These papers are all alive, and devoted to the best interests of the town.

With this narration of Hudson's material interests, it is a pleasure and a relief to turn to another and different aspect of its people's growth. While devoted to all possible advancement in worldly affairs, the citizens have not forgotten religious matters, nor failed to cultivate the social side of their natures.

CHURCHES.—There are four churches in a vigorous and healthy condition, occupying handsome and commodious structures, which are paid for. The Baptist, Methodist and Unitarian are situated together on Church and Main Streets, while the Catholic is situated on the next street to the east, Maple, indicating a bond of unity and good fellowship not always existing among rival denominations.

The first Methodist in Hudson was Phineas Sawyer in 1800; he introduced Methodist preaching, but, owing to his early death by accident, it did not seem

to flourish until some years later. There were many warm adherents of the Methodist faith in Hudson from 1860-65, but no continuous preaching was had in town until Mr. George Houghton generously fitted up a hall near the Fitchburg depot for the use of this people, and on Sunday morning, April 9, 1865, Rev. W. W. Colburn preached the first sermon to a good-sized audience. Mr. Colburn was a young, energetic man, full of the faith and zeal of Methodism, and he worked untiringly, "in season and out of season," for the good of the church. So successful were his efforts in this direction, that in August, 1866, the foundation of the church edifice was put in, and the work so rapidly pushed to completion, that in the following winter services were held in the new building. From this time forth the new society grew rapidly, and is to-day in a most flourishing condition, with a large membership, and a wide-awake Sunday-school, ably conducted, and intent on keeping alive the same spirit which has ever characterized it. The church is situated on Main Street, in the centre of the town. Directly opposite it, on a slightly elevated site, stands the edifice used by the First Unitarian Society, formerly called Union Society.

The movement which culminated in the organization of this society may be traced to the anti-slavery agitation in Feltonville, and to the religious services held in the engine-house, Cox's Hall and Manson's Hall in 1848 and 1850. In 1854 the School Street School-house was built with a small hall in the basement, and Rev. Mr. Stacey was engaged to preach at five dollars a Sunday. This hall was named Freedom Hall. In June, 1860, when Feltonville had one thousand inhabitants, steps were taken for the erection of a church, which, when completed, including furnishing, organ and bell, cost \$8400. The house is called Lawrence Church, in honor of Amos Lawrence.

In 1862 Mr. Stacey closed his services for the society, and Rev. W. S. McDaniel was called to the pastorate. He resigned in 1864, and Rev. H. C. Dugan took his place, serving until 1867. He was succeeded by Rev. W. S. Heywood, and he by Rev. Hilary Bygrave, who resigned in 1879. Rev. E. P. Gibbs was installed in 1880 and resigned in 1883. He was followed by Rev. Clarence Fowler in 1884. In an anniversary address delivered by Rev. Mr. Fowler, in speaking of the religious freedom and tolerant spirit manifested by the early founders of this society, he related an instance in 1862, when there were some misgivings about allowing Wm. Lloyd Garrison to speak in the church, and Francis Brigham voiced the convictions of the society when he said he would rather Lawrence Church were leveled to the ground than that Garrison should not be allowed to speak from that pulpit. Many founders of the society are still living.

The Sunday-school, which is the pride and inspiration of the society, has a very large membership, and great interest is manifested in it by teachers and pu-

pils. The Ladies' Social and Benevolent Society and the Unity Club are powerful auxiliaries in the work of this society, and could not well be dispensed with. A new and commodious chapel is soon to be added to the accommodations of the church.

The Baptists are the oldest organized society in town. It was through the earnest efforts of some of the ladies of Feltonville, assisted by Rev. Henry Fittz, that it was organized. In 1844 services were held in Cox's Hall and at the houses of those interested. Later on, various students and ministers followed up the good work, until, in 1851, a church was built on the site of the present edifice, and Rev. E. L. Wakefield was ordained as its minister. His services with the church lasted until 1864, when, on account of failing health, he was obliged to resign. He was an earnest and eloquent preacher, and greatly loved by all. In 1865 Rev. E. H. Page was called to the pastorate and resigned in the following year, his place being filled by Rev. H. G. Gay. After four years' faithful service Mr. Gay gave way to Rev. W. H. Ventres, who was ordained in 1871.

During Mr. Ventres' engagement the present attractive edifice was erected at an expense of over \$23,000, and all paid for, giving this people one of the finest churches in town. Mr. Ventres concluded his ministrations in 1876, and soon after Rev. Francis S. Bacon was called to the place, filling it with marked success and almost unanimous satisfaction for nine years, when he resigned to accept a call from Marblehead. Rev. H. F. Perry, a student of the Newton Theological School, was asked to supply the pulpit, and the people were so favorably impressed with his ability that he was given a unanimous call. He was ordained in 1890. Thus this society has grown from eight members, at the time it was constituted, to a vigorous and flourishing church, sowing much good seed and adding continually to its membership.

St. Michael's Society (Catholic) was organized by Father M. T. Maguire, in 1869, and a church was built on Maple Street. It supplied all their needs, until the rapid growth of the society made a new and larger structure imperative. This was begun in 1889, and will cost \$30,000. The corner-stone was laid Sunday afternoon, August 25, 1889, at three o'clock, with the full ceremonies of the Catholic ritual. The services were in the open air on the site of the new church. In a receptacle of the stone were placed a parchment containing a Latin inscription, copies of the *Hudson Enterprise*, and the Boston daily papers, coins of the period, etc. The ceremony was one of the most impressive possible. The preacher on the occasion was Rev. Charles W. Currier, C.S.S.R.

Besides these older societies, in the year 1887 the formation of a Congregational Church began to be agitated, but with no immediate result other than to keep the subject in the minds of the members of that denomination who had not united with either of the other churches in Hudson. In 1889 the subject again

received attention and a canvass was made for members of churches of this denomination whose homes were here, and they were invited to attend a meeting for prayer and conference in a private dwelling. The evening being a very cold one, but few came, but those who were present deemed it best to repeat the invitation for another evening and the interest and attendance at this second meeting justified their action. Not long after this small beginning a Sabbath-school was organized and the Enterprise parlors were secured for the use of the growing society. Following close upon the organization of the Sabbath-school came the establishment of Sabbath preaching ser-

of exclusiveness—the outgrowth of older growth and sectional jealousy—so common in larger towns, to be found within the social environment of Hudson. A hearty cordiality and good fellowship pervades the place. The “stranger within her gates” is made welcome—how welcome can be judged from the fact that some of her leading men are those who came to visit friends for a day, were enchanted by the attractiveness and cordiality everywhere found, and have stayed on, until they are now represented by second and third generations. It is this spirit which is the secret of the flourishing societies to be found in her midst. They are manifold. The Mason will find entertain-

ST. MICHAEL'S ROMAN CATHOLIC CHURCH.

vices, the pulpit being supplied by pastors of neighboring Congregational Churches, who kindly offered their services to the young society. At the present time the outlook is very encouraging, and there is every reason to believe that a strong church will, in a few years, result from this small beginning. In 1890 their first pastor was settled, Rev. J. C. Hall. The first enrollment of membership was thirty. The Sabbath-school has an average membership of fifty, a good library and pleasant rooms, and the attendance upon the preaching services averages about seventy. A Ladies' Sewing Society has also been formed, and is in a flourishing condition. The society has purchased a site on Central Street and hopes to erect a church at no very distant day.

SOCIAL ADVANTAGES.—There is none of that air

ment in Doric Lodge or Trinity Commandery in the halls in the Town-Hall building; the Odd Fellow, in Odd Fellows' Hall; the G. A. R., in Cochran's Block; the Granger, in Jeffs' Block; the Knight of Pythias, in Lewis' Block; the Red Men, in Odd Fellows' Hall, and all others in some one of these halls which are sub-let to them.

No brother or sister can apparently appear upon the scene without meeting the sign and password of his or her particular order. Of all these, Doric Lodge, A. F. and A. M., is the oldest. In the autumn of 1863 a few members of the lodge in Marlboro', wishing to enjoy the rites of their order with less inconvenience than the necessary travel to Marlborough compelled, applied to the Grand Lodge for a dispensation to work in Feltonville. A charter was granted

Dec. 28, 1863. On January 19, 1865 the lodge was constituted and consecrated by the Grand Lodge, and a public installation of the officers was held. The lodge-rooms were over Lawrence Church, and they were occupied until 1872, when the rooms in the Town-Hall building were leased for twenty years and furnished at an expense of \$2400. These rooms were dedicated Oct. 18, 1872. On Dec. 28, 1888, the lodge celebrated its twenty-fifth anniversary, and one of its pleasantest features was that it had as its guest William Parkman, the Grand Master who signed the charter. The Masters of the lodge have been as follows: P. E. Millay, J. L. Harriman, Willard Houghton, A. S. Trowbridge, Lyman Morse, Parkman Nourse, Edward P. Miles, John F. Wood, Walter H. Small, Francis Howe and Joel M. Pettengill. The membership roll has grown from the original fifteen to one hundred and eighty. Occupying the same rooms with Doric Lodge is Trinity Commandery, Knights Templar. The first meeting of those interested in forming a commandery was held March 23, 1871, and twenty-five signed the list. This was increased so that when the charter was granted, April 6th, there were forty-six charter members. Work was begun that month under command of Sir Knight F. J. Foss, of Malden, Past Commander of Hugh de Payens Commandery. It was constituted and organized in the vestry of the Methodist Episcopal Church, on December 7, 1871.

Dr. N. S. Chamberlain was its first Eminent Commander. Those since have been, J. L. Harriman, W. E. C. Worcester, Luman T. Jefts, James T. Joslin, George B. Cochran, John Hillis, F. S. Dawes, J. Frank Childs. It began with a debt of \$1600, which was cleared in 1878, and now there is a handsome surplus in the treasury. In December, 1888, elegant jewels were presented to all the Past Commanders. It has made nine pilgrimages. Its membership has increased to one hundred and forty.

Hudson Lodge, No. 154, I. O. O. F., was instituted March 21, 1871. This lodge, although occupying small and inconvenient quarters in Lawrence Church, had a steady growth in numbers, and accumulated a very large reserve fund, amounting at one time to about eighteen hundred dollars. The charitable provisions of this order have always been fully carried out in this lodge, and the social feature which has always been characteristic of Odd Fellowship is particularly true of Hudson Lodge. Not many years after the lodge was instituted, the wives of the members who had taken the third degree formed a ladies' branch of the order, and by their efforts in a social way gave an added and extremely pleasant side to the organization. In 1887 the members of Hudson Lodge decided that their rooms were too small to accommodate them properly, and an arrangement was made with Hiram W. Chase to add another story to his block on Wood Square, to be fitted up for the especial use and convenience of this lodge. The means of the organization made it possible for them to fit up the new

rooms in a handsome manner without crippling their resources. The change to the new hall was made September 20, 1887.

With the removal to this hall came an increased interest in the affairs and welfare of the lodge, and an added desire on the part of many to become members. Probably no social organization has made greater strides forward during the last two years than has Hudson Lodge. Its membership list is growing rapidly and its fund for charitable purposes will soon be larger than at any time in its past history. Since its foundation the following members have presided over its deliberations and attained the rank of "Past Grand": Charles W. Barnes, Hiram P. Bean, Jesse E. Bliss, Charles G. Brett, Simeon M. Bruce, Willard G. Bruce, Reuben A. Derby, N. S. Fairbanks, James G. Dow, George T. Fletcher, Frederick P. Glazier, Edwin B. Goodnow, Charles F. Hall, James T. Joslin, Ellsworth S. Locke, William G. Locke, Otis H. Moore, William H. McCarthy, Charles H. Moore, John Robertson, Oliver B. Sawyer, William F. Smith, Fred. W. Trowbridge (2d), Martin V. Tripp, Arthur G. Wood, John A. Woodman, Henry A. Wheeler.

The names are arranged alphabetically and not according to term of service.

Mr. James T. Joslin was the first Noble Grand of the lodge and has always taken a great interest in Odd Fellowship. He was Grand Master of the Grand Lodge of the State of Massachusetts in 1880, and a representative to the Sovereign Grand Lodge during the next two years. Since the agitation of the question of an Odd Fellows' Home he has been one of the trustees having that matter in charge.

Dr. Cornelius S. Jackson is the present Noble Grand, serving a second term in that position.

The wives and daughters, as has been stated, had a temporary organization for many years, but, except in individual cases, were not regular members of Rebekah Degree Lodges. In 1887, it was proposed that a regularly constituted Rebekah Degree Lodge be instituted, and this plan met with hearty favor. After going through with the necessary formalities, Magnolia Degree Lodge, No. 55, Daughters of Rebekah, was instituted September 22, 1887, and has had a remarkably successful career ever since. The following ladies have occupied the Noble Grand's chair since that date: F. Emma Wood, Rachel S. Bruce, Flora A. Moore.

The other secret orders of the town are strong financially and in numbers. They have a most undoubted effect upon the affairs of the place, but a want of space precludes any more extended reference to them in this sketch.

BOARD OF TRADE.—A town to grow must have the elements of growth within herself, public spirit, manifested not only in words, but in deeds. That "union is strength" is nowhere better illustrated than where public-spirited men unite unselfishly to advance the

interests of the town in which they live. Such a union was effected in Hudson in its Board of Trade. Agreeable to a call issued to those who had expressed a desire to organize a Board of Trade, about one hundred of Hudson's wide-awake business men assembled in the lower town hall on Wednesday evening, March 22, 1887, to devise measures for the formation of an organization whereby unity of action might be secured for the better promotion of the public interests. Hon. L. T. Jefts presided and spoke in favor of the organization of a Board of Trade and the great good that would probably result to the town from such an organization, not only to business men, but to all classes. On motion of R. B. Lewis it was voted to proceed to the organization of the meeting, and Mr. Jefts was chosen chairman, F. H. Chamberlain, secretary, and R. B. Lewis, treasurer. A committee was chosen to draft constitution and by-laws and report at an adjourned meeting. Some stirring speeches were made, and the meeting was marked by unity of action and purpose which foreboded a change for the better in the business affairs of the town. The meeting adjourned for one week to hear the report of committee on organization. The adjourned meeting was well attended. The committee on by-laws presented the same to the meeting and they were unanimously adopted. A paper was drawn up for signatures and forty names secured. At the third meeting on the Wednesday following, April 9, 1887, the membership was increased to one hundred and one, and the following officers elected:

President, F. A. Robinson; Vice-Presidents, L. T. Jefts, E. M. Stowe, J. S. Bradley; Secretary, F. H. Chamberlain; Treasurer, D. W. Stratton; Corresponding Secretary, W. H. Small; Collector, J. H. Robinson; Reception Committee, G. T. C. Holden, L. D. Apsley, G. B. Cochran, J. F. Wood, J. B. Clare, Caleb L. Brigham, W. H. Brigham; Board of Directors, W. H. Moulton, C. H. Robinson, Benj. Dearborn, Henry Tower, M. Wood, R. B. Lewis, F. S. Dawes, H. C. Tower, A. K. Graves and G. A. Tripp.

Its object is tersely expressed in its preamble: "This organization is effected for the purpose of advancing and encouraging the growth and prosperity of this town, and for promoting and fostering social and business intercourse among its members." Its motto, "Stand Together."

It has stood together valiantly, giving material aid to established industries, and inducing others to locate here. It first secured the Elastic Webbing Company, then formed the Woodward Manufacturing Company and finally the Hudson Real Estate Company. The latter is a good illustration of its vim and ability. For several months efforts were made to bring to town the large shoe manufacturers, Messrs. Mawhinney & Company, having factories at Stoneham and Fayville, and doing an immense shoe business, reckoned among the soundest firms in the State, with a heavy financial standing. No satisfactory arrangements seemed

possible at first, as no available factories were sufficiently convenient for their work, but finally two active members of the board asked them what could be done to get them to locate in Hudson. Mr. Mawhinney made a proposition which was that if a factory could be built for them in Hudson, 250x40 feet, four stories high and supplied with engine and boiler and fixed machinery, they would take the plant at a certain per cent. for a long term of years. To do this would require about twenty-five thousand dollars. The Hudson men unhesitatingly gave their opinion that such a factory could be built for them, and returned home fully determined to make the effort. A meeting of the Board of Trade was immediately called. A large number of the wide-awake business men of the town were present and entered into the scheme with enthusiasm. It was thoroughly discussed and a committee appointed to retire and formulate some definite plan of action for the acceptance of the meeting. After a brief consultation the committee returned to the meeting a proposition to raise \$25,000 for the establishment of the plant by the sale of stock, the shares to be placed at fifty dollars each, and the first four members of the committee appended their names to a document pledging nearly one-tenth of the required sum. The paper was at once circulated among the members, and in less than fifteen minutes the subscriptions had reached over five thousand dollars. A soliciting committee was appointed to raise the remainder, and in one week the task was done. The factory, one of the largest in the State, was built and occupied by the firm, April 1, 1890.

In October, 1889, the Board of Trade published and distributed a 15,000 edition of the *Hudson Enterprise* of sixteen pages, containing over fifty large illustrations of the town, its residences and business plants. It was scattered all over the country. The work of the board is having an appreciable effect upon the town; building is very active and yet the demands for tenements cannot be met; business is "booming" as thoroughly as in any Western town, without any mushroom tendency; the stores are being remodeled and fitted with all modern conveniences; taxable property is growing rapidly, and the census will show large gains in population. For many of the data used in this history we are indebted to the columns of this Board of Trade paper and desire to acknowledge our obligation to it, having in several instances found no better statements anywhere than in this paper of historical facts.

NATURAL ADVANTAGES.—Nature is often prolific in her beauties, and certainly no place east of the Berkshire Hills has been so lavishly endowed as Hudson.

Nestled in a valley through which flows the gentle winding Assabet, furnishing power and water supply to some of the largest manufactories, on every side are gentle slopes and hills affording most attractive building sites. Rising sharply from the right of the

river bank is Bellevue, a tower of strength and beauty, its green slopes smiling down upon the town, offering rest and refreshing shade after daily toil. It commands an extensive view of the country in all directions and nearly all parts of it look directly down upon the town, with its churches, schools, business blocks and manufactories, and yet is removed from its noise and smoke and dust.

The outlook is surpassed by no other eminence in this section, particularly to the east and west, where the Assabet finds its winding way and where verdant fields, forests of green hills and vales stretch away as far as the eye can reach, presenting a charming panorama of loveliness.

Broad streets lined with beautiful shade trees, attractive dwellings, well-kept lawns and shrubbery, form a picture of comfort and prosperity which speaks eloquently for the inhabitants. The area of the town is not large, but it is compactly built, thus concentrating the efforts and interests of the inhabitants and inspiring each to add to the beauty of the whole. This pride in the town's growth and prosperity has induced hundreds to own and beautify their dwellings, a larger share of whom are working-men, many holding an unencumbered title to some of the finest estates in town. The surrounding country is equally beautiful, affording pleasant drives in all directions, and opening to the view delightful scenery. To the west of the town is "Potash Hill," towards the north "Falls Hill," to the south "Prospect Hill," from each of which extensive views can be had of the surrounding country.

There are no extensive streams. The Assabet, the largest, is a small river having its rise in Westborough, and flows through Northboro', Marlboro', Berlin, Hudson, Stow and Concord, where it unites with the Sudbury River. On its passage it receives several smaller streams from Berlin and Bolton, but they are not very important, though furnishing sufficient power during portions of the year to run some of the mill industries. Of the ponds, the one in the eastern portion is the most beautiful. From its clear, sandy bottom, it has always been called "White Pond," now dignified into the newer appellation of "Mirror Lake." Few sheets of water can compare with it in purity.

Geographically Hudson is situated in the extreme northwestern part of Middlesex County, the western boundary being that of the county as well as the town, as has been referred to already several times in this history. Four miles west is Berlin, four miles north Bolton, four miles south Marlborough, and four miles northeast Stow. All these, except Marlborough, are farming communities, of which Hudson is the natural trading centre. To this they have gradually been drawn, until to-day the business centre of the town is a scene of continual bustle and activity; brick blocks have risen in place of the old wooden ones, special stores have taken place of the

old "general stores," and the future outlook is one of growth and prosperity,—how prosperous may be gleaned from the record of growth since 1866. At that time the inhabitants numbered about 1800; in 1890, about 5000; the valuation in 1866 was \$805,277; in 1890, \$2,490,115. The increase from May, 1888, to May, 1889, was \$68,428; from May, 1889, to May, 1890, it was \$208,345. These figures indicate a vigorous, healthy, growing town, which will soon become prominent in the county.

It has been the effort of the writers of this sketch to avoid all appearance of exaggeration. They realize that there is little that is exceptional in what has been told in these pages. It is the story of the foundation and growth of a New England manufacturing town owing its progress to the efforts of typical Massachusetts men. They believe, however, that even in this account there is much that may be learned by those who would themselves succeed, and have an honest desire to promote the future advancement of Hudson. We are too apt to hurry over the achievements of our predecessors and to hold their labors in too slight estimation. It is well occasionally to step aside from the rush of business life to gather recollections of the past, to learn something from "the days of small things," and pay a meed of honor and respect to those whose work is done and often for the most part forgotten. Many things of historical interest have necessarily been omitted, many persons, living and dead, are entitled to much greater recognition than it has been possible to give them, and many inaccuracies of statement may be found in spite of our efforts to be correct. Hudson is in its infancy, and its history, its real history, is before it. A full and complete account of it must be deferred to a later time and under other circumstances.

BIOGRAPHICAL.

JEDEDIAH WOOD.

Jedediah Wood was born in Marlborough, May 16, 1777, and moved to the "Mills" when he was twenty years old. One of the earliest citizens of the place, he has descendants still occupying the property, and conducting a business in which he was engaged, though now, of course, adapted to modern requirements. He married Betsey Wilkins, September 6, 1801; they had seven children, of whom Col. William H. Wood was prominently connected with the growth of the town. The story of Mr. Wood's prosperity is this. While still in his teens he was sent by his father to get a bushel of corn from a neighboring trader. As he wanted it on credit, it was refused. Cut to the quick, he then and there decided that the time should come when his credit would be good.

In time he bought the "Mills" on credit, and carried on cloth-dressing. The farmers wove this cloth

James West

Stephen Pope

Frederick L. Bradley

and it was brought to him from all the surrounding country, even from Boylston. His work was of such good quality that some broad-cloth of his dressing received the first premium at the Concord Fair. His machinery was in the basement of the "Old Red Shop," which stood on the spot afterwards occupied by the "Brick Shop." On the north side of the road below the Caleb Haskell house, he had his field of teasels, the ripened flower-heads of which were used in raising the nap of woolen cloths.

In this same building he opened a general store. At that time there was no wagon at the "Mills," but he would ride his horse to Marlborough, borrow a wagon, drive to Boston and buy his goods, and then return the vehicle. For the first seven years this business did not pay its expenses, but the cloth-dressing and a little farming kept the balance on the right side of the ledger. Cool and moderate in his manner and habits, he shrewdly conducted affairs, until he established the business which passed to his son, Col. William H. Wood, and is now in the hands of his grandson, Solon Wood. He became a large buyer of real estate, owning all from the river to the present Brigham place on the south side, all east of Maple Street, and several buildings. He and Squire Pope were the large land-owners half a century ago. He lived in the house now known as the "Wood Place," at the junction of Park and Washington Streets. He was a selectman of Marlborough, and was captain of a military company. During the War of 1812 he was on duty for a while at Fort Warren. He died in 1867, nearly ninety years of age.

STEPHEN POPE.

Mr. Stephen Pope was one of the pioneers of the town. He was born January 11, 1786, and moved to this place from Bolton in 1816. He was then a Quaker, and every Monday morning he took his two oldest children to the Quaker school, and every Thursday and Sunday attended the Quaker services, then held in the school-house. He engaged in tanning, his yard being on the spot where the Methodist Church now stands. His tanning was all done in the primitive way, and the old white horse which turned the bark-mill was a very familiar object. Whenever sufficient skins were tanned the horse made the journey to Boston to find a market.

Mr. Pope's first residence was where R. B. Lewis' house now stands. He soon desired to own a farm and bargained for the land from the Bolton line over what are now Felton and Pope Streets. At the time he mortgaged it heavily, and has since stated that he could not get credit for seven pounds of flour. Work, early and late, prudent habits and care in time cleared the farm, added other lands until he became the largest land-owner in this section. What is now Felton Street was his apple orchard; Summer, Winter and Spring Streets now cross what was his "mis-

sionary" land. He drove each year regularly to Salem to pay the interest on his debt, and he always took one of the children with him. In 1825 he became interested in the Methodist services held in the village, and as they found difficulty in obtaining a place in which to hold their meetings, he fitted up a room in one of his tan-yard buildings for their use. When the Baptist Church was built he gave them the land and bought the first pew, though he never affiliated with them. When the Fitchburg Branch was built he gave the land for the depot site. He occupied various town offices, was selectman of Marlborough and one of the overseers of the poor for many years. He was a member of the Massachusetts Senate when the Senators were elected from counties. He died in 1870, at the advanced age of eighty-four years, in the brick house which was removed when the town-house was built.

JOSEPH S. BRADLEY.

Joseph Stevens Bradley traces his genealogy on his mother's side to one of the earliest settlers in Feltonville—Robert Bernard. It will be remembered that Bernard was the purchaser of about three hundred and fifty acres of land from one Barstow, in 1723, a copy of the deed being given in the early pages of this history.

The family line runs as follows: Robert Bernard married for his second wife Elizabeth Bailey, of Lancaster, and the result of this union was six children, among them a son by the name of Joel, who married Lucy Stevens, July 16, 1756. One of their children was Lavinia Bernard, who married Daniel Stevens as his third wife. Their daughter married William Trowbridge, December 11, 1814, and was the mother of the subject of this sketch. William Trowbridge was a son of Joseph Trowbridge and a machinist by trade, moving from one town to another, more or less frequently, as his business necessitated. It thus happened that Mr. Bradley was born in Worcester, Mass., May 20, 1823.

When three years of age he was taken to Marlborough to live, and at the age of seven came to live with an aunt, in the house now located near the entrance to the grounds of the late Captain Francis Brigham, that property having been a portion of his mother's estate. While living here he obtained what little schooling he ever enjoyed in the small school-house then located on what is now Washington Street, which has been spoken of before in these pages. With the exception of the very short time devoted to acquiring a knowledge of the three "R's," Mr. Bradley's boyhood was passed in earning what he could to pay for his living. Farther down the street was the factory of Lorenzo Stratton, and here, before he was twelve years of age, he learned to make a whole shoe. Later on he worked in Stephen Pope's tannery, splitting leather, and, for a diversion, driving

the old white horse. Thus, without being aware of the immense value which this knowledge was to be to him in the future, he learned to know leather thoroughly, and became a practical shoemaker.

At sixteen he worked a while for Captain Francis Brigham, who at that time was manufacturing shoes in a brick shop on the site of Holden's grocery store, on the north side of Wood Square. At seventeen he was seized with a desire to see something of the world, and resolved to go to New Orleans. On reaching New York State, however, he learned that yellow fever was rampant in the South, and turned his steps northward, landing, as much by chance as anything, in Saratoga Springs, in the summer of 1841. Here a new world was opened before him; for even at that time what was known as Congress Spring was discovered, and its water valued for its medicinal properties. During that summer about five thousand guests visited the place, bringing with them the stir and bustle of a pleasure resort. Mr. Bradley worked at his trade as a shoemaker upon the opposite side of the street from where the present Grand Union Hotel stands. At that time there was a hotel there of the same name, but much smaller, which has since been destroyed by fire. During this summer he had the good fortune to hear Ole Bull, who was on his first visit to America, and was revealing to astonished and delighted Americans new realms in the musical world with his violin. While there, also, the first omnibus ever seen at the Springs was driven into town by a young man who is much better known to the present generation of readers by the name of the Rev. George S. Ball, at that time a driver in the employ of Massachusetts parties. The "bus was all the "go," and Mr. Bradley recalls, with a good deal of pleasure, of riding from the lake back to the Springs in it, on one occasion, when ex-President Martin Van Buren was a fellow-passenger.

Mr. Bradley remained here from June to December, and these months must have been among the most memorable of his life. He went as far north as the present city of Ottawa, and the River St. Lawrence freezing up the next day, he was obliged, much against his will, to remain there during that winter. After a decidedly dreary winter here he took the first boat back to the States in the spring. He tired, however, of a nomadic life, and returned to Feltonville, working at the shoemaking trade here, in Worcester, Woburn and other places until 1850.

On October 1st of that year he began business on his own account in company with Captain Francis Brigham and Mr. William F. Trowbridge, his brother, under the firm-name of "F. Brigham & Co." It will be remembered that the general outline of this firm's history has been given elsewhere. At the outset, however, all was not smooth sailing, and, as Mr. Bradley has stated, at the end of the first three years it could not be said that the firm had made a dollar. Better days followed, and in 1858 the firm moved into

the brick shop which has since been burned. Mr. Trowbridge withdrew from the firm in 1866, and Messrs. W. F. and W. B. Brigham came in. This firm continued until April 1, 1880, when Mr. Bradley withdrew to enter into a co-partnership with Henry R. Sayward, of Cambridge, Mass. The firm-name is Bradley & Sayward, and occupies the F. S. Dawes factory in Hudson and a somewhat smaller one in Dover, New Hampshire. This firm is one of the strongest and most active concerns in Massachusetts. Their business averages half a million dollars annually, while the average output at the Hudson factory monthly is nine hundred and sixty-pair cases. The Dover factory has about one-half this capacity. No manufactory in Hudson runs more steadily or with less friction. The firm's goods are sold mostly in the South and Southwest, and their customers are found in twenty-eight States of the Union. From Portland to Galveston, and from Minnesota to Florida their shoes may be found.

Mr. Bradley's time has not been given entirely to his own business. Prior to the incorporation of the town he served upon several committees seeking to accomplish the desired change; was a member of the committee of five on the part of Hudson to make a final separation from Bolton. He was the first Representative sent to the House from Hudson in 1867, and during that year had the most important matter to handle that has ever been before the Legislature in which Hudson interests were solely concerned. In 1870 he was elected town treasurer, and served continuously in that position until the election in 1890, when he declined longer to hold the office. When he entered upon the duties of this office he found that the business had not been done in a systematic manner and used his best endeavors to have the town's finances put in proper shape. It had been the custom up to that time to borrow money in a hap-hazard manner of any one who had a hundred or a thousand dollars to lend and wished a safe investment at a high rate of interest. Mr. Bradley funded the debt then existing by means of longer time notes at a much less rate of interest. The town incurred large obligations in the purchase of Massachusetts Central Railroad stock, in building a town-house, new roads and school-houses, and it is a most fortunate thing that she had so skilled a financier in charge of this office for so many years. In 1877 he was elected a member of the Board of Selectmen, but declined a re-election the following year. He has always been connected with the banking institutions of the place, having declined an election as president of the National Bank, although a member of its directorate. He has been for many years a vice-president and one of the board of investment of Hudson Savings Bank, and in other organizations at home and abroad he has occupied prominent places. He has always been a believer in the Unitarian faith and a steady supporter of its church. He has long enjoyed a reputation for business ability

Samuel Patton

Geo. Haughton

and strict integrity. He is a lover of standard books and has not lost his liking for travel. The surviving members of his family are his wife and one daughter, the wife of Fred S. Dawes, of Hudson.

DANIEL WILBUR STRATTON.

Daniel Wilbur Stratton, born April 24, 1848, is the eldest son of Daniel and Tryphena Rice (Holman) Stratton. He is of the fourth generation bearing the name Daniel. His great-grandfather was born at Weston, May 20, 1749. His grandfather was born April 22, 1777, and married Cally Smith, of Needham (born December 20, 1778), April 22, 1800. Cally Smith was the daughter of Captain Aaron Smith, who commanded a military company in the War of the Revolution. With his company he participated in the repulse of the British forces which advanced to Concord, April 19, 1775, and as a result of that day's engagement his command suffered a loss of five men killed and two others wounded. Daniel Stratton, the father of the subject of this sketch, was born September 7, 1817, in the north part of the town of Marlborough (now Hudson). When about four years of age the family moved to the farm just across the line in Bolton, upon territory which became a part of Hudson by the annexation of 1868. Daniel Stratton grew to manhood and afterwards became the owner of his father's estate together with much additional property which he acquired by purchase. In 1865, when the movement was made to incorporate a new town from territory of the towns of Marlborough, Stow, Bolton and Berlin, Daniel Stratton was the leading petitioner from the Bolton territory, and was selected as the representative from that part of Bolton to serve on the standing committee of five to prosecute the movement for an incorporation. He entered on this enterprise with the zeal and determination which he exhibited in all the affairs which engaged his support. The undertaking was consummated, and the "Stratton Homestead" was included within the new town of Hudson. When twenty-two years of age Daniel married, December 31, 1839, Tryphena Rice Holman, of Sterling, and this union continued fifty years and one day. A "Golden Wedding" was celebrated by this couple and their numerous friends December 31, 1889, and on the day following, soon after his retirement for the night, without hardly a premonition, the messenger of death summoned the head of this happy and prosperous household to that better land which is "fairer than day." Although a farmer his life long, he was every whit a man. Intelligent, progressive, fearless for the right, independent in his opinions, the cause of religion, temperance, education, good citizenship had no stancher champion or firmer ally than Daniel Stratton. He held various town offices.

From such ancestry descends a worthy son. Daniel W. was reared on the farm under wholesome influ-

ences and amid surroundings the best fitted to develop the latent aspirations of boyhood and youth. From the common school he was sent to the high school of the town, afterward to Wilbraham Academy. Supplementing this for special training, a course in the Massachusetts Institute of Technology was taken.

In early manhood he was thus prepared to enter upon his calling of a civil engineer, in which he soon became skilled and efficient. As opportunity offered in the growing town of his birth, and his abilities became recognized, he was early summoned by his townsmen to official trusts. Widening and enlarging the scope of his private enterprises, by engaging in the insurance business, conveyancing and the settlement of estates, he was elected town clerk in 1878, which office he has since held; in 1887 he was elected to the Board of Water Commissioners and afterward registrar and superintendent of the Hudson Water Works; in 1881 he was made treasurer of Hudson Savings Bank, and one of its trustees, which trusts he still holds. He is in the prime of life, with golden opportunities ahead.

June 9, 1880, he married Annie Scott Webster, daughter of Richard Webster, of Haverhill. The children of this marriage are Mary Edith Stratton, Walter Daniel Stratton and Helen Inez Stratton.

GEORGE HOUGHTON.

The subject of this sketch assumed and had legalized in 1844 this name in lieu of Earl H. Southwick. He was the oldest child of Elisha and Lydia (Houghton) Southwick, there being a brother and a sister younger.

Elisha Southwick was a descendant, in the sixth generation, from Lawrence Southwick, whose name appears on the records of Salem as early as 1639. Lawrence and his wife, Cassandra, were Quakers, and suffered much from the persecution of people claiming the name Christian. James Savage's "Genealogical Dictionary of First Settlers of New England" contains the following: "1658 and 1659. In the dark days of delusion against the Quakers, the whole family of Lawrence and Cassandra Southwick suffer much from fines and imprisonment. When the fines of Daniel and Provided were unpaid, the tender-hearted General Court, with intent to magnify the glory of God, ordered them to be sold for slaves to any Christian in Virginia or Barbadoes." This infamous act was attempted, but to the glory of God, and the credit of Massachusetts, no one was found vile enough to bid at the sale and the maiden, Provided Southwick, was released by the sheriff.

Elisha Southwick was a Quaker, and was trained and educated as a teacher and preacher to the faithful. Although nearly a century and a half had elapsed since the perpetration of the outrage on his ancestor above referred to, yet the first quarter of the nineteenth century even, found this sect of believers

in Massachusetts subject to many restrictions and social ostracism. So much was this the case that a movement was undertaken to settle a Quaker colony in the valley of the St. Lawrence. A tract of land comprising about 15,000 acres was secured, and the settlement was commenced. The church and the school must be planted with the felling of the forest. The missionary, pioneer and prophet selected for this important and arduous duty was Elisha Southwick. In the strength of opening manhood he accepted the mission and went to the field of duty. The undertaking prospered, and in the course of a few years the young teacher yearned for a help-meet. He returned to Bolton and found Lydia Houghton, a young woman of character and resolution, willing to join her fortune with his, and in due time they were married. The wedded couple departed for the new home beyond the limit of State, and under the protection of the British flag. Earl H. was born on Canadian soil, July 23, 1822. The trials and hardships of parents were great, and after a few years the fact appeared that the mind of the father was becoming unsettled, and verging on insanity. Friends interested themselves, and the family, consisting then of father, mother and three children, returned to the town of Bolton. The father was placed in an asylum where he died August 13, 1830, at the age of thirty-five. Earl H. was then eight years old; his mother a widow with two younger children, in a state of penury. Poverty, however, is not the greatest misfortune. Lydia, the mother, was a woman of spirit and courage. She was a woman of action likewise. Earl H. was provided with a home where, for the time being, he could earn a living. In due time he was apprenticed to learn the trade of making shoes. The mother cared for the others as best she could. Soon Earl H. lent a helping hand to mother and brother and sister. Thus the children grew to manhood and womanhood, and the mother remained true to her charge. All have now passed to the "silent majority," save the subject of this sketch, who survives.

Earl H. inherited a good constitution and mental faculties of no ordinary kind. In stature he is moulded a Southwick; in mental and humane traits he takes largely the mother's endowments. When a youth he was advised to take his mother's surname. He was told that it would be advantageous. That Quakerism was odious. That his father had lived and died in error. This by Christians. Had he then known the history of his race, and the mark they have left impressed on the ages, this advice would probably have never been heeded. In 1881 the Southwick genealogy was published, and therein is disclosed the sufferings, persecutions and indignities endured by his Quaker ancestry; how they remained steadfast for truth and conscience sake and finally triumphed. Ere this revelation came, however, Earl H., now only known as George Houghton, had vindicated the record and had added another illustrious

example to the list already extended. From humble beginnings, by industry and perseverance, from making shoes in a part of his dwelling-house with a team of four men, he occupied a new shop, sixty by twenty-five feet, four stories in height, equipped with modern machinery; in a few years this shop is increased to 112 feet in length; a few years later, by still vaster strides, he becomes the owner and possessor of the largest manufactory in the town of Hudson, with a capacity of anywhere from 2000 to 6000 pairs of shoes per day, as the demands of the trade required. Not content with this, he finally owned and equipped the finest tannery and currying establishment in the State. Willing and determined to help on the growing industries of the town, he virtually engineered the erection of a piano-forte manufactory, into which he put \$16,000 of his capital.

A man of indomitable will-power, obstacles to men of less zeal and determination were brushed aside or made to serve his purpose, and hence he came to be regarded a leader, as most emphatically he was, in the manufactures in which he engaged. From this fact, when the Japanese Embassy visited America to inspect our industries, it was to his establishments that Boston merchants took their guests to see the wonderful improvements in the manufacture of leather and shoes. To show the characteristics of the man a single example must suffice. At the centennial industrial display, in Boston, in 1875, his exhibit astonished the world. It was deemed impossible by the best artisans to establish a manufactory with steam power and fixed machinery, on wheels. The difficulties were virtually decided to be insuperable. To most men it would have been impossible. Mr. Houghton grappled with the problem and made it a perfect success. In fact, he put into that procession a shoe factory on wheels with all the necessary paraphernalia, drawn by eight powerful horses, and made shoes entire from the beginning to the close of the procession, and never a belt left its pulley nor a mishap occurred. To do this required great mechanical skill. What deterred others but stimulated him. What others said could not be done he asserted could be done, and he made good the assertion. His has been a master-spirit, and to his matchless energy the town is largely indebted for her present beauty, thrift and enterprise.

Mr. Houghton has been twice married. Both wives were, in the fullest sense, help-meets to him, and shared his struggles and successes. He has been a widower since 1876. Of the eight children born of these unions, two sons survive. Mr. Houghton has met with reverses, and has retired from the field as a manufacturer. His friends, and his town's-people are altogether such, rejoice that the closing years of his life may be free from the great burdens which for many years he bore, and that there is yet in hand and in store enough of this world's goods, so that the remaining years shall be free from the anxieties and hardships which beset his youth.

L. J. Speltz

HON. LUMAN T. JEFTS.

Hon. Luman T. Jeffs, of Hudson, was born of humble parentage in Washington, N. H., in 1830. His opportunities for cultivating the mind were very limited. When seventeen years of age he attended school away from home one term; then, feeling the need of a more thorough course of education, he obtained permission from his father to gratify his cherished wish, providing he did it at his own expense. He spent most of the next six years in working every spare day out of school, attending school as much as his limited means would allow and then teaching and attending an academy. Afterwards he became a clerk in a store at the munificent salary of \$300 per year. After finishing his contract there he went into the grocery business. We find him, in 1859, at the age of twenty-nine, with the little money he had saved by practicing economy, entering into partnership with A. K. Graves for the manufacture of shoes in the village of Feltonville (now Hudson). After two successful years in a small way, the partnership was dissolved, and he alone continued the business, which has steadily increased, until he is now one of the most successful business men in this town.

While pursuing his honorable business career, Mr. Jeffs has found time for culture of mind and heart, having traveled extensively in his own country and twice visited Europe, and lately Mexico. He has shown his public spirit by building and presenting to his native town of Washington, N. H., an elegant public library building. He has also given to the Methodist Episcopal Church in Hudson an elegant parsonage. He has taken a deep interest in the Chautauqua Assembly. He is treasurer and trustee of the New England Conservatory of Music, and was last winter unanimously elected trustee of Boston University. He was the first president of the Hudson Co-operative Bank, and has been president of the Hudson National Bank since its establishment. He has for many years been one of the trustees of the Hudson Savings Bank, and is now vice-president and one of the committee of investment of the same.

He is a Knight Templar in Trinity Commandery, Hudson, belongs to Hudson Grange and is a member of the Rawson Council, No. 936 Royal Arcanum.

In 1882 he was nominated by the Republicans and handsomely elected Representative from the Thirty-third Middlesex District, and served on the Committee on Banking. In 1885, and again in 1886, was he unanimously nominated by acclamation as a candidate for Senator for the Fifth Middlesex District, a thing unprecedented in the political history of the district. Each year he was elected by a large majority, and served in the Senate both years on the Committees on Manufactures, the Liquor Law and Public Charitable institutions. In the Senate of 1887, he served as chairman of these several committees. At a dinner given by Senator Jeffs, near the close of the session, President Boardman said: "Recognizing his ability in last

year's Senate, I appointed him chairman of three important committees, and the work accomplished by him in these committees convinces me that I made no mistake." He is now serving his second year as a member of the Republican State Committee. Starting out as a poor boy, we find him filling every position, whether in private station or public life, with honor and credit to himself, while gaining the respect and confidence of all who have been associated with him.

He is interested in every measure that tends to advance the best interests of Hudson, while he also finds time to aid outside enterprises.

CHAPTER XXIV.

TEWKSBURY.

BY REV. E. W. PRIDE.

THE town of Tewksbury is bounded on the north by the Merrimac River and Andover, on the east by Andover and Wilmington, on the south by Wilmington and Billerica, on the west by Billerica and Lowell. Its extent is, by the census of 1890,—13,301 acres with a population of 1713, and 1000 inmates of the State Almshouse, that being the average number of inmates of that institution. The valuation of the town is \$1,365,495.

For a small town Tewksbury possesses considerable river frontage. The Merrimac flows for some three miles along its northern boundary and separates it from Dracut, which town alone divides it from New Hampshire. The Concord winds along its southwestern part for miles, and formerly was its boundary on the west till the union of that river with the Merrimac. The "Shawshine," a deep, swift, but narrow stream, runs through the southeast part of the town for its entire length. Numerous brooks pour into these streams; prominent among them is Mills' Brook, which runs into the Merrimac, Strong Water Brook, and Heath Brook, which empty into the Shawshine. There are three ponds of considerable extent—Long, Round and Mud Ponds.

Two hills—Prospect and Strong Water—rise to a considerable height, and afford fine views of the surrounding country from their summits. These hills with their wooded slopes form beautiful features in the landscape.

The north part of the town called North Tewksbury, has land of a superior quality, and from various points the prospects are remarkably beautiful of Lowell, the neighboring towns and also of the distant hills of New Hampshire. It possesses a small village, a church, and formerly had a post-office which the proximity of Lowell rendered superfluous.

The other parts of the town are more or less at a

disadvantage because of the large extent of light and sandy soils, which, however, often allow the cultivator to produce earlier crops than can be done where the land is heavier. Towards the Billerica line on the south the sand is so extensive as to form a miniature desert, whose drifts in spots encroach on the neighboring grass and shrubs.

The chief village of Tewksbury is at the Centre. There are the Congregational Church—till 1843 the only one in town,—the post-office, the store and the station of the Boston & Lowell Railroad. With its common and trees, its well-kept walks and trim-looking houses, it is a pleasant village of the old New England type, from which the goodly ancient stock has not yet all departed. Much of this beauty in the village is due to the laudable efforts of the Village Improvement Association for the last three years.

Toward the west part of Tewksbury appear two manufacturing establishments, which intimate the proximity of the neighboring city. These are the chemical works of Taylor Barker, and the Ather-ton Machine-Shop, which turns out a large quantity of cotton machinery.

On the edge of Lowell are many suburban residences, whose owners do business in the city. Near the Lowell Cemetery and Concord River many of the factory population live, whose work is in the adjoining great manufacturing centre.

In past years Tewksbury was quite a seat for the manufacture of furniture. Mr. Alvin Marshall was engaged in this business at the Centre for years, employing quite a number of men. Gregory & Barrell also for some time manufactured pine tables and similar articles. Lowell gradually absorbed these firms. By far the largest business of this kind was that begun in Tewksbury Centre, in the spring of 1851, by Joel Foster, Enoch Foster and N. P. Cole, under the style of J. & E. Foster & Company, only one, Joel, being of the age of twenty-one years. The beginning was small, the power used was horse-power, and in hired buildings. Soon were built shops and a steam mill, and from five to fifty men were employed. Early in the business a great demand sprang up for furniture in California, and freights were high, and as the trade was large, the plan was devised of making the furniture to be knocked down, thereby putting four bureaus into the space of one, and boxing up tight, which gave this firm the advantage of all other manufacturers, and orders were received which would take from two to three months to fill, giving all that could be done. In the mean time a fine trade was being worked up in all the Southern States, Cape Town, South Africa, Cuba, etc.

The breaking out of the Civil War caused a heavy loss, as the blockade soon prevented shipping goods South.

In 1862 Mr. Cole went to San Francisco and opened a wholesale store for all kinds of furniture. He was followed in 1865 by Mr. Joel Foster, and a new store,

wholesale and retail, was opened, adding all kinds of upholstered goods and draperies, etc.

In 1868 the business in Tewksbury was sold, and in 1870, Mr. Enoch Foster, the last member of the firm to leave town, followed the others to California, where they manufactured all kinds of furniture in the State Prison at San Quentin. Here, in the best years, the sale of goods exceeded \$100,000 per month.

For the facts in this brief sketch of the firm, the writer is indebted to Hon. Enoch Foster, a name frequently appearing in almost every office in the gift of the town.

A large tanning business also was formerly carried on by the late Mr. George Lee, which has been continued by his son, Mr. William H. Lee, whose name frequently appears on the official lists of the town.

Besides these larger manufacturing establishments, a number of smaller ones have sprung up near the edge of Lowell. There are also two saw and grist-mills, known as Trull's and Kendall's, which, before the extensive use of steam as a motor, ground large quantities of grain and cut multitudes of logs into lumber.

The occupation of the mass of the population of Tewksbury, especially of its older families, is agricultural. As the town is within easy distance of Lawrence and Lowell, and quite accessible to Boston by rail, its business is market gardening. Cabbages are the main crop, but every variety of vegetable and fruit adapted to a northern clime is raised and yields an abundant return. Large portions of land are also used for grass farms, and the production of milk is carried on extensively.

For its moderate area the town has an extensive road surface. The highways are estimated as extending sixty-five miles, and are kept in good repair by teams owned by the town under charge of a superintendent.

The following is a brief description of its botanical and geological distinctions, furnished by Mr. G. Homer Galger, late principal of the High School:

"The town offers many attractions to the lovers of natural science, being locally famous for the abundance and variety of its wild flowers. Scotch heather, *Calluna vulgaris*, is found in small quantities growing wild.

"Two varieties of Sundew, *Drosera rotundifolia* and *Drosera longifolia*, are found growing in abundance. Among the Orchidaceae, besides the *Spiranthes*, the *Cypripedium*, the *Pogonia*, the *Arethusa*, the *Habenaria* and others, many of the less common genera are found.

"In the western part of the town many notable elms and pines, said to be among the largest in the State, may be seen.

"Prospect Hill is one of many similar eminences scattered throughout northeastern Massachusetts, all of glacial origin. Such hills, in geological language, are known as 'drumlins,' and are supposed to have been formed by sub-glacial streams in a way similar to that by which (on a smaller scale) a stream of water often makes longitudinal ridges of sand in its bed. A somewhat remarkable 'sand desert,' of a dozen acres or more in extent, is found on the Billerica Road. A part of this 'desert' is sparsely covered by a growth of pines, but along its western edge runs a kame-like ridge of sand almost entirely destitute of vegetation. This sand kame is about 1500 feet long by one-third as wide, and is about fifty feet in height at its highest point. It has gently-sloping, rounded sides, the trend being southeast, thus resembling the gravel-kames of glacial origin. It is said that many flint arrow-heads

have been found here. A number of large boulders of porphyritic gneiss running through the town are fragments torn from the cliffs near Lake Winnepesaukee, by the ice, carried south and left in their present positions. Very fine examples of contorted gneiss are found in abundance; in fact, the town and its vicinity offer quite as many attractions to the geologist as to the botanist."

The wood lots of Tewksbury are quite extensive. In former days much of the timber was heavy, and a few specimens—alas! too few—of the fathers of the forest still remain.

The town is noted for its various and beautiful flora, and on account of this is often visited by eminent botanists. It is one of the few places on the American continent where the Scotch heath is found. This plant is becoming rare, chiefly, as authorities declare, by its extinction through the encroachments of other vegetation. It would be well to make an attempt to save it from total disappearance.

Tewksbury has two churches, eight school-houses, in which are kept ten schools, one of which is a High School, a public library, the State Almshouse and the usual public buildings requisite to such a community. Of most of these institutions brief descriptions follow.

The Salem and Lowell Railroad, a branch of the old Boston and Lowell Road, runs through the southern and central part of the town, and the Boston and Maine has a branch about a mile farther north, thus bringing the stations within six miles of Lowell, and about twenty-two of Boston. The city of Lawrence is also quite accessible by these railroads and by carriage roads.

Tewksbury is known to the world chiefly by its State Almshouse, one of three such institutions established by an Act of the Legislature, May 20, 1852. The other two are at Bridgewater and Monson. All were opened for the reception of inmates by a proclamation issued by Governor Emory Washburn May 1, 1854. Within three weeks nearly 800 inmates had been admitted to the Tewksbury Almshouse alone.

The first superintendent was Capt. Isaac H. Meserve, the first physician Dr. Jonathan Brown, the first chaplain Rev. Jacob Coggin. For many years a school for the children was part of the institution, whose influence was helpful and whose singing was a marked and attractive feature. Its numbers ranged from 86 to 153.

The plan of supporting State Almshouses originated in this Commonwealth; hence the three in Massachusetts were largely experiments constructed to accommodate far less numbers than soon crowded them. In the year 1857, a season of great suffering for the poor, more than 1200 were daily lodged and fed at this institution.

The farm, consisting of 250 acres, was originally so poor as to be a by-word in the Commonwealth, but now, through judicious and faithful cultivation, has been brought to a condition highly productive. This is evident from a few of the products as given in the last annual report of the superintendent, Oct., 1889:

English hay, 137 tons; rye straw, 35 tons; ensilage, 425 tons; rye, 200 bushels; potatoes, 900 bushels; cabbage, 2000 heads; milk, 39,544 gallons; eggs, 1860 dozens. There were slaughtered from the stock of the farm 14,111 pounds of pork, 341 pounds of poultry and 8797 pounds of beef.

The whole institution shows a correspondent and constant improvement. Where a sandy prospect without a shade tree was found, now are shady walks, green plots of lawn sprinkled with bright and varied flowers, the whole surrounded with buildings no longer a disgrace, but a credit to the State.

With the exterior the interior improvements have kept gradual pace.

Captain Meserve was removed in June, 1858, and was succeeded by Captain Thomas J. Marsh.

In 1866 the school was removed to Monson.

The number of inmates from the opening of the Almshouse, May 1, 1854, till May 1, 1889, was 84,599.

During the war nearly a company of men enlisted from this institution, and many others went as substitutes. Dr. Brown went as a volunteer surgeon and rendered important service in the hospital at Yorktown. Other surgeons for the army went or originally came from Tewksbury service. Even the children of the school scraped lint for the use of the wounded.

In 1871 the Almshouse at Monson has changed into a "State Primary School," and that at Bridgewater to the "State Work-house," and the Tewksbury one into an almshouse proper, for the accommodation of the more helpless poor.

In 1866 the office of resident chaplain was abolished, and since that time the religious services have been conducted by clergymen in the vicinity of different denominations.

Captain Marsh closed his connection with the institution July, 1883, and was succeeded in the following August by C. Irving Fisher, M.D., the present superintendent. The institution had gradually passed from a shelter for the poor into a vast hospital. Hence the election of a physician for superintendent.

Chester Irving Fisher, M.D., the present superintendent of the State Almshouse, was born in Canton, Massachusetts, April 25, 1847, and was the third son of Cyrus and Caroline (Guild) Fisher. He was educated in the common schools of his native town, and then prepared for teaching in the State Normal School at Bridgewater. After leaving Bridgewater he taught in Provincetown, where, in 1867, he began the study of medicine with Dr. J. Baxter, and in June, 1870, was graduated from the Harvard Medical School. In April, 1871, he entered the Quarantine Department of Boston as assistant port physician, and became port physician, February, 1873. In September, 1875, having resigned his position, Dr. Fisher entered private practice in Holbrook, Massachusetts, where he continued until he assumed the duties of superintendent and resident physician at the Almshouse, August 1, 1883.

Since his connection with the institution the most important improvements are doubtless the two new hospitals erected from his plans and under his immediate oversight—one for women, at a cost of \$69,000, having 110 beds; and one for men costing \$35,000, with 50 beds. The old hospital for men has been thoroughly renovated and re-arranged under his direction, so that the entire hospital accommodations are now ready for 275 patients, thus divided—for men, 140 beds; for women, 110 beds; maternity, 25 beds. Of these hospitals, their lighting, ventilation, conveniences, &c., competent medical authority has officially pronounced that they are the "best appointed, best equipped and best administered of any hospital for the indigent sick in the world."

This Almshouse was the first State institution to adopt electric lighting, which was introduced under the present superintendent in 1887.

The aim and marked characteristic of Dr. Fisher's administration have been to incorporate into the working of the institution the practical and tried appliances and methods of modern science in all its available and multiplied branches.

Dr. Fisher is an enthusiast in the great charitable work to which his life is consecrated. He is one of the devoted members of the National Association of Charities, and has published the following pamphlets: "The Other Infectious Disease; or, A Plea for a New Hospital;" "The Prevention of Insanity by the Timely Control of the Dissolute;" and "The Necessity for Social and Statute Recognition of Syphilis." He has also, as opportunity came, in carefully prepared addresses, presented these and kindred topics to churches, to clubs, medical and ecclesiastical, and to any body which might aid in arousing the intelligent part of the community to these subjects, so germane to the prosperity and health—physical, mental and moral—of the Commonwealth.

The Tewksbury Almshouse is and has ever been a model of cleanliness, where the poor have received wholesome food in abundance, gentle treatment and the best medical skill the State could furnish. It is and has been open for the inspection of the public, subject to the conditions requisite to the conduct of all public institutions.

HISTORY.—Previous to its incorporation Tewksbury belonged to what in early times was the large town of Billerica or "Shawshin." Its history, therefore, before 1734 is included in that town once so extensive. Little can be gathered from those days concerning our northern part of the great township, but a few items are worthy of preservation.

At the junction of the Concord and Merrimack Rivers was the former Indian town of Wamesit, once the northwestern part of Tewksbury, but now in Lowell, a great resort of the Wamesits—part of the large tribe of the Pawtuckets—one of the five great nations which in the days of the first settlers dwelt between the Penobscot and Hudson Rivers. Some five hun-

dred acres of the Wamesit purchase was included in what became Tewksbury, and appears to have been the site of the Indian praying town of which an eyewitness, Mr. Daniel Gookin in his *Historical Collections of the Indians in New England*, in 1674, two hundred and sixteen years ago, has preserved a description worth quoting:

"Wamesit is the fifth praying town; and this place is situate upon the Merrimack River, being a neck of land, where Concord River falleth into Merrimack River. It is about twenty miles from Boston, north northwest, and within five miles of Billerica and as much from Chelmsford; so that it hath Concord River upon the west northwest, and Merrimack River upon the north northeast. It hath about fifteen families; and consequently, as we compute, about seventy-five souls. The quantity of land belonging to it is about twenty-five hundred acres. The land is fertile, and yieldeth plenty of corn. It is excellently accommodated with a fishing place, and there is taken variety of fish in their seasons, as salmon, shads, lamprey eels, sturgeon, bass and divers others. There is a great confluence of Indians, that usually resort to this place in the fishing seasons. Of these strange Indians, divers are vicious and wicked men and women; which Satan makes use of to obstruct the prosperity of religion here. The ruler of this people is called Nunmough. He is one of the blood of their chief sachems. Their teacher is called Samuel, son to the ruler, a young man of good parts, and can speak, read and write English and Indian competently. He is one of those that was bred up at school, at the charge of the Corporation for the Indians. These Indians, if they were diligent and industrious,—to which they have been frequently excited,—might get much by their fish, especially fresh salmon, which are of esteem and good price at Boston in the season; and the Indians being stored with horses of a low price, might furnish the market fully, being at so small a distance. And divers other sorts of fish they might salt or pickle, as sturgeon and bass; which would be much to their profit. But notwithstanding divers arguments used to persuade them, and some orders made to encourage them; yet their idleness and improvidence doth hitherto prevail.

"At this place, once a year, at the beginning of May, the English magistrate keeps his court, accompanied with Mr. Eliot, the minister, who, at this time, takes his opportunity to preach, not only to the inhabitants, but to as many of the strange Indians that can be persuaded to hear him; of which sort, usually in times of peace, there are considerable numbers at that season. And this place being an ancient and capital seat of the Indians, they come to fish; and this good man takes this opportunity to spread the net of the gospel to fish for their souls. Here it may not be impertinent to give you the relation following.

"May 5th, 1674, according to our usual custom, Mr. Eliot and myself took our journey to Wamesit or Pawtuckett; and arriving there that evening, Mr. Eliot preached to as many of them as could be got together out of Matt. xxii. 1-14, the parable of the marriage of the king's son. We met at the wigwam of one called Wannalancet, about two miles from the town, near Pawtuckett Falls, and bordering upon Merrimack River. This person, Wannalancet, is the oldest son of old Passaconaway, the chiefest sachem of Pawtuckett. He is a sober and grave person, and of years between fifty and sixty. He hath been always loving and friendly to the English. Many endeavors have been used several years to gain this sachem to embrace the Christian religion; but he hath stood off from time to time and not yielded up himself personally, though for four years past he hath been willing to hear the word of God preached, and to keep the Sabbath.—A great reason that hath kept him off, I conceive, hath been the indisposition and averseness of sundry of his chief men and relations to pray to God; which he foresaw would desert him, in case he turned Christian.—But at this time, May 6, 1674, it pleased God so to influence and overcome his heart, that it being proposed to him to give his answer concerning praying to God, after some deliberation and serious pause, he stood up and made a speech to this effect:

"Sirs, you have been pleased for four years past, in your abundant love, to apply yourselves particularly unto me and my people, to exhort, press and persuade us to pray to God. I am very thankful to you for your pains. I must acknowledge," said he, "I have, in all my days, used to pass in an old canoe [alluding to his frequent custom to pass in a canoe upon the river]; and now you exhort me to change and leave my old canoe and embark in a new canoe, to which I have hitherto been unwilling; but now I yield myself up to your advice, and enter into a new canoe, and do engage to pray to God hereafter."

"This his professed subjection was well pleasing to all that were present, of which there were some English persons of quality; as Mr. Richard Daniel, a gentleman that lived in Billerica, about six miles off; and Lieutenant Henchman, a neighbor at Chelmsford; besides brother Eliot and myself, with sundry others, English and Indians. Mr. Daniel, before named, desired brother Eliot to tell its sachem from him, that it may be, while he went in his old canoe, he passed in a quiet stream; but the end thereof was death and destruction to soul and body: But now he went into a new canoe, perhaps he would meet with storms and trials; but yet he should be encouraged to persevere, for the end of his voyage would be everlasting rest. Moreover, he and his people were exhorted by Brother Eliot and myself, to go on and sanctify the Sabbath, to hear the word, and use the means that God hath appointed, and encourage their hearts in the Lord their God. Since that time, I hear this sachem doth persevere, and is a constant and diligent hearer of God's word, and sanctifieth the Sabbath, though he doth travel to Wamesit meeting every Sabbath, which is about two miles; and though sundry of his people have deserted him since he subjected to the gospel, yet he continues and persists.

"In this town they observe the same civil and religious orders as in other towns, and have a constable and other officers.

"This people of Wamesit suffered more in the late war with the Mahawks than any other praying town of Indians; for divers of their people were slain; others, wounded; and some carried into captivity; which Providence hath much hindered the prosperous estate of this place."

With Billerica, the vicinity of Wamesit passed through all the horrors of the early Indian warfare. The conversion of the Wamesits, however, was a blessing to the whole region. They remained faithful friends of the whites, although often suspected and also unjustly treated by the latter. The cruelties perpetrated in Billerica and this part of that town were not by them. In his "Memoirs of the Indians and Pioneers of the Region of Lowell," Cowley states that some Indians of another tribe visited that part of Billerica now Tewksbury, and killed John Rogers and fourteen others. Colonel Joseph Lynde, of Charlestown, with three hundred armed men, ranged the swamps around here in pursuit of the marauders, but in vain. Lynde's Hill, which he fortified and garrisoned, preserves his name. Fort Hill was first used for defence by the Wamesits, and their friendliness at this time permitted, without any effort, its use by Lynde and others.

Several garrison-houses were located in this vicinity and also in the north and south parts of the town.

In various portions Indian relics have been found, some, as those collected by Mr. Follausbee, of Andover, of the Stone Age. On the farms of Mr. Jesse L. Trull, of the State Almshouse, and recently of Mr. Harnden, South Tewksbury, and especially near the sandy desert in the south of the town, numerous finds of hatchets, mortars for bruising corn, chisels, gouges, arrow and spear-heads have been made.

Indeed, the traces of the Wamesits, or Pennacooks, Agawams, Piscataquas, Naamkeeks—for their names were numerous—are rich in the town which sprung up so near, and included their former fishing station and praying village, at the junction of the Merrimac and Concord Rivers. The Merrimac means the Sturgeon River.

It is reported that after these troublous times were

over, the Wamesit chief visited the Rev. Mr. Fiske, of Chelmsford. To his inquiry whether Chelmsford had suffered much, the pastor replied "No," and devoutly thanked God. "Me next," said Wannalanacet. It was a fitting correction of the omission to recognize the faithful agents God had employed to save the whole adjoining country from even more fearful sufferings than it had endured.

The following anecdote, contributed by Miss Mary F. Eastman, for the past twenty years, with her family, a resident of Tewksbury, belongs to this period, when Tewksbury was the north part of Billerica: "A corporal, John French, who belonged to the north part, was wounded at a distance in Brookfield, and in consideration of his wounds, they abated his taxes, gave him a more prominent place in church and allowed his wife to occupy a seat in the front gallery with Mrs. Foster, and those women placed there."

As early as 1725 an effort was made by Jonathan Bowers, Samuel Hunt and others to incorporate the more northern part of Billerica into a town, to be known as Wamesit. It was intended to include in this new town the whole Wamesit Purchase, which contained 2500 acres, 500 of which lay on this side of the Concord River, but 2000 acres on the other side, in Chelmsford. This effort, which would fittingly have retained the old Indian name of Wamesit among the towns of the State, was unsuccessful.

Later the movement was renewed, because of the inconvenience to the inhabitants of this northern portion of Billerica in going so far to public worship as the old meeting-house. Few estimate the important part religion played in all public and social life in those early days. Hence when the people in this part of the ancient town found it a heavy burden to go so far by horseback, or oxen, or on foot—for vehicles were scarce indeed,—they desired to have a meeting-house of their own. Many went to church on horseback—the husband and wifesometimes with children also upon the same animal, frequently taking what the records call a "bridal" path. At times we hear of a woman carrying her babe five or six miles to attend divine service. Hence, on May 13, 1733, the northern section of Billerica asked the ancient town to "erect a meeting-house in the centre of the town, or so as to accommodate the northerly part of the town, upon the Town's cost, or set them off, so that they maintain preaching among themselves." Reluctantly and after some time Billerica granted the last part of this petition. They were set off with two-thirds of the land between the Billerica meeting-house and the Andover line, by a parallel line extending from the Concord River to the Wilmington line, "if the inhabitants on the south-easterly side of the Shawshine River be willing to join with them." "This final condition," says Mr. Hazen, in his interesting "History of Billerica," "called out a petition from Samuel Hunt and others to the General Court, praying for the grant of a town with these bounds, or a commit-

tee to examine and report." The latter was done, and as a result *Tewksbury* was incorporated December 23, 1734. From this and his earlier but unsuccessful effort it appears that if any one person has the honor of being the father of this town it is Samuel Hunt, a name prominent in all the early history.

It was formerly supposed that the new town was named from Tewksbury, England, because some of the early settlers of Billerica came from that place, historic because of its Abbey and famous battle-field. Of this there is no evidence. No family, either in Billerica or in Tewksbury, traces its origin to that transatlantic home. The following extract from a paper on the origin of the names of New England towns, read by Mr. W. H. Whitmore before the Massachusetts Historical Society, gives the only reason so far found for its name:

"Tewksbury, Dec. 23, 1734, Act. This is the name of a town in Gloucestershire, England, famous for its Abbey. It had been, however, one of the titles of George II., who was, in 1706, made Baron Tewksbury, Viscount Northallerton, Earl of Milford-Haven, Marquis and Duke of Cambridge. In 1714 he became Prince of Wales; and on his accession, in 1727, all his dignities merged in the crown. Still this use of the name is the most probable reason for its adoption here." About the period of the formation of the new town it was a fashion thus to honor members of the royal house—a loyalty entirely quenched by the experience of the Revolution less than fifty years after.

The new town received 9000 of the 25,000 acres which then belonged to Billerica, but the surveys must have been very loose, for after losing some 2000 acres to Lowell, Tewksbury has still over 13,000 acres. Among these acres were some 3000 which composed the well-known Mrs. Winthrop's farm, or "Winthrop's Farm," as it was popularly called, which was the grant made to her by the General Court, Dec. 10, 1641, which confirmed and defined a former one of 1640. To quote Mr. Hazen's extract from the State records: "Mrs. Marg^t Winthrop hath her 3000 acres of land, formerly granted her, to be assigned about the lower end of Concord River, near Merrimack, to be layde out by Mr. Flint and Mr. Leift. Willard, wth Mr. Oliver or some other skilful in measuring, so as it may not hinder a plantation, and any p^t thereof they may purchase of any Indians that have right to it." This grant was between the Merrimack and the Concord, on the east side of the latter river, and was subsequently laid out by Jonathan Danforth, "in a true circle," including a part of Lowell and the adjacent section of Tewksbury. There it took in the whole northwest part of Tewksbury, save the 500 acres of the Wamesit Purchase, came to the east of Trull's Brook at the north, and extended along the Concord River on the west. The other 2000 acres of the Wamesit Purchase had been acquired by Chelmsford. That whole purchase is now

in the city of Lowell, south of the Merrimack River.

From the old town the following families were taken into the new. The list, as given by Mr. Hazen, is imperfect, but, as he states, will have interest:

Brown, Joseph	Kittredge, James, Jr.
Brown, William	Kittredge, James, Ser.
Farmer, Richard	Kittredge, John, Dr.
Farmer, Thomas	Kittredge, John, Jr.
French, John	Kittredge, Joseph
French, Thomas	Kittredge, Thomas
Frost, Daniel	Kittredge, William
Frost, Edmund	Levestone, John
Frost, Joseph	Levestone, Seth
Hall, Richard	Manning, Eliphalet
Hall, Samuel	Manning, Thomas
Hazeltine, Samuel	Marshall, Thomas
Hazeltine, Stephen	Needham, John
Hunt, Jeremiah	Osgood, Stephen
Hunt, John	Patten, John
Hunt, Joseph	Patten, Kendall
Hunt, Peter	Patten, Nathaniel
Kidder, Ephraim	Shed, Nathan
Kittredge, Daniel	Stickney, Abraham
Kittredge, Daniel, Jr.	Trull, Samuel
Kittredge, Francis	Whiting, John
Kittredge, James	

Mr. Hazen says that "to these forty-seven names enough should probably be added to make the number sixty. They include all on our list of the names of Hall, Hazeltine, Hunt and Kittredge, a loss too serious not to be felt. The latter family had become so numerous in that part of the town exclusively, that it is not strange they have been credited with original settlement there. In fact, as noted elsewhere, their ancestor, John Kittredge, lived and died southeast of Bare Hill, in Billerica."

At this time the centre was not the most thickly settled part of Tewksbury, but the southeast, as the ancient and numerous gravestones of the old cemetery show.

The first town-meeting was held January 14, 1735, twenty-two days after incorporation. Lieutenant Daniel Kittredge, a name frequent and honored in all the ancient affairs of the town, was elected the first moderator. The following other officers were chosen: Selectmen, Lieut. Daniel Kittredge, James Hunt, Jr., Joseph Kittredge, John French, Nathan Patten; Town Clerk, Nathan Patten; Town Treasurer, Nathan Shed; William Kittredge, Surveyor of Flax and Hemp. This last officer lets us see one of the chief products of the region, next to the necessities of life. This, with the choice of constable, seems to have been the business of the first town-meeting.

At the next meeting, January 31st, the first vote was to choose a committee to determine the line between their own and the mother town. This business was prolonged for a considerable period on account of various reasons, chiefly the reluctance of Billerica to accept the various propositions. Hereafter the prominent subjects of town-meetings in those days occupy chief attention,—the church, the highways and the

schools,—except when the various wars remanded those affairs to a secondary place. The new town had not proceeded very far in bringing its corporate existence into shape before it was found requisite to determine its centre. Accordingly at a meeting held May 20, 1735, it was "voted that Mr. Enggals should be ye artis to find ye center of their town," also "that their committeemen and chain men should assist in finding ye center of ye town." These committeemen were those chosen to determine the line between the town and Billerica. They were Lt. Daniel Kittredge, Samuel Hunt and John French, to whom James Kittredge was subsequently added. The chainmen were John Whiting and Nathan Shed.

At the same meeting a vote was taken to levy a town rate of £30 charges to be made by the last assessment in Billerica. The first rate-list on the town records follows and is interesting as showing the first tax-payers of Tewksbury:

Minister. Town s. d. s. d.	Minister. Town s. d. s. d.
Richard Hall	Samuel Wench . . .
Joseph Bayley	Moses Worcester . .
Joseph Bayley, Jr. . .	Ross Wyman
David Bayley	Gideon Hardey . . .

Oliver Scales

Having chosen an "artis" and a committee to find the "centre" of the town, they started the large system of roads which is still a marked feature of this region, by electing, September 29, 1735, a "committee to see what highways are needed, and upon terms they may be had and where most feasible." Samuel Hunt, Jr., John French, Richard Hall, James Kittredge, Jr., Cornet John Whiting and William Kittredge were chosen for that committee.

The roads were laid out largely to get people to meeting as well as to serve business purposes. Having formed the town because church services in Billerica were inconveniently remote, almost the first thing to be done was to carry out plans for better accommodations in this respect. Then it was the part of a town to provide for the people all which pertained to the means of grace, meeting-house, minister and whatever was requisite to keep them in efficient working-order. Promptly then, and at great sacrifice, they provided for one of the chief features of every New England town—the church.

CHAPTER XXV.

TEWKSBURY—(Continued).

THE CHURCH.

At the second town-meeting, June 31, 1735, the third vote—and the third vote in town except for the election of officers—was to choose a committee, which consisted of Peter Hunt, James Kittredge, Jr., and William Brown, "to view Andover old meeting-house frame and report to ye town at ye adjournment of said meeting." Having performed this duty, they reported the frame "sound except 2 or 3 sticks." Nothing more is heard of the Andover frame; but in the fourth town-meeting, February 13, 1735, came the vote, Daniel Kittredge, (moderator) "that they build a new meeting-house." March 10th, John French, Samuel Hunt, Jr., James Kittredge, Jr., Abraham Stickney and Peter Hunt were chosen a committee for that purpose. At the same meeting they refused "to act upon ye first article in the warrant at this time," which was "to agree of what bigness their meeting-house should be," but "July 9th, voted that the bigness should be 48 feet long, 36 feet wide and 14 feet high between 'joyns.'" Such was the size of the first of the two buildings used by the Church of Christ of the old order in Tewksbury.

September 20, 1735, "voted that they would have preaching in ye town, and that they would meet at ye house of John French, Jr., upon ye Sabbath Days and worship God." This house was often devoted to

town-meeting also before the church building was available for that purpose. November 7th, Lieutenant Daniel Kittredge, Samuel Hunt, Jr., and John French were chosen a committee to provide a preacher, and it was voted the "stated time to begin ye Public Worship on ye Sabbath Days shall betwix a Clock in ye morning, that ye time of intermission between exercises should be one hour and a half, and that they would sing that way that is now called ye new." Then "Joseph Baily and Nathan Stickney were chosen to tune and read ye psalms."

Gradually they approached the time when a church with all necessary appointments for its existence and work should be found within their borders. Nov. 7, 1735, voted to choose Lieutenant Daniel Kittredge, Samuel Hunt, Jr., and John French a committee to provide a preacher.

After much deliberation on the site, after delay caused by the difficulties ever attending such an undertaking, especially in communities not too rich in worldly goods, they proceeded with the building of the meeting-house. The town-meeting of March 30, 1736, was an interesting one. It began at the house of William Kittredge at 12 o'clock noon. It adjourned to the centre of the town to see the land proposed as the site of the new meeting-house, and came back to Mr. Kittredge's and then adjourned to the evening, when it was "voted that their meeting-house shall stand upon the land of Nathaniel Richardson, near a small pine tree marked with R." They also chose as a committee, "to let out their meeting-house to be framed and finished," Samuel Hunt, Jr., James Kittredge, Jr., Nathan Shed, William Kittredge, Abraham Stickney and Stephen Osgood. Several of the votes which mark the progress of the work reveal the life and customs of those days which are no more. June 10, 1736, they voted "that they would raise their meeting-house by a teacle;" "that they would not provide for the raising of their meeting-house by a rate," and "that they would raise a town rate of £200 for the building of their meeting-house." The exact date of its completion cannot be given. Probably it was not entirely finished for some years after its occupation for public worship and town-meetings, for the records contain many intimations of the building of pews and the finishing of parts of it.

After it was completed sufficiently for use the question which next engaged the town was the seating of it. This was no trivial matter. There were many deliberations and many methods proposed. The questions of precedence and of payment enlisted the interest of the entire town. Sufficient and careful comparison of the town records might enable one to construct a plan of that ancient seating and mark the location of the family pews and thus the social position of the various households. Finally, in December, 1737, they decided "to seat their meeting-house and to have respect both to money and age in seating the meeting-house, to age all above sixty years;" "to

seat the meeting-house by one head, real and personal, going back to the first assessment that was made in Tewksbury;" "to leave the pews room joyning the pulpit, one on the right hand and one on the left—one for the minister and one for the town; to dispose of the room that remains left for pews to the highest payers, giving the highest payers the first choice, and if he refuse to make his choice, the next highest payer, and so on till the above-said pew-room be taken up; that such persons as shall make choice of the above-said pews are obliged to ceil the meeting-house sides against their pews up as high as the bottom of the lower windows." Later the town obliged the pew-owners to glaze the windows opposite their respective pews and keep such portion of the meeting-house in proper repair.

The pews were not built all at once, but for several years permissions were granted to persons as they sought for them to build one or more pews. It was later still before the galleries were even finished. Hesitation appears to carry out the plans of rating, etc., for we find that the committee having failed to do its duty, another was chosen with definite instructions "to see who the highest payer was from their first being a town;" and still in 1742 the following vote spurs up the dilatory: "That the selectmen build a pew for their minister forthwith."

It is time to hear of their first minister. Although the town called the meeting-house and minister theirs, yet within the church was an inner body—the church proper, united by no local, but by a spiritual relation. Exactly when the church in Tewksbury was formed is uncertain, but probably about the close of 1736, for November 23, 1737, we have the account of the first minister's ordination over it. Eleven months before the meeting-house was ready for occupancy the people of Tewksbury voted, January 17, 1736, "that Mr. Samson Spaulding, of Chelmsford, should be our Minister upon his accepting our Choice;" also, "to chose a Committee to treat with Mr. Samson Spaulding, whom we have chosen to be our Minister, and to make return." That committee was representative of the town, consisting of Lieutenant Daniel Kittredge, Sergeant John French and Mr. Samuel Hunt, Jr., February 7, 1736, they voted to give Mr. Samson Spaulding, whom they "made choice on for their Minister," "yearly for his salary £120 sterling, according to the valuation of grain now received among us—Indian Corn at 6s. per bush., and wheat at 10s. per bush., and Rie at 8s. per bush.," also "to give Mr. Samson Spaulding, whom the Town has made choice on for their Minister even for his settlement among them, £300, and to pay the same at three payments, namely—£100 a year till the whole sum be paid."

The choice of a minister then was a matter of interest to the whole town, which was connected with the church in the closest manner. This intimate connection may be seen by the custom of voting his salary first of all the business in town-meeting after

the election of officers, often before the election of the minor officers, and by a vote spread on the town records like the following "that a Committee of three be chosen to recommend Phenias R. Red and others into the religious society in said Town."

Hence, September 13, 1736, a fast was appointed by the town for the 20th day of November, "in order for calling a minister;" then it was voted that the selectmen appoint the fast and provide the ministers requisite to conduct it. Entertainment and expenses for these ministers were also provided. The ordination of a minister then was a great occasion. The affair was too rare and too important to be passed over lightly. October 6, 1737, voted "that Mr. Sampson Spaulding, of Chelmsford, whom ye town had made choice on for their minister, should be ordained on the 16th day of November next, salving if the thanksgiving put it not by, and if it did, then one week following, on Wednesday ye twenty-third of the same month," and also voted "to have three men for a committee to provide ministers and messengers for said ordination." The three were Lieutenant Daniel Kittredge, Mr. John French and Mr. Samuel Hunt, Jr. It was decided that the house of Mr. John French "be place of entertainment for ministers and messengers at said ordination," also that "the provision made for the ministers and the messengers at the ordination shall be provided by the discretion of the committee chosen for that purpose." How these few votes bring before us the life of the times, social and religious! How one would like to have seen and heard the worthies as they gathered and solemnly ordained and installed the first minister of the town! Of the ordination itself, and of the solemn covenant of the church, a record happily has been preserved by the hand of that first minister. From that time, November 23, 1737, till his long and only pastorate was closed by death, we have the guidance of Mr. Spaulding in the history of the church, written by himself. It begins with the solemn church covenant, a document interesting for many and general reasons. This covenant, as given below, is instructive in many respects, and shows the educational, as well as religious development of the New England towns one hundred and fifty years ago:

"We (whose names are under written) sensibly acknowledging our unworthiness of such a favour & unfitness for such a Business, yet apprehending ourselves to be Called of God to put ourselves into a way of Ch^h Communion and seek the Settlement of all the Gospel Institutions amongst us; do therefore in order thereunto, & for the better promoting thereof, as much as in us lies, knowing how prone we are to Backslide, abjuring all Confidence in ourselves, and relying on the Lord Jesus Christ, alone for help, so Covenant as follows—Imprimis. As to the Confession of faith put forth by the Last Synod of Churches, held in Boston, in New England, wee do heartily close with it, so far as we are or may be acquainted with it and find it agreeable to the holy Scriptures, and promise to stand by, maintain & if need be Contend for the faith therein delivered to the people of God, and if any among us go about to undermine it, we will bear Due Testimony against them.

"Wee—Also combine together to walk as a particular Ch^h of Christ according to all these holy rules of the Gospel, prescribed to such a Society, so far as God has revealed, or shall reveal his mind to us, in that respect.

"Wee—do accordingly recognize the Covenant of Grace, in which we professedly acknowledge ourselves devoted to the fear and service of the one true God, our Supreme Lord, and to the Lord Jesus Christ, the High Priest, prophet & King of his Ch^h unto whose Conduct we Submit ourselves, & upon whom alone we wait a hope of Grace & Glory, to whom we bind ourselves in an Everlasting Covenant never to be broken.

"Wee Likewise give up ourselves, one unto another in the Lord, resolving by his Help to cleave Each to other, as fellow-members of one Body, in Brotherly love, and holy watchfulness over each other for mutual Edification & to subject ourselves to all the holy administrations appointed by him who is head of the Church, dispensed according to the rules of the Gospel, & to give our constant attendance on all the public ordinances of Christian Institutions, walking orderly as becometh Saints.

"Wee—do likewise acknowledge our posterity to be included with us in the Gospel Covenant, & Blessing God for so rich a favour, do promise to bring them up in the nurture and Admonition of the Lord, with greatest Care, and to acknowledge them in their Covenant relation according to the Gospel Rules.

"Furthermore. Wee—promise to be Careful to the utmost to provide the Settlement & Continuance among us, of the Offices and Officers appointed by Christ, the chief Shepherd, for the Edification of the Church & accordingly to do our duty faithfully for their maintenance & encouragement, & to Carry towards them as becomes us.

"Finally, Wee do promise and acknowledge to preserve Communion with the faithful Churches of Christ, for the giving and receiving of mutual Counsel and assistance in all cases wherein it shall be needful.

Now the Good Lord be mercifull to us, and as he has put it into our hearts, thus to Devote ourselves to him, Let him pity and pardon our frailties and humble us for our Carnal Confidence and Keep it forever upon our hearts to be faithful to himself & one to another for his praise & our eternal Comfort, for Christ Jesus' Sake, to whom be glory for Ever. Amen.

Among the signers of this covenant were most of the fathers of the town. Mr. Spaulding then gives a record of his call and ordination. It is brief enough to copy entire: "Sampson Spaulding, of Chelmsford, was unanimously chosen by the people of Tewksbury the 17th day of January, anno: Dom: 1736-7, . . . and Ordained the 23 day of November, 1737,—the Rev^d Elders that assisted in his ordination were Mr. John Hancock, of Lexington, & his son, Ebenezer; Mr. Sampson Stoddard, of Chelmsford; Mr. Samuel Ruggles, of Billerica; Mr. Thomas Parker, of Dra-

cut; and Mr. Nicholas Bowes, of Bedford. Mr. Parker opened the solemnity by prayer. Mr. Ruggles preached the sermon from 2 Cor. xii. 14: *For I seek*

Mr. Hancock gave the charge, and Mr. Stoddard the hand of fellowship." After this record of his ordination follows this entry on the church book: "The Chh. met again the 29th Day of Jan'y, anno Dom. 1741-2, & made choice of Joseph Kittredge as a Deacon, to officiate in said Chh., and voted that one shilling should be added per member for a year, to what was first voted, viz: y^e every member pay be put year in order to provide for the L^ds Table, i.e., 1s. 6d. at a Contribution every half year, & y^e each one write his name upon the money given."

Shortly after his establishment among them, Mr. Spaulding married Miss Mehitabel Hunt, of the family so well known in the northwest part of the town.

This was started on his long and successful career the first pastor in Tewksbury. For sixty years, in peace and war, in prosperity and adversity, he was with the town in all its varied fortunes, when there was one flock and one shepherd. The ancient church-book is the chief memorial preserved of him—an invaluable precious record of the doings of the church, the baptisms he administered, the marriages he performed and the funerals at which he officiated during those three-score years.

The baptisms during Mr. Spaulding's ministry were 700, admissions to the church, 218—deaths, 903—as recorded by himself from the time of his settlement till shortly before his death. The last record is, "Old madam Bordman Dy^d Nov. 24, 1793, etat 80. Short sickness." It is interesting and pathetic to trace between the lines his own life in the baptisms and deaths of his children—as, "Our child, Mehitabel, aged 24 years and 6 days;" and "My daughter Mehitabel's Benjⁿ, Dyed April 28, 1779. Mortification." And we follow his work in the long record from the time when, in the vigor of youth, the handwriting was somewhat stiff, till afterward, growing more ductile with years, it becomes stiff again and unsteady with age. At last, in the letters, the dim eye and trembling nerves become evident, and finally the pen drops from the hand of the aged servant of God. Then, following his last record of a death, comes, in a different handwriting, most probably his widow's, this insertion: "The Rev. Sampson Spaulding Died Dec. ye 15th, 1796," just a month and two days short of sixty years from the time he was "the choice of the

"Tradition says of Mr. Spaulding that when in advanced years, he was dressed in a venerable form and commanding stature, wearing a white wig and decorated in black and gold. And that with a weak and tremulous voice he spoke unto his people the words of eternal truth."—Quoted from "Tewksbury," by Mr. L. Huntress and Mr. J. C. Kittredge in Drake's "Middlesex County."

By 1792 Mr. Spaulding had evidently become so incapacitated that the pulpit must be supplied, for in a town-meeting January of that year, it was voted to "hire preaching," a phrase often appearing on the records, and to raise £30 to pay for preaching that year. A committee of seven was chosen to treat with Mr. Spaulding, whose conference with him had a highly satisfactory result.

This was embodied April 2, 1792, in the following vote: "to give the Rev^d. Sampson Spaulding during his natural life yearly as shall be in proportion to thirty pounds in case he will resign up so much of his charge as will not be a hindrance to the town settling another gentleman in the ministry if the town shall think proper." A committee was chosen to wait upon Mr. Spaulding and reported "that the Rev. Mr. Spaulding acknowledged himself fully satisfied and contented with the vote of the town."

A month or so later the church appointed a fast to look to God for direction in choosing his colleague, and at the March meeting the town voted to concur with the church. More formal action was taken the May following in the decision to have a day of fasting and prayer in concurrence with the vote of the church and also in respect to the reverend gentlemen to be sent for to attend the fast. It was also voted that the day be the 17th of this instant and that "the selectmen should see that there be entertainment for the Reverend gentlemen that shall come to attend the fast."

A committee was also appointed to estimate what the minister's settlement and salary should be that shall be settled in this town. June 5th the town concurred with the church in giving Mr. Titus Theodore Barton a call for their minister, and offered him £150 for his settlement, to be paid one-half nine months after his ordination, the remainder in fifteen months, and a salary of £90 and twenty cords of wood at his door, yearly "so long as he shall be our minister."

Mr. Barton having accepted the call, preparations extensive and imposing compared with these days were made to ordain him. Large committees were appointed to provide "place and entertainment for the council that shall come," "to prop up the galleries in the meeting-house and make it secure against the day of ordination," and "find materials and make a 'scarfill' out before the meeting-house for the ministers to be on to ordain Mr. Barton, if it should be done out of doors" "to provide for the Council and see that there be good order kept on the Day of ordination or appoint some persons to see it Done," and also "to provide for other ministers, candidates and scollars that shall come to the ordination."

Less than a year later Mr. Barton received the thanks of the town for giving up £10 yearly of his salary and ten cords of wood. Probably in voting £90 instead of £80, as first granted, there was a little strain upon the town's ability.

The next matter on the records which pertains to

the church is in 1798, when at the May meeting the town decided "to introduce the Bass Viol into the meeting-house on the Sabbath Day and other days of Public Worship." The same year witnessed the building and sale by auction of four new pews. These were sold to David Rogers, William Brown, Jr., Nathaniel Hardy and John Spaulding, for \$81, \$79.50, \$59 and \$52 75, respectively.

Mr. Barton ended his labors with the church May 19, 1803, and on the 30th instant the town voted again to hire preaching. September 5, 1804, they are found voting "to appoint a day of fasting and prayer to look up to God for his direction in the choice of a minister to settle with them." They had a "Town's Committee" and a church's committee to make the necessary arrangements. It was not, however, till 1806 that their choice was directed, when, in the March meeting, it fell upon Mr. Jacob Coggin, a name made honorable in the town by himself and son. At that meeting it was voted to hear Mr. Coggin longer in order to give him a call. A month later the town confirmed this vote in a full meeting, and in three weeks after concurred with the church in giving him a call to settle with them in the work of the Gospel ministry. The town "more fully concurred" with this call July 10, 1806. Mr. Coggin was granted \$600 for his settlement and for years received a salary of \$520 and sixteen cords of wood. The story of the preparations for the solemnity of his ordination is almost a verbal repetition of what took place when Mr. Barton was ordained.

Previous to the calling of the next pastor the church revised its Confession. The following is an account of this interesting action:

At a meeting of the church September 25, 1804, which is recorded by Lt. William Simonds: "The Covenant entered into when they were first form'd into a Church state, and the heads of the confession of faith agreed upon by the Synod of Boston, May 12, 1680, and solemnly adopt'd by this church when it was first gathered, as far as they were or might be acquainted with it, and should find it agreeable to the holy scriptures, were distinctly read: the Covenant and confession of Faith lately us'd were also distinctly read. After considerable conversation upon this business this question was put: Will the church abide by that Covenant on which this Church was first gather'd? It passed in the affirmative."

It was then voted to request "Mr. French, of Andover, Dr. Cummings, of Billerica, and Mr. Stearns, of Bedford," to "form a more concise Confession of Faith and covenant and lay them before the Church for their acceptance or rejection."

After several meetings, which were adjourned because the committee was not ready to report, we find that "Oct. 15, 1804, The Church again met agreeable to notification at 2 o'clock P.M.," at which the Confession of Faith and Covenant recommended by the committee were adopted. The following is the Confession:

"You (and each of you) professedly believe there is one God, the Father, Son and Holy Ghost—that the scriptures of the Old and New Testaments are the word of God, written by the Prophets and Apostles by the inspiration of the Holy Spirit. You believe in the fall of man, and the depravity of human nature; the necessity of being born again in order to be fitted for the kingdom of heaven; and that this change is ordinarily affect'd by the Spirit of God through the instrumentality of the word and means of grace. You believe in the remission of sin through the sacrifice and atonement of Christ, and that he hath appointed two special ordinances to be observed by every true believer, viz., baptism and the supper of the Lords and that the qualifications for these ordinances are repentance toward God and faith toward our Lord Jesus Christ. You also believe the future existence of the soul, the resurrection of the body and a day of future Judgment, in which every one will receive a reward according to his works, do you (and each of you) profess to believe this?"

About 1814 the tithingmen seem to have become lax, for the town declared it to be its desire that they do their duty and appointed a committee of ten to aid them.

It was finally voted, April 16, 1818, to build a new meeting-house. A committee of seven was chosen, one from each school district, to view a spot for the meeting-house and report. A year later a new committee was chosen for the same purpose, and in September, 1821, another "to get the town measured for the purpose of fixing on a spot to set a meeting-house on." Various committees for similar purposes appear. In the meeting May 16th it was voted "to set the meeting-house to the south end of the old one, provided the town can purchase the land. This appears to have been done, the land being purchased of Deacon John Spaulding for \$175. September 16th the plans, with some exceptions, were accepted and a vote passed to build the meeting-house in one year. A committee of five were chosen, consisting of Josiah Brown, Joseph Brown, Jr., Jesse Trull, Wm. Rogers, Capt. Dudley Marsten, to do the work, which, after the usual delays and experiences, was successfully completed, and the building was dedicated at two P.M. July 6, 1824, almost ninety years after the dedication of the first one. It was a red-letter day. A committee of fifteen, made up from the men most prominent in town, was appointed on arrangements. Samuel Worcester, Esq., was "Martial of said day."

The pews were auctioned off July 7th, except one on each side, and one to be selected by the selling committee and Mr. Coggin "for the minister's pew," and it was voted to sell in the same order as in the former house, if they will pay, and also with pews to give rights to build horse-sheds." It was a very successful sale, realizing \$5399 deducting from which the cost of the new church, \$4590.31, the handsome balance of \$808.69 was left. This was devoted to the purchase of a new bell, which, not proving satisfactory, was exchanged for the one now in use, which weighs 1850 pounds.

The town passed at the March meeting, 1825, a unanimous vote of thanks to their committee and another to Mr. Jesse Trull for the present of a clock. The report of the committee—a model in its way—was accepted and ordered to be recorded with the vote of thanks.

Little relating to the church appears after this upon the records, except the annual vote of the minister's salary. Even this disappears after April, 1834, for the town accepted, November 11, 1833, the amendment to the Bill of Rights, which severed the tie hitherto existing between the church and the town. Tithingmen, however, continued to be elected annually till it was voted to dispense with choosing them.

This account may fittingly close with a few notes on matters connected with the church.

It was not till 1737 that liberty was granted "for individuals to warm the meeting-house." It appears to have been an appreciated effort, for next year pay was voted for pews to make room for stoves for that purpose. We can hardly conceive of any use for the pews without the stoves.

The time between the services was so brief that the people had no opportunity of going home. Groups would club together and build and warm small houses called Sabba-day houses. There a pleasant season was spent in eating lunch, exchanging the news, and also discussing the sermon. A descendant of one of the oldest families in Tewksbury, Miss Elizabeth Rogers, writing to a friend, thus speaks of them from memory: "In those times there was no fire in the church and intermission was short, not sufficient time to go home so far, as the old house was opposite that of Mr. David Rogers. Therefore his great-grand-father built him what was called a Sabba-day house on his own land, where they could go and warm by a fire, and in the oven was their dinner. Others were often invited with the family. Some think lightly of those houses, but I have a *great reverence and respect* for them. The cellar-hole is on my land in Tewksbury, although fires have several times burnt around and in it. There has an oak-tree come up years ago, and lives through it all. Probably there the sermon and services were discussed, and I have no doubt that good arose from that place."

The first deacons were Lieutenant Daniel Kittredge and Mr. Nathan Shed, chosen January 10, 1737—men prominent in town affairs during their entire lives. Mr. Kittredge was the first moderator and the first selectman of the town, and served the community in these and other positions till incapacitated by ill health and age. Interesting in this connection is one brief entry on the town records, March 9, 1739: "Deacon Kittredge, not being able to attend the meeting to act as moderator, the town then proceeded to choose a new moderator, namely, Captain Peter Hunt." Affixing is this brief entry in the record of deaths by the pastor, too soon for town and church: "No. 37, Deacon Daniel Kittredge Died Mar. 8, 1742," less than eight years from the incorporation of the town. A worthy colleague in the deaconship and other trusts, although less prominent, was Nathan Shed, the town treasurer for the first six years of the town's existence. He died December 31, 1773.

Their resting-places are in the cemetery at the Centre.

The following is a list of the pastors of the Congregational Church of Tewksbury:

PASTORS.

Rev. Sampson Spaulding, a native of Chelmsford, and a graduate of Harvard College, 1732, was ordained November 23, 1737, and died December 15, 1796.

Rev. Titus Theodore Barton, a graduate of Dartmouth College, 1790, was ordained as colleague with Rev. Mr. Spaulding, October 11, 1792. Dismissed May 19, 1803.

Rev. Jacob Coggin, a native of Woburn, and a graduate of Harvard College, 1803, was ordained October 22, 1806, and died December 12, 1861.

Rev. Samuel Lamson's ministry began 1844, and continued during two periods of nearly two years each, his ministry ending in 1851.

Rev. Moses Kimball, a native of Hopkinton, N. H., and a graduate of Dartmouth College, 1826, was installed colleague pastor [with Rev. Mr. Coggin], February 24, 1847. Dismissed May 15, 1849.

Rev. Richard Tolman, a native of Dorchester, and graduate of Amherst College, 1839, was installed colleague with Rev. Mr. Coggin, Aug. 25, 1852. Dismissed July 11, 1870.

Rev. Samuel F. French. Ministry began November 1, 1871. Dismissed October 25, 1882.

Rev. Frank H. Kasson. Ministry began September 2, 1883. Dismissed June 23, 1886.

Rev. James Alexander. Ministry began December 12, 1887.

DEACONS.

Daniel Kittredge, chosen Jan. 10, 1738; Nathan Shed, chosen Jan. 10, 1738; Joseph Kittredge, chosen Jan. 29, 1742; Abraham Stickney, chosen Oct. 11, 1759; Isaac Kittredge, chosen Oct. 11, 1759; Jacob Shed, chosen May 31, 1774; Eldad Worcester, chosen March 19, 1776; Ezra Kendal, chosen April 7, 1779; Thomas Clark, chosen April 31, 1807; John Spaulding, chosen June 27, 1811; Joseph Brown, chosen July 10, 1821; Oliver Clark, chosen Aug., 1826; John Jacques, chosen May 4, 1832; Job Kittredge, chosen May 4, 1832; James Bailey, chosen May 4, 1832; Abel Marshall, chosen Oct. 28, 1853; Zephaniah P. Foster, chosen Dec. 23, 1866; John F. Spaulding, chosen Dec. 23, 1866; George Pillsbury, chosen Sept. 22, 1867; Enoch Foster, chosen Jan. 11, 1885.

This was the only church in town till 1843. In that year the First Baptist Church was formed. In the late winter and early spring of the previous year, 1842, Lowell enjoyed a large revival of religion under the celebrated evangelist, Elder Jacob Knapp. Many came into the city from the neighboring towns. Among these were a large number from Tewksbury. Of this number Mr. Jesse Trull, the father of five sons and two daughters, was converted, with his entire family, including two of his sons' wives. Most of these converts became adherents of the Baptist denomination. They joined the First Baptist Church in Lowell. Soon it was deemed best to form a Baptist Society in Tewksbury. This society was legally formed March 18, 1843, in the Town Hall, where the congregation worshipped, and after a very brief existence at the Centre—where there was no room for another—this church was judiciously removed to North Tewksbury, where it now stands on a commanding eminence in the most beautiful part of the town. Soon after the organization of the society, means were taken to erect a meeting-house. This was accomplished after much effort and self-sacrifice, and dedicated in August, 1843.

Since about the year 1830 there had lived in North Tewksbury three families—Mr. Jefferson Farmer's, Mr. Stephen Puffer's and Mr. Ebenezer Wood's—that

attended the First Baptist Church, Lowell. For years their prayers had been that a church of their order might stand upon the spot where, in the Providence of God, the First Baptist Church of Tewksbury now stands. They saw the answer to their petitions when, on September 6, 1843, this church was organized by sixty-eight constituent members, sixty of whom came from the First Baptist Church, Lowell.

In 1846 a lot was purchased and a parsonage erected, which in 1886 was enlarged by an additional story, and put in handsome order.

In 1887 extensive repairs were made upon the meeting-house. Assisted by the gift of \$1500 from Miss Sarah C. Wood, of Philadelphia, a former parishioner, the building was entirely remodeled at an expense of about \$4000, and now is not often surpassed as a country church in beauty and convenience.

The present membership is 123. The congregation includes a number of families from West Andover.

PASTORS.

Rev. Joseph M. Graves, 1843-45; Rev. David Burroughs, 1845-49; Rev. Lorenzo Tandy, 1850-51; Rev. John E. Wood, 1853-55; Rev. Clifton Fletcher, 1856-60; Rev. Albert de F. Palmer, 1869-72; Rev. Eugene E. Thomas, 1873-76; Rev. George F. Raymond, 1876-78; Rev. Edward W. Pride, 1879-.

DEACONS.

Nathaniel Trull, 1843-84; Abijah Upham, 1843-57; Lewis Fiske, 1844-78; Thomas Bridge, 1875-82; Peter C. Shedd, 1884-86; Jesse N. Trull, 1884-; A. Monroe Kendall, 1886-.

CHAPTER XXVI.

TEWKSBURY—(Continued).

THE FRENCH AND INDIAN WAR—THE REVOLUTION.

THE town certainly shows, for a small community, an extremely good record during those struggles for the supremacy of race on this continent. This can be gathered from the meagre records of an official character. The following extract from the papers preserved in the State-House, Boston, gives the men who took part in several of the expeditions against the French in Canada. Probably other items would reward the search of the more leisurely historian:

"September 22d, 1755.

"A list of the men's names that Goine in the expedition against Crown's point which belongs to the northeasterly Part of ye Ridgement whereof Eleazer Tyng, Esqr., is Col. which were Presented by me, ye subscribers' muster-master, by ye subscribers, Capt. of ye several Companies to which ye men belong: Tewksbury men,—Jonathan French, Peter Farmer, Samuel Frost, Jr., Nathan Kittredge, Jr., David Kittredge, Benjamin Hoegg, Samuel Danforth, Ebenezer Jaquith.

"(Signed), Thos. Kidder, William Brown, Daniel Stickney, Ralph Hill, Joseph Fitch, Captns."

This expedition against Crown Point was part of the disastrous movement, under General Braddock,

against Canada, although his particular part of it was successful. The following extract appears to pertain to the same general movement:

"A Return of men enlisted for his Majesty's Service for the total Reduction of Canada: Aaron Beard, Junr., age 18 years; Stephen Osgood, Junr., age 19 years; Daniel Mace, age 24 years."

About this period, under the list of officers commissioned for "ye Second Regiment of Militia in ye County of Middlesex," are found the following names from Tewksbury:

"Joseph Kidder, Capt. of Company in Tewksbury, Wm. Hunt, Lt. Jona. Shed, 2 Lt., Wm. Brown, Jr., ensign."

But by far the most interesting documents of this period are two lists of men "drawn out of Captain William Brown's company," as is declared in one of them. The second list, a largely duplicate of the other, is given entire, as far as concerns Tewksbury men:

"A muster roll for the pay of a Company of Militia that were raised by Col. Eleazer Tyng and marched for the relief of Fort William Henry, under command of Thomas Flint, Capt., in Aug. 1757: Abraham Stickney (ensign), Samuel Mears, Jacob Shedd (corporal), Samuel Hazeltine, Samuel Frizel, Edmond Frost, Jr., Benjamin French, Peter Clark, Peter Farmer, James Champall, Amos Foster, Oliver Hall, Oliver Stearns, Thomas Cogin, Oliver Whiten, Samuel Putnam, Isaac Mace, Joseph Frost, Timothy Dutton, Eph^m. Fisk.

"The above under the care of ensign Abraham Stickney, of Tewksbury Alarm, 1757."

Most of these men rode, and were paid for riding, sixty miles, at the rate of 2s. 8d. per day, and were out five days. The men named in the following list belonged to the same expedition:

"A muster-roll for Pay and Subsistence of a troop of Horse that were ordered by Col. Eleazer Tyng and marched for the relief of Fort Wm. Henry, under the command of Daniel Stickney, Aug. 1757: Jonathan Kittredge, Tewksbury, Thomas Kittredge, David Trull, Zebulun Bootman, William Kittredge, Jr."

This Fort William Henry was formerly Fort Lake George, and at this time the troops were under the command of "his Excellency, Sir Jeffrey Amherst, Esq., General and Commander-in-Chief of his Majesty's Forces in North America for the Invasion of Canada."

The record of those who never returned, as kept by the pastor, Reverend Sampson Spaulding, is this:

"In ye service at Fort Wm. Henry, 1756: Seth Jewett, Dy^d Oct. 26, 1756, Stephen Merrill Dy^d, Joshua Kittredge Dy^d, Daniel Griffin, Junr. Dy^d, Corporal Joseph Brown, Dy^d, July 14, 1757, Fort Edward; Timothy Kittredge, Dy^d, Sept. 15, 1758, at Hospital, Albany; Thot. Peacock, Dy^d, Sept. 4, 1758, below Oswego Falls; Samuel Putnam, Dy^d, Sept. 19, 1758, at Lake George, fever; Benj^m. French, Dy^d. An. Dom. 1760, in ye Service at Lake George."

From these deaths it is evident that still others than those yet found in the State archives await the unearthing of the patient investigator of that immense treasure-house.

The account of this period may fittingly close with a receipt copied from the town records:

"April the 23d, 1756, Mr. Harrison Gray, Province Treasr., Esq^r. Be Pleas'd Sir to Pay to Stephen Osgood the half wages Due to me for my last year's service in the Crown Point Expedition, in a redgement under Colonel Richard Gудley in a company of Foot under the command of Capt. Jonathan Butterfield, as Witness my Hand,

"BENJ^m. HOAGS."

...and Mr. Ezra Gray, Treasurer of the Town, who, with the voices of the majority, voted the vote of the Committee, and the Town, to attend the Provincial meeting at Concord, on the 21st of September, 1774.

THOMAS MANNING, }
JOHN NEEDHAM, }
JOHN TRULL, }
JOHN NEEDHAM, }
JOHN TRULL, }
JOHN NEEDHAM, }
JOHN TRULL, }

THE REVOLUTION.—Tewksbury manifested a spirit of patriotism and sacrifice not less than her sister towns in the great struggle for independence.

February 8, 1773, the first note of the coming strife sounds in the town records. Then Tewksbury voted to choose a Committee of Correspondence with the town of Boston, and Mr. Ezra Kindall, Aaron Beard, John Needham, Nathaniel Heyward and David Trull were chosen; and then it was voted to adjourn to March to hear their draft, which was accepted. The warrant of September, 1774, contains an article "to see if the town will appoint one or more delegates to attend a Provincial meeting at Concord;" and another article "to see if the town will provide some fire arms and more ammunition and choose a committee to provide for the same." September 21, 1774, seven months before the battle of Lexington, they voted to buy more powder for a town stock, and to buy two more barrels of powder in addition to the town stock, and to "leave it with ye committee to provide bullets and flints as they shall think proper." Six days after they met according to adjournment, and chose Mr. Jonathan Brown as "Delegate for the Provincial meeting to be holden at Concord on ye second Tuesday of October next." In November was considered the article in the warrant "whether the constables be directed by a vote of the town to pay the money that they shall have or shall collect of the Province tax to Henry Gardiner, Esq., of Stow, according to the directions of the Provincial Congress." March, 1775, they voted to indemnify the assessors for not making returns to Harrison Gray, Esq. They then "voted to raise minute-men,"—it was high time after passing such votes,—and to give their minute-men five shillings apiece "for every half-day in the week that they train till further notice."

March 9, 1775, voted to choose a committee to suppress disorders in town. A large committee of their best men was chosen. It was none too soon, for in a little over six weeks their minute-men must march to face the veterans of Great Britain at Concord, and it would never do to leave Tory sympathizers in the town to aid the enemy. That there were Tories then in Tewksbury is clear, for afterward, March, 1779, they chose Mr. Ezra Kindall as agent to care for the Tory farms in town. This meeting, at which men and money were voted, was held March 9th. April 19th the embattled farmers at Concord and Lexington, as Emerson says, "fired the shot heard round the world."

Tewksbury was found that fateful night, on rather

morning, by one of the men started by Paul Revere on his famous ride through the Middlesex farms. The messenger passed through this village and roused its sleeping inhabitants. Then riding on, he stopped on that spring morning on Stickney Hill, at the house of Captain John Trull, near the training-ground often used by the captain for drilling the men, and enlisting them in their country's service. Hearing the cry, "The British are marching on Concord!" Captain Trull sprang from bed, and after firing his gun as the signal previously agreed upon to arouse General Varnum across the Merrimack in Dracut, threw himself upon his horse and rode rapidly to the village. Here he found the minute-men drawn up, ready at the word to march. Placing himself at their head, they were soon on their way by the Billerica road to Concord, and joined at Merriam's Corner with those from Billerica and other towns in hot pursuit of the retreating British. There, all accounts agree that the sharp conflict changed the retreat into a rout.

One of the Tewksbury men was Eliphalet Manning. One of Captain Trull's grandsons, Mr. Herbert Trull, often related that when a boy, on his way to Salem, he used to pass Manning's door. Eliphalet would call out: "I fought with your grandfather from Concord to Charlestown. He would cry out to us as we sheltered ourselves behind the trees: 'Stand trim, men; or the rascals will shoot your elbows off.'"

There were three companies of men which marched from Tewksbury to answer the Lexington alarm April 19, 1775—one, the minute-men, under Capt. John Trull, two the companies of militia. The following are their muster and pay-rolls as copied from the originals preserved in the State-House:

"First,—A Muster Roll of the Minute Company under the Command of Capt. John Trull, in Colo. Ebenezer Bridges' Regiment, April 19th and after, 1775:

"John Trull, Luke Swett, Abraham Bayley, Sampson Spaulding, Joseph Phelps, Jon^s Frost, Phineas Annas, Isaac Manning, Jonathan Beard, Eliakim Walker, Joseph Frost, Peter Hunt, Wm. Hardy, Benj^s Dillaway (Andover), John Dandley, Jacob Frost, Amos Foster, Jonathan Gould, Jonathan Gray, Paul Hunt, John Haywood, David Merrill, Eliphalet Manning, Phebe Batchelor, Moses Gray, Samuel Manning, Isaac French, Timothy Rogers, Benjamin Burt, Jacob Burt, Ephraim Frost, Jeremiah Kidder, John Flint.

"£46 7 2

JOHN TRULL, Capt."

These men served from nine to ten days and traveled fifty-nine miles.

"Second,—The 'South East Company,' under Capt. Jonathan Brown.

"LEVIN, FOR ALARM. Tewksbury Southeast Company in Col. David Green's Regiment, Co. of Mid., sworn March 11, 1776. Indexed as Lexington alarm, vol. ii. p. 108: Jonathan Brown, Lt. Abraham Stickney, Josiah Baldwin, Amos Foster, Benj. Burt, Eliaz Stickney, Thomas Manning, Saml. French, Jacob Coney, Benj^s Clark, Sam. Longgun, Aaron French, Eph^s Kindall, Joel French, David Merrill, Wm. Kittridge, Reuben French, Jon^s Foster, Neh. French, Thomas Kittridge, Jr., Jon^s Shoad, Eben. Whittemore, Joel Marshall, Thomas Sterns, Aaron Beard, Saml. Ober, Eben. Twiss, Jr., Wm. Kittridge (3d), Isaac Kittridge, Jr., Jerem. Kidder, Steph. Osgood, Jude Richardson, Joseph Frost, Jr., Josh^s Clark, Ezra Kindall, Wm. Marshall, Benj. Frost, Jon^s Spaulding.

"£100 0 0 was the total sum paid to the company."

"Third,—The Militia Company under the Command of Lt. Thomas Clark.

" Muster-Roll of the Militia Company of the T. of Tewksbury under the Command of Lt. Thomas Clark in Cole Green's Regt., specifying the No. of miles and days of their march, April 19th, 1775 :

" Lt. Thomas Clark; Sergt., Newmau Scarlett; Corpl. Jacob Shed; Corpl., Davis Chapman; Priv., Roger Mears, Wm. Leveston, Nathl. Hunt, Paul Thordike, Benjⁿ Mace, Nel^s Hardy, Saml. Marshall, Benjⁿ Danforth, Edw^d Butsman, Robt. Nicolas, Jacob Sanders, Eben^r Kittredge, Danl. Leveston, Saml. Frost, Nathl. Kittredge, John Needham, Tim^s Rogers, Thomas Mears, Thomas Taylor, Stearns Needham, Joel Wright, David Bayley, Tim^s Dutton, Asa Leveston, Elijah Hazelton, Saml. Bayley, James Hazelton, Tim^s Hunt, John Hall, Hez^b Thorne-dike.

" £14-12-6 was the money paid to the entire company."

From these three lists it appears how general was the response to the Lexington Alarm and the presence among them of almost every family name in town.

Interesting as showing that they had no large factory from which arms could be ordered is this "order to Joseph Phelps for making Eleven Bayonets Scabbards." March 6, 1775, it was voted "to Indemnify the Assessors from all or any Charges in not making a return of the Constables' names and sums in their lists the year past to the Hon^{ble} Harrison Gray, Esq^r," also voted "to Indemnify the Constables from Charges in not paying their province monies to the Hon^{ble} Harrison Gardner, of Stow." They adjourned to Thursday, three days after, and then voted "To Chuse a Committee to Inspect disorders in the Town," and chose for this purpose :

" Deacon Isaac Kittredge, Dea. Jacob Shed, Nathl. Heywood, Aaron Beard, Eldad Worcester, Ezra Kendall, John Needham, David Bailey, Moses Worcester, Jonathan Brown, Thomas Marshall, Eben^r Whittemore."

May 23, 1775, they voted "to Chuse a member to Represent the Town in the Provincial Congress at Watertown on the 31st day of May Instant." Mr. Ezra Kendall was chosen. The following May they made Deacon Isaac Kittredge, Nathaniel Heywood, John Needham, David Bailey and Thomas Clark the Committee of Correspondence.

How vividly is the clothing of the army brought out in a vote like this "that the selectmen shall make a return of what coats the Town doth make for the men in province servis." At the 4th of March meeting, 1776, the Committees of Correspondence, Inspection and Safety were combined in the persons of Nathl. Clark, Jr., Nathl. Heywood, Dea. Jacob Shed and Wm. Brown; but at the May meeting following some evidently thought the number too small, and they added to it Lieut. John Flint, John French, Jr., and Benjamin Burt.

For the remaining years of the war the various fortunes of the cause may be traced on the records in the efforts of committees to raise men and supplies. Payments were made to men for going to Cambridge, Roxbury, "Boston and the Lines," Dorchester, Rhode Island, Ticonderoga, New York, Fishkill, the Jeffreys, "at the westward taking Burgoyne." As these places pass before us the course of the struggle passes too. Many are the kinds of supplies forwarded from this little town to the army fighting for

liberty and home. Coats, shirts, shoes, stockings salt pork, Indian corn, horses and beef, for Continental soldiers, are taken from the town directly to the various camps or depots. Nothing brings home to one so vividly how the war was carried on, what it cost in treasure, sacrifice and blood. As those eventful years go by the difficulties in obtaining men to fill the town's quota increase. More effort and more bounty money are required. Special collectors and methods had to be employed to collect the war rates of money or coin. Familiarity with such details increases admiration for those who carried, the struggle through to its glorious issue. While the husbands and fathers were in the field their dependent families were well cared for by the town. Frequent are the votes directing the selectmen "to provide for those families that the men are in the Continental army." Touching also are entries like these "April 12, 1778, to the widow Rebecca French £3 5s. 10d. 2;" "to the widow Rebecca Gray 7s. 9d." The severity of the struggle appears as the history of the town goes on in the town records. Many are the votes like this: "Sept. 8, 1777, to raise £200 for the encouragement to raise men for the Continental army," to which they added £200 more three weeks later, and voted "to choose collectors to raise these rates." The difficulty to find men to serve as collectors reveals the hardness of the duty. The scarcity of salt felt by the Colonies at this period is thus made historical: "Oct. 21, 1777, voted that the salt be delt, to the poor sort of the people, not to the whole of the town at 15s. p^r bushell they paying the money down for it." A committee was raised "to deal the salt out," and instructed thus: "that the committee deal out the salt discessionally as they shall think proper." Guns, powder, gunlocks, lead, flints and other necessities for war appear often as paid for or ordered.

Along with the war went hand in hand the formation of a government and the framing of a constitution. May 25, 1778, voted to choose a committee to examine the constitution or form of government. This committee was Ezra Kindall, Dr. Eldad Worcester, Ens. William Brown, John Needham and Nathl. Clark. This year 1778 was full of business, a meeting often occurring each week. In June, the 8th inst., they decided "not to accept the constitution as it now stands." Almost a year later, May 21, 1779, they "voted to have a new constitution or form of government made" by a vote of 20 against 2. This year two new drafts of men were called for and means taken to supply them. The emergency is shown by the military character of the committee elected to hire these men—Capt. Joshua Baldwin, Capt. John Trull, Maj. Jonathan Brown—and also by the decision that the committee should "give those men that should engage in the Continental service fifty pounds per man per month, or ten bushels of Indian corn per month." By a vote of 37 to 13, at a town-meeting they decided "to accept of ye proceedings

of the convention that met at Concord to regulate prices," and a committee was chosen "to regulate prices in town." At the same meeting Mr. William Brown was elected "a delegate to go to Cambridge the first day of September next to meet in convention in order to frame a new constitution."

From this record, January 19, 1780, it comes out that with all their efforts, they failed, either through inability or miscalculation, to fill their quota by one man. "Warrant of January 19, 1780—To see whether the Town will have the fine made into a rate that is Come in the Tax Bill upon the town for one man, which the town wanted for the nine months in the Continental army." In 1780 the stress of war appears in the increasing bounties offered for men and the difficulties in obtaining them. How characteristic of the time is the offer of June 21st "To give those men 22 bushels of Indian Cor. p^r man p^r month, or sole leather, or stock or Continental money equivalent thereto, and allowing them pay for twenty miles p^r day for out and in, and the men to give the town an order for the whole of their wages." That year the town rate voted was £12,000, in part to pay the soldiers. In June they are still working to get the necessary troops, and an article in the warrant is "for the Town to Proceed in any way or meatherd the Town shall Think Proper to raise the men that are called for to Joine the Continental army," and also "to hear the Request of the Great and General Court for money to carry on the war." The bounty was raised almost threefold at the following meeting. The following August they are hearing the request of the General Court for "Clothing and Blankets," and in October for beef, to furnish which great activities follow. Their committee was finally instructed to hire money to provide the beef, or pay in lieu of it, or "to act in any other way they shall think is for the Benefit and Advantage of the Town Respecting Procuring the Beef." The proceedings are of a similar character in response to the call in December for further men and beef. Affairs had reached the state that any practical way to comply with these calls was approved. The chief records of the town become taken up with raising of men and all kinds of supplies to keep them in the field, and pay for them both. Nor were disputes between towns wanting concerning the crediting of men. June 11, 1781, "An order to Col. Jonathan Brown the sum of £9, it being for two days going to Boston to git John Danforth held a Continental soldier for Tewksbury, and £13 14s. for three days going to Boston about a dispute between Tewksbury, Dracutt, Chelmsford and Wilmington, concerning Continental soldiers, and £21 p^d Thomas Taylor, Jacob Sanders and Benjamin Danforth, for going to Dracutt to be sworn, and £10 10s. for two days going to Boston to Git two Continental men returned, and £17 8s. for expenses the above two days, and £12 paid Esq^r Varnum for drawing all bills and covering the witnesses, and £15

for one day going to Dracutt, and other time spent in the above affairs, £136 10s." At this time it took seventy-five Continental dollars to pay for one in silver. In March, 1781, the selectmen and commanding officers are directed "to class the town to git men to re-inforce the army." In 1781, then, the townsmen are found, as in other places, combined into classes, which hired a soldier for the army at an expense of some £27. The receipts and mustering-in papers of several of these men from Tewksbury can be seen on file at the State-House. In 1782 an execution was sent upon the town for the three-years' men, and Wm. Brown received 18s. for its cost; and a suit is noticed a little later which cost the town 12s.

March, 1781, they voted instructions to their committee, to engage men for three years or during the war: "to men that shall engage, 100 silver dollars per man per year, or the current exchange," and also "to fall into line with other towns in their offers." In June Nathaniel Clark was added to "the militia officers, to git the remainder of the men to engage in the army for three years or during the war," and 400 silver dollars are offered each of the four men that will so do. Next month, July, they voted to raise £100, hard money, to provide beef for the army, and in September to collect only in hard money. Corn had become to a large extent a medium of exchange, as is seen from the vote in October, to see how much the corn shall be a bushel to pay the corn notes. They set it at 4s. per bushel, and chose a committee to "settle with the soldiers that have corn notes against the town." In December a vote shows the condition of affairs: "Voted, that the assessors give the constables orders to strain upon the inhabitants and others for the money that Don't pay in the corn in 20 days from the time the constables receive the lists;" and "that there be places appointed to carry the corn to." Peter Hunt, Aaron Beard and Joel Marshall were appointed to receive the corn.

The records are filled with the ways and means to raise men and supplies. The military condition appears from the choice of constables this year who were Captain Joshua Baldwin 2d and Captain John Trull. In 1782 as high as £66 or £67 was paid by a class for a soldier. The town appears to have ultimately paid back what the different classes expended for hiring men for the Continental Army. Thus, February 27, 1784, "an order to Jacob Frost (and sixteen others), it being what they paid as a class to hire a soldier for the Continental Army for three years, £65 18s. 9d. 2y."

This list, arranged alphabetically, probably contains the names of all the men from Tewksbury who took part in the Revolutionary struggle at any time:

Ames, Phineas	Bayley, Daniel
Ames, Isaac	Bayley, James
Ames, James	Burt, John
Bayley, Noah	Bayley, David
Bayley, John	Beard, Jonathan
Brown, William	Bayley, Samuel

Burt, Jonathan

 Wood, Asa
 Walker, Eliakim

Whitney, Moses
 Whiting, Moses
 Walker, Supply, of Pegwankitt
 Wood, Thomas
 Worster, William
 Wood, Amos.

Unfortunately there is no town record of those who fell on the field, but a few notes may be added, chiefly culled from the pastor's book of Church Records. In the muster roll of Captain Benjamin Walker's company of Col. Bridges' regiment of Twenty-seventh Foot is found the name Philip Fowler, of Tewksbury, deceased 17th June, enlisted April 19, 1775. In the pay roll which follows, Fowler is reported missing. The captain was reported dead, and the company was in charge of Lieutenant John Flint, of Tewksbury. The Rev. Mr. Spaulding records among the deaths "Philip Fowler's son, died June 17th, 1775, *perhaps*, Silver Cord Broke. Sud." The boy fell for his country in the fight, and his body never having been recovered, as was not unlikely, something of a shadow remained upon his end.

In addition to the ancient pastor's record, the following certificates are copied from the file preserved at the State House :

"TEWKSBURY, April 23, 1776.

"This may Certify that philip Fowler served in the Late Capt. Benjamin Walkers Company, in 27 Regiment, Commanded by Col. Ebenezer Bridge, and the said philip was taken or killed in the site at Bunker-hill, and has not Rec^d. the Coat that was Dew to him as stipulated by the Congress.

"JOHN FLINT, Leut."

"ANDOVER, April 2, 1776.

"To the honor^d. Committee at Watertown, pleas to Deliver the Coat or the price of one, to the Bearer, that was Dew to (philip Fowler), my husband, and the bearer's Receipt shall be your Discharge.

hir

"ETER X. FOWLER"
 mark

"This may Certif that the above philip Fowler, Do^r., Did not leave any Estate worth Administering upon.

"Tewksbury, 18th, 1776.

"EZRA KENDEL,

"one of the Select men of Tewksbury."

It would seem that these various testimonies to Fowler's death ought to place his name upon the tablets erected on Bunker Hill as among the killed in that memorable fight.¹

Another note by the pastor is "Lenises (?) Green (Winchendon), Dy^d in Tewksbury, November 13, 1775, Wounded at Bunker Hill."

From Mr. Whitmore's "Report to the Boston City Council, on the Bunker Hill Tablets, Appendix B, Taken Prisoners"—is taken: "Jacob Frost, Tewksbury, 'was taken in Bunker Hill fight,' Captain Benjamin Walker, Chelmsford, Col. Ebenezer Bridge, alive September 14, 1775, and in prison."

Later among the deaths are the following entries by Mr. Spaulding in the Church Book:

John Hunt, Jr., in public service at No. 4, 1776.

John Haseltine, in public service, 1776, small-pox.

Samuel Bailly, in public service, 1776.

Enoch Merrill, in public service, 1776.

John Haywood, killed in battle, Rhode Island, August 29, 1778, shot.

¹ His name has since been placed on the Tablets.

Many of the company at Bunker Hill commanded by Captain John Harnden, of Wilmington, in Col. Bridges' regiment, were from Tewksbury.

The following from the records seem to mingle the Indian and Revolutionary Wars: "October 26, 1779, to Jesse Baldwin it being for six pound which he paid Nathaniel Hunt for engaging in the Continental Army During the war and for three pound six shillings for one blanket, and six pound six shillings for one pair of shoes, and one pound ten shillings for a tomehawk, all for said Hunt £26.2."

The following receipt is one of many from Tewksbury men, preserved at the State House :

"Boston, June 14, 1782.

Received of Capt. John Trull, Treasurer of Class No. 3, for the Town of Tewksbury, the sum of twenty-three pounds & money, as a bounty to engage the Continental Army for the term of three years.

"Witness my hand,

"Jesse N. Osgood's
mark

"Attest, The Townsman."

Interesting is the treasurer's account all through the Revolutionary period, as showing how heirs of estates, trustees for the same, men and women of all classes, furnished supplies such as shirts, stockings or shoes or blankets for the soldiers, and how the same general response was given by loaning the town money in this hour of its need.

June 24, 1776, voted "that the Selectmen shall provide ammunition and shovels, spades and peck-axes, &c., according to their discretion;" also, "that the Town shall provide bayonets for the training band in the Town,"—"that the selectmen shall provide fire-arms for those persons that they shall think proper, and other Accoutrements."

Oct. 14, 1776, they chose William Brown, Aaron Beard, David Bailey, Nathaniel Heywood and John Flint, "a committee to make a draught for government," which plan for government was accepted eight days later.

The following entry shows that this town was represented at the suppression of Shays' Rebellion :

"Oct. 8, 1789, an order to David Rogers for his service, being drafted to go in the Shai's affair, 18s."

CIVIL HISTORY.

For many years in its early history Tewksbury refused to avail itself of representation in the General Court. May 16, 1738, it was voted not to send a representative. For a long period this was the customary disposal of the matter in the May meeting, coupled with this language, that they would not send a representative, but trust to the mercies of the General Court. These mercies failed to satisfy them always, for on the records are several protests, through committees, against legislative actions.

In any business necessary to come before the General Court they usually chose a friend to represent them, but preserved a frugal mind in reckoning with said committees, as a vote here this shows :

"Voted not to allow James Kittredge, Jr., and Samuel Hunt £17 for services at the General Court in getting the non-residents' land taxed," but "to pay them later, conditionally."

For years the business and history of the town pursue the usual channels of such bodies. Highways are laid out or closed; bridle, often spelled "bridal"-paths are laid out most frequently, that persons may go to public worship. The course of the present roads, as the one which goes by the old Hunt place to the Centre, was often determined by these "bridal-paths."

The customary course of civil history is broken only as the more general events in the country break in upon the peace and quiet of the community. Some of the votes of these early years are worth preservation for the landmarks and customs they reveal.

March 10, 1740, "Voted to have three assessors for the year Insuing, and to chuse them by holding up of hands." These first assessors were, Deacon Daniel Kittredge, Cornet John Whiting and Stephen Osgood. Forty shillings was then the sum paid to each of the constables, one of whose duties was to collect the taxes. The town clerk received only five shillings for his services. The town treasurer, in 1744, received £3 for his salary. The same year it was voted to have "a pound keeper for the year ensuing," to which office Samuel Peacock was elected.

December 10, 1740, the Rev. Sampson Spaulding signified that he should not be inclined to take less than £200 for his salary. Voted not to pay it. March, 1741, "Voted to give Rev. Sampson Spaulding, their minister, £150 if said minister, being at ye meeting, signified to ye people that what they would freely give him he would be satisfied with." In 1742 they voted £160, and he appeared and declared himself satisfied with what the town had granted him. This manifests the same judiciousness and Christian resignation which may be traced from the beginning to the end of his ministry.

The finishing of the meeting-house was let out to Stephen Osgood for £140, on condition that he did so by the last of September. This he failed to do, for they voted, Jan. 19, 1742, to give Wm. Kittredge £160 to finish their meeting-house forthwith. More important is the vote which followed: "That Stephen Osgood, of Tewksbury, should serve the Town of Tewksbury for a school-master ye remainder of this year."

Interesting is the difficulty found in getting a committee to decide upon the highest tax-payer in town, the disputes and protests on this matter, and such a vote as the following of December 9, 1742, that no person should "bring stuff or timber for building pews nor to presume to erect a pew till further order of the town." In this line is the vote of April 12, 1743, to choose a committee "to remove all incumbances out of the meeting-house which are brought there without order of the town." This committee

was intrusted with full power to deal with the matter; incumbance they afterward defined, "they meant pews."

September 19, 1751, they chose Thomas Marshall, Nathan Bailey and John French a committee to seat the meeting-house, and left it "to the Discretion of the said committee how to proceed in Seating the said meeting-house." About this time pews began to be erected in the galleries, for March 6, 1752, "James Kittredge, ye 4th, Nathaniel Clark, Jr., Zephaniah Kittredge, Timothy Brown, Samuel Kittredge, Jonathan Shed, Thomas Kittredge, Jr., Amos Foster, Jr., David Trull, Oliver Hall, Ebenezer Hardy, Abraham Stickney, Eldad Worcester," were granted "Liberty to build two pews in said meeting-house—one in the West gallery against three of the windows for men to set in: and ye other in the East gallery against three of the windows for women to sit in: and said Petitioners are obliged to maintain the glass windows against ye said pews and to fill said pews as full as is comfortable to sit in." They also voted that ye said petitioner shall have the privilege to leave ye s'd seats and to hold their right in s'd meeting-house: Provided the s'd Petitioner keeps ye said Pews full with ye inhabitants of s'd Town." Almost constantly through that year the meeting-house needed repairs, which they finally voted to make March 7, 1757, after much discussion, as is evident from the variety of motions rejected. How much some of the much-discussed repairs were needed is learned from the order February 10, 1755, paid "to Mr. Thomas Marshall for carrying out the snow in the meeting-house 2s."

As early as 1772, some thirty-four years after his settlement, Mr. Spaulding appears to have suffered from impaired health, for July 22, 1771, an order was paid "to Mr. Jacob Coggin," the first mention of a name honorable in the history of the town, "it being for supplying the pulpit six Sabbaths £8." Beside serving the town and then the church alone as pastor, his son, Rev. Jacob Coggin, filled with acceptance the positions of delegate to the Constitutional Convention in 1852, and District Elector in 1853, beside others of minor importance. His name stands on the School Committee list for many years as chairman. Possessed of more than the ordinary portion of the spirit of the Apostle John, he suggested the beatitude, "Blessed are the peacemakers," by his efforts to ensure peace in church and town. His gentleness made him great.

The tithingmen for 1748 were John Chapman and Nathan Shed, a schoolmaster and a deacon. A feature of the government of the old town is revealed in the treasurer's order of March 21, 1763: "To Lt. Osgood, it being for repairing the stocks, and bringing them to the meeting-house 3s." A similar one occurs on January 12, 1771. "An order to Abrm. Bailey, it being for repairing the stocks 6s."

The meeting-house, with its town ammunition, stocks and all the things needful for the govern-

ment and business of an ancient town, must have been a strange sight compared with its aspect to-day. It was not till 1826 that the town business was done elsewhere unless in a tavern or some private dwelling. June 13, 1825, it was determined to build a house to do town business in. It was erected by October of that year under the supervision of Josiah Brown, William Rogers and Capt. Stephen Brown.

As early as about forty years after the first meeting-house was built, the questions were agitated of adding to the meeting-house, or of building a new one. To do the former was refused in 1772; the latter was negatived March, 1774. Probably the prospect of war had much to do with their refusal for years to make any but the most necessary repairs upon the church building.

As early as March, 1782, attention to the artistic worship of God appears in the vote in March of that year, to devote "a third part of the front gallery for the use of the singers." Occasional votes of a similar character are found, and frequent ones to recompense the singing-master, Lt. Thomas Wood: thus, Nov. 29, 1789, "an order to Lt. Thomas Wood, it being for what the town voted him for instructing the singers in full, for the time past, and for the time to come, £2 8d." Yet, in spite of this comprehensive payment, is found the vote, March, 1790, "to allow Lt. Thomas Wood something as a gratis—at times spelled "gratice"—for meeting with the singers to instruct them to sing.

In 1787 they voted to have public worship in the afternoon of Sabbath and other days without singing.

Property qualifications for the exercise of the franchise were early known. In 1804, at the March meeting, it was decided that a person, as formerly, must not only be twenty-one years of age, but must have an income of at least £3 or an estate of not less than £60 to vote.

Neither at an early date were appropriations for music by the town so novel. March, 1808, they voted "To raise the sum of \$60 to pay the master who taught the singing-school the present winter past."

In 1812 they grant \$50 for the expense of the singing-school, and in 1815 Lt. Thomas Wood was given \$12 for meeting with the singers on the Lord's Day, for one year. In 1817, \$50 was raised for the singing-school.

Not only the church, the roads, the schools, the poor, difficulties between townsmen and neighbors, at times the estates of widows and orphans, but also morals were under the care of the town. Thus the March warrant for 1824 has this article, "To see what method the town will take to prevent Idlers and tiplers from spending their time and property, or for the town to act on the same in any way they may think proper at said meeting." At said meeting they

voted that "there be a paper's list posted up." They recognized how straight is the road from idleness and tripping to the poor farm. Each man appears to have had his own way of spelling, as is evident from many of the votes quoted in this sketch. For instance, for generations pewa is almost always "puas."

Among the curiosities of their independent spirit is the vote of the March meeting of 1798: "That the inhabitants of the town wear their hats only when they address the moderator."

Although the temperance sentiment was far behind that of to-day, yet the evils wrought by the indiscriminate sale of strong drink called forth some efforts to regulate its sale. In the treasurer's accounts for 1744 is this: "Received Mr. Thomas Kittredge's fine for selling strong drink, £5 14s. old tenor . . ."

And also several other fines for breaking the Sabbath £11. May 22, 1746 "Voted not to give said Thomas Kittredge the six pounds which said Thomas Kittredge forfeited for selling strong drink without a license."

August 23, 1775, "Voted that the Selectmen do approbate Timothy Rogers, Junr., to be a Retailer." March 2, 1778, "Voted that the Selectmen do not approbate Willm. Fiske to be a retailer."

Quaint is the first notice in regard to preserving orderly the resting-place of their dead: "April, 1797, Voted and chose John Spaulding, Nathan Shed and Timothy Hunt to take care of the burying Ground and Dige the graves." A year later a committee is found "to inquire into the burying Ground."

After serving the town for twenty-two years as clerk, which office death found him in, and for twenty years as first selectman, it is pathetic to read, June 17, 1799, "Voted to chuse a committee to go to the Widow Scarlett's to git the town books and papers belonging to the town."

As the necessity was felt, beginnings of a Board of Health appear thus: May, 1811, "Voted and chose a committee to superintend the small-pox." They at the same time appointed "the selectmen to superintend the hospital where the small-pox is." A large Board of Health, consisting of ten citizens prominent in their respective districts, was chosen August 20, 1832, "to preserve our citizens against spasmodic cholera." The next year the selectmen were elected the Board of Health.

The War of 1812 is brought to attention by the grant to the soldiers of \$13 per man if called to march and the raising of \$500 for the purpose of carrying on the war declared by the government. In September, 1814, \$500 was raised for the payment of "the town's share of the equipments for town stock, and it was also voted "To make up to the soldiers the loss of mule by called on last of the present season."

As early as 1831 many voted for the annexing of part of the northwest portion of the town to Lowell. At this period Belvidere seems to have been some-

what a thorn to the town, for through its influence the town-meetings were carried several times to the school-house in that section or to one of the taverns there. Perhaps a trace of Belvidere may be detected in this vote of May: 1833, "That every man may kill his own crows," it having been the custom of the town previously to pay a premium for killing them.

It was November 11, 1833, that, by a decisive vote of 101 to 17, the town accepted the amendment to the 3d Article to the Bill of Rights, by which towns were no longer required to support religious teachers or churches. Consequently the next March meeting, 1834, was the last time Tewksbury provided the minister's salary, namely \$575 for the Rev. Jacob Coggin. It was just one hundred years from the time the first appropriation was made by their pious ancestors and the founders of the town for a similar purpose.

THE SCHOOLS.

The history of the public schools in Tewksbury begins December 10, 1740, when it was voted in town-meeting "that Stephen Osgood of Tewksbury should serve the town of Tewksbury for a schoolmaster for ye remainder of this year." December 6, 1743, "Voted to have a writing and reading school in the town, and that said town be provided with a school as above mentioned for the space of three months from the time he is made choice on." Mr. Francis Kittredge and Captain Peter Hunt were chosen to provide a schoolmaster for the town as above mentioned. They were the first School Committee. They were allowed fifteen shillings per week for keeping the schoolmaster. The next vote was in 1744, "voted and chose a committee to provide a schoolmaster to keep a writing and a reading school in said town" and they rebelled against imported talent, for "a vote was tryed by the Moderator to see if ye town would have Mr. Bridges of Andover for their schoolmaster, and said vote passed in the negative." They strove to equalize privileges; for March, 1744, they voted a consideration of "ten pounds (old tenor) to ye westwardly part of ye town for their not having any benefit of ye town schoolmaster." Then old-tenor money was about one-quarter the value of the new. For about twenty years from 1744 money for the schoolmaster was voted only occasionally, but the usual three months school appears to have been kept regularly notwithstanding. In September, 1755, they passed the usual vote with this addition, "and also to prefix the place where the said school shall be kept." In 1766 the vote was "to provide two schoolmasters for ye winter season," which became customary after the introduction of "wimins" or "dames' schools." In June, the 17th, 1766, an article in the warrant was "for the town to act their pleasure in seting up wimings school this season in s'd town," which they refused to do; but on March 4, 1771, it was voted "to have woman's schools keep this present year in the town."

The first mention of a school-house in town is March 8, 1770,—“an order given to Thomas Kittredge for boards to fit up the school-house.”

In 1768 the names of five different schoolmasters appear in the accounts, which suggests difficulties not yet obsolete in discipline or capacity. The next year they decided to divide the town into “squadrons for the benefit of schooling,” but this was not done until 1771, when the committee’s report was accepted to squadron out “ye town for the benefits of schooling, and it was voted to have a woman’s school kept this present year.” A brighter day begins. In 1771, December 16th, appears the name of the first female teacher in town in an order to Lucy Needham for sixteen shillings for keeping school one month. The other teachers that year in town were—

“Mary Brown, paid £2.8, December 26.

“Molly Merrill, paid £2.12, December 26.

“Elizabeth Bailey, paid £2.8,” January 7, ’72.

All honor to these pioneers of a noble band!

In 1772 it was “voted that each squadron draw their equal rata of the money voted for schooling.” February, 1776, an order for sixteen shillings to Molly Brown “for keeping school four weeks in ye year.” Thus four shillings a week was the rate for teaching, one hundred years ago.

In March, 1793, they voted to build school-houses in the several squadrons, and chose two persons in each squadron to visit the schools, but it was not till next year that the money was voted for this purpose.

In 1795 five men were chosen to inspect the schools. Sometimes they raised the number to ten, two for each squadron.

Private schools were once known in town. It was voted, March, 1830, that Doctor Henry Kittredge and others have liberty to keep a private school in the town hall, they making good the damages and paying rent if requested.

About the year 1830 the districts had about \$80 each, except the Centre, which had about \$100. Afterwards the appropriations rose gradually.

In 1838 it was voted to print the school reports for the first time, one hundred copies being ordered.

Dames’ schools seem to have been successful, for they were asked “to see if the town will sell Elinor Putman the town’s part of the school-house.” March 1, 1779, is notable for the raising of “£200 for the use of the schools, to be equally divided to each squadron according to their rate bills.” In 1779 at the October meeting they negatived a vote “To see if the town will give those persons Liberty that have a mind to join and build a school-house at the meeting-house, and also that they draw their equal part of the town money.”

The vote of £200 shows the value of money during the war years. The usual sum was £30, which was in 1787 increased to £40.

Here is inserted a list of the School Committees and school-masters and dames so far as they can be gathered

from the books of the town, beginning with the first teacher, Stephen Osgood, in 1743, till the close of the critical period in American history, 1789.

SCHOOL COMMITTEE.

1743. Mr. Francis Kittredge. Capt. Peter Hunt.	Moses Worcester. James Thorndike.
1744. Francis Kittredge. Thomas Clark.	1761. Aaron Beard. William Brown.
1746. Dea. Nathan Shed. Samuel Hunt.	Jonathan Kittredge.
Lt. Wm. Brown.	1762. Moses Worcester. Jonathan Kittredge. Daniel Dane.
1747. John French. Thomas Clark. Thomas Kittredge.	1764. Lt. Wm. Kittredge. Joseph Kidder. Eldad Worster.
1755. Dea. Nathan Shed. John French. Moses Worcester.	1765. Eldad Worcester. Francis Kittredge. Edmund Frost.
1759. William Kittredge.	

SCHOOL MASTERS.

1743. Stephen Osgood.	Nathl. Heywood.
1745. Mr. Bridges, of Andover.	Jacob Shed’s son.
1745 to 47. John Chapman.	Mary Brown.
1748-49. Joseph Bradstreet, evidently boards around two or three weeks in a place.	James Bridges. Dorcas Osgood.
1750-51, ’53-56. John Chapman.	1773. Molly Merrill. Hannah Bailey.
1757. Benjamin Farmer.	Newman Scarlett.
1759. John Chapman three months and Sampson Tuttle for two months.	Nathl. Heywood. Jacob Shed’s son. James Bridges.
1761. Doctor Wm. Chase. Eason Dix.	1774. Hannah Bailey. Nathl. Heywood. Newman Scarlett.
1761-62. Caleb Clerk, who kept in house of Mr. Ebenezer Temple.	Eldad Worcester, Molly Merrill, Molly Brown.
1765. Isaac Abbott’s son.	1775. Molly Merrill, keeping school for teaching in the senter squadron.
1766. Samuel Griffin. Mr. Wite.	Hannah Spaulding. Molloy Brown.
1767. Samuel Griffin. Phineas Spaulding. William Worcester.	1776. Newman Scarlett. Molloy Scarlett.
1768. Nathaniel Heywood. Samuel Griffin. Phineas Spaulding.	Anna Beard.
1769. Nathaniel Heywood, John Hyns and Isaac Abbot.	1777. Doct. Abn. Moors Newman Scarlett. Jonathan Frost. John Barron. Mr. White.
1770. George Abbot and N. Heywood.	
1771. Newman Scarlett. Nathl. Heywood. William Jaquith. Lucy Needham, Molly Merrill, Mary Brown.	1778. Abigail Keadall. 1779. John Barron. 1780. Dr. Daniel Ryan’s daughter. Patrick Fleming. 1788. Samuel Whiting. 1789. Judith Kindall.
1772. Oliver Whiting’s sister. Newman Scarlett.	

It was voted January, 1793, to build school-houses in the several squadrons, but as no money was appropriated for this purpose, they were not erected for several years. At this time, and for a number of years afterward, in addition to the regular School Committee, one or two persons from each squadron were chosen to visit—“prospect,” or “inspect”—the schools. In 1794, when money was voted for the building of school-houses, squadrons “that don’t want to draw it for that use” were “discharged from the school-house tax.”

The town was divided in six districts in 1801; in 1825 the Belvidere District was formed, being set off from the North. The following year reveals a con

dition of dissatisfaction often found, for they voted and chose a large committee of seven to examine into the situation of the schools and report. In 1828, and for a few years after, each district received for school money that which it paid. In 1831 it was divided according to the property of each district. This appears to have been the practice till the vote of 1835, when a chosen committee to divide the school money to the best of their judgment. The history of this question, even in this town, as well as the varying practice of "hiring" teachers, justifies the action of the Legislature in abolishing school districts throughout the State, an act with which Tewksbury complied in the March meeting, 1869, and the selectmen were instructed to carry out the law in all such cases.

From 1844 the town voted to accept the report of the School Committee, and in 1856 the committee was instructed to print it. The number ordered was 200 copies. In 1857 a committee was chosen to revise the school system, but its report has not been recorded.

In the autumn of 1887 it became necessary to divide the school at the Centre on account of its size. It was thought best to make the second school, which resulted from this division, of a higher grade of studies, and throw it open to the entire town. Soon a school of considerable size was found pursuing the last studies of the grammar year and the usual high school studies of our educational institutions. In August, 1888, a course of studies was arranged and adopted by the School Committee. At the November town-meeting it was voted that the advanced school at the Centre be a High School, which it was before, essentially. The first year it was taught by Miss Emma V. Kirkland, of Randolph, N. Y., the second by Mr. C. Homer Galger, of Chelsea, Massachusetts. It is now under the charge of Mr. M. H. Jackson, of East Boston, with an assistant.

Through the death of Mrs. Betsy Lang, the High school received a legacy of \$3000, whose income is to be used in assisting to pay the teacher, or in books and apparatus for the school, at the discretion of the School Committee.

But as early as May, 1768, they had the custom of letting out the poor to the highest bidder, as is seen from the extracts which follow: May, 1768, "Voted that . . . 's child be put out to the lowest price where it shall be proper to have it go." November 20, 1776, "Voted to appoint and Impower the Selectmen in behalf of the Town or any part of them, to Endent and agree with Some person or persons, to Support and maintain the Wid" . . . during her life or any part thereof." Still more ancient is the flavor of this advertisement, December, 1784: Whereas, . . . is supported by the town and the selectmen can't git it done without great cost, this is to see who will take and support her." August, 1786, the warrant has an article "To see how the town will support the poor," which resulted in the decision, "that the poor be set up to the highest bidder and that the selectmen give publick notice of the time and place where they are to be set up." This was usually done by appending to the warrant a notice that they would be set up in the evening after town-meeting, thus: "N. B. The Poor that are supported by the Town are to be put out to them that will do it cheapest, in the evening of the above said day, and also the Widow Stickney's thirds for the season."

In this connection stand these entries quoted for their quaintness: August 17, 1772, "An order to David Sanders for boarding Nicholas Stricker 35 weeks and finding him a pair of tow briches." February 13, 1773, "An order to Benj. Burt it being for four pair of gloves for the funeral of . . . 's wife," dependent upon the town. February 22, 1779, "An order to Saml. Danforth for finding . . . her house room and fire-wood and Sass and Drink."

Some of the items preserved on the records show vividly the customs and the social life of the former days. Such is the order given February 23, 1780, to David Bailey, "it being for one Loos striped toe lining Ground 2½ yards and fore one toe and wolling wailed Coat 2½ yard and for one Jacot and for one pair of shoes, for one pair of stockings, all which he found for . . . for and Boarding thirty-three weeks and half to the sixth day of March £66: 8s." The records are full of similar orders.

As early as October 17, 1780, an article is found in the warrant "to see if the town will erect a work-house for the purpose of such as shall become a town charge." A good many years passed before anything was done to carry out the suggestion.

In 1787 overseers of the poor were chosen. It was not till 1826 that the present poor-farm, consisting of some 80 acres, was purchased. In May of that year it was voted to use it also as a house of correction. A new poor-farm house, with conveniences suitable for the inmates, is now in process of building.

SLAVERY.—Many fail to remember, perhaps never dreamed, that slavery once existed in Massachusetts, the leading State in the great anti-slavery movement.

Traces of the "peculiar institution" may be found in all the early New England towns. Tewksbury is no exception. The town records contain frequent references to negroes belonging to one and another of the names familiar in our history. It seems strange to hear of the Kittredge, the Trull, the Hunt, and the Rogers families as among the slaveholders. Stranger still is what Mr. Aaron Frost relates, that when slavery was abolished in Massachusetts there were three slaves in this town: a man owned by Dr. Kittredge, from whom the poor-farm was bought; a girl named Rose, owned by Mrs. Rogers, and one named Phyllis, the property of the Rev. Sampson Spaulding. Her death is thus recorded: "1820, June, Phyllis, a negro woman in Dea. John Spaulding's family, ninety years, old age." It speaks well for their treatment that when freedom came the two maid-servants preferred to remain with their former owners.

In those days they not only voted what seats the singers should have, and adjusted all difficulties with them, but passed the following, September, 1786: "that the negroes have the seat next to the long pew for their seat to set in."

In this connection the following document is interesting:—

"Know all men by these presents that I, John Kittredge, of Tewksbury, in the County of Middlesex, in his Majesty's Province of the Massachusetts Bay in New England, Chirurgeon, Know ye that I, said John Kittredge, for ye love, good will and affection that I have and do bear toward my servant Negroe man Reuben, and also for ye Good Service that the said Reuben hath done and performed for me, Do by these presents Declare, Order and Establish that my said Servant Reuben, if he lives and survives me, his said Master John Kittredge, that after my Decese the said Reuben shall be Intirely free and at his own free Liberty for his life time after my Decese, so that my Heirs, Executors, or Administrators, or Either of them, shall not have any Command or Business to order or Dispose of said Reuben. Dated at Tewksbury, the Sixteenth day of January, in the Twenty Eight year of his Majesty's Reign, Anguo Domini 1751 5.

"Signed, Sealed and delivered
in presence of us.

"JOHN KITTREDGE.

"JOHN HAN KITTREDGE,

"JOSEPH KITTREDGE,

"JOHN CHAPMAN.

"The above written instrument of ye Cleronance of Doctr. John Kittredge's Negroe man Reuben, was entered November ye 16, 17 66.

"Per me, STEPHEN OSGOOD,
"Town Clerk."

NATURAL HISTORY.—The early descriptions of New England reveal an unusual beauty. The number and varieties of the trees of the forests primeval impressed the writers. The same impression of admiration arose from the multitude and variety of the animals, birds and fish which Tewksbury had in common with other towns. Some of the quadrupeds are now extinct.

The abundance of fish made Wamesit the capital at one time of the tribe after which it was named. The Merrimac is "the Surgeon River." In this river, the Concord and the Shawshen, and in their numerous tributaries, abounded all the kinds of fish known to New England waters. In former days the northwestern part of the town was known as "Shad-town," and apprentices stipulated that they should be

and only so often upon the royal salmon or upon shad. The southern portion was for years called "Pigeon-town," from the numerous pigeons which frequented those parts. At every town-meeting, from 1743 till 1830, fish Reeves, wardens or "fish cares" were appointed. The following is the first vote: Stephen Cogswell and Samuel Hunt were chosen a committee "to see that the fish have free passage up and down those streams where they usually pass to spawn." Soon after the founding of Lowell, the manufacturing interests, by polluting the waters, left the committee without occupation, and it ceased to be elected.

As late as August, 1760, about which time the savage beasts disappeared, was killed in Wilmington the last wild bear in that vicinity. "It was shot by Ephraim Buck, from beneath the branches of an ancient oak, now standing, near the road leading from Wilmington Centre to the east part of the town." (Drake's Middlesex, Wil. by L. C. Eames.)

Interesting is this vote passed December, 1739: "Voted to chose two men to take care that the deer in this town be not destroyed contrary to the last law made in their behalf." Josiah Baldwin and Samuel Trull have the honor of being elected the first of a long list of deer Reeves which ends about 1777.

The following vote shows the abundance of small game compared with its scarceness to-day: 1742, "voted a town rate of £25 old tenor to pay the bounty laid on gray and ground squirrels and black-birds which are caught in the town." Bounties for fiercer animals were not unknown, for in 1757 an order for six shillings was paid John Ball for killing one wildcat; and in 1758 Jonathan Kittredge was paid ten shillings for one killed—the last of which there is historical record. There was a bounty on crows also, whose rate rose and fell with the times. In 1791, "Voted a bounty for killing crows, 9d. per head for old ones, and four pence ha'penny for young ones killed by the inhabitants of this town in the town: Voted also that the heads be brought to the selectmen or town treasurer to be examined, and if they suspect their being killed in the town, then the person bringing them shall go to a justice of the peace and swear that the crows were killed in the town and bring a certificate that he thus swore."

In 1814 it was voted to let fishing privileges to the highest bidder: \$50 was paid for the privilege formerly owned by Dr. Worcester at the northwest

upon the town records, supplemented by such remarks as will explain them.

The sound of the coming strife is heard in the vote March 4, 1861, "to instruct the School Committee to cause the Constitution of the U. S. to be read in each of the public schools of Tewksbury once at least each term." They also voted, March 6th, the same notable year, to raise more money and adopted the following report of a committee raised at the previous meeting and consisting of George Lee, Elijah M. Read, Jonathan Brown, D. G. Long, Elbridge Livingstone:

"That the town appropriate the sum of \$2000 and that a committee consisting of the Selectmen and four other citizens be appointed to disburse this appropriation among the volunteer citizens of Tewksbury in such manner as in their judgment the circumstances may require. It being understood that out of said appropriation an outfit and a reasonable amount of pocket money be provided for all volunteers from Tewksbury, and that the families of the absent volunteer shall be cared for, and also that this committee shall also look after their future wants and necessities during their enlistment and also that the compensation of the said volunteer be increased to twenty dollars per month for the time of their actual service." They also voted and chose the following named gentlemen to act in connection with the selectmen in distributing the above appropriation: N. P. Cole, B. F. Spaulding, William Grey, John P. Taylor.

This committee reported at the next annual town-meeting, March 3, 1862, as follows:

"Your committee entered upon their new and unusual duties with a desire to do justice, as well as exercise benevolence towards our young men, who, at this crisis in our country's march, so nobly stepped forward to protect the homes and the institutions of this great and favored people. Neither were they unmindful of their duties to those who, though quietly at home, so willingly supplied the means.

"By a vote of the town each man enlisting into the U. S. service was to receive from the town a sum sufficient to make his wages twenty dollars per month.

"On the 23d May last the legislature of Mass. passed an act rendering nugatory all acts of towns for increased pay of wages to volunteers beyond the term of three months for any individual.

"This deprived a majority of our volunteers of any increased pay.

"At the early stage of our national trouble, our State, as well as our National Government, was not fully prepared to uniform and fit out troops as fast as the exigencies of the case seemed to require.

"Hence the importance of towns and individuals to interest themselves to provide the comforts and furnish necessities to our volunteers and their families. To this end the attention of your committee was directed more especially to see that each man had the necessary clothing and a small amount of money when he should march to the seat of war. In the act above referred to, the State made ample provisions for the families of volunteers, which relieve your committee of that service.

"The act of the town made it the duty of the committee to distribute aid to the volunteers according to their judgment of their several necessities.

"They furnished six persons with clothing and necessary articles for the camp, to the amount of one hundred and eighteen dollars and eighty cents (\$118.80) thirty-three persons with pocket-money at ten dollars each (\$10), three hundred and thirty dollars (\$330), and two persons with two dollars each, four dollars (\$4), to defray their expenses to Boston to enlist, making the total amount paid and authorized to be paid, of \$142.80.

"It may be proper to state here that quite an erroneous opinion, for a time, seemed to prevail among some of the volunteers and their friends, to wit: that the town had voted to pay each volunteer ten dollars, irre-

CHAPTER XXVIII.

TEWKSBURY.

THE CIVIL WAR—CIVIL AND GEOGRAPHICAL.

THE part played by the town in this tremendous conflict is best seen from the reports and votes spread

spective of the judgment of the committee; this, as well as other erroneous views that obtained currency, increased their labor by requiring frequent explanations.

"Ten dollars have been paid, or authorized to be paid, to each volunteer or his authorized agent or guardian, who has applied for it and furnished satisfactory evidence that they have been lawfully enlisted in the volunteer service of the U. S., except one who was aided to the amount of eight dollars and ninety-three cents (\$8.93), for needed articles, but no money. One made no application.

"The base of the action for granting aid was evidence that the volunteer had his residence in Tewksbury at the time of his enlistment.

"The subjoined tabular statement exhibits the name of each volunteer or person aided from Tewksbury, together with the number of the regiment and the description of the battery, squadron or company to which they are attached, so far as could be ascertained, also such other information relating to their condition as is in possession of your committee.

"Your committee respectfully requests to be discharged from further service, and recommends the selectmen be authorized to perform the remaining duties for the committee.

"B. F. SPAULDING, *Chairman.*"

Meanwhile the town was alive with efforts to recruit the ranks of the army and sustain that army in the field. As will be seen from the lists of her soldiers in this contest, Tewksbury had men among the first in the ranks, notably in the renowned Sixth Massachusetts, some of whom still live to tell the tale of the celebrated march through Baltimore.

July, 1862, came another call for troops, on which the town at once acted, as thus recorded:

"July 28, 1862.

"Whereas, by Proclamation of the Pres. of the U. S., an addition to the forces now in the service of the country, of 300,000 men, is required and ordered, and Whereas, of the whole number to be raised, 15,000 is set down as the portion of Mass., and Whereas, by Proclamation of the Gov. of the State, eleven men is the number assigned to the town of Tewksbury as its quota of the above force, therefore,—

"Voted, That a bounty of \$125 be appropriated to each of said eleven men, who shall enter said service from this town, to be paid to them when mustered in.

"Voted, That the Treasurer of this town is hereby authorized to borrow a sum of money not exceeding, in amount, \$1500, on such time as he may deem best, etc.

"Voted, That Clerk and Treas. spread these votes on their respective records, the names of recruits under this call and the amounts paid them each."

This was July 28th. In less than a month another meeting was held to act upon still another call for "three hundred thousand more." Similar resolutions and votes were passed, as on the previous occasions; \$100 was voted to each man enlisting for nine months, and the treasurer was authorized to borrow \$1500 additional.

Next month, November 4th, at another meeting, it was decided to pay all expenses attending enlistments.

Coming to the next annual meeting, April, 1863, the celebrated proclamations of Governor Andrew and President Lincoln for a day of humiliation, fasting and prayer are spread upon the records of that solemn time after the usual report.

November 3, 1863, finds the town again convened to respond to the third call of the President for 300,000 troops. It is a pathetic reminder of the spirit which filled the Republic in her adversity to notice that, before even electing the moderator, by solemn vote

they called upon the Rev. Richard Tolman to open the meeting by prayer.

Here are the votes which pertain to the great conflict, then raging throughout the land: "That a bounty of \$200 be paid to each volunteer soldier on being mustered in the United States service, also that the town choose a committee to make an assessment on each individual of his proportion necessary to be raised for this purpose;" "that a meeting or series of meetings be called by the selectmen as they may think best to encourage enlistment;" "that the same committee that is appointed by the Governor to enlist volunteers for this town, do assess and apportion to each individual their proportional part necessary to raise the above amount."

The next important action was in the meeting of May 30, 1864, when they voted to pay \$125 to each enlisted man that shall be mustered into the military service of the United States from this town the ensuing year. Ten men were required to fill the quota. The treasurer was authorized to borrow \$1250 to meet demands. The town then seems to have made an effort for this final demand upon its resources with success.

Immediately after the town-meeting a citizens' meeting was organized by choosing Leonard Huntress chairman. These rallies were kept up with great enthusiasm by men prominent in town affairs and from all parts of it till the quotas were filled. The first meeting voted "that the assessors be required to assess the amount of \$1250 on the tax-payers of Tewksbury as a voluntary tax for the purpose of securing the requisite number of men that may be called for by the President, from this town;" and that Elijah M. Read be treasurer to receive all the money of the several collectors chosen at a previous meeting.

The ladies during these severe and trying experiences did their part by gathering necessities and luxuries to send to the men defending the flag on distant battle-fields or bearing pain for it in remote hospitals. Here, as elsewhere, all classes were fused into one by ardor for the common cause—union and freedom.

The end came at last, even sooner than expected, in the annual meeting of April, 1865, when, after reporting that the town debt at that date was \$8932.32, the chairman, Leonard Huntress, appended to the report of the selectmen these remarks:

"The selectmen, in addition to the foregoing report of receipts and expenditures, desire to call the attention of their fellow-citizens, in a few brief words, to matters showing more especially the town's relation to the country.

"The war has existed four years. Every call made upon us for men to put down the rebellion has been honored. Our quotas are all full. We have also a surplus to our credit of two men.

"The end now appears to be so plainly drawing nigh that we are in hopes no additional calls will be made. In fact, the spirit of liberty and of patriotism seems to be doing for the army in these last days so good a work, that we believe our ranks will be kept full.

"Since April 1, 1864, this town has furnished twenty-four men. The last one who went was our fellow-townsmen, Anson B. Clark.

HISTORY OF MIDDLESEX COUNTY, MASSACHUSETTS.

William F. Whittemore, 12th D. George B. Spaulding, 13th D. Thomas Adams, 24 H. A. A. Henry Sottang, 29th I. Abhioud C. Abbott, 29th A. Jesse C. Osgood, 29th A. Edmund J. D. Hunkins, 29th D. William H. Trull, 29th D. Charles O. Shedd, 29th F. William Kirwin, 29th E. Lowell Davis, 29th C. Thomas Davis, 29th D. Charles A. Orcutt, 29th D. Jesse Sumner, 29th D. John Cornick, 33d A. Edward Ballard, 33d A. Daniel A. Kendall, 33d A. Enoch B. Phelps, 33d A. William L. Jacques, 33d F. Abner A. Shedd, 33d F. Thomas McGovern, 38th B. John Dyer, 59th C. James R. Daley, Vet Res Corps.

Daniel Pickering, Vet Res Corps. John Sullivan, Vet Res Corps. Alonzo D. Marshall, 7th Bat. Alonzo C. Tyler, 2d I. John W. Smith, 11th Bat. Lyman Lane, 2d C. Thomas Manning, 2d C. Herman Marshall, 29th B. Henry Kittredge, 29th D. James J. Trow, 1st Cav. C. Charles M. Hunkins, 29th F. Samuel J. W. Livingstone, 2d E. William Duffee, 24th B. Riley Davis, 17th B. James H. Fletcher, 2d. Albert Stackpole, 6th G. Samuel W. Dexter, 10th 2. Stephen C. Field, Vet Res Corps. Josephus Stone. John M. Bryant, Navy. Jonathan Brown, Contract Surg. James L. Williams, 6th. Zula M. Saunders.

"Of those that went in the winter of 1862-64, four are known to have been killed. William Adams, a Veteran of the Middlesex Regiment, was killed at the Battle of the Wilderness. He was a good soldier, a correct officer, and an exemplary and upright man. He died after a brief sickness, beloved, we believe, by the whole command."

"The Middlesex Regiment were not citizens of this town. Their home was Prince Edward's Island. Temporarily at war here, they enlisted in the Seventh Battery, and during the last warm season they all died near the mouth of the Mississippi River. For all of these brave ones, and for those who have fallen before them, the town does most tenderly cherish the memory of their gallant and heroic deeds."

"The Middlesex Regiment were not citizens of this town. Their home was Prince Edward's Island. Temporarily at war here, they enlisted in the Seventh Battery, and during the last warm season they all died near the mouth of the Mississippi River. For all of these brave ones, and for those who have fallen before them, the town does most tenderly cherish the memory of their gallant and heroic deeds."

At the close of this report Mr. Huntress says:

"We would therefore suggest for the current year:
 "The report of the Middlesex Regiment, 1864, per day \$1200
 For Schools 1200
 For the Middlesex Regiment, 1864, per day 1200
 For the Middlesex Regiment, 1864, per day 1200
 And the county tax is 660
 And the county tax is 3000
 Amounting to \$10,760

"We think the tax-payers will prefer to pay that amount promptly rather than attempt to stagger under them."

"The Town will understand that these are only suggestions and will treat them accordingly."

"LEONARD HUNTRESS,
 "Chairman of the Selectmen."

A vote was passed "to render thanks to him and his associates for the efficient services of the past year in procuring troops to fill our quotas." They voted also "to assess the present year \$3000, that being the amount paid as bounties to volunteers."

With such a spirit, no wonder that the town in a very few years paid its war debt and resumed its wonted prosperity.

The list which follows gives the names of probably all the men who served the town in the War of the Rebellion. It is taken from the official record of Tewksbury.

	Amel Williams, 3d Cav.

Several men as Alonzo Marshall entered the Seventh Battalion, which was formed from Reg. 6th, Co. G.

Little of general interest remains to complete this sketch, but a few matters of more than transient importance are noted in the order of their occurrence.

In 1868 a second movement began for a division of the town by annexing nearly 1000 acres of the north-westerly part to Lowell. This was completed after strenuous opposition from the town in 1874. The last division of the town was in 1888, when about 200 acres were lost to Lowell to the regret of the old town.

November, 1870, it was decided to repair the Town Hall, but in March, 1875, it was voted to build a new one, 33x60 feet, at a cost of \$3000, in which a vault was to be constructed at an expense not exceeding \$700. This was done on the site of the old one, which was sold. The building committee was Elijah M. Read, Zephaniah P. Foster and Nathaniel Trull. The final cost was \$3896.12.

Tewksbury in 1875 came into the Nineteenth Representative District, which consisted of the towns of Chelmsford, Tyngsborough, Dracut and Tewksbury, and contained 1258 legal voters, who elected one Representative to the General Court.

At the November meeting in 1876, \$500 was appropriated for the purpose of improving and beautifying the centre of the town, the first of a number of similar appropriations. The committee to expend this money was George A. Kittredge, Enoch Foster and Joel Foster.

The gentleman at the head of this committee was the founder of the

PUBLIC LIBRARY, which the town voted to establish at the November meeting a year afterwards, 1877. Mr. George A. Kittredge was the first chairman of the Board of Six Trustees, by whom the library is managed. Since the death of Mr. Kittredge, his brother, Mr. J. C. Kittredge, has held this position. To both

¹ Unassigned Recruit.

² Unattached Heavy Artillery.

of these gentlemen the library is indebted for numerous gifts of books. In March, 1878, and yearly from that date, the town voted the dog tax to the support and increase of the library. In March, 1879, an appropriation of \$100 was granted for the same purpose. Every year since, but one, the town has given a sum in addition to the dog tax varying from \$100 to \$250. The shelves now, 1890, contain 3326 volumes, and readers are furnished with the popular magazines. Patrons in remote parts of the town have books delivered at a point near their home. The circulation of books for the year ending February 1, 1890, was 7171, including a few magazines, the largest number ever used in one year. Many competent judges have deservedly praised the selection of books, which includes the best of every class of literature, and which furnish a valuable and increasing help to the work of the schools. Perhaps some affluent native of Tewksbury who reads these pages, may be led to furnish a fitting home for these literary treasures. There are few better ways to perpetuate a good and ancient name, or to render money a permanent source of good, than the establishment and endowment of Public Libraries, which make accessible to all the people the best that has been thought and written in all times.

To trace the history of even a small New England town like Tewksbury shows that it is representative of the great type to which it belongs, a form of society and government unsurpassed by any the world has ever seen. Even this comparatively small town illustrates the principle on which the master historians of to-day proceed in the study of the great drama still unfolding—that the local history should furnish the beginning which ends in the universal. Tewksbury stands connected with the great world wide current. The town had a share in every change and movement of the land. Her social life was part of the life of the day. Often a vote, a phrase, a single word or name from her records brings up a past which belonged to that entire ancient world which seems to most men like the stuff dreams are made of. Even here the old adage is true that "Every road leads to Rome."

LIST OF MODERATORS OF THE TOWN OF TEWKSBURY—FIRST MEETING JANUARY 14, 1794-35.

1735—Lt. Daniel Kittredge; March, Samuel Hunt, Jr., William Brown; May, June, July, November, Lt. Daniel Kittredge.
1736—March 29th, Joseph Kittredge; June 10th, November 22d, September 13th, Daniel Kittredge.
1737—March 7th, May, September, Lt. Daniel Kittredge; October 6 Joseph Kittredge; December 22d, Lt. Daniel Kittredge.
1738—February 16th, March 6th, May 16th, Deacon Daniel Kittredge; August 31st, Joseph Kittredge; November 27th, Capt. William Brown.
1739—March 5th, Deacon Daniel Kittredge; March 9th, Capt. Peter Hunt; May 24d, Capt. William Brown; September 4th, November 27th, Deacon Daniel Kittredge.
1740—March 3-10th, adjourned May 20th, Deacon Daniel Kittredge; October 8th, Capt. William Brown; December 10th, adjourned to 17th, Deacon Daniel Kittredge.
1741—January 24, May 15th, June 15th, Deacon Daniel Kittredge; November 4th, Lt. William Brown.
1742—January 19th, Joseph Kittredge; March 1st, adjourned to March 5th, March 24th, Lt. William Brown; May 18th, Deacon Joseph Kitt-

redge; October 4th, adjourned to the 29th of December, Lt. William Brown.
1743—March 2d, April 12th, May 20th, September 12th, Lt. William Brown; November 14th, Dea. Joseph Kittredge; December 6th, Lt. William Brown.
1744—March 5th, 30th, May 23d, June 5th, September 7th, November 13th, Lt. William Brown.
1745—March 4th, adjourned to March 18th, April 11th, Capt. Peter Hunt; May 23d, September 23d, November 23d, Lt. William Brown.
1746—March 4th, 25th, May 23d, Capt. Peter Hunt; September 23d, Lt. William Brown.
1747—March 2d, Capt. Peter Hunt; May 20th, Lt. William Brown; September 17th, Lt. William Kittredge.
1748—March 7th, Capt. Peter Hunt; March 29th, Thomas Clark; May 20th, no name; September 13th, William Kittredge.
1749—March 6th, William Kittredge; May 12th, Stephen Osgood; September 12th, William Kittredge.
1750—March 5th, Lt. William Kittredge; May 17th, Dea. Joseph Kittredge; October 2d, William Brown.
1751—March 4th, adjourned to March 11th, Thomas Clark; May 14th, Thomas Marshall; September 19th, William Brown.
1752—March 2d, Thomas Clark; May 11th, Joseph Kittredge; September 21st, Thomas Clark; December 8th, John Chapman.
1753—March 5th, Thomas Clark; May, no name; June 15th, Thomas Marshall; September 13th, Wm. Brown.
1754—March 4th, Wm. Brown; March 19th, Dea. Joseph Kittredge; May 15th, October 15th, Wm. Brown.
1755—March 3d, Wm. Brown; September 16th, Dea. Joseph Kittredge.
1756—March 9th, Capt. Wm. Brown.
1757—January 12th, John Chapman; March 7th, Capt. Wm. Brown; May 10th, Joseph Brown; September 29th, Capt. Wm. Brown.
1758—March 6th, October 2d, Abraham Stickney.
1759—March 5th, May 11th, William Kittredge; September 27th, Capt. Wm. Brown.
1760—January 17th, adjourned to January 28th, Wm. Kittredge; March 3d, Capt. Wm. Brown; March 24th, Deacon Abraham Stickney; July 21st, October 6th, Capt. Wm. Brown.
1761—March 2d, October 19th, Capt. Wm. Brown.
1762—March 1st, Capt. Wm. Brown; May 20th, Stephen Osgood; September 29th, December 2d, Capt. Wm. Brown.
1763—March 7th, Dea. Abraham Stickney.
1764—October 2d, James Thorndike.
1765—March 4th, Capt. Wm. Brown; March 25th, Lt. Wm. Kittredge; May 9th, Capt. Joseph Kidder; September 30th, Wm. Kittredge; October 14th, Capt. Wm. Brown.
1766—March 3d, Capt. Wm. Brown; May 13th, June 17th, September 15th, Thomas Marshall.
1767—March 2d, Lt. Wm. Kittredge; March 19th, Capt. Wm. Brown; May 14th, Lt. Wm. Kittredge; September 14th, Ezra Kendal.
1768—March 7th, Lt. Wm. Kittredge; May 16th, Ezra Kendal; September 29th, Aaron Beard.
1769—March 7th, Thomas Marshall; September 4th, Ezra Kindell; October 27th, Aaron Beard.
1770—March 5th, Timothy Brown; May 24th, Lt. Wm. Kittredge; September 20th, Ezra Kindell.
1771—March 4th, Timothy Brown; May 24th, Aaron Beard; September 9th, Lt. Wm. Kittredge.
1772—March 2d, Timothy Brown; March 30th, Jacob Shed; May 21st, Wm. Brown; September 29th, Eldad Worcester; December 7th, Lt. Wm. Kittredge.
1773—February 8th, Jonathan Brown; March 1st, David Bailey; May 11th, Aaron Beard; July 2d, September 20th, Wm. Brown; October 18th, David Bailey.
1774—March 7th, Timothy Brown; May 23d, Lt. Wm. Kittredge; September 21st, David Bailey; November 23d, Wm. Brown.
1775—January 23d, Wm. Brown; March 6th, David Bailey; May 23d, Ezra Kindal; August 2d, Aaron Beard; October 30, Ezra Kindal.
1776—March 4th, Ezra Kindal; May 20th, Aaron Beard; June 24th, Wm. Brown; October 14th, November 20th, Ezra Kindal.
1777—March 3d, Ezra Kindal; March 17th, Aaron Beard; May 23d, September 8th, Ezra Kindal; September 29th, Aaron Beard; October 21st, Ezra Kindal; December 4th, Wm. Brown.
1778—March 2d, Aaron Beard; March 16th, April 9th, Ebenezer Whittemore; May 12th, Ezra Kindal; May 25th, Aaron Beard; June 26th, Samuel Marshall; September 14th, Capt. John Trull; September 23d, Jacob Low.
1779—January 21st, Ezra Kindal; March 1st, Jacob Low; May 21st,

- 1862—March, July, Aug., Nov., Leonard Huntress.
 1863—March, Nov., Leonard Huntress.
 1864—March, May, Nov., Leonard Huntress.
 1865—April, annual, Nov., Leonard Huntress.
 1866—March, Leonard Huntress.
 1867—March, Nov., Leonard Huntress.
 1868—March, Nov., Leonard Huntress.
 1869—March, Leonard Huntress; Nov., Joshua Clark.
 1870—March, Nov., Leonard Huntress.
 1871—March, Leonard Huntress; March 27th, Z. P. Foster.
 1872—March, Joshua Clark; May, Oren Frost; Nov., Samuel L. Allen.
 1873—March, Hon. Thomas J. Marsh; Nov., Oliver R. Clark.
 1874—Jan., Leonard Huntress; March, Hon. Oliver R. Clark; April, B. F. Spaulding.
 1875—March 29th, Nov., Oliver R. Clark.
 1876—Jan., Elijah M. Read; March, Nov., Oliver R. Clark.
 1877—Jan., Thomas J. Marsh; March, April, Oliver R. Clark; May, Leonard Huntress; Nov., Oliver R. Clark.
 1878—March, Leonard Huntress; March 25th, April, Oliver R. Clark.
 1879—March, Oliver R. Clark.
 1880—March, Oliver R. Clark; Nov., Enoch Foster.
 1881—March, Oliver R. Clark.
 1882—March, Oliver R. Clark; April, Leonard Huntress; July, Enoch Foster; Nov., Oliver R. Clark.
 1883—March, Nov., Larkin T. Trull (2d).
 1884—March, June, Sept., Albert C. Blaisdell.
 1885—March, Albert C. Blaisdell.
 1886—March, John L. Fleming.
 1887—March, John L. Fleming; March 21st, Calvin Shedd.
 1888—March, Samuel Sewell.
 1889—March, Joshua Clark.
 1890—March, June, John L. Fleming.

TOWN CLERKS OF TEWKSBURY.

1735, Nathaniel Patton; 1736-44, Stephen Osgood; 1745-46, Richard Boynton; 1747-55, John Chapman; 1756, Stephen Osgood; 2 1757-58, John Chapman; 1759, Stephen Osgood; 1760-63, Wm. Hunt; 1764, evidently Wm. Brown, Jr., but no record of election; 1765, Wm. Brown, Jr.; 1766, David Bailey; 1767-70, 1771-77, John Needham; 1778-99, Newman Scarlett; 1799, Thomas Clark, to fill vacancy; 1800-1, Thomas Clark; 1802-4, Samuel Worcester; 1805-8, William Simonds; 1809-22, Josiah Brown; 1823-24, Hermon Marshall; 1825-28, Josiah Brown; 1829-33, William Rogers; 1834-35, John G. Moor; 1836-40, Aaron Frost, Jr.; 1841-44, Enoch Foster; 1845-48, Aaron Frost, Jr.; 1849-54, Jonathan Brown; 1855-58, Alvin Marshall; 1859-60, Wm. H. Gray, removed from town October; Oct., 1860, Enoch Foster, appointed by selectmen 1860-68; Enoch Foster, resigned April 6, 1868; May 1, 1868, Samuel L. Allen, appointed by the selectmen; 1869-72, Samuel L. Allen; 1873-78, Henry E. Warner; 1879-84, William H. Lee; 1885-90, John H. Chandler.

1877—H. G. Pillsbury, 3 years.
1878—Rev. Geo. T. Raymond, 3 years. Oct. 8, 1878, Wm. H. Lee chosen in place of Geo. T. Raymond, resigned.
1879—March, Rev. Edward W. Fido, 3 years; J. F. French, 2 years; Wm. H. Lee, 1 year.
1880—Wm. H. Lee, 3 years.
1881—Joshua F. French, 3 years. July, 1881, Geo. W. Trull to fill vacancy by resignation of J. F. French.

1798—William H. Lee, 2 years; Albert S. Moore, 2 years.
 1799—Rev. Edward W. Pride, 3 years.
 1800—Albert S. Moore, 3 years.

NOTE.—For many of the facts connected with the almshouse in the early part of this history the writer is under obligation to the superintendent, C. Irving Fisher, M.D., for later years, and to Mr. Charles B. Marsh, the clerk, for the earlier history.

BIOGRAPHICAL.

CAPTAIN JOHN TRULL.

Many names appear on the town record of men prominent in their day of whom the present generation would gladly know more. Such among others, are Nathan Shed, Captain John French, John Whiting, Thomas Clark, of the earliest times, Captain Joshua Baldwin, Dea. Ezra Kindell, who survived most all his generation, dying at 97, Colonel Jonathan Brown, of the Revolutionary period, and "Squire" Brown and William Symonds of late days, and others too numerous to mention. Alas, little but their names and graves remain except the record of the part they played in the body politic.

Readers of this sketch will recall, however, the name of Captain John Trull, as often appearing, especially during the Revolutionary days. He was born in Billerica in 1729, and died in Tewksbury, Oct. 5, 1791, aged 62 years. His wife was Esther Wyman, born in Woburn, 1740, a member of the family so celebrated in the history of that town. It was the house of a Wyman which became the shelter for Adams and Hancock on the great day of Lexington and Concord, April 19, 1775. Captain Trull had a family of thirteen children, all of whom survived him except his eldest son John, who died in the public service in New York in 1782 at the early age of 21 years. This son is said to have enlisted in response to the earnest and enthusiastic appeals of the Captain, his father, for recruits as he drilled the company on the old muster field on Stickney Hill, now on the farm of Jesse N. and Frank B. Trull. The young John is described in the State muster roll dated 1780, as being five feet six inches high, with a half inches high, having dark hair and gray eyes. The Captain had a second John born a year after the death of the first, who died in 1867, at the ripe age of eighty-four. How near this brings Revolutionary days to the present generation.

The widow of Captain John survived him till Dec. 11, 1800, when she was about 60 years of age.

ninety-one years. She is well remembered by her grandchildren, to one of whom, Mr. Jesse Loring Trull, the writer is indebted for many of these reminiscences.

JESSE TRULL.

The fifth child of Captain John Trull, was Jesse Trull a man of great public spirit. He was born in Tewksbury, October 11, 1767, and died in his native town December 20, 1853. Beside serving the town in various minor offices he represented the town nine years in the Great and General Court between 1810 and 1826, no representative being sent the other years of that period. In connection with his legislative experience the following incident, contributed by his daughter, Mrs. John Clark, illustrates the man and the social life of his day. It was the custom after his election for the successful candidate to call together his townsmen and treat them to toddy and liquor. After his election one year, Mr. Trull, convinced of the injurious effects of the custom, determined to honor it in the breach. When his constituency had assembled as usual, he arose—tall and dignified—and told them that he thought the custom wrong and that his conscience would not permit him to give them another drop of liquor, but instead he would give them a clock to be placed in the inside of the new church. There was some complaining, but he was firm in his stand for temperance. The clock was presented, and is still ticking, a constant memorial of his adherence to a cause then held in contempt. It is significant of the social life of those days that Mr. Trull was not again elected. Another illustration of the man and the times occurred when Mr. Trull undertook the raising of his house. The friends and neighbors were assembled, but no liquor was forthcoming. They refused to do a stroke of work till a supply was sent for from "Squire Brown's" and furnished to them. In those days this was the only way of raising new buildings.

Mr. Trull, as already stated, served on the committee for building the new meeting-house in 1824, and at the auction of the pews bid off the one which sold highest at \$133, a round sum in those times. He was also one of the committee which purchased the present poor-farm.

Till quite late in life he attended and warmly supported the church at the centre, but in the well-known Knapp revival of 1842 in Lowell he, with a large number of his family, was converted and united with the First Baptist Church of that city. When the Baptist Church at North Tewksbury was founded the next year he with his four sons and their wives became the chief founders and supporters of that interest. It was a time for sacrifice and self-denial. He may be considered the ancestor to whom this family traces its position in the community.

Mr. Trull was twice married, first to Mercy Griffen, who died in 1797, and then to Olive Thorndike, with

John A. Kittredge

whom he spent a happy and respected old age. By his first wife he left a daughter, Mrs. Mercy Trull Foster, who died in 1880. The following were the surviving children of his second marriage: Mr. John Trull, of Boston, in his eighty-ninth year; Mr. Herbert L., a public-spirited man, died 1882; Deacon Nathaniel Trull, the first deacon of the Baptist Church and representative of the town to the Legislature of 1852; Mr. Jesse L. Trull and Mr. Larkin T., and one daughter, Mrs. Elizabeth R. Clark, all of Tewksbury.

Mr. Jesse Trull was of the old New England type, an indefatigable worker, abounding in enterprise and energy, whose character and judgment were held in respect by the town.

The writer is indebted to Mr. J. C. Kittredge, of Gardner Road, Brookline, for the following sketch of his father. Mr. Kittredge was descended from one of the oldest families in town. The ancestor, John Kittredge, was educated in England (from whence he came) in a liberal manner. His son, Doctor John Kittredge, was probably the first male child born in the present Tewksbury in 1665-6, January 24, in a house which contends with the old Hunt homestead as being the oldest in town. He was buried in the South Cemetery, and his tombstone has this inscription: "Here Lyes the body of Doctor John Kiterig, who Departed This Life Aprill the 28, 1714. in ye 49th year of his age."

JEREMIAH KITTREDGE.

Jeremiah Kittredge was born at the old homestead, opposite Round Pond, September 5, 1796, and died in Boston, November 5, 1855.

He was the eldest son, and second of five children of Jeremiah and Annah Kittredge.

The family is one of the oldest in Billerica and Tewksbury, John Kittredge, an ancestor, having been one of the first settlers of Billerica in 1652.

When Mr. Kittredge was a boy the youth had no such opportunities for education as are to be had now, for teachers were but imperfectly trained, and terms were very short.

He remained with his father until he was twenty-one years of age, and then started forth, with twenty-five cents in his pocket, and walked to Charlestown, for employment. He entered there the grocery store of Skinner & Herd, where he remained several years.

He was faithful to his employers then as always, and did his best; by serving them he served himself; and good habits, with diligence and frugality, were not wanting. After a proper apprenticeship he, with a young man by the name of Wyman, in the same store, established themselves in the grocery business, opposite the Boston and Maine depot, near the junction of Haverhill and Charlestown Streets.

The venture was successful, and, after a few years, the firm was dissolved.

Mr. Kittredge then moved to the corner of Hanover and Union Streets, the subsequent site of Rev. Dr. Neal's Baptist Church, now occupied by the Blackstone National Bank. A wholesale importing business was carried on here; and that he might extend it, vessels were built for the purpose of importing.

These were sent to the West Indian ports, Jeremie, Jacmel, Saint Thomas and other places in the West Indies, as well as to the Baltic ports.

The principal vessel was the barque Lexington, built on land in South Boston, purchased for the purpose. Manufactured goods and groceries were exchanged for cotton, logwood, mahogany, coffee and other commodities.

After staying in this store till about 1835, he moved to an office situated on the north side of Commercial Street, where he remained until his death.

Here he extended the business, adding naval stores to the otherwise many interests. Camphene (a burning fluid popular at the time) was invented by him, and from which the returns were lucrative. In this part of the business he associated with himself several partners, mostly relatives, whom he in this way benefited as well as being helped by their efficient services. He possessed that characteristic of genius, namely, the power of selecting subordinates well.

The naval-store department brought him into intimate relations with Southern people, whose acquaintance he found agreeable and friendly. Spirits of turpentine, tar, pitch, rosin and all that is found in that connection were manufactured and sold by him. It can be readily seen, from what has been written, that the business was extensive, and one that could have been invented and conducted only by a superior man; one gifted extraordinarily in a commercial way.

He was essentially, and to the heart's core, a man of business. His aim was single, and he pursued it with unswerving energy. Fond of literature and science, he could only gratify his taste for them by attending lectures, on account of the limited leisure at his disposal.

He never entered political life, not accepting even of a public business trust, although solicited to do so; his known integrity and mercantile ability making him a very desirable candidate for such a position. He was one of those many self-made men found in New England and elsewhere, the fruits of whose toil seem to put to shame many who have been favored with far greater advantages.

In those days mercantile enterprises were attended with more risks and trials than at present, although competition was not nearly as great. Fire insurance, for one thing, was not as general or effective as now. Mr. Kittredge met with several losses from the consuming fiend. When he began his career, and indeed until the time of his death, Boston was a much smaller, and a very different place from what it is at the present day.

He lived in the days of Webster, Clay and Calhoun, and died previous to the great Civil War earthquake, but not before the signs of the times were pointing toward such an awful event.

In 1843 he purchased from the other heirs their right in the farm stood presently in Tewksbury; and in 1854 he removed the old house, which had stood since early in the eighteenth century and built the capacious structure, with barn, at present standing.

It was his intention to make Tewksbury his summer residence, but unfortunately death came before he had an opportunity to do so.

Mr. Kittredge was twice married; first to Miss Lydia Wood, of North Tewksbury, October 19, 1824, and to Miss Clarissa J. Chapman, of his native town, also, October 19, 1842. From the first marriage there were three children, two daughters and one son; and from the next, two sons, George Albert and Jeremiah Chapman; of the entire family, the last name alone survives.

LEONARD HUNTRESS.

Although not a native of this town, no man was better known to the present generation than Leonard Huntress. Born at Rochester, N. H., November 22, 1811, his boyhood was spent in Portsmouth, of that state, where he learned the trade of printer. On attaining his majority, 1832, Mr. Huntress came to Lowell, and was employed in the office of the *Lowell Mercury*. The year following he married Miss Lydia Anne McKinnon, of Portsmouth, N. H., with whom he spent nearly fifty happy years.

In 1834 he purchased a half interest in the *Mercury*, and afterwards, in partnership with Daniel H. Knowlton, bought the *Lowell Weekly Journal*, and united it with the former paper. This firm, Huntress & Knowlton, on January 6, 1835, started the *Lowell Courier*, which appeared as a tri-weekly until 1845, since which date it has been published as a daily. A year after the start of the *Courier*, Mr. Knowlton retired, and Mr. Huntress published the paper alone, with the assistance of several able citizens as successive editors until 1842, when ill-health caused him to dispose of it. For some eight years Mr. Huntress engaged in business, but in 1850 was elected to the Board of County Commissioners, on which he served most of the time as chairman, till 1876.

In 1842 Mr. H. removed to his farm at North Tewksbury, which continued to be his home till his death, July 19, 1885, at the age of seventy-four years.

For over thirty years Mr. H. held in Tewksbury prominent positions in its public and social life. He was fifty-three times moderator of town meetings, nineteen of which were annual. From March, 1861, to November, 1869, he was elected to his position twenty times in succession which period included the war years. Seventeen times he was chairman of the Board of Selectmen, serving in that capacity during all the war, and also as recruiting officer. Mr. H.

also served on the School Committee for several years and was frequently elected to minor official positions. The town records and the preceding sketch of Tewksbury, show the service he rendered the town and the estimation in which he was held. Mr. H. also was for the period of its existence, eleven years, trial justice of the court at the almshouse. After his retirement through failing health, Mr. H. found enjoyment in the work of his fine farm and in those literary pursuits in which he had taken a warm interest all his life. He was a fine reader, and the aid of his voice was often sought in social entertainments.

Genial, hospitable, courteous, commanding in presence, equable and tender, Mr. H. was a fine specimen of the Christian gentleman of the old school, a type too rare in any community.

As an illustration of a kind of work he was doing through life in settling disputes and estates, the two last years of his life afford an example. He spent the leisure of that period in the employ of the Locks and Canals Company in adjusting the damages to owners of land on the banks of the Merrimac, caused by the raising of the flash boards at the dam. This work involved a vast amount of labor, and required no ordinary tact and address, but was accomplished to the perfect satisfaction of the claimants for damages and of the company.

In early life Mr. H. was a very prominent member of St. Paul's Church, Lowell, in building whose edifice he took an active part. In later years he was a constant worshipper in the Baptist Church, North Tewksbury.

His surviving children are, Mr. Frank Huntress, of Boston, Mass., Dr. Leonard Huntress, of Lowell, and Mrs. George Dyer, of Washington, D. C.

OLIVER RICHARDSON CLARK.

Oliver Richardson Clark was born on the old homestead in North Tewksbury, March 16, 1819. His birthplace, the home of his brother, Deacon Joshua Clark, is part of the celebrated Winthrop's Farm which now includes the homestead of the Hunts, Clarks, Fosters and others. The Clark family is descended from the noted second minister of Chelmsford, the Rev. Thomas Clark, whose great-grandson, Deacon Thomas Clark, came to Tewksbury about the year 1744, and appears frequently in the lists of town officers. He was town treasurer for nine successive years. Indeed the years are few when a Thomas, or Joshua, or Oliver Clark is absent from the town records.

O. R. Clark was educated in the common schools of Tewksbury, except one term, which was spent in Phillips Academy, Andover, and two terms at Warren Academy, Woburn. Through life Mr. Clark enjoyed reading of the solid and also lighter kinds.

He began life as a shoemaker and cutter of shoe stock, but soon entered the business firm of Cutter & Co., Boston, dealers in mahogany and other fancy

woods. His energy and tact soon secured advance in this relation till after a few years he became a partner in the concern. Having married a daughter of the senior member of the firm, Miss Julia Ann Cutter, on Mr. Cutter's retirement Mr. Clark became chief partner, a position he retained till his death March 6, 1887.

Mr. Clark was prominent in political life. An abolitionist in early life, he became an ardent Republican on the formation of that party, to which he ever remained warmly attached. For many years he lived in Winchester, where he was one of the selectmen for ten years, one of the School Committee for seven years, many times moderator, and treasurer of the cemetery twenty years. In 1859 he represented the Sixth Middlesex district in the House of Representatives. He was a member of the Massachusetts Senate in 1861, and again in 1864. In the latter year it devolved upon him, as senior member, to call that body to order, and preside until a presiding officer was chosen. Gov. Clifford appointed Mr. Clark a justice of the peace in 1853, which office he held under successive governors till his death.

Mr. Clark returned to Tewksbury in 1872, and there was prominent, as the official list shows, in town affairs.

He was a devoted member of the Congregationalist denomination, joining the church in early life. For fifteen years he was superintendent of the Sunday School of the First Congregationalist Church, Winchester, and for many years he served the Tewksbury school in the same capacity. The title of "Deacon Clark," by which he was generally known in town, came to him from having held that office in the Winchester Church eighteen years.

Besides filling many minor offices, Deacon Clark at his death was one of the vice-presidents of the Merrimac Valley Congregational Club, and from 1886 one of the trustees of the State Almshouse, Tewksbury.

Unbounded energy, sterling Saxon sense, an indomitable will, a very sociable nature, strict integrity in business relations, ardent devotion to temperance and reform, these are among the prominent traits of one whom his associates found a kind and genial neighbor and obliging friend.

THOMAS JEFFERSON MARSH.

Captain Marsh, as hosts usually called him, was born March 7, 1805, in Exeter, N. H., where he obtained the title as captain of a militia company. There he learned, and in various places practised the trade of shoemaking. He resided successively in Amesbury, Lynn and Boston, but in 1853 he removed to Waltham, his home for several years.

The greater part of his life was spent in public office and he was identified with some of the most important movements of the time.

For nearly twenty years he was in the Boston Cus-

tom-house in various positions. In 1855-56 he was State Treasurer of Massachusetts. In early life Mr. Marsh was a Democrat of the Jefferson stamp. Naturally when the Republican party was born, he became one of its ardent and permanent adherents, and was a delegate from the old Banks district to the convention which in 1856 nominated John C. Fremont, the first Republican candidate for the presidency.

In 1857 Mr. Marsh took an active part in the political life of Kansas. He played it in a manner of which so good a judge as Mr. F. B. Sanborn wrote in the *Springfield Republican*, "his Kansas experiences . . . were creditable to him and should not be forgotten."

Capt. Marsh went to Kansas at the suggestion of Senator Wilson and George L. Stearns, then chairman of the State Kansas Committee of Massachusetts. His mission is thus well described by Mr. Sanborn: "The following letter discloses his errand:

"CHARLES ROBINSON, Esq., Lawrence, K. T.:

"*Dear Sir*—By the advice of Hon. Henry Wilson, who returned from Kansas but a short time since, we have raised a small sum to assist the Free State Party in the coming election, and have engaged Thomas J. Marsh, who will hand you this, to go to Kansas as our agent. This letter of instructions to him will inform you of our plans, and we trust he will be able to render you efficient aid in procuring such an organization of the Free State as will enable them to vote down the bogus constitution, if submitted to the decision of the people of the territory; but in any event to take possession of the territorial legislature in October next. Mr. Marsh will remain in Kansas until the October election, if he can be of any use to you.

Truly yours,

GEORGE L. STEARNS

Boston, June 30, 1857.

"This letter was written in the same week when Abraham Lincoln made a Kansas speech at Springfield, Ill., in which he said: 'Nothing but bold, wicked despotism has ruled in Kansas since it was organized into a territory. Let slavery sweep over the territories and God will sweep us with a brush of fire from this solid globe! The 'small fund' of which Mr. Stearns spoke became about \$4000, and was raised, chiefly, in Boston, by Henry Wilson, Mr. Stearns and other anti-slavery men. It was judiciously used by Mr. Marsh, and the result was, in October, 1857, a territorial legislature chosen by good majorities, which was controlled by the Free State men."

While in Kansas he acted for part of the time as adjutant general.

Shortly after his return he was appointed superintendent of the State Almshouse in Tewksbury. This was in early summer of 1858. He soon brought its affairs out of the "chaotic condition" in which he found them and began the constant improvement which has continued in and around that institution to the present day. A farm of which the *Boston Advertiser* said that an equal number of acres at the bottom of Boston harbor would be more arable was gradually changed into a state of productiveness and comparative beauty. His government of the indigent

and his conduct to his charge revealed his possession of the rare gift of discipline without the appearance of disciplining.

From early manhood Mr. Marsh was a member of the Baptist Church. Among his brethren he held many official trusts and filled many positions requiring tact and delicacy. He bore the office of deacon in the old Rowe Street Church during a part of Dr. Baron Stow's ministry, and afterward the same office in the church at Waltham. He was an enthusiastic friend of Christian missions and of all benevolent work, and in his church and among the brethren had the reputation so rare of being "too generous." Capt. Marsh left the Institution at Tewksbury after over twenty-five years as superintendent, during which time it is estimated that over \$2,000,000 of the State's money passed through his hands in a manner which allowed so good a judge as General and then Governor Butler to declare of Mr. Marsh "I believe you are an honest man."

After leaving Tewksbury Capt. Marsh returned to his native town, Exeter, N. H., where, after a brief period of repose, he died February 27, 1888, aged almost 83 years.

Genial, equable, impressively unselfish, persuasive in manner and speech, idolized by his family, loving and lovable, Mr. Marsh personally illustrated these words:

For those who love me,
For those who know me true,
For those Heaven that smiles above me,
And awaits my spirit too;
For the cause that lacks assistance,
For the wrong that claims resistance,
For the great hope in the distance,
At the close of that I am to be.

MARY F. EASTMAN.

For the past twenty years Tewksbury has been honored as the home of one of the well-known laborers in the great cause of the elevation of woman. Of one who has been the subject of many eulogiums from the pens of those of whom Colonel T. W. Higginson has said: "If you want to know what I mean by a clear and satisfactory utterance, hear Miss Mary F. Eastman lecture."

Miss Eastman has not only found a field on the platform but in the pulpit also has uttered her message with wide acceptance in "sweet and helpful words," as the Rev. Robert Collyer said of one of her

The writer is indebted to Miss Helen Eastman for this brief sketch of her sister's life:

Mary F. Eastman, daughter of Gardner R. and Mary Eastman, is a native of Lowell, Mass., but has resided in Tewksbury for many years. Her early school training was in the Lowell high school, followed by seminary and Normal school courses. It was with keen regret that she then found all New England college doors closed to her sex, and she turned to the only other school of education open to her—the teacher's profession. To this work she devoted herself as to a beloved art. She taught in the high and normal school for girls, Boston, then at solicitation of Hon. Horace Mann, she went to Ohio to aid in the work of education which he had undertaken at Antioch College, and remained until his death.

About this time, in pursuance of Mr. Mann's recommendation she was solicited by Minister Sarmiento, then representing the Argentine Republic in this country, to take charge of the great work, since so successfully carried on there, then in its inception, of introducing into the South American Republic a system of schools substantially as it had been developed in New England. Though much impelled after Mr. Mann's death, to carry out his desires, Miss Eastman, after due consideration of her youth and inexperience, declined the important work. Returning to New England she took charge of the Female Department of the Lowell High School, her Alma Mater, which had nearly two hundred pupils. After four years service, she resigned to take charge of a seminary for young ladies at Meadville, Pa., where she remained seven years. While there Miss Eastman was invited to address the students of the Meadville Theological School stating her views on the mooted question of woman's claim to the ballot. The outcome of this lecture was a change of work, and she entered the lecture-field in support of educational, political, and other reforms—with lectures on travel and on literary topics, meeting with most cordial reception from the public.

She has in the past few years prepared the biography of Dr. Dio Lewis and contributes the section on History of the Education of Women in the Eastern States, to a forthcoming volume on "Woman's Work in America."

Miss Eastman since her residence in Tewksbury has cherished a warm interest in the welfare of the town. Although leading a busy public life she has served on the school committee and has generously afforded her aid in establishing the Public Library and the Village Improvement Association.

CHAPTER XXIX.

WATERTOWN.¹

BY SOLON F. WHITNEY.

Mythical Period.—Geography—Physical Features of the Lands Within its Ancient Boundaries—Agricultural Characters of the People.

The following contributions to a history of this ancient town are the result of a movement recently made to establish a Historical Society of Watertown. The secretary of this young society is the editor of this collection of articles, the faults of which he cheerfully undertakes to shoulder, while the merits he gratefully credits to the several writers.

The editor is more and more impressed with the fact that very much of great interest to the historical student has been connected with the people of this town, many of whom, although scattered in different parts of the country still delight, like dutiful children, to refer to old Watertown as the source from which they derived ideas of personal and municipal independence, of correct moral and religious teaching, of thrift and industry, which have been of service to them wherever they have been located.

Not all knowledge is of equal worth. Not all seed produces fruit worth the raising. If valuable elements of character have been matured in this old town, first planted by Sir Richard Saltounstall, blessed by the true, independent, God-fearing parson, George Phillips, and continued by a loyal posterity, it must be of service to others, and so an honor to any to hand down the memory of it to future generations.

To study and preserve the memory of all that has been or may be of use to others from the wide domain of ancient Watertown, is the purpose of this Historical Society.

SOLON F. WHITNEY, Sec.

THE history of Watertown is important, as it is the oldest town now in the county, the town which has colonized so many other towns, and which, from its peculiar independent character and position, has served as a typical town in the organization of the state.

MYTHICAL PERIOD.—That the Norsemen colonized Iceland and the south-western shores of Greenland five or six centuries before the voyages of Columbus is a matter of history. That the claims of the Sagas that their bold sailors reached the shores of Labrador, of Newfoundland, of Nova Scotia and New England seems hardly incredible. Iceland is distant from Norway some 650 miles, from Scotland and the Shetland Isles about 500 miles, while from Greenland only about 150 miles. The vessels and the seamanship that enabled the hardy Norsemen to cross from Norway to Iceland in frequent voyages, would have enabled them, with the aid of the southern currents which pour out of Baffin's Bay along the coast of Labrador and over the banks of Newfoundland and are well marked along the coast of Nova Scotia and Maine inside of the Gulf Stream as far south as Cape Cod, to visit these New England shores. There can be little doubt but that the many vague stories of the Sagas have under them facts accomplished which the more definite language of a later period would have fixed with such minuteness of dates and measurements and careful details as to have changed the myths to veritable history. It may be mere myth,

or theory, or the faith of a dreamer that makes Watertown the chief settlement of these venturesome navigators, and the seat of a commerce in what seemed to the Icelanders and the people of the north of Europe wonderful growths of gnarled wood and vines. We have not space in this brief sketch of the history of this town, so favored by nature, so neglected as yet by man, for more than this mere allusion to the claims of new discoveries in this direction by Professor Horsford in his remarkable communication to the American Geographical Society made the last year. What is possibly true it may be difficult to prove by incontestable evidence. If true, some remains of grave, or utensil, or arms, or armor, will yet be found, though one may doubt if iron or wood would endure the changes of this climate nearly a thousand years to bear witness to former owners.

Stone walls and dams and excavations may yet establish the faith of the builder of the tower to the Norumbega of the early French and English navigators, said to have been in the Vinland of the Norseman, and possibly that the mythical city that figures on so many early maps may have been located where now are the wharves and streets of this Watertown, by the head of tide-water on the river Charles.

Even if the location of the ancient and almost mythical Norumbega in this town is a mistake, it has already invested these slopes with a wonderful poetic interest, and will lead many an investigator to turn the soil with more care and to examine the surface of the earth with the hope of possibly tracing the footsteps of former Scandinavian inhabitants. Even if the truth of these earlier navigators to priority of discovery to these northern New England shores should be well established, it would not detract from the honor due to the bold Columbus, whose faith led him to find the West India Islands, even against the derision of his most faithful followers. What Prof. Horsford claims to be so far established, he is abundantly able, with a wealth of illustration and typography and quotation from early writers and a good appearance of logical reasoning, to show.

INDIANS.—When our early settlers came to occupy these banks, there seemed to be a well established village of Indians near the falls at the head of tide-water. That the highlands along the banks from Cambridge cemetery nearly to Watertown bridge had been for a long time the dwelling-place of Indians engaged in fishing seems to be attested by the abundance of Indian remains found in the soil in the shape of stone implements of various kinds, as well as in some places evidences of Indian graves. One can repeat the answer of Thoreau with hope of finding equally good illustrations anywhere along these banks. When, on the shores of Walden Pond, he was asked where one could find Indian remains, he said "Anywhere, if one has eyes to see," as he

¹ Copyright 1899, by Solon F. Whitney.

poked out of the soil, with his foot, some Indian arrow-heads.

Geographical Location and Limits.—Watertown is pleasantly located, for the most part on the north bank of the Charles River, between Cambridge on the east and Waltham on the west. A portion of the town opposite the principal village lies on the south side of the river, next the garden city of Newton; while on the north it has Belmont, which separates it from Arlington. At present of very limited area, almost the smallest town of Middlesex County, it has Mount Auburn Cemetery, of one hundred and thirty-six acres, on its southeastern corner, and the United States Arsenal, occupying one hundred acres of its southernmost border, stretching along for a half-mile on the bank of the river. It is most compactly built about the falls, at the head of navigation of the Charles River, about eight miles from Boston, with which it is connected by a branch of the Fitchburg Railroad, by a branch of the West End Horse Railroad by the way of Cambridge, and by the main line of the Albany Railroad, a station of which is within a half-mile of the town hall. This latter station, although not within the town limits, greatly accommodates her people wishing to go to the westerly or southern portion of the city of Boston, or westward along the Albany Railroad, or southerly along the Old Colony Railroad or its branches. The town is at present only about three miles in length from east to west, and scarcely a mile in width.

It was not always so insignificant in area. The history of its location, of its boundaries at different times, of its successive losses in territory and of the causes which led to these changes is interesting and instructive, and may form a fitting introduction to a larger history.

Sir Richard Saltonstall, Rev. Geo. Phillips, and their companions, of whom we shall speak later, soon after their arrival from England, and the removal of the colony from Salem to Charlestown, probably before the middle of July of 1630, went up the Charles River, and, having found a suitable landing and convenient fields for agriculture, brought thither their servants, their cattle, of which they had liberal store, and their goods, and began a settlement, which afterwards (September 7th) was, by vote of the Court of Assistants, called Watertown.

The vote—"It is ordered, that Trimountaine shall be called Boston; Mattapan, Dorchester; and the town upon Charles Ryver, Watertown."

The location of this landing is with little doubt the same as that which continued for many years to be the town landing, shown on the map in the archives of the State, in the secretary's office,—the map of 1712. This landing, known more recently as Gerry's Landing, was called in old records and deeds as "the landing," "Oliver's landing," and "landing near Samuel's hill", is below Mt. Auburn and the Cambridge Cemetery, near the present location of the

Cambridge Hospital. It has been made quite noted by being selected as the most probable site of Lief's houses, by Professor Horsford in his claim that here the Northmen landed, more than six hundred years before the foundation of this Colony. However that may be, the reasons given by the professor for this particular landing-place for the Northmen are good *a priori* reasons why Sir Richard Saltonstall should select this spot for his landing. Traditions and all the indirect evidences of history also point to this spot as the landing, and the immediate vicinity as the location of the settlement which, we have seen, early received the name of Watertown.

It is well to dwell a little on this point, as it is the key to much given in connection with the early history. The city of Cambridge in 1883 appointed a committee of the Board of Aldermen, who made, the next winter, an exhaustive report on Gerry's Landing, accompanied with plans and authorities which places the subject beyond question.

"The landing was the original town-landing for Watertown, and, with the way leading from it, is mentioned in the early records of the town soon after its settlement in 1630, and continued a part of Watertown till annexed to Cambridge, April 19, 1754, in a grant of the General Court of the Province of Massachusetts Bay." It was here on the banks of the river that Sir Richard Saltonstall selected the site of his future home, to the north and east of the landing, on land now owned in part by the Cambridge Hospital.

In the Watertown Records, Division of Lands, p. 98, quoted as above, is the following: "Sir Richard Saltonstall, 1, one housefull of sixteen acres by estimation, bounded the north-east with Thomas Brigan (Brigham) and Robert Keie, the South-east with the river, the south-west with the highway, and the north-west, George Phillips, granted him."

When we come to consider the persons who composed the earliest band of settlers of the town, their minister, their buildings, church and houses, we shall find that here, on territory now no longer a part of the territory of Watertown, was located the town which, with the exception of the sea-ports, Charlestown and Boston, and the probable exception of Dorchester, antedates all other towns in the Massachusetts Bay Colony, and which, from its inland situation and its being the open door to all the country beyond, was "a hive from which swarmed the people who settled a large part of the rest of New England," from which have gone out continually men and women to become famous in all parts of this broad nation.

To repeat, for the sake of emphasis, the "Town" of Watertown of 1630, '31, and perhaps '32 was no part of the Watertown of to-day. The location is swallowed up in Cambridge.

THE BOUNDS OF WATERTOWN. The bounds of Watertown have undergone great changes, both in the minds of men and on the maps of the country. At first there was no idea of limit except the limit

placed by the charter and the convenience of the early settlers. By the charter the Massachusetts Bay Colony was entitled to enter upon all lands from three miles south of the Charles River to three miles north of the Merrimack. Charlestown on one side and Boston on the other side of Charles River near the sea were early chosen as the sea-ports, and began to be settled at once in 1630. Watertown was the first inland town. It was not limited on any side by any possible barrier to immense growth. London would not need more land than was possible to it in 1630. Charlestown and Boston were mere peninsulas. In accordance with the words of the charter the lands of the colony stretched away one knew not how far, "from the Atlantic to the South Sea."

But her people were mostly humble farmers. Even Sir Richard Saltonstall, one of the wealthiest men of the new colony, the first assistant of the Governor in the government, who had brought good store of cattle and numerous servants, wished to herd these his cattle within narrow limits, where he could find them, and although each agriculturist wished a goodly number of acres for his farm, he wished also for safety against unknown savages, to be no farther away from his fellows than the needs of his farm and his cattle would require. With the traders the case was somewhat different. They wished to be settled together as compactly as possible. Their interest in their commodities called for protection from the savages. Hence within six months they began to look about for a convenient place to build a fortified town,—a fort,—“a pallsadoc.” In that part of the territory of Watertown which extended towards Charlestown a spot was selected as “a fit place for a fortified town,” and in 1631 Deputy-Governor Thomas Dudley and others here erected houses. Governor Winthrop put up the frame of a house, which it is true he took down again and carried the next year to Boston, which he probably saw would be the most fitting place for commerce and for the government.

In February, 1631-32, it was voted that “there should be three-score pounds levied out of the several plantations within the lymitts of this pattent towards the making of a pallsadoc aboute the new town.” Thus a new town, chosen as a convenient one for a fortified capital or home of the government, began to be built up on the east of “the towne,” the bounds of which is the subject of our inquiry.

No definite bounds were established between them for several years, until the people began to build near each other and the convenience of the tax-gatherers required some definite limits.

“William Colburn, John Johnson and Abraham Palmer, being appointed, March 4, 1631-33, by the General Court to lay out the bounds betwixt Watertown and Newe Towne, did make this return unto the Courte, 7th April, 1635. . . . It is agreed by us, whose names are here underwritten, that the bounds between Watertown & Newe Towne shall stand as they are already, from Charles Ryver to the great Fresh Pond, & from the tree marked by Water Towne and Newe Towne on the south east syde of the pond, over the pond, to a white poplar tree on the

north west syde of the pond, and from that tree upp into the country more west & by west, upon a straight lyne by a meridian compass; and further, that Watertown shall have one hundredth rodd in length above the weire, and one hundredth rodd beneath the weire in length, & three score rodd in breadth from the ryver on the south syde thereof, and all the rest of the ground on that syde of the river to lye to Newe Towne.”

“WILLIAM COLBURN.

“JOHN JOHNSON.”

“ABRAHAM PALMER.”

These boundary lines between Watertown and Cambridge were again confirmed by vote of General Court, 13th of March, 1639.

Here, after five years' growth and gradual encroachment upon the bounds that might easily have been claimed by early Watertown men, the General Court limits their spreading both on the east side and on the north side and by the river, with the small exception about the “weare” on the south side. Only possible room left to grow in was to the west and southwest. To the fortifying of this “Newe Towne” on the east, Watertown was required to contribute the same amount as Boston, namely, £8, which was more than any other town in the Colony, thus showing probably, as the Governor and the wealthy traders lived in Boston, that Watertown was then, as it continued to be for several years, the most populous town in the Colony. To the west it might, under the charter, extend its limits indefinitely towards the South Sea. There was, however, evidently, from the action in regard to the fortifications at Cambridge, a feeling that it was necessary to organize compact communities for defence against the savages, and perhaps the early settlers of Watertown had never contemplated the extension of their territory far from their first settlement, which soon began to be called “the town,” in distinction from the more sparsely-settled country over which her people scattered in search of better lands. It is certain that in 1635, when there were large arrivals of people from England and considerable confidence had been acquired in the peaceful or harmless character of the Indians, that settlers had pushed up the Charles River and westward to another river, which ran northward towards the Merrimack. By vote of the General Court on the 3d of September, 1635, “It is ordered that there shall be a plantation settled, aboute two myles above the falls of Charles Ryver, on the northeast syde thereof, to have ground lying to it on both sides of the ryver,” etc.

Afterwards on the 8th September of the following year, 1636, it was “ordered that the plantation to bee settled above the falls of Charles Ryver, shall have three years' immunity from public charges as Concord had, . . . and the name of the said plantation is to be Dedham. . . .”

The same court that ordered the plantation “above the falls of Charles Ryver,” Dedham, ordered, “that there shall be a plantation at Musketequid, and that there shall be six miles of land square belong to it, . . . and that the name of the place shall be Concord.”

Thus, on the southwest, the town of Watertown was limited as the population of Dedham, and on the northeast by the population of Concord.

As the lands of Watertown were gradually filled up and some felt straitened for want of room, they naturally looked westward towards the pleasant meadows along the river "that runs towards Concord," and, greatly pleased by the prospect of possessions along that pleasant river, with its sedgy banks and its grassy upland slopes, they finally petitioned the General Court for permission to go thither to found a new town. On the 20th November, 1637, it is recorded in the records of the General Court held at Newtowne (Cambridge): "Whereas, a great part of the chiefe inhabitants of Watertown have petitioned this court, that in regard of their straitnes of accommodation and want of medowe, they might have leave to remove, and settle a plantation upon the ryver which runs to Concord, this court, having respect to their necessity, doth grant their petition." It provided what should be done if said inhabitants of Watertown did not, to the number of thirty families or more, actually settle on the land,—ordered that they "shall have power to order the scituatioun of the towne, and the proportioning of lots, and all other liberties as other towns have under the proviso aforesaid." "September 4, 1639, it is ordered that the new plantation by Concord shall be called Sudbury."

Thus was Watertown entirely circumscribed, and thus, although there are no very early maps, it is possible to fix quite definitely the entire bounds of the town when its bounds came to be defined. Whatever indefinite ideas its early settlers may have had previously to this, they henceforth, to obtain more room, must go beyond the bounds of other towns and settle in the boundless wilderness beyond. That they asked for and received grants of such extraneous portions of land for special services, as after the Pequot and again after the Narraganset war, we may have occasion to show. From the largest of such grants the town of Westminster on the slopes of Wachusett was largely made. In granting to the new town Concord six miles square, the General Court, from the want of exact surveys, unwittingly gave to Concord a portion of territory already included within the limits of Watertown. For this they granted two thousand acres of land, afterwards located on the side of Wachusett. Whether Watertown ever profited by her part of this territory does not appear; Weston and Waltham sold their portion. But henceforward the changes in her territorial possessions, like those which have proceeded, will be of division, of curtailment. Watertown henceforth, by division within, or by want of a common interest, suffers loss of territory, loss of inhabitants, which too often the people were, after long contest, too willing to part company with, till now, when it is whispered that Belmont wants a portion on the north, and Newton has long clamored

for a large piece on the south, and Cambridge has hardly recovered from her surfeit of grave-yards on the east, one can hardly know what our children's children will find to which the honored name of Watertown can legally be affixed.

Let us look a little more closely into this process of division, and follow the geographical changes in boundaries as they were made.

As to the manner of dividing the lands among the freemen of the town, we will speak later. The bounds of the town were hardly fixed before they began to settle the outermost portions in systematic manner. On October 14, 1638, it was "Ordered that the farmes granted shall begin at the nearest meddow to Dedham line, beyond the line runneth at the end of ye great dividents, parallel to the line at the end of the Towne bounds, and so to go on successively from Dedham Bounds," etc. The earliest map preserved in the archives of the State is a map of a portion of the extreme southwest corner of the town, next to the Dedham line, giving the location of lines running east and north near "Nonesuch Pond," which lies partly in Sudbury.

This ancient map, bearing the date of 1637, gives the lines in position with reference to this Nonesuch Pond, and their direction by the compass, thus determining the boundary line between Watertown and Dedham, afterwards Needham, and later still, the line between Weston and Wellesley on the south, while on the west the line in position and direction between Watertown and Sudbury, now between Weston and Wayland. By continuing this line in a northerly direction until we meet the six miles square of Concord, we have the early western boundary. Of course this was fixed after many measurements and surveys by committees appointed by the towns, but this remains substantially the boundary between Weston and Wayland to this day.

The boundary on the east, between Cambridge and Watertown, has been changed several times, always at the expense of territory for Watertown. At first, as reported to the General Court in 1635, it was near what is now Sparks Street and Vassal Lane thence across Fresh Pond to a certain poplar tree on the northwest side; thence by a straight line northwest by west, eight miles into the country, till it meet the west line between Sudbury and Watertown, or rather would have met it at an angle beyond and above Walden Pond, had not that portion been cut off by the grant to Concord of six miles square.

Frequently during a period of many years after the apportionment of lands to the 114 townsmen, in 1637, the division of the lands at the West Farms was a source of disagreement and contention at the regular and at irregularly called meetings of the town. The historian of Weston will doubtless show how delightful those fields were, and what objects of contention among all the townsmen, who had naturally equal right to some possession among them; how many pro-

minent men were drawn away from the older settlement to gain by occupancy these farms; of the remoteness from church privileges, and from schools; of the injustice of church rates and other taxes, which were spent where they could not easily profit by them, till finally, March 13, 1682-83, it was voted in town-meeting that "those who dwell on west of Stony Brook be freed from school tax;" and November 10, 1685, it was "voted that the farmers' petition should be suspended as to an answer to it until it pleaseth God to settle a minister among us." In 1692 a town-meeting was held to decide upon a site for a new meeting-house, but there was so great excitement and such differences of opinion among the people, that the Governor and Council were called in to decide the matter. The Governor and Council were unable to please either the people on the "Farms" or the people in the east part of the town. In 1694, at a town-meeting, the east bounds of the West Farms Precinct were fixed at Beaver Brook, but the General Court, in 1699, fixed them at Stony Brook. At the May session of the General Court the petition praying for leave "To set up the public worship of God amongst the inhabitants of the west end of Watertown" was granted, the farmers having been exempted from ministerial rates the preceding year. After long and vexatious contention the act for the incorporation of Weston was passed, on the 1st of January, 1713. Thus there was cut off from the territory of the old town nearly half of its area.

The next reduction of area came with the incorporation of Waltham in 1738, which took about six-tenths of the lands left to her. Before Weston was incorporated that part was called the West Precinct (Weston), this the Middle Precinct (Waltham) and the eastern portion the East Precinct. With the incorporation of Weston, the part now Waltham became the West Precinct. The incorporation of Weston took away about 10,372 acres, of Waltham about 8891 acres and left the old town only 3833 acres; this was less than a sixth of the area of the three precincts together.

In April, 1754, a portion of the eastern part of the town was joined to Cambridge—all that part between the most northern bend of the river, near where Sparks Street now runs and along Vassal Lane to Mt. Auburn Cemetery. This took away, probably, most of the lands owned by Sir Richard Saltonstall and his early associates, the cluster of dwellings called "the town." The town of Watertown still retained its right to the wharf and landing on the river for a century longer.

In 1859 all that part of the town north of Belmont Street was set off to Belmont, so-called. This was the result of a long struggle and a fierce contest like each other excision of territory and loss of inhabitants. By this act, 1446 acres were taken from the town.

In 1704-5 a committee was appointed to find out the line between Watertown and Newton on the

south side of Charles River. The committee reported in 1705 the line nearly as at present represented on the map on the south side, giving by estimation about 88 acres. They have at different times been increased, till at present, including Water, Boyd and Cook's Ponds, they include one hundred and fifty acres.¹

The last excision of territory was arranged amicably with Cambridge, she buying the lands of the owners and paying the town of Watertown \$15,000 for loss of taxable property for lands taken between Mt. Auburn Cemetery and the river for the Cambridge Cemetery, and authorized by act of the General Court, which transferred the Winchester estate to Cambridge; also the road passing between Mt. Auburn and Cambridge Cemeteries.

There now remain within the bounds of the town including Charles River, the marshes, the ponds, Mt. Auburn and Catholic Cemeteries, according to the surveys of Henry Crafts, 2668.25 acres, of about 4½ square miles. The number of acres taxed in 1890, is 2027.

PHYSICAL FEATURES OF THE LANDS WITHIN THE ANCIENT BOUNDARIES.—The whole town, even in its greatest extension, lies mostly along the north banks of the Charles River, which finds its way irregularly over the drift, the broad deposits of sands and clays which fill the broad valley between Arlington Heights and Prospect Hill on the north and west and the somewhat elevated lands of Newton on the south. Beyond the southernmost limits of the old town, say in what was old Dedham (now Needham and Wellesley) the river gradually descends from its course through a higher plain, elevated say about one hundred and fifty feet above the sea, to the level above Waltham, which is thirty or forty feet only above the sea, and then by gentle falls here and at the Bleachery, at Bemis, and finally at the paper-mill in Watertown village, to mingle with the brackish waters of our higher tides from Boston harbor. The rocks which underlie this region seem to be slates and conglomerates—ancient rocks belonging to the lower strata of the earth's crust, from above which, in the progress of the geologic ages, all later fossil-bearing rocks have been removed by the process of plowing by the glaciers, whose traces, well marked in direction are now and then brought to view, as on the slate ledges on Morse's field. The hills and plains as well, as the geologists inform us, are but slight inequalities in the general plain once smoothed off by a sheet of ice a mile in thickness. The depressions in the general level, like our ponds, perhaps mark the position of some stranded portion of ice when the advancing heat gradually drove the ice-field back towards the North, around which the currents drifted the sands and gravels which form their banks. By boring we know that the level of the bed-rocks dip below the sea here in our town, although their harder

¹ For a full treatment of the south side bounds see Mr. Ensign's paper,

portions in some places come near the surface. Back of the western bounds of the old town, among the hills of Weston and the western part of Waltham, the general level is one hundred and fifty to two hundred feet higher. There are fine specimens of deposits in ridges of ancient glaciers, moraines, in various portions of the town, as at the Waverly Oaks, while the rounded hills of hard clay and gravel deposits are seen in White's Hill, in Strawberry Hill between Mt. Auburn and Belmont Streets, and in other places. Thus we find with considerable variation in level and in that irregularity of form due to the unequal wearing away of materials of unequal hardness, as well as the irregular deposits of moraines, a sufficient variety of surface to produce that picturesque effect always noted from the time of the earliest visitors to the present, when city denizens swarm out prospecting for convenient country homes. The soil of Watertown, says Dr. Francis, "is remarkably good." The substratum of clay, even when mingled with sand and gravel to some extent, make the hill-sides rich, moist, productive. This under-structure of the soil accounts for the abundance of fine springs, which claimed the attention of the early colonists, and which, according to a tradition, helped give name to the town, *Water-town* it was written. It will be remembered that they suffered for water at Charlestown. The hills, the river-banks, the lowlands must have been covered with heavy forests when first visited, although one would think from the early accounts that the plains east of Mount Auburn, if not also west of it along the river near the Arsenal, over the plains west of Lexington Street and over the Waltham plains, were lands destitute of forests and so easily plowed and desirable for tillage.

We can form little idea of the size of the brooks, or of the abundance of springs found by the early settlers, from the fact that the forests have been stripped from their fastnesses, and the surface has been cultivated like a garden; and, if the water-courses have not been entirely dried up, as in old Palestine, we owe it to the nearness to the sea, and the tenacity of the clay soils for the water, which they give up slowly.

The hill on which the tower was built, in Mt. Auburn Cemetery, is 125 feet above the river; while Strawberry Hill is somewhat more than 250 feet high. This was afterwards called School-House Hill, and after the church was erected there, Meeting-House Hill, and is the hill now marked by the beautiful half-brick residence of Gilbert R. Payson, which is visible from all the hill-tops, and many of the housetops within ten miles of Boston.

The hill nearer the village formerly called Whitney's Hill,¹ from the fact that John Whitney's, Sr., and his sons were supposed to have owned the north

and west sides of the hill, more recently called White's Hill, over which Palfrey Street is now extended, is quite prominent from the fact that it is nearer the main street, nearer the railroad, and so is more frequently visited. This is a little over 200 feet above the sea, or fifty feet lower than Meeting-House Hill. The stand-pipe of the water-works is placed here. This is high enough to secure a flow of water to all parts of the town, except to the higher portions of Meeting-House or Payson's Hill.

Prospect Hill, beyond the plain of Waltham, the Middle Precinct of the old town, irregular in shape, rising in its highest portion 482 feet above the sea, is the most elevated point of the old town, probably the most elevated portion of the county. This point is seen first by sailors approaching the harbor of Boston, after the Blue Hills, of course, and gives from its broad slopes extended and most beautiful views of the surrounding country, including the city and harbor of Boston, ten miles distant. Mount Feake is the first eminence of the town named in history. If the name is now attached to the hill to which Winthrop assigned it, it must have lost much of its former prominence, or Winthrop and his party must have been in merry mood, as there is little to suggest the name *mount* in the present site of Mount Feake Cemetery. As this account from the letters of Governor Winthrop is the oldest we have of the physical features of the town, its insertion here may help to a closer comparison. It bears date January 27, 1631-2. "The governor, and some company with him, went up by Charles River, about eight miles above Watertown, and named the first brook on the north side of the river (being a fair stream, and coming from a pond a mile from the river) Beaver Brook, because the beavers had shorn down divers great trees there, and made divers dams across the brook. Thence they went to a great rock, upon which stood a high stone, cleft in sunder, that four men might go through, which they called Adam's Chair, because the youngest of their company was Adam Winthrop. Thence they came to another brook, greater than the former, which they called Masters' Brook, because the eldest of their party was one John Masters. Thence they came to another high pointed rock, having a fair ascent on the west side, which they called Mount Feake, from one Robert Feake, who had married the governor's daughter-in-law. On the west side of Mount Feake they went up a very high rock, from whence they might see all over Neipnett, and a very high hill due west, about forty miles off (Wachusett Mountain), and to the northwest the high hills (perhaps Monadnock Mountain) by Merrimack, about sixty miles off."

The Beaver Brook is now well-known by this name. Adam's Chair is not now to be found, having probably been destroyed by the building of the Fitchburg Railroad. Masters' Brook, now greatly diminished in size by change of surface and by filling, enters the

river near the watch-factory bridge. Mount Feake, within the cemetery of that name, affords the fine view to the west, it is said, which is mentioned in Winthrop's account.

The Charles River, of course, is the principal body of water in the old town. Whether the fall spoken of by the earliest settlers was due to a dam erected by the Norsemen, as Professor Horsford claims, or was merely a series of rapids, as it would seem necessary to suppose it would be if the dam were removed, we have not sufficient historical data to determine. It may not be proper in this place, for lack of direct testimony, to enter into an argument to prove, from the testimony of Clap's party to finding near three hundred Indians fishing about the fall, that there must have been greater hindrance to the free, upward movement of the fish to their spawning-grounds than a series of gentle rapids, in order to make this such good fishing-grounds. No direct statements, accounts or allusions have as yet been found to the building of the dam by our early settlers, while the construction of the fish-weirs are named again and again.

The dam as it exists at the present time raises the water above it, so as to present very pleasant water spaces to vary and enliven the appearance of this part of the town; and above, at Bemis, at the Bleachery and at Waltham, many beautiful lake-like expanses of water, with their irregular succession of tree-covered or grassy slopes, often with intervening islands, delight the eye of the observer and combine to make this river the pride of the poet and the painter, the constant and ever-present benefactor and delight of the people who dwell along its banks or are led by the needs of business, or are attracted by the charms of travel, to visit its winding course.

It is a matter of history that poets have been nursed on its banks. Although Longfellow lived just across the line, in Cambridge, and ever loved to look on the

"River that in silence windeth
Through the meadows, bright and free,"

Lowell was born and lived near the ancient landing of Saltonstall and Phillips, in what, for more than a hundred years, was a part of this town.

Fresh Pond, in the eastern part, now entirely gained by Cambridge; Lake Walden, in the north-western part, now within the bounds of Concord; Sandy Pond, now in Lincoln; Nonesuch Pond, now in Weston; Beaver Pond, and Sherman's Pond, recently Mead's Pond, now in Waltham, all belong to the old town of Watertown, and help to diversify the surface and enliven the landscape.

The trees about Waverly, notably some large buttonwoods, an immense elm, and "The Oaks," many centuries old, are frequently visited. It has been estimated that the oaks are from four to nine hundred years old. It is said that over seven hundred concentric rings have been counted in the stem of a fallen oak of the group standing on the beautiful

moraine beyond the Waverly Station, on the banks of Beaver Brook. The writer counted over four hundred in a large branch. These oaks might have been standing when Lief and Thorfinn visited Vineland the Good, and if the Charles River is "the river which flowed through a lake into the sea," Gudrid, the wife of Thorfinn, may have rested under the branches of these very trees. At all events, poetry, the vague, indefinable influences of popular tradition, science, a praiseworthy regard for the instruction and the health of future generations, unite in asking that these ancient specimens of trees and terminal moraines may be preserved by making a park of the fields containing them. If Waltham does not feel moved to purchase and preserve this border portion of her territory, the State of Massachusetts certainly should, before the "monarchs of the forest" fall before the vernal axe.

AGRICULTURAL CHARACTER OF THE PEOPLE.—

From what we know of the formation of the surface of the country in this vicinity, of the character of the soil, of the situation of the town in the immediate vicinity of the best harbor on the coast, and yet just enough removed to prevent active participation in commerce, and yet without sufficient water-power for extensive manufactures, we can see that if its people became active among the productive agencies of the Colony, or afterward in developing the resources of the young State that arose out of the fires of the Revolution in which it took a prominent part, if, in other words, it had seen intelligently its advantages and set actively and courageously at work to do what it was best fitted to do, it would have done exactly what it did do—namely, apply itself chiefly to agriculture. Watertown was soon the garden of Massachusetts Bay.

If we include what originally belonged to her, she is largely the garden for the production of a large part of the vegetable food of Boston to-day. She need not deny to Arlington, the daughter of her daughter Cambridge, all praise for her accomplishments in this direction. Blessed in like manner, she too has improved her advantages. And having poorer facilities for manufacturing industries, being more restricted in her range of employments, it would not be strange if her gardens outstripped her older neighbor's in productiveness.

Sir Richard Saltonstall made no mistake when he selected this valley for his home. Winthrop's party, of whom he was one of the chiefs, left Salem to explore every nook and cranny of the shores of Massachusetts Bay. The traders and commercial adventurers who formed a large part of the party had in a measure taken possession of Charlestown slopes and Boston heights, so near an excellent land-locked harbor and the mouths of two considerable rivers. Saltonstall explored particularly the Massachusetts River, called by John Smith, whom all since have followed, the Charles, and had the wit to see the advantages of

pasture and soils, and water and forests for a new settlement, such as he would most enjoy to see.¹

Sir Richard had been a man of considerable landed possessions in Yorkshire, on which he must have been a good landlord as he came with three of his sons and two daughters, with many servants and "some store of cattle," to seek a new home and greater independence in a new country. It was with an eye to the natural advantages of position that he landed his stores and set down for the winter in that part of Watertown now within the municipal bounds of Cambridge.

There was no thought of other towns or cities then between Charlestown—or Charloton, as it was first called—and the place of his choice. We may not be able to fix upon the exact location of his house, but it was not far from midway between the homes of Longfellow and of Lowell, if we mention names of men whom the world knows and honors, and who, long before they were so widely known, knew and loved every natural feature of their surroundings; or,—if we name localities marked by walls of stone and brick, albeit erected by the spirit of charity itself,—a little to the north and east of the present Cambridge Hospital. In the little cove in the bend of the river, below the cemetery and near the hospital, was the landing-place alike of Saltonstall, with his belongings, and of Phillips, the sturdy defender of independence in church and in state, with the several score of others who have become the progenitors of many a family now scattered over our broad country.

The lands immediately about the landing were well adapted for tillage, and being undulating and well drained on one slope by the river and on the north slope into the basin of Fresh Pond, were fortunately chosen for the homesteads of the colonists.

There was little waste or forest land in the vicinity—the first of which is seen by the fact of its being divided up into homesteads, or, as they are called in early records, homestalls, within a very few years among the first settlers and their immediate followers, and the lands out several miles from their first lots were soon divided up for tillage and pasturage; the second is seen by the frequent mention of orders passed to preserve the trees, and as if they were comparatively few, and by the price placed on their use or destruction.

What we have mentioned and what we know concerning the character of the region justifies the first choice of Watertown by an agriculturist of the wealth and eminence of Sir Richard. That he did not long continue to make it his home or for the rest of his life, I fear we must read between the lines of the recorded history what is supplied without great difficulty. The character and income of the people who

were attracted by him, and chosen with reference to their helpfulness, were agricultural in their training, rural in their spirit and their knowledge. He must have been a man of force of character, and might have been impatient in the short-comings of some whose attention was diverted by the strangeness of their surroundings from their master's interests. It is recorded November 30, 1630, that "Sir Richard Saltonstall is fynyed V^l for whipping 2 several persons without the presence of another assistant, contrary to an act of Court formerly made," while before that he "is fynyed 4 bushells of malte, for his absence from this Court."

It seems that long afterwards, some years after he had returned to his native England, where he continued to show his kindly feelings for the Colony by many and delicate services which he then was enabled to perform, and after he had shown his wise moderation by his counsel against persecution for mere opinion's sake, that, by vote of the General Court of September 6, 1638, the Court did discharge the £5 fine, and the fine of "4 bushells of malt." Mere feathers these: unmentionable littlenesses which may show some movements in the social or religious atmosphere which disappointed Sir Richard in his hope of freedom and independence. There is no disputing the fact that Watertown had the benefit of his good judgment at the start, of his choice of a religious leader and teacher, and of his continued friendship after he had returned to his native land; but Watertown lost that influence at the seat of government that allowed continued protection to her territories, which soon began to be and which continue to this day to be the envy of others and the constant prey of more powerful communities, as well as of divisions within herself, the Great and General Court always standing as judges. Whether the small territory left to bear the name of Watertown be allowed to remain much longer undivided, or not wholly swallowed up by some more powerful municipality, or not, there can never be denied her the privilege of looking over all the lands extending as far into the country as eight miles from the meeting-house, as the home of her founders. In view of the fact that the children of ancient Watertown now dwell in almost every part of the country, and that some of them have served in every war to protect her most extended interests, and the life of the Union itself, a little local family pride may be allowed them as they look back to their ancestral acres and in imagination recall the undivided interests of larger territories, when broad fields and extended slopes were their ancestors' possessions.

The old mode of farming required more room—room for cattle and sheep to graze, room to plow and sow grain and plant corn. The concentrated work of the modern market gardener, with his abundance of fertilizers, his glass to prolong the seasons, his rotation of crops, was not known and was not possible. A score or two of acres would hardly have

¹ The first of these is seen by the fact of its being divided up into homesteads, or, as they are called in early records, homestalls, within a very few years among the first settlers and their immediate followers, and the lands out several miles from their first lots were soon divided up for tillage and pasturage; the second is seen by the frequent mention of orders passed to preserve the trees, and as if they were comparatively few, and by the price placed on their use or destruction.

satisfied the humblest colonist; several hundred were the possession of a few. Now several men will find all they can do on a single acre. Now we are doing all we can to invite new-comers to share our rich possessions and make them, by increased social advantages, still richer. But as early as July, 1635, it was "Agreed, by consent of the freemen (in consideration there be too many inhabitants in the Towne, and the Towne is thereby in danger to be ruined), that no forainer coming into the Towne, or any family arising among ourselves, shall have any benefit either of Commonage or Land undivided, but what they shall purchase, except that they buy a man's right wholly in the Towne."

Even as late as the present century, when there was some prospect of the Boston & Worcester Railroad desiring to pass through the town, there was a successful effort put forth to keep it from spoiling our valuable lands. It is within the memory of the present generation that lands were held with so great tenacity that it was next to impossible for any new man or new interest to get a foothold within the town. All this shows the earlier and the later interests of the people in the cultivation of the lands for agricultural purposes.

The agriculture of the past was at best the agriculture now common in the towns remote from the large cities. Even when people began to raise vegetables for sale in Boston, the mode of making these sales was most primitive in its simplicity. It is one of the traditions in the family of one of the largest and most successful market gardeners in this town that the vegetables raised by their grandfather were put into panniers over the back of a horse and sold out to the families of Boston by the grandmother, whose personal attractions helped not a little in creating a market. Compare now the lofty piles of well-filled boxes which pass from the same lands each day of almost the entire year.

It is difficult to obtain and to give exact descriptions of individual cases in this direction. Where almost every family raise a part or the whole of their vegetables, and a few raise a little to sell to others, to one who keeps forty or fifty men and boys and women at work all or most of the year, and has acres of grass to enable him to begin the season almost before the last season has been allowed to close, one finds no easy dividing line.

With our present easy and rapid means of transportation, any surplus of production, if excellent in its kind, like Boston asparagus or tomatoes, Brighton strawberries, or Watertown celery, finds a ready market, if not in Boston, why then in Portland or Providence, in New York or Washington. While Oldham, afterwards Cradock, obtained a grant of 500 acres, and Saltonstall one of 450 acres, and some settlers of farms grants of from one hundred to three hundred acres, not many farmers requiring so much room for their grazing and their mode of farming could be accommodated in a town of a little over 2000

acres or in the old town of 23,500 acres even. At the present time a much larger population is possible in the present narrow limits, where men can find profitable employment with the improved concentrated methods and appliances.

The population in 1890 on these 2000 acres is over 7000. It will be shown later that the principal industries of the town are not now agricultural, yet your historian may be allowed the remark that, if all the land were cultivated as highly as the heirs of John Coolidge cultivate the "vineyard" and other portions of their lands, or as Joshua Coolidge and his sons cultivate their lands, or as Joshua C. Stone cultivates his land, or as Calvin D. Crawford cultivates his own and other people's land, some of these finding time also to manage the affairs of the town, a still larger population than at present might be supported from the soil, and there would be no thought of "there being too many inhabitants in the Towne, and the Towne thereby in danger to be ruined," as was agreed by consent of the freemen in 1635.

CHAPTER XXX.

WATERTOWN—(Continued).

ECCLIESIASTICAL HISTORY.

EARLY LOCATION OF FIRST CHURCH OF WATERTOWN.—On July 30, 1630, Sir Richard Saltonstall joined with some forty other men in forming the first church at Watertown, which, next to that of Salem and Dorchester, was the earliest church of Massachusetts Bay. Rev. George Phillips was chosen pastor and Richard Browne ruling elder. During the first four years Watertown was the most populous town in the Colony and probably continued so for fifteen to twenty years. It came next after Boston, "the centre town and metropolis," "the mart of the land," as Johnson called it in 1657 in his "Wonder Working Providence," in wealth.

As the members of the church, even from the beginning, were too many to be accommodated in any one of the small, hastily built tenements at first erected, a special meeting-house was very probably soon built; at least the rate of £80 ordered by the town records of 1635 to be levied for "the charges of the new meeting house" of necessity imply that there had been another and earlier one. Unfortunately the records do not show when or where this older one was situated. But doubtless as Richard Saltonstall, Mr. Phillips, Elder Browne and most of those first admitted freemen had all settled in "the town," as that part of the plantation just east of Mt. Auburn was designated, it was also situated there.

¹ By Bennett F. Davisport.

The new meeting-house of 1635, according to Rev. Converse Francis, stood upon the knoll on the north side of Mt. Auburn Street, between where long afterward were the houses of Deacon Moses Coolidge and that of Mr. Daniel Sawin, on the corner of Arlington Street, and later the houses of Mr. George Frazer and Mr. Kimball, the level land where the later house now stands being the Common, used as a training-field.

In the town records of 1637 the meeting-house lot is mentioned as containing forty acres. This doubtless was the whole lot now bounded by Mt. Auburn and Belmont Streets upon the south and north and by School and Arlington Streets upon the west and east. It was the land along this last street which the selectmen, in 1667, ordered sold on the meeting-house common, upon the west side of the way from the meeting-house to Pastor Sherman's house, the pay to go towards building the bridge at the mill. But the town-meeting held three days later voted not to allow of this sale and bargain with J. Coolidge, Jr. By the records of 1639, 12-25 the meeting-house was appointed for a watch-house. By those of 1638, April 23d, those freemen living remote from the meeting had been ordered to build and settle upon the town "Plott" as the two squares were designated bounded by Main and Belmont Streets upon the south and north and by Lexington and Warren Streets, upon the east and west, and between which from east to west Hager Lane, afterward known as Warren Street, run, the latter, Warren Street, being the one within the Watertown present limits, while the former is that in Waltham. The records of 1669 February 6th, mention a bell-rope. It therefore doubtless had a bell.

As the settlements in the town had gradually extended westward there had, ever since the death of Rev. Mr. Phillips in 1644, been contention in the town on account of the meeting-house being located in the eastern part of the town. On October 14, 1654, it had been ordered that a new meeting-house be built between Sergt. Bright's and John Biscoe's,—that is, between John P. Cushing's mansion-house and the northwest corner of Belmont and Common Streets. John Sherman was bargained with to build it by September 1656, for £400, with the use of the old seats, the Cambridge meeting-house to be the pattern in all points. This location caused so much dissension that the new house was built on or near the old site upon Meeting-house common. The seating of the meeting-house was ordered November 7, 1656, to be made according to office, age and estate, three rates, amounting to £453 12s. 3d., having been raised. This building continued to be the meeting-house for the entire town, including both Waltham and Weston, until after the resignation of Mr. Bailey in 1692. After that the old controversy about the inconvenience of the location waxed more earnest and resulted in a division of the church in 1695, and the building of a new West Precinct meeting-house upon the southeast corner of Belmont and

Lexington Streets, upon the homestall lot originally granted to the Rev. John Knowles, who had been the assistant or colleague of Mr. Phillips. This building was upon the north side of the present Orchard Street. At the new house Samuel Angier was settled by the majority vote of the town and church, the Rev. Mr. Gibbs having declined to remove from the old building with those who preferred to still assemble there. The division did not result, however, in a legal separation till 1720.

In 1695 the farmers of Weston had amiably been assisted by the whole town in building a meeting-house more conveniently located for them, upon the land of Nathaniel Coolidge, Sr., on the road at the head of Parkhurst meadows, a little in front of the site of the church of 1850. They did not have a regularly organized church and settled pastor till 1709, although they began to occupy it in 1700. In 1722 they raised a new building.

In 1720 the Legislature ran a division line between the East and West Precincts and ordered the West within two years to locate their meeting-house upon the rising ground near Nathaniel Livermore's dwelling-house—that is, a little northwest of the George W. Lyman mansion-house, in Waltham. The East Precinct was within ten years to locate their meeting-house upon the southeast corner of Belmont and Common Streets, upon School-house Hill, afterward known as Meeting-house Hill. Both precincts attempted to secure the old West meeting-house, but to such a height had the dissension gone that both failed. The West, therefore, bought the old meeting-house of Newton for not over £80 and erected it upon the appointed location, that of the present Waltham church, and in 1723 Rev. Warham Williams was settled as pastor. The East Precinct erected a new building upon their location in 1723, and Mr. Gibbs having died, Rev. Seth Storer was settled in 1724; the old church records remained with the East Precinct. In 1754 they built a new house at the foot of Common Street, corner of Mt. Auburn Street, and in 1836 upon the present site.

The old West meeting-house was continued a while as a separate Third Church, Robert Sturgeon acting as pastor, for which he was indicted by the grand jury and fined £20. Not long afterwards the building was demolished.

THE FIRST PARISH IN WATERTOWN.¹—*To the pastorate of Dr. Francis.*—On the 30th day of July, 1630, O. S., about forty men had assembled (probably in the house of Sir Richard Saltonstall) in Watertown, in the Colony of Massachusetts Bay. The object of their gathering was the organization of the church known to history as the First Parish Church in Watertown. The first name on the list of those who subscribed to the covenant then adopted was

¹ By Rev. Wm. H. Savage.

that of Sir Richard Saltonstall. This is the covenant to which they set their names :

JULY 30, 1630.

"We, whose names are hereto subscribed, having, through God's mercy, escaped out of the Pollutions of the world, & been taken into the Society of his People, with all thankfulness do hereby both with heart & hand acknowledge, that his gracious goodness & fatherly care towards us; & for further & more full declaration thereof, to the present and future ages, have undertaken (for the promoting of his glory & the Church's good, and the honor of our blessed Jesus, in our more full and free subjecting of ourselves & ours, under his gracious government, in the practice of & obedience unto all his holy ordinances & orders, which he hath pleased to prescribe and impose upon us) a long & hazardous voyage from East to West, from old England in Europe, to New England in America; that we may walk before him, and serve him without fear in holiness & righteousness, all the days of our lives, & being safely arrived here, and thus far onwards peaceably preserved by his special providence, that we may bring forth our intentions into actions, & perfect our resolutions, in the beginnings of some just and meet executions; we have separated the day above written from all other services, and dedicated it wholly to the Lord in divine employments, for a day of afflicting our souls, & humbling ourselves before the Lord, to seek him, & at his hands, a way to walk in, by fasting & prayer, that we might know what was good in his sight; and the Lord was intreated of us. For in the end of that day, after the finishing of our public duties, we do all, before we depart, solemnly & with all our hearts, personally, man by man for ourselves & ours (charging them before Christ & his elect angels, even them that are not here with us this day, or are yet unborn, that they keep the promise unblamably and faithfully unto the Coming of our Lord Jesus) promise, & enter into a sure covenant with the Lord our God, & before him with one another, by oath & serious protestation made to denounce all idolatry and superstition, will-worship, all humane traditions & inventions whatsoever in the worship of God, & forsaking all evil ways, do give ourselves wholly unto the Lord Jesus, to do him faithful service, observing & keeping all his statutes, commands & ordinances, in all matters concerning our reformation; his worship, administrations, ministry & government; & in the carriage of ourselves, among ourselves & one towards another, as he hath prescribed in his holy word. Further swearing to cleave unto that alone, & the true sense & meaning thereof to the utmost of our power, as unto the most clear light & infallible rule, & all-sufficient canon in all things that concern us in this our way. In witness of all, we do *ex animo*, & in the presence of God, hereto set our names or marks, in the day & year above written."

That was the beginning of the First Church in Watertown. Over the church thus founded George Phillips was settled as minister, having for his ruling elder "one Richard Browne."

The task of the present writer is to give in brief the biographies of Mr. Phillips and his successors, with such marginal comment as the scope of the present work will admit.

Before proceeding to such biographical notices it is, however, fit that we should glance at some of the personal elements that went to the making of the First Church.

From the first day of its existence we may see the working of tendencies that were prophetic of all that has been notable in the history of the organization. From the first the people of Watertown were out of harmony with the idea of Church and of State that gave shape to the Puritan Theocracy, the ideas of government that found expression in Winthrop and the Board of Assistants, and the ideas of ecclesiastical exclusiveness and dogmatism that found expression in the ministers of Boston.

Early in the year 1631 the Governor and his assistants levied a tax of sixty pounds on the planta-

tions, for the purposes of fortifying the Newtown border.

When this action became known in Watertown, Rev. George Phillips and Mr. Richard Browne, his ruling elder, united in calling the people together, and when they had assembled they were asked to consider the fact that they had not been consulted about the tax. Acting under the advice of their leaders, the citizens refused to pay. The result of this action on the part of Watertown was that the proceedings of the Boston oligarchy came to a sudden stop. Before any further taxation was attempted, it was ordered that "two of every plantation be appointed to confer with the Court about raising a public stock." This was the origin of representative government on this continent. The lineal and legitimate results of the action taken by the men of Watertown in 1631 came in the Boston Tea Party, the Declaration of Independence and the Constitution of the United States. The men who made their homes on the Charles were the first on this continent to show that they appreciated the gravity of what was taking place on these new shores and to exercise that "eternal vigilance" without which no people can keep its liberties.

In the organization and administration of the church Mr. Phillips and Mr. Browne were no less careful of the rights of the individual than they had shown themselves in the ordering of civil affairs. The covenant that was made the basis of their church was remarkably free from the hair-splitting dogmatism that has been the bane of the world's religious life. Its aim was to secure for the church and for the individual the rights claimed by its signers as against the various forms of ecclesiastical hierarchy, and not at all to bind them to any set of doctrinal propositions. Mr. Phillips was a man of broad and charitable spirit, very liberal in his theological opinions, and in his ideas of church government a thorough independent. In this last matter he was entirely at one with his parishioners. This appears in the fact that when, in 1639, Mr. John Knowles was settled as his colleague in the parish he was set apart for the work of the ministry by the Watertown Church. No council was called to assist or to sanction their act. No other church was notified, and no minister save their own had any part in the service. This was the first clear assertion of *strict Congregationalism* on this side of the ocean, and established the claim of the Watertown Church to have been the first *Congregational Church* in this country.

In the position he took and held, Mr. Phillips had the countenance and sympathy of two men who are entitled to loving and grateful remembrance. One of these men was Richard Brown, who stood with Mr. Phillips in his controversy with the General Court against taxation without representation, and the other was Sir Richard Saltonstall. Mr.

Brown was a relation of Robert Brown, the founder of the "Brownist" movement in England. Before he had been a ruler in a Separatist church, he had there rendered important services to persecuted Non-conformists. He seems to have been a man of decided character, and of no mean abilities as a thinker and administrator of public business. To the end of his life he retained the confidence and the esteem of the people of Watertown, and was honored by them with many offices of trust and responsibility. We have seen that he was quick to claim his right as a citizen, when a tax was demanded of him. He had a merit which is of a rarer sort—he was willing that other men should have their rights in matters of opinion and of worship. He opposed all persecution for opinion's sake, and took the (then) extreme ground that "churches of Rome were true churches." But such radicalism could not then be tolerated, and though Mr. Phillips seems to have agreed with him, Winthrop and Dudley, and others in power did not. The usual result followed. Brown was deposed from being elder, but his spirit remained in the church, and in due time found itself in the majority.

Sir Richard Saltonstall, after he had helped to found the church on the broad and generous plan exemplified in the faith and conduct of its chosen minister and elder, returned to England, where he resided for the rest of his life. The sentiments he entertained regarding the matter of religious liberty were not such as to commend him to the favor of those who were shaping the policy of the Colony at large, and he probably felt that a peaceful co-operation with them would not be possible for him. How completely he was in sympathy with the leaders of the Watertown church is revealed in a letter that deserves a place in the remembrance of those who trace their religious lineage to a source so high and pure.

This letter was addressed to the persecuting religionists of Boston :

When I was in Holland, at the beginning of the warres, I remember some Christians there, that then had serious thoughts of planting a church in this country. They were of the same opinion as we are, and they were of the same mind as we are, that the Lord would give you the unity of the spirit in the bond of peace.

When I was in Holland, at the beginning of the warres, I remember some Christians there, that then had serious thoughts of planting a church in this country. They were of the same opinion as we are, and they were of the same mind as we are, that the Lord would give you the unity of the spirit in the bond of peace.

know if those that differ from you in opinion, yet holding the same foundation in religion, as Anabaptists, Seekers, Antinomians, & the like, might be permitted to live among you, to which I received this short answer from your then Governor—Mr. Dudley—God forbid, (said he) our love for the truth should be grown so cold that we should tolerate errors; & when (for satisfaction of myself & others) I desired to know your grounds, he referred me to the books written here, between the Presbyterians & Independents, which, if that had been sufficient, I needed not to have sent so farre to understand the reasons of your practice. I hope you do not assume to yourselves infallibility of judgment, when the most learned of the Apostles confesseth he knew but in parts, & saw but darkely as through a glass, for God is light, & no further than he doth illumine us can we see, be our partes & learning never so great. Oh that all those who are brethren, though yet they cannot think & speake the same things, might leave one accord in the Lord, Now the God of patience and consolation grant you to be thus mynded towards one another, after the example of Jesus Christ our blessed Saviour, in whose everlasting armes of protection hee leaves you who will never leave to be

"Your truly & much affectionate friend, in the nearest union,

"RICH. SALTONSTALL."

"For my reverend & worthy much esteemed friends, Mr. Cotton & Mr. Wilson, preachers to the Church which is at Boston, in New England, give this—"

Over the church founded by such men in the spirit of devotion and self-sacrifice that characterized the Puritan movement, and in a spirit of enlightened liberality so far in advance of the Puritan age, was set, as we have seen, a man eminently fitted for the post of leadership.

Mr. George Phillips was born at Raymond, in the county of Norfolk (Savage says "at Rainham, St. Martin's, Norfolk"), England. He gave early evidence of uncommon talents and love of learning, and at the University (probably Cambridge) distinguished himself by remarkable progress in his studies and developed a special fondness for theology. He settled at Boxstead, in Suffolk, and soon became suspected of a tendency to Non-conformity. As the troubles of the time increased, Mr. Phillips resolved to join his fortunes with the Puritans who were about to depart for New England. He arrived early in the year 1630, and soon after lost his wife, who died at Salem. Presently, in company with "that excellent Knight, Sir Richard Saltonstall," and "other Christians, having chosen a place upon Charles river for a town, which they called Watertown, they resolved that they would combine into a church; (fellowship was their first work; and build the house of God before they could build many homes for themselves." In his office as minister of the Watertown Parish, Mr. Phillips was eminently faithful and successful. A man of firmness and independence in thought and in conduct, he was capable of maintaining his views with ample learning, and a vigorous and convincing logic. Though, in several respects in advance of his time, the nobility of his character, the candor and courtesy of his manner and the force of his mind secured and kept the confidence and respect of his fellow-citizens. He died on the 1st of July, 1644, lamented not only by his parishioners, but by the Colony at large. As the founder of representative government in America, he should

have a statue erected to his memory in the town to which he gave his life.

It was the custom of early New England for each church to have two ministers—one as *pastor* and the other as *teacher*.

Until 1639 Mr. Phillips was sole minister. In that year Mr. John Knowles, "a godly man and a prime scholar," arrived in New England, and on the 19th of December he was ordained second pastor, in connection with Mr. Phillips. By departing from the common usage of pastor and teacher, the church put its theory of independency into practice, and, by ordaining a man who had never been a minister, ordaining him by their own act, without notice given to the magistrates, without co-operation or consent of any minister save their own, the people declared that they took their Christian liberty in sober, practical earnest. Mr. Knowles seems to have been a man of very liberal views; in church government an independent, and in his broad charity of doctrine a man to delight "that good Knight, Sir Richard Saltonstall."

In 1642 he went with Mr. Thompson, of Braintree, on a missionary voyage to Virginia, but, finding things there in no condition to warrant much hope of good, he presently returned to Watertown and resumed his pastoral relation with the church.

This relation he retained for six years after Mr. Phillips' death, when in 1650 he returned to England. Making his home in London, he continued to preach in spite of persecutions until he died at a very advanced age in 1685.

According to Dr. Francis, "Mr. Phillips' successor in the ministry at Watertown was the Rev. John Sherman." By some Mr. Sherman is said to have begun his pastoral work in 1647, but there is no certain proof from the records of his having been in office before 1648. His relation to Mr. Knowles, who was here until 1650, is not definitely settled.

Mr. Sherman was born December 26, 1613, in Dedham, in the county of Essex, England. In his home, and under the preaching of the celebrated John Rogers, the friend and counselor of George Phillips, he received deep and permanent religious impressions. In school he was studious and dutiful—once only he was chastised, on which occasion his offence was that he gave "the *heads of sermons* to his idle schoolmates, when an account thereof was demanded from them"—an offence which no modern boy could well be guilty of.

In due time he became a student at Emanuel College, Cambridge, but failed to receive his degree because he refused to make the required subscription.

As he was then not more than twenty years of age, his behavior revealed not only an early maturity of thought, but an equal development of honesty and self-respect. He acted with like decision when it came to the choice of his theatre of action in life, for when he was but twenty-one years old we find him in New England. That was in 1634. In that year he

preached at Watertown as assistant to Mr. Phillips for a few weeks. Mather informs us that his first discourse was on a Thanksgiving Day, when a meeting was held under a tree in the open air. Several clergymen who were present "wondered exceedingly" when they heard so young a man speak with such learning and good judgment.

Soon after this he removed to New Haven, and was invited to settle in that region. Declining to do so, he was chosen as one of the magistrates of the Colony; but being invited to return to Watertown to take the place left vacant by the death of Mr. Phillips, he laid down his office and came back to the banks of the Charles.

Here he fully justified the high reputation he had made before his departure. He was chosen fellow of Harvard College, and besides the services rendered to that institution in his official capacity, he continued for thirty years to give fortnightly lectures, which were attended by the students, who walked from Cambridge to Watertown to hear him. His reputation for scholarship extended far and wide. A "skill in *tongues and arts*," says Mather, "beyond the common rate adorned him."

His favorite studies were, however, mathematical and astronomical, and in these departments he had no peer in the western world.

In his leisure he made almanacs, in which he set down moral and religious maxims good for all meridians and all years.

His style of discourse is said to have been full and rich. His mind was his library, and he could speak freely and accurately without the help of manuscript or even the briefest notes.

In private he was sparing of speech. In council he was clear and weighty. In all relations of life dignified and courteous. His last discourse was marked by a richness of thought and energy of language that filled his hearers with admiration. He was seized with his last illness at Sudbury, where he had gone to preach, but rallied sufficiently to be able to reach his own house in Watertown, where he died on the 8th of August, 1685, at the age of seventy-two.

Mr. Sherman was twice married—six children were born to him in his first marriage, and twenty in his second.

On the 24th of August, 1685, a little more than two weeks after the death of Mr. Sherman, a committee was chosen at a town-meeting to treat with "Mr. Bailey, the elder," on the subject of settling in the ministry at Watertown. Mr. Bailey was at that time residing in Boston, and a committee was sent to him requesting him to meet the assembled people and give them an opportunity "to discourse a little with him." At a conference held in accordance with this proposal, he expressed himself willing to become their minister "if peace and love should continue amongst them, and they would make his life comfortable."

enter there." In 1719, the Rev. Samuel Angier, minister of "the Western Party," died, and after several years more of controversy, a part of his constituency were set off to form the town of Waltham, and the rest gradually became identified either with the old or the new town.

The Rev. Henry Gibbs was born in Boston, and was graduated at Harvard College in 1685. His father, Mr. Robert Gibbs, was a Boston merchant, of large property, and of considerable distinction. The position of minister in Watertown during the years of controversy must have been one to tax both the wisdom and the patience of the incumbent, but Mr. Gibbs seems to have met the demands of the time with singular firmness, prudence and good sense, and to have been held in high respect by all the inhabitants of the town. This fact alone is eloquent in his praise. Many a man who has gone to the stake with unshaken courage, would have broken down under the strain of twenty-seven years of angry debate and petty neighborhood jealousies. That Mr. Gibbs was able to bear such a trial, and all the while to "do justly and love mercy," entitles him to rank with Job on the roll of the world's worthies.

His power to keep his head in a time of general madness finds another illustration in the fact that he seems to have stood aloof from the mob that hounded the Salem witches to their miserable fate. Under date of May 31, 1692, he records the fact that he was in Salem, observing the trials, and he says: "Wondered at what I saw, but how to judge and conclude I was at a loss; to affect my heart, and to induce me to more care and concernedness about myself and others is the use I should make of it."

"Mr. Gibbs," says Francis, "was a benefactor both to his church and to the college. In his will, which was proved November 11, 1723, he made the following bequest, part of which still constitutes a portion of what is called *The Ministerial Fund*: 'I do give and bequeath to the Eastern Church of Christ in Watertown, to which I have borne a pastoral relation, for the encouragement of the gospel ministry there, my four acres of pasture land and three acres of marsh, situate in the East end of said town, for the use of the said church forever. And I do give to said church my silver bowl with a foot.'

"His bequest to the college he devised in the following terms: 'And further it is my will, that within ten years after my youngest child comes of age, an hundred pounds be paid by my heirs for the use of the Harvard College, forty pounds thereof by my son, and twenty pounds apiece by my daughters; the yearly interests to be exhibited to such members of the college as need it, firstly to my children's posterity if they desire it.'

As a writer, Mr. Gibbs was natural and direct. His words were those of an honest man, who desired to do good. He died on the 21st day of October, 1723, in the fifty-sixth year of his age and the

twenty-seventh year of his ministry. He was buried in the old grave-yard at Watertown.

Mr. Gibbs was succeeded in the ministry of the Eastern Parish by the Rev. Seth Storer, who was ordained July 22, 1724. There is no record of the proceedings that attended his settlement on the books of the town, since the transaction concerned only the Eastern Precinct. In fact, there is not, so far as is known, any record in existence of the particulars of his life or ministry. He inherited the controversy that began in the time of Mr. Gibbs, between "The Western party" and the old parish, and experienced, doubtless, his share of the discomfort arising during its progress and settlement.

There were many other distracting incidents arising during the growth of the town, and out of its relations to the authorities in Boston, but it is believed that the minister of the First Parish bore his part in these matters with patience and wisdom. His term of service was the longest in the history of the town—over fifty years. He died on the 27th day of November, 1774, in the seventy-third year of his age. He was a native of Saco, Maine, where he was born May 27, 1702. He graduated at Harvard College in 1720, at the age of eighteen. His father was Colonel Joseph Storer, of Wells, Maine, a man who won considerable distinction in the Indian wars. As indicating the conditions amid which his childhood was passed, we may note the fact that he had a sister Mary, who was carried away by the Indians as a captive, and was brought up near Montreal. Dr. Francis relates that in his time there were still living a few who could remember Mr. Storer in his old age, and they reported that he was much loved by young people and children. This fact he justly regards as an evidence of the simplicity and goodness of his character. He never, as far as is known, published any production of his pen. He took no part in the theological strife of his time, but lived the friend and helper of his neighbors and died lamented by those who had known him to love and respect him.

For three years after the death of Mr. Storer the pulpit of the First Parish Church remained unoccupied by a settled minister. This was probably owing to the excitement and confusion of the time which saw the opening of the Revolutionary War. The pulpit was filled by temporary supply, as circumstances and the inclinations of the people directed. There was use for the church, however, at this time, not contemplated by those who built it, though it was precisely such use as was forecast by the action of George Phillips and Richard Browne, in 1631. The Second Provincial Congress was suddenly summoned to meet at Concord, April 22, 1775, but immediately adjourned to meet at Watertown. Here the Congress assembled, during the remainder of the session, in the meeting-house. John Hancock having been chosen delegate to the Continental Congress at Philadelphia, Joseph Warren presided over the deliberations. The

third and last Provincial Congress also met at Watertown on May 31st. The sessions were held in the meeting-house as before. Joseph Warren was again chosen president, and Samuel Freeman, Jr., secretary. The Rev. Dr. Langdon, president of Harvard College, preached a sermon before the body. The session lasted until the 19th of July. On the 26th of July the meeting-house was again in use for the assembling of the General Court of the Colony. Subsequently the Boston town-meetings were held here, and in 1776 the anniversary of the 5th of March was observed by the people of Boston in the meeting-house in Watertown.

It was not till November, 1777, that any movement was made toward the settlement of a minister. At that time it was voted unanimously to concur with the town in the choice of Mr. Daniel Adams. He accepted the invitation to the pastorate, and was ordained on the 29th of April, 1778. The Rev. Mr. Prentiss, of Medfield, preached the ordination sermon, and the Rev. Dr. Appleton, of Cambridge, delivered the charge.

The settlement of Mr. Adams was regarded by the people as adequate cause for rejoicing, and the brightest anticipations were apparently about to be realized, when the town was plunged in grief by the sudden death of its chosen leader. In the August following his ordination Mr. Adams was seized with a violent illness, and, after lingering for six weeks, expired on the 16th of September, in the thirty-third year of his age.

He was the son of Elisha Adams, of Medway, where he was born in 1746. His ancestor, Henry Adams, came from Devonshire, England, and settled in Braintree (now Quincy) in 1630. He was graduated from Harvard College in 1774, and immediately began the study of theology under the tuition of approved scholars and preachers, as the custom then was.

As a preacher he was received with marked favor, and his services were desired by several churches. In the brief term of his pastorate in Watertown he won the respect of his people by the virtues of his character, and commanded their admiration as a preacher.

After the death of Mr. Adams the pulpit was filled by various preachers, employed for various terms of service, by a committee of the church, until the 13th of March, 1780, when a meeting was called to consider the calling of a pastor. Mr. Richard Rosewell Eliot, who had preached for the society during the preceding winter, was chosen by a unanimous vote. He accepted the invitation, and was ordained June 21, 1780. Dr. Francis records the fact that the town appropriated £1600 to defray the expenses of the ordination. What sort of festivities were indulged in is not matter of record. We may infer the condition of the currency, however, from the sum named.

The period covered by the pastorate of Mr. Eliot saw the successful termination of the National struggle for independence, and the exciting and critical

debates that resulted in the adoption of the Constitution. It was a time of hardship and of trial. The financial and industrial confusion of one great war were soon succeeded by the business stagnation incident to another, and there are indications that the Watertown parish and its minister had their share in the troubles and depressions of the time.

Mr. Eliot died on the 21st of October, 1818. He was sixty-six years old and had been for more than thirty-eight years the minister of the First Parish. He was descended in direct line from John Eliot, the apostle to the Indians, and was born at New Haven, Connecticut, October 8, 1752. He was graduated at Harvard in 1774, and was a class-mate of Mr. Adams, his predecessor in Watertown. In his early manhood he gained much reputation as an orator, but for the larger part of his life his health was poor and his strength was inadequate to the full exercise of his native gifts. As a preacher, he was graceful and pleasing in manner, and his doctrinal views were of the milder and more benevolent type. His virtues were such as fitted him to shine in the quiet walks of a life of piety and beneficence.

SUPPLEMENTARY HISTORY OF THE FIRST PARISH.¹

—Rev. Mr. Eliot's successor was Dr. Convers Francis, the last minister hired by the town. He had preached occasionally during the winter after the death of Mr. Eliot, and on the 12th of April following (1819), the town concurred with the church in the invitation, and offered him a salary of one thousand dollars and a settlement of the same sum. The ordination took place on the 23d of June, in the old meeting-house, a plan of which we give later, that stood near the corner of Mt. Auburn and Common Streets, in what is now the cemetery, and where his remains and those of his wife now rest.

Dr. Osgood presided at the council, and one might expect some disputation at this time, when the doctrines which were soon developed by the Unitarian controversy began to be differentiated; "but everything went off without an infraction of the peace." Rev. Mr. Lowell made the first prayer, Dr. Osgood preached the sermon, President Kirkland made the consecrating prayer, Dr. Ripley, of Concord, gave the charge, Rev. Mr. Palfrey gave the right hand of fellowship, and the Rev. Mr. Ripley, of Waltham, made the concluding prayer: "God grant that my ministry in this town may be a long, a happy and a useful one, and that many may have reason to bless the day when my union with this people was formed." The ministry was a long, and, in many respects, a happy and a useful one. There are those still living whose childhood reaches back to that time.

Converse Francis was devoted to the ministry to which he was called. "But his record upon earth is biotted with the clouds of his humility and self-depreciation. There never was a man of such various

¹ By Solon F. Whittney.

learning, delightful converse and refined philosophy, so absolutely unconscious of a personality. It seems at first as if more self-esteem would have enhanced his powers." In 1821 he says in a little diary, "God forgive me that, when speaking on the most important subjects, I am so cold and indifferent." "My mind is filled and pressed with anxious thoughts." He felt depressed that he could not lift the people to the level of his glowing thought. His quiet life in Watertown was made eventful by thoughts and books. He wrote the life of Eliot, the apostle to the Indians, for Sparks' "American Biography." A thousand or more of his manuscript sermons, now in the Public Library of this town, testify to his industry and his interest in his people. The classic writers of Greece and Rome were often in his hands. The literature of France and Germany presented no barriers by their strange tongues. His library, a part of which is now the property of the town, gathered from all nations, shows his omnivorous reading. He was especially interested in the history of the past, the history of his own town and parish, as his history of Watertown and his historical addresses testify. He was an active member of the Massachusetts Historical Society and the New England Historic Genealogical Society, and, by his collections of materials and his substantial contributions, showed that not only in the Bible, and in Bible history, but in all history he believed the thought of God could be traced dealings with his people.

He was something of a seer. When Emerson was covered with a cloud of obloquy, and even he could not agree with his remarks on some points, he says, "The more I see of this beautiful spirit, the more I revere and love him; such a calm, steady, simple soul, always looking for truth and living in wisdom and in love for man and goodness." Plato was also a bond between them.

He made (March 28, 1837) some remarks on art, in speaking of the destruction of his old church: "In passing the site of our old meeting-house, I observed that to-day the last remains had been leveled with the ground. The old spire came down, the cock bowed his head to the dust" (it is now perched on the Methodist spire in the village) "after having stood manfully up amidst the winds of heaven. There is an interest attached to the humblest forms in which the genius of man makes itself apparent in outward shapes, however rude. Every church, every dwelling-house, every utensil we use in domestic life, every garment we wear, is a fragment in the great world of art, which has been building up ever since Adam. The individual forms and manifestations vanish, but art is ever reappearing. I believe, after all, I can never love my new church as I did the old one; it had been consecrated by years of prayer and instruction; generations had come and gone, and had sought God and truth within its walls; old men were there, with their gray hairs, whose infant fronts had

been touched with the water of baptism at that altar."

This is not the place to present his peculiar doctrines, or to present arguments in favor of his soundness in wisdom, or his success in reaching the truth.

The times were fertile in ideas and new organizations. New England was in labor. Whether the offspring of that day will help to bring on the millennium or not it is not the province of the historian to discuss. That the asperity of the controversies which began in those times is somewhat changed for the better, and that it found no occasion for being in Doctor Francis' mild, quiet, studious, loving life, there are many yet to testify.

There is in the Public Library a delightful portrait of Doctor Francis in middle life, painted by Alexander, a noted Boston artist, and given by his daughter Abby a few months before her last sickness, the same time as when she entrusted to the same keeping the collection of his written sermons, that they might be near where they were produced, and perhaps where they would find the children of those to whom they were preached, who might, for their fathers' and mothers' sakes, like sometimes to test the earnestness and purity of heart with which they were written.

Whether the people of the town would be better served, would be more highly blessed, by the ministrations of the church, if all the differences of opinion and of sentiment that now divides it into so many societies, with such sharp lines of doctrine, could be obliterated and all return into one fold, with one shepherd, as under the former ministers in the town church, or not, we will not attempt to answer.

As this period of Dr. Francis' long ministry (twenty-three years), which ended only with his acceptance of the important Professorship of Pulpit Eloquence in the Divinity School of Harvard University, in the summer of 1842, was the last one in which the town was united, we may find it pleasant to stop a moment to look it over.

We hoped to present an *elevation* of the old meeting-house, which was built, in 1755, enlarged in 1819, and demolished in 1836. We must be content with a *plan* of the seating of the church as it is remembered by some of the old people who are still living.

This plan was drawn by Charles Brigham, architect, at the suggestion of Dr. Alfred Hosmer, president of the Historical Society of Watertown, and is the result of a large amount of labor and careful comparison of testimony. Here in the building thus represented were held all town-meetings.

The second Provincial Congress having assembled in Concord, on the 22d of April, 1775, adjourned to this house the same day; the third Provincial Congress assembled here May 31st, and remained in session until July 19, 1775.

This house was immediately occupied by the General Court, or Assembly of the Colony, until they adjourned to the State-House, in Boston. It was again

occupied by the General Court, in 1788, during the prevalence of small-pox in Boston.

This drawing shows a plan of the old meeting-house as it was when last used as a place of worship, in 1806. It stood in what is now a burial ground, on the corner of Mt. Auburn and Common Streets. The names are of persons who are now known to have been pew-holders, or to have had sittings.

We wish the time and space allowed us would now allow us to give a short historical sketch of each person whose name is included in this significant plan. We cannot do better than present some reminiscences, from a member of the Historical Society, of

THE OLD MEETING-HOUSE. The old meeting-house, so truthfully sketched by Mr. Brigham, has a greater interest for the towns-man of to-day than could possibly belong to any church edifice of the present time, similarly reproduced a century or two hence. The modern structure would only represent the particular occupants thereof, and their peculiar traits, whereas the one now under consideration has a secular, as well as a religious history. Throughout its entire existence it was the only place where the town-meetings were held, and that elliptically enclosed space below the pulpit, designed for the dispensation of church ordinances, was also the forum where the edicts of the town were uttered and recorded.

In this place the moderator rehearsed the usual "Articles" of the "Warrant" in their order with the conventionally reiterated phrases of "To see," "To know" and "Act thereon," so familiar to everybody nowadays. The people have not always received a printed copy of this document at their doors—a written copy was posted in a glass-covered case at the front door of the meeting-house, for the prescribed number of days. And where also every man, young or old, before he could take to his home, in lawful wedlock, the partner of his bosom, must have his intentions to do so, "published" over the signature of the town clerk during three successive Sundays. The town-reports also were not published, and could be consulted only by a resort to the records of the town clerk.

In the earlier days of the old meeting-house the town and the parish were an involuntary co-partnership—the minister was called the "minister of the town." An inhabitant *belonged to the parish, notens videns*—and in a more chattel sense than was agreeable to an inconsiderable minority of persons. A tax-payer might abstain from its teachings, but there were only two ways of escape from contributing to its support—either to move away, or die, before the 1st day of May. Afterward the law was so modified that scruples could be relieved by "signing off" (as it was called) to some other specified parish. And still later on, *all persons* were exempted from involuntary

taxation for religious purposes. This was the final sundering of church and state in Massachusetts.

Selfish ends have been attained often by shrewd foresight and sharp practice. The clustering memories of the old meeting-house call up a transaction which, in the attending squabble, and the eminent counsel engaged, had at the time all the importance of a "cause célèbre."

Property belonging to the town had been set apart, by an act of incorporation, for the support of the "Minister of the Town."

About fifty years ago, when the population had increased, and new parishes had been formed, a majority of the inhabitants petitioned the Legislature that the act of incorporation might be so changed that the income of the "ministerial fund," so-called, would revert to the treasury of the town.

The contention then was that, as the ministry of the town had become a subdivided function, the town provender should be correspondingly distributed, or *else remain in the granary*. Moreover, the "Minister of the Town," municipally, no longer existed—and casuists queried whether the "ministerial fund," also, had not lapsed with the beneficiary. The petition was argued, *pro* and *con*, by eminent counsel, before a committee of the Legislature, who reported leave to withdraw, on account, as was said, of the troublesome precedent of disturbing old vested rights and interests—some captious persons have pretended to descry a similar paradox in this case to that of the old jack-knife that claimed identity with one that had a new blade, and a new handle.

The particular topic to which my random recollections were invited was a Sunday in the old "Meeting-house." I have made a prelude of its week-day history, which in its entirety would comprise a history of town affairs for a century, the later years of which will not much longer be rehearsed by eye-witnesses. My own experience in the Sunday services of the old meeting-house occurred in its latter days, now more than three-score years ago, when, and where, for a short time, in my early teens, I took part in the instrumental accompaniment to the church choir. The associations and personal friendships of those days have been unavoidably interrupted, but they will be remembered as long as the faculty for so doing remains.

The especial object of interest in the Sunday service is the occupant of the pulpit, and to which object all other arrangements are incidental and tributary. The incumbent under our notice, the late Rev. Convers Francis, D.D., was a man of medium height and stocky build, made apparently more so when in the pulpit, by the ample folds of his silken robe. Under the canopy of the great broad sounding-board, which, by its seemingly slender hanging, menaced whoever stood beneath it with probable destruction, he unaffectedly delivered his always carefully written sermons, a large collection, of which, in their origi-

nal manuscript, are in the custody of the Free Public Library.

It seemed strange that one so amply endowed with exuberance of thought and fluency of speech never indulged in extemporaneous discourse in the pulpit. He could "reason of fate, foreknowledge and free-will," "from rosy morn till dewy eve," without note or break, and for conversation needed only a listener to make the onflow continuous. He did not affect those graces of oratory that are exemplified by gesticulation, his emotion never found vent through his arms, nor did he ever attempt to make a point clearer by laying one fore-finger upon the other. His convictions might have been shaken by argument, but they could not have been burned out of him with fire. His contempt for all 'isms and 'ologies other than his own was never disguised by any blandishments of demeanor.

He was equally vigorous in body and mind—books were as essential to his existence as bread, and were he required to dispense with either, he would have experimented up to the starvation point, at least, upon a diet of books alone. Many of those he read became much enlarged by his annotations upon the fly-leaves and margins—sentences would be underlined—exclamation and interrogation points sprinkled in—and in the margins would be found the "pshaws," or "bahs," or "boshes," or other forcible expressions, according to the intensity of his agreement or dissent. A great university of learning, to him, was more worthy of reverence than almost any other human achievement. He made frequent visits on foot to Cambridge, where he was ultimately called to a professorship. This was his Mecca, and before whose shrine he passed the remainder of his days. I occasionally met him in the vicinity of the college, when he always stopped for a friendly chat about affairs in Watertown, and the current topics of the day—especially of the anti-slavery movement, which was then at full tide—in which he took a deep interest, and for the noted advocates of which he had great admiration. The conservatism of his former years had melted away, and a wider field had been opened to his views and his desires. Mr. Brigham has given us a sketch of the pews and the names of their occupants also, with all the correctness of a sun-picture; but the history of a "Sunday service" would be lacking without the mention of an occurrence which was frequently repeated, and which in any worshipping assembly of to-day would be a startling shock to the prevailing sense of propriety.

It was the custom to turn up the hinged seats in the pews in order to make room. At the close of the *standing* services they would come down with a whang and a clatter closely resembling the report of a volley of musketry by an undrilled company of militia; yet the devotional demeanor of the occasion was not disturbed, either in the pulpit or in the pews. In our sketch personal allusions are precluded through

fears both of forgetfulness and seeming invidiousness. But there was one more, at least, who was part and parcel of our theme. He had a place in the front centre of the singing-gallery, where he accompanied the choir upon the 'cello. The sexton and the bell were no more punctually present in their vocation than was Col. Thomas Learned. He lived in a house, the site of which is now occupied by the house of Mr. Charles Q. Pierce—from which, twice every Sunday, he could be seen with his instrument of music under his arm, wending his way to the church. And during the tolling of the "last bell" he was occupied with "tuning up," and the mingling of the soft concordant sounds were a more fitting and pleasurable prelude to the succeeding exercises than the pretentious hullabaloo now sometimes inflicted as a "voluntary." He was also self-appointed tithingman whenever the need existed—sometimes he would proceed to the vicinity of a group of disorderly boys in the "free-seats," and either push them apart and seat himself among them or else take the biggest rogue by the collar and lead him back to his own seat in the choir.

The attraction as well as the edifying influences of the singing service were as well understood and appreciated in those days as at present. If there were persons who were indifferent, to say the least, to their own spiritual welfare, *might* they not be "moved by the concord of sweet sounds," and thereby be brought within reach of the more salutary influences of the pulpit? Therefore, preparatory measures must be kept in operation for the replenishment of this branch of the service. Music was not a part of the town-school curriculum—the average scholar came out of it, finally, with as little ability (gained therein) to read a staff of printed music, as he had to comprehend the geometrical intricacies of the differential calculus. Now, "we have changed all that."

This want was supplied by the village singing-school. It never attempted to exemplify "High Art," nor to produce extraordinary individual proficiency; it did not aim at the training of professional "stars," but of a company of supernumeraries that would be available for the Sunday service of song. Other objects and influences incidentally grew out of and into it—the social element became prominent; it afforded remarkably congenial conditions for the development of the "tender passion;" conjugal affinities were brought within that sphere of mutual attraction where, "like kindred drops, they mingled into one;" and many a fragrant flower there found recognition, which otherwise might have "wasted its sweetness on the desert air."

The village singing-school passed away with the demise of our sturdy townsmen and intimate friends, Messrs. Joseph and Horace Bird. They rendered effectual voluntary aid to the singing services of the "old meeting-house" for a considerable time, meanwhile qualifying themselves, by study and practice

under higher professional sources, to become teachers of this particular science, in which capacity they were widely known and esteemed, during forty years in our own and many neighboring towns, where they successfully practiced their special vocation. They never needed importunity to take part in any movement that had in view the public welfare or the relief of private want.

Of the male members of the singing choir during my own sojourn, whose names and faces are still vividly in mind, there is not one now to be found. Of those in the same department, who, in the familiarity of youthful intimacy, were called "the girls," but two can be recalled, who would hear the sound of the old church-bell could it again peal forth from the newly reproduced steeple. And the occupants of the pews, excepting those who were then in early childhood, can now be counted upon the fingers—and some of these, although living in their original homes, are residents of another town. And many of the family names borne by those who congregated in the old meeting-house, have become extinct, or are tending in that direction.

The losses we have enumerated were in the order of Providence, and therefore could not have been averted—others may have occurred through negligence. The associations connected with the history of the old meeting-house were of sufficient interest to have induced, if possible, its further preservation—and it would have seemed proper action on the part of the town to have determined by examination and discussion, whether the "sentence" of demolition should not have been commuted. But fate decreed otherwise. And the structure that sheltered the Provincial Congress while in direful circumstances, passed away, "unwept, unhonored and unsung," and the green lawn upon which it stood was transformed into a final resting-place for the descendants of those who reared and occupied it.

Our readers will certainly pardon the wide range which memory of a place occupied for so diverse purposes as the town meeting-house calls up in the charming sketch which we have inserted without charge or suggestion.

That the *town*, the modern New England town, the unit which is everywhere repeated, although in various combinations, in the organization of the State and the nation, had its origin in the *parish*, we perhaps have here one of the last chances to see. Originally an ecclesiastical organization, growing out of the democratic origin of the Christian church, the idea of the public good has in time come to be larger than the idea of kings or of any privileged class. In the history of this church, this town, we see the municipal order separating from any and all churches, and launching out upon the independent, the broad and generalized idea of existence for the public good, and henceforth meeting (from 1847) in a town-house constructed for the purpose, wholly freed from ecclesiastical questions,

determining, it must be confessed, sometimes in a most tumultuous fashion, what shall be done for the restraining of criminals, the preservation of property, the education of the young, the care of the poor, and all those various concerns suggested by the common convenience.

This is rather suggested by considering the history of the *town* than of the *church*. But so far they were inseparable.

Rev. John Weiss was ordained October 25, 1843. He resigned October 3, 1845, because of his strong anti-slavery convictions, but resumed his pastorate on invitation of the parish in 1846, and continued till his resignation in November, 1847, when he was installed as pastor of the First Congregational Society in New Bedford.

Rev. Hasbrouck Davis was ordained March 28, 1849. He resigned May 11, 1853.

Rev. George Bradford was ordained November 6, 1856. He died February 17, 1859, after a brief but useful ministry.

Rev. Arthur B. Fuller became pastor March 1, 1860, and resigned in 1862, and enlisted with Company K, (?) receiving the appointment of chaplain of the regiment. He was shot in the streets of Fredericksburg, having volunteered to go over the river to the attack.

In June of this year Rev. John Weiss returned by invitation and preached for the society until 1869.

Of Mr. Weiss, the first minister ordained after the society was wholly separated from the town government, and serving long after all of the present churches—but one, the Episcopal—were established, much might be said. The time is too recent, although his service began nearly fifty years ago, and feelings are still too unsettled, the perspective too short, for a clear and impartial statement of the value of his labors. His services in the work of the public schools and in the establishment of the Free Public Library were of inestimable worth to the town. As time passes they will rise higher in the regard of his fellows. Mr. Weiss was born in Boston in June, 1818, and died there March 9, 1879. He went to the Chauncy Hall School for a while and afterwards to the Framingham Academy, from whence he went to Harvard College in 1833, graduating in the class of 1837, taught for a time at Jamaica Plain, entered Harvard Divinity School in 1840, spent the winter of 1842-43 at Heidelberg University in Germany, and on his return to this country was ordained, as we have stated, in 1843, over this old parish church.

Looking back over his whole service, his brilliant preaching, his interest in all forms of education, his cheerful and playful manners, his wit, and yet his earnestness, we are glad to take refuge in the appreciative words of O. B. Frothingham, a classmate and life-long friend, who says of him, in the course of quite a long article:

"This man was a flame of fire. He was genius,

unalloyed by terrestrial considerations; a spirit-lamp, always burning. He had an overflow of nervous vitality, an excess of spiritual life that could not find vents enough for its discharge. As his figure comes before me, it seems that of one who is more than half transfigured. His large head; his ample brow; his great, dark eyes; his 'sable-silvered' beard and full moustache; his gray hair, thick and close on top, with the strange line of black beneath it like a fillet of jet; his thin, piping, penetrating, tenuous voice, that trembled as it conveyed the torrent of thought; the rapid, sudden manner, suggesting sometimes the lark and sometimes the eagle; the small but sinewy body; the delicate hands and feet; the sensitive touch, all indicated a half-disembodied soul."

Soon after he graduated "he read a sermon on the supremacy of the spiritual element in character, which impressed me as few pulpit utterances ever did, so fine was it; so subtle, yet so massive in conviction." Afterwards in New Bedford, he gave a discourse on materialism, which "derived force from the intense earnestness of its delivery, as by one who could look into the invisible world, and could speak no light word or consult transient effects. Many years later, I listened in New York, to his lectures on Greek ideas, the keenest interpretation of the ancient myths, the most profound, luminous, sympathetic. He had the faculty of reading between the lines, of apprehending the hidden meaning, of setting the old stories in the light of universal ideas, of lighting up allusions.

"His genius was eminently religious. Not, indeed, in any customary fashion, nor after any usual way. He belonged to the Rationalists, was a Protestant of an extreme type, an avowed adherent of the most 'advanced' views. His was a purely natural, scientific, spiritual faith, unorthodox to the last degree, logically, historically, critically, sentimentally so.

"He had an agonized impatience to know whatever was to be known, to get at the ultimate. Evidence that to most minds seemed fatal to belief was, in his sight, conformity of it, as rendering its need more clear and more imperious. 'We need be afraid of nothing in heaven or earth, whether dreamt of or not in our philosophy.'"

He was a more subtle and more brilliant thinker for being also a poet. Dr. Orestes Brownson, no mean judge on such matters, spoke of him as the most promising philosophical mind in the country. To a native talent for metaphysics his early studies at Heidelberg probably contributed congenial training. His knowledge of German philosophy may well have been stimulated and matured by his residence in that centre of active thought; while his intimacy, on his return, with the keenest intellects in this country may well have sharpened his original predilection for abstract speculation. However this may have been, the tendency of his genius was decidedly towards metaphysical problems and the interpretation of the

human consciousness. This he erected as a barrier against materialism. His volume on "American Religion" was full of nice discriminations; so was his volume on the "Immortal Life;" so were his articles and lectures. His "Life of Theodore Parker" abounded in curious learning as well as in vigorous thinking. He could not rest in sentiment, must have demonstration, and never stopped till he reached the ultimate ground of truth as he regarded it.

He was a man of undaunted courage. He believed, with all his heart, in the doctrines he had arrived at. He was an anti-slavery man from the beginning. At a large meeting in Waltham in 1845, to protest against the admission of Texas, Mr. Weiss, then minister at Watertown, delivered a speech, in which he said, "our Northern apathy heated the iron, forged the manacles, and built the pillory."

To his unflinching devotion to free thought in religion he owed something of his unpopularity with the masses of the people. "There is dignity in dust that reaches any form, because it eventually betrays a forming power, and ceases to be dust in sharing it." "It is a wonder to me that scholars and clergymen are so skilled about scientific facts." "We owe a debt to the scientific man who can show how many moral customs result from local and ethnic experiences, and how the conscience is everywhere capable of inheritance and education. He cannot bring too many facts of this description, because we have one fact too much for him; namely, a latent tendency of conscience to repudiate inheritance and every experience of utility." John Weiss was essentially a poet. His pages are saturated with poetry. His arguments are expressed in poetic imagery.

"What a religious ecstasy is health! Its free step claims every meadow that is glad with flowers; its bubbling spirits fill the cup of wide horizons, and drip down their brims; its thankfulness is the prayer that takes possession of the sun by day, and the stars by night. Every dancing member of the body whirls off the soul to tread the measures of great feelings, and God hears people saying: 'How precious also are thy thoughts, how great is the sum of them! When I awake I am still with thee.' Yes, 'when I awake,' but not before."

John W. Chadwick said of him, "It is hard to think of Weiss as dead, and the more I think of it, the more I am persuaded that he is not."

After Mr. Weiss resigned, the society spent some time in hearing candidates, but in 1870 Mr. James T. Bixby was installed, and he preached until 1873, showing those scholarly traits that have made him so famous as a writer since.

Joseph H. Lovering preached from 1875 to 1878; Arthur May Knapp, preached from 1880 to 1887; and William H. Savage has preached from 1887.

The society seemed to take a new start under Mr. Knapp, and has fairly roused into something of its old activity under Mr. Savage.

Within the last few years a new building has been erected for Sunday-school work and for social purposes, which has proved an aid in religious and social ways. The Unitarian Club, of this church, the first to be established in any society, has proved of help to its members in leading to new interest and participation, in church activities, and has been followed in its form of organization by many new clubs in various parts of the country.

THE BAPTIST CHURCH AND SABBATH-SCHOOL.

During the summer and fall of 1827, Miss Eliza Tucker, Miss Martha Tucker and Miss E. Brigham united in gathering some of the children of the village together, Sabbath mornings, to teach them verses of Scripture and poetry, and also to properly observe the Sabbath.

They were successful, and the movement found favor with the people, especially the mothers, who were glad to have their children properly cared for on the Lord's day.

Miss Brigham was a teacher in the Town School, which gave her special opportunity with the children for good.

They held their gatherings in the house of Deacon John Tucker (the building lately occupied by Otis Bros.), but their numbers increased so they had to seek a larger place, and in the fall of 1827 they hired the hall in the brick building now occupied by S. S. Gleason and others.

In this hall the Sabbath-school was held at 9.30 A.M., and preaching service at 10.30 A.M., every Sabbath. In April, 1828, the school was organized, with a membership of thirty-five, including officers and teachers. William Hague, superintendent; Josiah Law, vice-superintendent; Deacon Josiah Stone, Elijah Pratt, Mrs. Pratt, Misses Eliza Tucker, Martha Tucker, E. Brigham and E. A. Wheeler were appointed teachers.

They occupied this hall until the fall of 1828, when they were obliged to move to a larger hall; they found such a hall in the building opposite Market and Arsenal Streets, where they remained until they moved into the vestry of the new church, in August, 1830, the same year the church was organized, composed of members of the Sabbath-school and others, which was July 18, 1830, with forty-six members.

The first house of worship was completed the same year and occupied the lot on which the present house stands.

In 1857 the old house was removed and the new house was built upon the same foundation, with a few alterations. This was dedicated in 1859. During the sixty years, the church has had ten pastors, whose names and terms of service are as follows: (1) Rev. Peter Chase, served 1 year and 1 month; (2) Nicholas Medbery, served 10 years and 10 months; (3) F. D. Very, served 1 year and 1 month; (4) C. K.

Colver, served 4 years and 1 month; (5) B. A. Edwards, served 3 years and 5 months; (6) William L. Brown, served 5 years and 3 months; (7) A. S. Patton, served 3 years and 2 months; (8) William F. Stubberts, served 2 years and 10 months; (9) G. S. Abbott, served 7 years; (10) E. A. Capen (present pastor), nearly 13 years.

The present number of members is 335. The whole number that have united during the sixty years is 1003, of whom about 230 have died.

The membership of the Sabbath-school is 350. Thus, from the small beginning, both church and school have become a power for good.

PHILLIPS CHURCH AND SOCIETY.—During the spring and summer of 1854 a pious and devoted lady, who was engaged in missionary labors in the town, became aware of the fact that many residents of the town were members of Congregational Orthodox churches in the neighboring towns and cities. A careful estimate gave from thirty to forty families. With these were connected many single individuals and a large number of children, who preferred to attend Orthodox Congregational preaching. Some of these had found a temporary religious home in the other churches of the town. But they had long felt that their own usefulness and growth in grace were in a great measure dependent upon church privileges, in accordance with their belief and convictions. For this they had anxiously waited and devoutly prayed. It seemed to them that now "the set time to favour Sion had come," and, acting in accordance with this, and believing that God was ready whenever the instrument by which His work is carried on is ready, a meeting of all those known to be in favor of such an object was called. The first meeting was held at the house of David F. Bradley, on Main Street, in the latter part of January, 1855. The meeting was adjourned one week in order to invite some brethren from the Eliot Church, Newton, to advise in the matter. At a subsequent meeting the subject was duly considered. The church was named after George Phillips, the first pastor of Watertown, and a committee chosen to procure a preacher. This committee were providentially directed to Dr. Lyman Beecher, the father of Mrs. Stowe and Henry Ward Beecher, who, after hearing some facts in relation to religious affairs in Watertown, said: "I will come and preach for you." He came, and his services were secured until a pastor was obtained.

Sabbath services were held in the Town Hall morning and evening. These services were well attended. Mr. Beecher was well advanced in life, but his eye was not dim nor his natural force abated.

He held his audiences with a tight grasp, and even Theodore Parker, then at the height of his popularity, who preached in the same hall, on Sabbath afternoons, with matchless eloquence, hardly held his

own against the stern logic and fire of Beecher, many of Parker's hearers being found at the evening service, careful and attentive listeners.

The society, or parish, was legally organized in the month of March; and the church was organized on the 17th of April, 1855, with a membership of twenty-six, received by letter from other Orthodox Congregational churches. A large council of churches from the neighborhood met in the Methodist Episcopal Church, the use of which was kindly offered by that society for the purpose.

At the expiration of Dr. Beecher's engagement a call was given to the Rev. Stephen R. Dennen (then finishing his studies at Andover Seminary), who accepted, and was ordained and installed as pastor on the 11th of July, 1855. A lot of land was bought and a church building erected on the site of the present one. The locality was then an open country, and the large building had a seating capacity of double the present one, and was a conspicuous object for miles around. It was dedicated and occupied in April, 1857. The congregation increased slowly during the following years, with a good deal of up-hill work.

On the night of January 13, 1861—one of the coldest nights of the season—the building was destroyed by fire. It had got such headway before the alarm was given that nothing was saved. The front of the building was much nearer the street than the present one, and many feared that the tall steeple might fall across Mt. Auburn Street, and do much damage. Fortunately it fell into the burning building.

For a time the enterprise seemed to stagger from the blow; pastor and people had to begin the up-hill struggle over again. They went back to the town hall again till a new building could be erected; and about a year after the destruction of the first building they occupied their second house, on the 12th of January, 1862. This is the building now occupied by the society. It is much smaller than the first house, but up to this date it is large enough to accommodate the worshipers. It is much more commodious, having a chapel in the rear which is used for prayer-meetings, Sabbath-school gatherings and social purposes. There are library rooms, vestries and kitchen. There is a bell in the tower. The inside of the building is frescoed. The windows are of stained glass. The choir gallery is over the front vestibule. It is one of the pleasantest and prettiest church edifices in the suburbs of Boston. There is a row of graceful shade-trees in front, and a well-trimmed lawn and concrete walks, the whole forming a picture in harmony with the neat private residences which cluster around it.

In August, 1862, Dr. Dennen, at his own request, was dismissed from the pastorate, and for a lengthened time the church depended on stated supplies. In the fall of 1863 the church secured the services of Rev. William L. Gage (afterwards of Hartford), who remained one year. This brief pastorate was one of

great satisfaction to pastor and people, and the relations between them ever after were cordial and affectionate. Rev. James M. Bell succeeded as pastor in the following spring. He filled the office for six years. He was followed in the pastorate by Rev. E. P. Wilson, who was installed on the 5th July, 1872. He remained pastor for near sixteen years, resigning February, 1888. During the vacancy the church was supplied by Dr. Webb, Dr. Dennen and others.

In the autumn of 1889 a unanimous call was given to the Rev. E. C. Porter, who accepted and commenced his pastorate on the 1st of October of that year, and continues his labors at this date. Under his faithful, and devoted pulpit and pastoral work the church and society have entered upon a fresh career of prosperity, spiritually and materially evinced by the large attendance, and interest taken in all the services of the church, the gain in membership, and the sound financial condition of the society.

The church has on its roll of membership up to July, 1890, 247.

The Sabbath school connected with the church has a membership of 252, including twenty-four teachers and six officers. The studies are graded from adult Bible classes down to a primary department, which is the largest and perhaps the most important of the school's work. It is in charge of a very efficient lady teacher, who is devoted to the work.

A deceased lady, formerly a teacher in the school, Miss Sarah Cook Dana, left a sum of money, the interest of which is to be spent yearly in the purchase of books for the use of members of the church and Sunday school, and to be called the "Dana Library." It is expected that the Sunday school library will be merged in it, and the Sunday School have the benefit of it. There is already an excellent collection of books and more are to be added from time to time, of standard religious works, suitable for promoting sound knowledge and instruction among the members of the church and Sunday school, all of whom are invited to take out and read such books.

She also left a fund, the interest of which is to be spent in purchasing shoes and clothing for destitute children, to enable them to attend the Sabbath-school. Several missionary societies exist in connection with the church, viz: A Sunday-school, the Ladies' Missionary Society, the Phillips Mission Board, and the Sunshine-makers. They do a vast amount of work, and contribute freely for home and foreign mission work. There is also a Young People's Society of Christian Endeavor, which is a strong and active association. The members are pledged to be active and earnest in Christian work, outside the regular meetings. There are at this date seventy active and twenty-five associate members on the roll of the society.

The officers of the society are E. A. Benton, president; Fred Lyman, secretary and treasurer. Most of the young candidates for church membership come from this society and the Sabbath-school.

The parish, which forms such an important part in New England Congregationalism, has been so modified by this society of late years that only members of the church are eligible as members. Formerly, any member of the congregation could be voted into the parish. In 1886, however, a committee of the parish which had the matter under advisement for many years, reported to change the by-laws. The report was accepted and adopted. It reported that all names then on the parish register should be continued as members, but that after January 1, 1887, only members of the church were eligible. Members of the church desirous of becoming members of the parish shall present a written request to the clerk. A Prudential Committee who shall have an article inserted in the warrant for the next parish meeting, to be then acted on by ballot. The parish is called the First Orthodox Parish of Watertown.

The treasurer's report for the year ending December 31, 1889, gives the following items of interest in regard to its financial affairs. The receipts from pew rents, and the weekly offerings for the year amount to \$2924.66, and the expenditures to \$2778.25, leaving a balance over to the new account of \$146. The Prudential Committee who manage the affairs of the parish, are: E. S. Plaisted, James H. Snow, Willard N. Chamberlain, Clerk; H. F. Morse, Treasurer; J. M. Johnson. The annual meeting for the election of officers and other business is held in April of each year.

Church finances do not pass through the parish Treasurer. There is also a church treasurer. The contributions passing through him are the great Missionary Association collections, which are taken up through the year, communion collections and other sums raised by the various benevolent societies of the church for the poor and other objects. The amount of these from all sources for the year 1889 was \$745.77, making the income from church and parish for the year \$3970.43. These pass through the treasurer's hands, but a considerable amount is given directly from private hands to benevolent objects, of which no account is rendered. The growth of the church has been steady, with periods of marked discouragements and trial. The officers of the church, besides its pastors already mentioned were: Deacons—Wm. G. Ladd, Ichabod H. Wood, Henry Waite, James G. Fuller, Abiel Abbott, Charles E. Whittemore, David B. Makepeace, Frank F. Fay, Orlando W. Dimes.

The present officers are: Rev. E. C. Porter, Pastor; Deacons, L. B. Morse, H. W. Otis, L. MacDonald, Noah Swett; Treasurer, J. Q. A. Pierce; Clerk, J. H. Goss.

The Phillips Church believes in carrying out the commission received from its great head of preaching the gospel to every creature, and in obedience to that command, finds warrant for its existence and work. It believes in the Congregational order, and polity of

Church government, and in the sound Orthodox faith, once delivered to the saints, and by its preaching, teaching, and other ministries, seeks to bring into obedience to the law of Christ, men's lives. How far it has succeeded in this cannot be gauged by numbers or financial success. Living epistles known and read of all men, are self-evident testimonies to the truth of the Gospel, which the church proclaims to a lost world, and this is the warrant and necessity for the existence of the Phillips Church. The following is a list of names of the original members who were received by letter, twenty-six in number, from other churches, at the formation of the Church, by Council.

Mr. Wm. G. Ladd,

Mrs. Margaret G. Ladd,

Mr. Wm. G. Ladd, Jr.,

Mrs. Adeline D. Ladd,

Mr. David F. Bradlee,

Mrs. Mara K. Bradlee,

Mrs. Catherine O. Cushing,

Mrs. Elizabeth French,

Mrs. Susannah Stickney,

Miss Elizabeth Stickney,

Mrs. Hannah Dana,

Mrs. Sarah C. Dana,

Mrs. Fanny H. Burnham,

Miss Elmeline Dana,

Mr. Moses Fuller, Jr.,

Mrs. Hannah Shepherd,

Mr. Alonzo W. Hildreth,

Mrs. Clarissa Davis,

Mrs. Lucy Collins,

Mrs. Sarah Eager,

Mrs. Harriet N. Faxon,

Mr. Ichabod Wood,

Mrs. Anna B. Wood,

Mrs. Lydia T. Richardson,

Mrs. Mary Hildreth,

Miss Jane Tobey.

METHODIST EPISCOPAL CHURCH.¹ About the year 1822, Mr. and Mrs. Leonard Whitney were received into membership in the Methodist Episcopal Church, Sudbury, Mass. Removing to Watertown soon after, and finding no Methodist society in the town, they opened their own house for services. These at first were attended by but four persons, Mr. and Mrs. Whitney, John Devoll and Joshua Rhodes. Although so few in number, they did not become discouraged, but continued these private services, with occasional preaching, for about two years. Rev. C. S. Macreading, who was then pastor of the Methodist church, at Newton Upper Falls, took great interest in the work of establishing Methodism in Watertown, and freely gave his services to the undertaking. October 4, 1836, the first class was constituted in Mr. Whitney's house. Beside the four persons already mentioned, the following were either at that time, or soon after, members: Sylvester and Cynthia Priest, George and Grace Bigelow, Thomas and Eden Campbell, Dorcas A. Sifford, Eliza Whitaker and Mrs. (or Miss) Richardson.

At nearly the same time a Sabbath-school was organized; the first superintendent formally placed in charge was George Bigelow.

Preaching was for some months obtained from various sources, but as the interest in and attendance upon the services increased, it was thought that with a little aid from the Missionary Society, regular preaching could be sustained. Accordingly application for this purpose was made to the New England Conference. The request was granted, Watertown

¹ By Helen Louise Richardson.

was made a mission, and Rev. George Pickering was sent as first Conference preacher, receiving his appointment June 17, 1837. Regular services were still held in Mr. Whitney's house, and here, August 4, 1837, was held the first Quarterly Conference.

The first stewards of the church, appointed at this time, were Leonard Whitney, George Bigelow and Joshua Rhodes; the last-named soon after removed to the West, and Sylvester Priest was appointed steward in his place. It now began to be generally felt that a larger and a permanent place of worship must be secured.

An old one-storied academy building on a slight elevation in the centre of the town was available; this was bought for four hundred dollars, and in the summer of 1837 was dedicated with appropriate services.

The first trustees of the church were Leonard Whitney, Sylvester Priest, George Bigelow, John Devoll and Daniel Pillsbury.

It is said that John Devoll, the first year of the existence of the society, gave in its behalf every dollar that he earned.

At the close of this year it was reported that the Sunday-school numbered twenty, that there was a Bible class of twenty-five, and though a mission station itself, \$21.84 were raised for missions. In 1838 Waltham and Watertown were united and made a circuit, which arrangement continued till 1846. During these years Revs. Geo. Pickering, Franklin Fisk, David Webb, Horace G. Barrows, Bradford K. Peirce and T. W. Tucker were in turn in charge of the circuit.

The junior preachers during the same time, who made Watertown their home, were Revs. O. R. Howard, E. A. Lyon, H. G. Barrows and Geo. W. Frost.

Rev. G. W. Frost was a local preacher, residing in Watertown, and teaching a grammar school; he was recommended to the Annual Conference by the Quarterly Conference of Watertown, and afterward became quite prominent. Removing to the West, he was appointed Government Director and Purchasing Agent of the Union Pacific Railroad; he also served several terms in the Nebraska Legislature. He died in Omaha, February 2, 1888.

In 1846-47 Watertown and Dedham were united as a circuit, and Rev. W. R. Stone was placed in charge, with Rev. L. P. Frost, a local preacher residing in Watertown, as assistant.

In 1847 Watertown was made an independent station, with Rev. Daniel Richards as pastor. This proved to be a very important year in the history of the church. The necessity for larger and more accessible accommodations was felt, and the society thought that the time had come to change its location, so the hill property was sold at auction.

A man from Boston, unknown to any present, purchased it for a bonnet factory, but as it proved, he bought it for the Roman Catholics, and the site has

ever since been occupied by their house of worship. June 6, 1847, was the last Sabbath in the old building. Having made the mistake of giving possession too soon, the society reluctantly left for the Town Hall, where services were held till August 1, when the vestry of the new church on Main street was ready for occupancy.

October 20, 1847, the church itself, which is that now occupied by the society, was dedicated. The land upon which the church is situated, was purchased for sixteen hundred dollars, and the building was completed at a cost of fifty-nine hundred dollars.

In 1848 Rev. J. Augustus Adams was appointed to Watertown; toward the close of his second year there was a revival, which was the beginning of a new era in the history of the church.

Mr. Adams was a graduate of Wesleyan University, was two years principal of a school in Norwich, Connecticut, and he and his wife were the first teachers of the New Hampshire Conference Seminary. He filled important pastorates honorably to himself and profitably to the church, and was assistant secretary of the conference for several years. He died in California, August 27, 1860, whither he had gone seeking restoration to health.

The pastorate of Rev. Mosely Dwight, who succeeded Mr. Adams, (1850-52) was very laborious and successful; during this time the trustees succeeded in raising \$2065.00 of the indebtedness upon the church property. From 1852-58, Revs. George Bowler, Franklin Furber and H. M. Loud served the church in turn, each remaining two years.

During the pastorate of Mr. Loud, and at his suggestion, the members living at Newtonville, established preaching services in a hall there, and afterward secured the construction of a church building. Their withdrawal to their new place of worship made a sensible impression upon the congregation in Watertown. During this pastorate also the interior of the church was handsomely refitted.

From 1858-60 Rev. George M. Steele was pastor. He was very popular, serving one year upon the town school committee. He is now Doctor of Divinity, and has for several years been Principal of Wesleyan Academy, Wilbraham, Mass.

Rev. Henry E. Hempstead received appointment here in 1860. In the winter of 1861-62, his mind being greatly exercised over the civil war then pending, he sought and obtained release from his engagement with the church, and was appointed chaplain of the 29th Regiment of Massachusetts Volunteers. His chaplaincy was distinguished for ability, usefulness and success. He fell opposite Fredericksburg, Dec. 21, 1862. In the spring of 1862, by the appointment of conference, Rev. (afterward Dr.) Bradford K. Peirce came to Watertown. His pastorate was characterized by all those fine qualities which made him so successful in the various important positions which he was afterward called to fill; for many

years he was Editor of *Zion's Herald*. Mr. Pierce remained one year, and was followed by Rev. J. L. Hanaford, who also remained one year.

In 1864 Rev. L. T. Townsend was sent to Watertown, and occupied the pulpit two years; then declining the charge of another society, he settled down in this place and has devoted himself to literature, teaching, occasional preaching and lecturing, ever since. He was chosen a member of the school committee in 1864, and served until the spring of 1866. He was again chosen on the school committee in 1869, was made chairman of the board, and served with distinguished ability in this position, until he resigned in 1872. His reports of 1870 and 1871, remarkable for anticipating the struggle for separate church-schools by the Roman Catholic church, aroused much thought, considerable opposition in certain quarters, as being premature, and have only proved his interest and keen insight into the danger which threatened schools which he thought should be wholly national and broad enough to be unsectarian. He is now Doctor of Divinity, Professor in Boston University, and known and honored throughout Methodism. In 1864 a Methodist church was organized in Newton; this removed from Watertown at different times about twenty-five members.

From 1866-70 the church was served by Revs. L. D. Stebbins, J. M. Bailey and Daniel Richards, the first two remaining one year each, and the last two years, this being his second appointment here. Rev. N. Fellows, who faithfully watched over the interests of the church from 1870-73, was a member of the school-board while in town; he was afterward Principal of Wesleyan Academy, Wilbraham, Massachusetts. Rev. F. G. Morris succeeded Mr. Fellows and remained three years. He represented the town one year in the State Legislature.

During the pastorate of Rev. T. W. Bishop (1876-79) a fine new organ was placed in the church; during the same time also an indebtedness of thirty-two years' standing was paid, leaving the church property unencumbered; this happy result was secured largely through the liberality of Mr. Leonard Whitney, Jr., son of one of the original members.

Since 1879 the church has been served by the following pastors: 1879-82, Rev. Henry Lummis, now Professor in Lawrence University, Appleton, Wisconsin; 1882-85, Rev. T. B. Smith; 1885-87, Rev. J. H. Twombly, D.D., afterward President of the University of Wisconsin and twice a delegate to the General Conference of the Methodist Episcopal Church; and in 1887-91, Rev. Wm. G. Richardson, who is the present pastor.

In the autumn of 1887, the fiftieth anniversary of the establishment of Methodism in Watertown was celebrated.

The exercises began with a semi-centennial banquet in the Town Hall, Oct. 28, at which over three hundred and fifty persons were present. This was

followed by special services continuing about two weeks, during which there was preaching by some of the most distinguished clergymen of the denomination.

The present Church membership is 195; the Sunday-school numbers 230.

There are connected with the Church an Epworth League, Golden Rule Mission Band, "Kings' Own," Young Men's Assembly, Ladies' Aid Society and Woman's Foreign Missionary Society, all of which are in a flourishing condition. The Young Men's Assembly, organized during the present pastorate, originated the Young Men's Assembly of the Town, the most prosperous, progressive and influential organization of Watertown.

The present officers of the Church are:—

Pastor. Rev. W. G. Richardson.

Trustees. George E. Priest, Edward F. Porter, William C. Howard, William H. Perkins, Wallace W. Savage, Oliver Shaw, L. Sidney Cleveland, Chester Sprague, Richard H. Paine.

Stewards. George E. Priest, Henry Chase, Cyrus H. Campbell, George W. Foskett, Freeman W. Cobb, Nathan B. Hartford, Wilbur F. Learned, George E. Teele, Frank J. Holmes, George G. Edwards, Bartlett M. Shaw, John Looker, Charles W. Leach.

Sunday School Superintendent. Geo. E. Teele.

Assistant Superintendents. Richard H. Paine, Bartlett M. Shaw.

A noteworthy feature of the present church edifice is a gilded rooster which surmounts the spire, and which is over a century old; it having at one time graced the spire of the old Parish Church, which stood in the present cemetery at the corner of Mt. Auburn and Common Sts. In this building were held the sessions of the Second Continental Congress while Boston was held by the British, during the Revolution. This old vane is supposed to be all that remains of the historic Church. The present church building is not adapted to the needs of the society, and a universal desire is felt for a larger and better place of worship.

Considerable money is already secured for the purpose, and it is hoped, that soon Methodism will be represented in Watertown, by an edifice commensurate with its needs, growth and means.

ST. PATRICK'S CHURCH.¹—Before the year 1830 the few Catholics residing in Watertown and its vicinity were attended by the priests of Boston, whose missions extended from Massachusetts Bay to the Hudson River.

But long before that year occurred events of historic import which form an interesting background to the history of the Catholic Church in Watertown. In 1631, shortly after the town fathers had selected the pleasant "plough lands" on the River Charles as the site for their township, Richard Brown, a ruling
